1. One C-130 aerial spray equipped aircraft will be available 4-8 Jan 10 to proceed from Youngstown ARS, OH and stage at MacDill AFB, FL. The mission purpose is to conduct winter aerial spray semi-annual currency and proficiency training over Avon Park Bombing Range, FL and coastal waters.

2. Concept of Operations:

- a. 4 January (Monday)  
1100 Show KYNG  
1300 Depart KYNG  
1600 Land KMCF
- b. 5-7 January (Tuesday-Thursday) Range: 1130-1330  
0900 Show KMCF  
1100 Depart KMCF  
1400 Land KMCF
- c. 8 January (Friday) Range: 1130-1330  
0900 Show KMCF  
1100 Depart KMCF  
1300 Land KMCF  
1400 Depart KMCF  
1700 Land KYNG

3. Spray Configuration:

- a. MASS – SP2G
- b. MI: QZNRKA468004
- c. Parameters – 150' and 100' AGL
- d. Chemical – Water for training only

4. Maj(b) (6) will serve as Mission Commander and Aircraft Commander.
5. Support required at MacDill AFB has been arranged.

(b) (6) (b) (6) Maj, USAFR  
Assistant Chief of Aerial Spray

(b) (5)

14 November 2003

MEMORANDUM FOR HQ AFRC/DOOM (FAX: 497-0198)

FROM: 757 AS/DOS ((b) (6)) FAX 346-1616)

SUBJECT: Concept of Operations for Aerial Spray Training at Avon Park AFR FL

1. Purpose/Objectives/Benefits: Test fuselage spray configuration and droplet characteristic for future high-pressure spray system and spray training for air and ground support crew..
2. Capability: Spray Aircraft Available 17-21 November 2003.
3. Concept of Operations:
  - a. **17 Nov (Monday):**
    - 1000 Show at KYNG
    - 1200 Take-Off KYNG
    - 1500 Land KAGR
    - 1515 Safety Brief
  - b. **18 Nov (Tuesday):** 1000-1200 Range Times, call AGR Tower/Fire Department
    - 0730 Show Time
    - 0930 Depart
    - 0930-1200 Spray water over designated area of the Avon Park Bombing Range
    - 1200 Land
  - c. **19 Nov (Wednesday):** 1000-1200 Range Times, call AGR Tower/Fire Department
    - 0730 Show Time
    - 0930 Depart
    - 0930-1200 Spray water over designated area of the Avon Park Bombing Range
    - 1215 Land
  - d. **20 Nov (Thursday):** 1000-1200 Range Times, call AGR Tower/Fire Department
    - 0730 Show Time
    - 0930 Depart
    - 0930-1200 Spray water over designated area of the Avon Park Bombing Range
    - 1215 Land
  - e. **21 Nov (Friday):**
    - 0700: Report
    - 0900: Depart KAGR
    - 1200: Land KYNG

4. Spray Parameters:
  - a. Booms -- Fuselage only.
  - b. Nozzles -- 8008 TeeJet
  - c. Number of Nozzles -- 4 per side (8 total) oriented straight down
  - d. Airspeed -- 200 knots ground speed.
  - e. Altitude -- 150' above ground level.
  - f. Wind -- Headwind/tailwind.
  - g. Flow Rate -- 3.6 gallons/minute
5. Aircraft Commander: Lt Col (b) (6) (b) (6)
6. Support required at Avon Park Bombing Range AFB have been approved via telephone conversations with MacDill AFB Ops and the Range Manager at Avon Park AFRB.
7. If you have any questions concerning this mission please contact DSN (b) (6)

(b) (6) (b) (6) Major, USAFR  
Aerial Spray Scheduler/Coordinator  
757 AS/DOS (346-1652)

26 MAY 2000

**MEMORANDUM FOR 757 AS/DO**

**FROM: 757 AS/DOS**

**SUBJECT: Decontamination Conference, Salt Lake City, UT**

- 1. Purpose:** Inform participants of the capabilities of the 757<sup>th</sup> Airlift Squadron Aerial Spray as it may be applied for decontamination of biological and chemical agents, and provide a demonstration of that capability at Dugway Proving Grounds. Personnel from the 757<sup>th</sup> AS attended to gain knowledge of new techniques and equipment being researched for decontamination.
- 2. Traveler(s):** The travelers are listed in attachment 1. Captain (b) (6) and Major (b) (6) attended the conference. The other travelers were aircrew and maintenance.
- 3. Itinerary:** Personnel traveled from Youngstown Air Reserve Base to Hill Air Force Base on 22 May 2000. Captain (b) (6) and Major (b) (6) continued to Salt Lake City. Four ferry sorties were flown totaling 11.8 hours and two training sorties were flown, one on 23 May 2000 and one on 25 May 2000 totaling 3.6 hours. The 0.4 hour demonstration sortie was flown on 24 May 2000.
- 4. Discussion:** Attendance at the decontamination conference proved to be valuable for the squadron. New decontamination agents are being developed that we may be able to disperse efficiently with our aircraft. Two of the most promising ones are a foam formulation developed by Sandia National Laboratories, and a microencapsulated dry formulation developed by Battelle Laboratories. The particles in the dry formulation are small enough that it acts like a liquid, and could possibly be applied with an aircraft spray system. There are several possibilities of grants for research with these agents.
- 5. Conclusions/Recommendations:** We should write and submit proposals in cooperation with CETAAR at Kent State University to obtain funding to research methods of applying new decontamination agents from aircraft. Attend the annual Decontamination Conference annually to keep informed of new techniques and materials, and inform others of our progress in applying decontamination agents from aircraft.

# 910 AW AERIAL SPRAY UNIT POST-MISSION REPORT

## GRAND FORKS AFB – ADULT MOSQUITO CONTROL 23-25 JULY 2007

### 1. MISSION BASICS:

- a. Installation Sprayed: Grand Forks AFB, ND
- b. Mission Duration: 23-25 July 2007
- c. Purpose of Application: Control adult nuisance and vector mosquitoes
- d. Application Date: 23 July 2007
- e. Time/s of Application (Local): 2000-2110 hrs
- f. Acres Treated: 12,160
- g. Project Coordinator/s (Name/Rank, Title, Phone #): (b) (6) (b) (6) DSN(b) (6) TSG  
(b) (6) NCOIC Pest Management Shop, DSN (b) (6)
- h. Date Spray Map Last Approved: 23 July 2007
- i. Date of Waste Generation Letter: 22 June 2001
- j. Installation In-Briefing: (When/Where/Briefer/s): 23 July, CE Conference Room, LTC  
(b) (6) & MAJ (b) (6)

### 2. OPERATIONAL:

- a. Mission Commander: Lt Col (b) (6) (b) (6)
- b. Certified PMP/s (Category 11): Maj (b) (6) (b) (6)
- c. Aircrew:
  - 1) Pilots: LtCol (b) (6) (b) (6) Capt (b) (6)
  - 2) Navigators: LtCol (b) (6) (b) (6) Maj (b) (6)
  - 3) Flight Engineers: MSgt (b) (6) (b) (6), TSgt (b) (6)
  - 4) Spray Operators: SMSgt (b) (6) (b) (6), MSgt (b) (6)
- d. Safety Briefer: Maj (b) (6) (b) (6)
- e. Spray Maintenance: TSgt (b) (6) (b) (6), TSgt (b) (6) (b) (6), SSgt (b) (6) (b) (6), Sra  
(b) (6)
- f. Spray Ground Monitors: Maj (b) (6) (b) (6)
- g. Crew Chief: SSgt (b) (6)
- h. Avionics: SSgt (b) (6)
- i. Flying Data:
  - (1) Spray Sorties/Hours: 1/1.2
  - (2) Ferry Sorties/Hours: 2/6.2

### 3. PESTICIDES:

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 120 gal Trumpet® (23 July)
- d. Gallons Pesticide Applied: 95 gal Trumpet® (23 July)
- e. Gallons and Name of Flush Used: 50 gal/water
- f. Other Additives Used: none
- g. Application Rate: 1.0 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8005 Flat Fan
- e. Nozzle Orientation & Number Used: 14 straight down
- f. Pressure (PSI): 40
- g. Flow Rate: 7.26 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 150° @ 9 knots
- b. Temperature (Degrees Fahrenheit): 92-88 °F
- c. Relative Humidity: 54%
- d. Cloud Cover: Partly Cloudy
- e. Source: Ground observations and National Weather Service

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 MDG/ADS conducts adult mosquito trapping to monitor mosquito densities on base and reported an average 166 mosquitoes on 4 July, 35 on 18 July. In addition, the City of Grand Fork Public Health Department also collects mosquitoes and identifies them to species.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito traps
  - (2) Results: The 319 MDG/ADS reported post spray trap counts as 71 on 25 July.

**8. REMARKS:** North and South Dakota are leading the United States in West Nile virus cases thus far in 2007. Mosquito counts were relatively low prior to this spray but with West Nile virus circulating in the region the decision was made to control West Nile virus vectors (namely *Culex tarsalis*) with Trumpet® EC. The application was made during the last 1.5 hrs of daylight to maximize the correlation between the spray period and mosquito activity. Meteorological conditions were excellent during the AFB application, with a moderate, unidirectional wind assuring good coverage. However, after landing checks showed that the fire detection loop failed on the aircraft APU. The repair part was sent via a technician on commercial air from Youngstown. Unfortunately, the repair failed to solve the problem and the rest of the mission had to be cancelled. Initial spray training was accomplished for a flight engineer and two spray maintenance troops. Re-currency was established for several crew positions. Spray maintenance did an excellent job dealing with the tight schedule for installation of booms, chemical loading, downloading, and cleanup. Special mention goes to TSgt (b) (6) as lead for the spray maintenance crew. There is an opportunity for an additional spray at Grand Forks AFB beginning 6 Aug 2007 but there are no further scheduled spray missions to Grand Forks AFB in 2007. Many thanks to the 319 CE Environmental and Pest Management sections for outstanding support!

- h. Date Spray Map Last Approved: 28 July 2008
- i. Date of Waste Generation Letter: 22 June 2001
- j. Installation In-Briefing: (When/Where/Briefer/s): 28 July, CE Conference Room, CAPT  
(b) (6) MAJ (b) (6)

### **2. OPERATIONAL:**

- a. Mission Commander: CAPT (b) (6)
- b. Certified PMP/s (Category 11): Maj (b) (6)
- c. Aircrew:
  - 1) Pilots: LtCol (b) (6) Maj (b) (6)
  - 2) Navigators: LtCol (b) (6)
  - 3) Flight Engineers: Msgt (b) (6) Ssgt (b) (6)
  - 4) Spray Operators: Msgt (b) (6) Tsgt (b) (6)
- d. Safety Briefer: Maj (b) (6)
- e. Spray Maintenance: TSgt (b) (6) MSgt (b) (6) TSgt (b) (6) TSgt (b) (6)
- f. Spray Ground Monitors: Maj (b) (6)
- g. Crew Chief: TSgt (b) (6) SSgt (b) (6)
- h. Avionics: SSgt (b) (6)
- i. Flying Data:
  - (1) Spray Sorties/Hours: 1/1.9
  - (2) Ferry Sorties/Hours: 2/6.2

### **3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 90 gal Trumpet® (30 July)
- d. Gallons Pesticide Applied: 90 gal Trumpet® (30 July)
- e. Gallons and Name of Flush Used: 50 gal/water
- f. Other Additives Used: none
- g. Application Rate: 1.0 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8005 Flat Fan
- e. Nozzle Orientation & Number Used: 18 straight down
- f. Pressure (PSI): 36
- g. Flow Rate: 7.26 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 1000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 078° @ 4 knots (ground observation)
- b. Temperature (Degrees Fahrenheit): 85 °F
- c. Relative Humidity: 61%
- d. Cloud Cover: Clear
- e. Source: Ground observations and National Weather Service

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 MDG/ADS conducts adult mosquito trapping to monitor mosquito densities on base and reported an average of 30 mosquitoes/trap on 28 July.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito traps
  - (2) Results: Trap data pending from 319 MDG/ADS. Landing counts of 1 and 0, respectively, at the golf course and flightline the following day.

**8. REMARKS:** North and South Dakota are leading the United States in West Nile virus cases thus far in 2008. Mosquito counts were relatively low prior to this spray. However, the threat of West Nile Virus prompted public health to make the decision to spray the base with Trumpet EC. Application was postponed from the 29<sup>th</sup> to the 30<sup>th</sup> because of unacceptable wind speeds and a non-functioning pitot tube heater on the aircraft. The application was made during the last 1.5 hrs of daylight to maximize the correlation between the spray period and mosquito activity. Meteorological conditions were excellent during the AFB application, with a moderate (3-4 knot), unidirectional wind assuring good coverage. Preliminary post-spray observations indicate excellent control of mosquitos. Pending trap count data will undoubtedly confirm this. The City of Grand Forks declined to spray aerially as they continue with an effective ground-based adulticiding program. Many thanks to the 319 CE Environmental and Pest Management sections, in particular (b) (6) (b) (6) TSGT (b) (6) and SSGT (b) (6) for outstanding support. Also, thanks to Tsgt (b) (6) and Ssgt (b) (6) for quickly resolving the aircraft problems.

MEMORANDUM FOR HQ AFRC/DOOM

FROM: 757 AS/DOS

SUBJECT: Concept of Operations for Hurricane Gustav Relief Aerial Spray in Louisiana

**1. Objective/Purpose/Benefit:** Control of mosquitoes and other disease carrying vectors present in elevated populations caused by standing water and flooding via aerial spray applications. Reduce negative impact of insect bites on relief workers and residents located in the regions disrupted by Hurricane Gustav.

**2. Capability:** 3 Spray Aircraft available 18 SEP 2008 - TBD

**3. Concept of Operations:**

**17 SEP (Wednesday) ADVON with 1<sup>st</sup> Spray Crew**

0800: Showtime

1000: Depart KYNG

1300: Land KBAD

**18 SEP (Thursday):**

0800: Show time

1000 Depart YNG 2<sup>nd</sup> Spray Aircraft

1005 Depart YNG 3<sup>rd</sup> Spray Aircraft

1010 Depart YNG Support Aircraft

1300 Land BAD 2<sup>nd</sup> Spray Aircraft

1305 Land BAD 3<sup>rd</sup> Spray Aircraft

1310 Land BAD Support Aircraft

**19 SEP - TBD**

All flights will be coordinated through the Mission Commander as assigned by HHQ.

**4. Spray Parameters:**

a. **Altitude:** 150' AGL

b. **Swath Width.** 2000 feet or as determined by the CPMP

c. **Flow Rate.** TBD based on target pest assigned

d. **Application Rate.** 0.60 oz/acre unless otherwise specified

e. **Ground Speed:** 200 Knots

f. **Proposed spray area:** 750,000 acres

**5. Aircraft Commander:** CAPT (b) (6) (b) (6) Maj (b) (6) (b) (6) Maj (b) (6) }

Replacements TBD depending upon duration of mission.

6. Support at Barksdale AFB has been coordinate..

// Signed //

## HOMESTEAD ARB, FL

### 6-10 JULY 09

**OBJECTIVE/PURPOSE AND BENEFIT:** Mission is in support of visit with 1<sup>st</sup> AF to include brief, static display and spray sortie.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: Col (b) (6) LTC (b) (6)
- (2) Navigators: Maj (b) (6)
- (3) Flight Engineers: MSgt (b) (6) TSgt (b) (6)
- (4) Spray Operators: MSgt (b) (6), MSgt (b) (6) SSgt (b) (6)

##### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6) MSgt (b) (6)
- (2) Crew Chiefs: TSgt (b) (6) TSgt (b) (6)
- (3) Avionics: SSgt (b) (6)

##### c. Entomologist: Maj (b) (6) (b) (6) Maj (b) (6)

#### 2. PPR REQUIREMENTS: PAM 082002

#### 3. PLANNED SEQUENCE OF EVENTS: All times are local

##### 6 July (Monday):

1500: Show time  
1700: Depart KYNG  
2000: Land KHST

##### 7 July (Tuesday):

1700: Show time  
1730: Load Chemical  
1930: Takeoff KRDR (Adulticide Spray Sortie)  
Sunset: 2131

##### 8 July (Wednesday):

1700: Show time  
1730 Load Chemical  
1930: Takeoff KRDR (Adulticide Spray Sortie)  
Sunset: 2131

##### 9 July (Thursday):

0900: Show time  
1100: Depart KRDR  
1500: Land KYNG

##### 10 July (Friday):

1100: Show time  
1300: Depart KHST  
1700: Land KYNG

**Special Notes:** Attendees will be Maj Gen (b) (6) 1<sup>st</sup> AFNORTH/CC, COL (b) (6) 22<sup>nd</sup> AF, Mr (b) (6) AFRC; LTC (b) (6) 601 AOC/1<sup>st</sup> AF, MAJ (b) (6) 601 AOC/1<sup>st</sup> AF. Possible attendees not confirmed at this time: Mr. (b) (6) -Chief of Staff/1<sup>st</sup> AF, Col (b) (6) -601 AOC/CC, CAPT (b) (6) (USN)

- All Briefings will be conducted at the 601<sup>st</sup>.
- PA/Media may be present for Static Display and Flight

#### 4. SPRAY CONFIGURATION: SP-2G, Fire Dept (ext 4777) supplying water POC Chief (b) (6)

- a. **Mass:** 2-Module System with 10-8070's installed
- b. **Differential GPS:** Wingman Installed
- c. **Aircraft:** 89-9106
- d. **Mission Identifier:** QZNRKA204233

# AERIAL SPRAY OPERATIONAL SCHEDULE

## HOMESTEAD ARB, FL

**TBD**

**OBJECTIVE/PURPOSE AND BENEFIT:** To control nuisance and vector mosquitoes in order to improve working conditions for members operating at Homestead ARB, FL and surrounding communities.

### 1. 910 AW PARTICIPANTS:

#### a. Aircrew:

- (1) Pilots: Maj (b) (6), Maj (b) (6) (MC), Maj (b) (6), Capt (b) (6) (b) (6)
- (2) Navigators: Maj (b) (6)
- (3) Flight Engineers: MSgt (b) (6)
- (4) Spray Operators: MSgt (b) (6) MSgt (b) (6)

#### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
- (2) Crew Chiefs: TSgt (b) (6), SRA (b) (6)
- (3) Avionics: TSgt (b) (6)

#### c. Entomologist: Maj (b) (6) (b) (6) Maj (b) (6) LTC (b) (6) (b) (6)

### 2. PPR REQUIREMENTS: **TBD**

### 2. PLANNED SEQUENCE OF EVENTS: All times are local. Plan to load chemical in the morning on Tuesday time TBD between the Spray Mx and safety observer.

\*\*Ensure all personnel needing access to the aircraft are written on the back of the orders prior to providing the copy to security forces. (MEP's, Crew chiefs, Spray Mx, etc) They will not be permitted on the flight line by SF until they are added to the list by either the AC or MC.

#### **TBD (Monday):**

0800: Show time  
1000: Depart KYNG  
1330: Land KHST  
1430 Installation Brief

#### **TBD (Tuesday):**

1600: Show time  
1630-1800: WX Decision  
1800: Takeoff KHST (Adulticide Spray Sortie)  
Sunset: 1940

#### **TBD (Wednesday):**

1600: Show time  
1630 - 1800: WX Decision  
1800: Takeoff KHST (Adulticide Spray Sortie)  
Sunset: 1939

#### **TBD (Thursday):**

1600: Show time  
1630 -01800: WX Decision  
1800: Takeoff KHST (Adulticide Spray Sortie)  
Sunset: 1938

#### **TBD (Friday):**

1000: Show time  
1200: Depart KHST  
1530: Land KYNG

14 October 2008

MEMORANDUM FOR 757AS/DO

FROM: 757AS/DOS

SUBJECT: Pest Management Professional's Post Mission Report for Louisiana Spray Applications following Hurricanes Gustav/Ike

**1. SUMMARY:**

On 17 September 2008, the 910 AW, Aerial Spray Flight deployed to conduct aerial spray operations for mosquito control at the request of the State of Louisiana and the Federal Emergency Management Agency (FEMA). Two spray aircraft, one spare aircraft, and three crews were placed at Barksdale AFB in Northern Louisiana. A total of 54 people were involved with the flying, entomology, maintenance, administrative, communication and life support issues relating to the mission. The mission was complete on 1 October 2008, and redeployment to Youngstown ARS, Ohio occurred on 4 October 2008 after spraying a total of 771,406 acres in Southern Louisiana.

**2. BACKGROUND:**

Hurricane Gustav made landfall on 1 September near Cocodrie, LA. Prior to reaching LA, Hurricane Gustav gathered strength in the Gulf of Mexico, inflicting significant damage to several countries, including Haiti/Dominican Republic, the Cayman Islands, and Cuba. Hurricane Gustav was acknowledged as a strong Category II Hurricane upon landfall. In the state of Louisiana, 34 parishes were declared as disaster areas, with approximately 1.5 million people lacking electrical power. Extensive flooding created an ideal environment for mosquito breeding, and the fact that there was no power meant that those remaining in the affected areas were much more likely to be exposed to mosquitoes potentially carrying disease. Adding insult to injury, Hurricane Ike made landfall in Texas on 13, September 2008, significantly delaying some rebuilding efforts. Though Ike did not hit Louisiana, areas in coastal south central and southwestern Louisiana, many of which had been adversely affected by Gustav, were subsequently reflooded by Ike. The most significantly affected were areas around Cameron Parish.

As Louisiana already had a background of West Nile Virus (WNV) circulating in mosquito pools and birds, the probability of transmission of this disease increases greatly after a hurricane event when mosquito populations are increasing. Furthermore, the potential for a serious encephalitis outbreak is also increased by post-hurricane conditions. In particular, power outages and living in temporary shelters expose people to additional mosquito bites. In response to these potential threats, the Louisiana Department of Health and Hospitals deemed it necessary to begin emergency mosquito spraying operations, and made an emergency request for assistance to FEMA. Aerial spray operations conducted by the 910 AW commenced shortly thereafter.

**3. RESULTS:**

A total of 771,406 acres were sprayed with 4074 gallons of Dibrom during spray operations following hurricanes Gustav and Ike. Attachment 1 is a listing of areas sprayed, with acreages, flight times, amount of chemical sprayed, and spray-on time. Attachments 2-6 graphically show areas sprayed. All spray locations were located in Southern Louisiana. Aerial applications were very effective in reducing numbers of mosquitoes. State entomologists and affected mosquito control districts reported effective sprays; in most cases control exceeded 90% of the mosquito population. Attachment 7 is a letter generated by the State of Louisiana, releasing the 910 AW from spray operations following the completion of the final spray areas.

#### 4. OPERATION LOCATION:

Barksdale AFB (Shreveport, LA) was chosen as the center for operations because it was relatively close to the areas of interest, and in the event that the State of Texas was to become involved, would be convenient for those operations as well. Although Barksdale is not a C-130 base, the commander was supportive of our efforts, and generously provided adequate space for the operation that was located right on the flightline with easy access to the aircraft. The facility provided was equipped with communications equipment, and the 910 Com flight worked closely with personnel at Barksdale to get email and internet connections established. Furthermore, flightline equipment was provided, and Barksdale also provided several vehicles for crew use, thereby significantly saving on the cost of rental vehicles. Fortunately there were no major mechanical events which would have required a dedicated C-130 facility. Overall support for this operation was outstanding.

#### 5. ENTOMOLOGICAL FACTORS:

- a. Pesticide: Dibrom Concentrate was the pesticide chosen by the State of Louisiana. This material is widely used in adult mosquito control operations in LA and has a historical precedent for use following mosquito outbreak emergencies. Indeed, it was used exclusively by the 757AS in the 2005 Hurricane Katrina/Rita spray contingency. The 757 Spray Flight, nor any other DoD agency made recommendations for the use of a particular insecticide, but rather served as the applicator of a product chosen by the requesting State. It is for this reason that this unit trains with more than a single type of pesticide to have experience using many types of pesticides prior to actual contingencies and know how a particular material functions with the application equipment. The Spray Flight is very familiar with using Dibrom and has reported often on the efficacy of such sprays. There are a few other products available for Public Health aerial application, some of which might be more desirable in certain situations.
- b. Spray areas: All spray boundaries were established by the State Department of Hospitals and Health Services (DHH) Medical Entomologist, with advisement from local mosquito control district directors. The preferred method for receiving spray area boundaries was in electronic format. Specifically this meant that files are delivered using the \*.shp file format which functions with geographical information systems (GIS). This method assures that the boundaries are exactly as the state requested. However, more often than not, areas were penned on maps which were e-mailed or had hardcopies faxed. The spray areas were then converted into electronic format and sent back to the state entomologist for confirmation. See section 6 for more information on mapping aspects.
- c. Insect surveillance & efficacy: Validating the need for an area to receive military sprays was extremely important in prioritizing spray areas. DHH Medical Entomologist(b) (6)

was the point of contact for the assignment of spray areas. Mr. (b) (6) worked with directors of local (Parish) mosquito abatement districts or public health departments to determine where there were high mosquito populations and much human activity occurring at the same time to determine the localized need for spray. In general, reductions of greater than 90% were reported from the field. Specific examples include reports from Iberia Parish where mosquito trap reductions were on the order of 97%. Similar results were seen in Cameron Parish. One exception was in Terrebonne Parish, where a retreatment was accomplished on the final day of spray ops. As the local MCDs operations return to normal it is expected that they will pass forward additional efficacy data.

- d. Spray monitoring. All spray operations were directed by an onboard AF entomologist, certified in EPA category 11 for pesticide application. Louisiana recognized the DoD pesticide applicator certification through a reciprocity program and confirmed such in writing and receipt of a license. Entomologist duties were conducted by Colonel (b) (6) Major (b) (6) (b) (6) and Major (b) (6)
- e. Spray timing: Timing insecticide applications with the period of maximum exposure of the target pest is a critical component of any pest control operation. Different mosquito species have different periods of activity and certainly flies are more active during the day than at night. Keeping these facts in mind, as well as considering the best way to avoid killing bees, a spray schedule was created to include only the final two hours of daylight for mosquito control. This strategy is, in fact, highly recommended on the label. Despite these precautions, a complaint was received regarding a bee kill. The area in question was just outside one of the spray blocks in Terrebonne parish. Pictures sent forward as a result of the complaint revealed a “super” with a small mound of dead bees at the opening. From the picture it did not appear that the bee kill was significant, however, the Louisiana Department of Agriculture and Forestry continues to investigate. Operating under these strict time constraints, large spray blocks were required for the C-130 airframe to be most effective. That is to say, the ability to rack up acreage would have been seriously hampered by multiple geographically separated spray blocks. Such spray blocks would require many more turns, equating to more time with the spray system off. Small blocks are better sprayed by smaller aircraft while large blocks better utilize the C-130’s size and speed. While this was the case in parishes such as Cameron and Iberia, some of the other parishes such as Terrebonne and Lafourche were subdivided into smaller blocks, principally over population hubs. As such, acreages accomplished per sortie were significantly less, simply because of the turn times involved and the maneuvering necessary to efficiently attack the block. Sorties were sprayed to as much as possible maximize the crosswind component, thereby maximizing the area the spray would affect. Most times this was possible; however there were certain instances where the wind would shift dramatically during the flight, such as was the case during the Iberia sortie, where the wind direction shifted 180 degrees in the course of 2 hours because of a change from sea breeze to land breeze. Also, there were some situations where the shape of the block was completely inappropriate for efficient spray.
- f. Spray configuration: Fuselage booms with stainless steel flat fan 8005 (Tee Jet) nozzles were used. The number of nozzles open was calculated to maintain approximately 40 pound per square inch pressure in the spray lines. The 0.66 oz/acre application rate required 12 nozzles open. The 0.75 application rate required 14 open nozzles.
- g. Spray swaths. Spray swath separation used for applications in this contingency was 2000 feet.

- h. Application rates: The amount of chemical applied against a certain pest was determined by the state point of contact (POC) after consultation with Air Force entomologists. Applications were made at 0.66 oz per acre, with the exception of 2 applications in Cameron Parrish, which were done at 0.75 oz/acre. All spray systems were calibrated prior to leaving home station. There was good agreement between the amount of chemical actually loaded and the amount the spray equipment indicated had been dispersed.
- i. Spray maintenance: Personnel from Spray Maintenance loaded and physically configured the aircraft on a daily basis. With over 13 hours of spray-on time during this mission the spray systems worked more in 2 weeks than in the previous year of normal spray operations. The systems had tremendous demands placed on them, but there were no major malfunctions, which is a testament to the professionalism of the Aerial Spray Maintenance Flight. The only adverse incident encountered was not with the spray system or the loading process. In this instance, TSGT (b) (6) (b) (6) was moving barrels and servicing the system in preparation for mission stand down and redeployment to home station, and somehow contacted an as yet unknown material that caused a severe reaction on the top of his hands. This reaction occurred after TSGT (b) (6) had washed his hands with soap and water and used a hand sanitizer. TSGT (b) (6) was immediately treated for the reaction at a local emergency room, and a follow-up was conducted at the emergency room the following day when TSGT (b) (6) returned to home station. A blood draw for cholinesterase levels was also preformed in case there was exposure to Dibrom and results from that test are pending. Furthermore, samples of all material TSGT (b) (6) might have come in contact with (soap, hand sanitizer, system cleaning solution, etc) were collected and given to doctors from the base clinic, who are having component analysis done on all products. Information from these tests is also pending.

## 6. MAPS AND NAVIGATION

Mapping and chart making has previously been the bane of contingency aerial spray operations. The problem previously was in obtaining charts and matching swath lines on charts with those created in the software directing the onboard GPS. A simple solution has been developed in the Aerial Spray Office which is partly the product of the digital age (digital maps available). Using a relatively affordable software program (approx. \$300) charts are viewed on a computer utilizing USGS topographic maps in 15- and 7.5 minute series (DeLorme X-Map version 4.5). Polygons can be directly drawn on the topographic background where the borders of important landmarks are readily seen (roads, water bodies, parish or county borders, wildlife areas, etc). Next, the actual proposed path of the aircraft is drawn over the spray areas. This path is the lane separation or swath width and was previously drawn on charts by hand which introduced some error. These polygons or spray blocks are then exported as CAD dxf (\*.dxf) files, which can then be converted into shapefiles (\*.shp). A shapefile is a computer graphic representation of geographic features with lat/long coordinates associated with it. These shapefiles can then be directly entered into the spray plane's GPS software. Shapefiles were also entered into the software program FalconView, a flight planning tool universally used by the Air Force. This allowed intended flight paths and potential obstacles to be added to the charts before they were printed on a large scale printer. Additionally, navigators had the option to use FalconView on a laptop during the spray sortie, creating another platform to confirm position and course. During previous contingencies operations, complete days were lost dealing with the complex issue of charts. The method discussed here allowed for quick turnaround (< 3 hours) from receiving potential spray areas to production of a usable spray chart. Nonetheless, mapping remains an integral and energy consuming portion of the mission. It is recommended to use a non-flying

crew member and/or entomologist to create charts to circumvent the problem of exceeding maximum duty day.

In addition to the mapping, navigation was also done using our new Wingman GPS navigation system. While the hardware in the aircraft worked admirably during the 2 week deployment, there were some issues with the computer based software, in that some of the mission logs were not being effectively recorded to an appropriate place on the computer where they could be observed and printed with information such as a time and date stamp, and aircraft information. To deal with these problems, a support call was made to the manufacturer of the system (ADAPCO), and technical representatives visited Barksdale to help iron out some of the problems. So far, the fixes seem to be working, and the manufacturer is working on revising some of the computer code to fix other quirky but non show-stopping issues with the software.

## 7. FLYING ACTIVITIES

- a. Developing a plan for unfamiliar areas: The aerial spray flight conducts training missions at DoD installations in CONUS as part of an ongoing pest control program for those installations. One critical component of these training flights is the preparation for the different types of terrain over which spray flights are conducted. In this response, spray areas varied all the way from flying over forested areas to flying over urban landscapes. All areas have hazards such as communications towers, power lines, other aircraft, birds, etc. While new charting technologies give a better projection of reality than was previously available, it is impossible to rely solely on charts. Upon reaching a new area, an aerial survey period was conducted at 300-500 feet above ground level (AGL). During the survey, the crew picked out ground reference points and obstacles from the air and confirmed them with the spray chart. Any flying hazards not appearing on the chart were noted. Following the aerial survey, a dry pass at spray altitude (150' AGL) was made to check the aircraft's heading, set drift kill, and make a Doppler wind reading. The onboard certified applicator (Entomologist) then determined if spray conditions were appropriate and signaled the crew to commence the application.
- b. Weather decisions: Spray operations always contend with weather. Some wind (3-5 knots) in at least a 45 degree crosswind component is desired. Strong winds or light and variable winds are not desirable. Weather conditions were generally outstanding during this mission except in the early days of the deployment. 19 and 20 October missions were cancelled due to inclement weather over the target areas. The Dibrom label indicates a maximum wind speed for application of 15 m.p.h. The decision to fly a spray sortie based on weather forecasts is made by the Mission Commander and Entomologist. Obviously, traveling 250 miles to begin spray operations only to find out that wind speeds are out of limits or that there are active thunderstorms is not good. Conversely, canceling on a weather forecast, and hearing later that conditions were excellent is discouraging as well. In practice, if the forecast was only marginally negative the mission went forward and a final determination was made once the spray area was reached. In the case where more than one area had been validated to receive sprays, bad weather could be avoided by choosing another area where conditions were more favorable. For example, the 23 October mission was diverted to Iberia Parish because of bad weather over the original targets in Jefferson and Plaquemines parishes.
- c. Communications: Four members from the 910<sup>th</sup> Communications Flight deployed to Barksdale. The role of communications in ground monitoring is discussed in Entomological Factors item 4. In short, the radio communications link could allow for aircraft to contact base operations approximately 40 minutes prior to landing. This gave the Mission Commander a reasonable lead time to plan if any contingencies had occurred during the sortie. Additional communications capabilities came from the use of Satellite phones in each aircraft that in many situations functioned better than the HF communications.

#### 8. PUBLIC AFFAIRS:

- a. Public Notification Procedures. The responsibility for notifying the public about aerial spray operations was assumed at the state level and coordinated with FEMA. A blanket statement which covers a given area for a given amount of time allows for the most flexibility in completing mission assignments and this is what was generally issued.
- b. Daily Reports: The Mission Commander issued a situation report (SITREP) generally within an hour of the completion of the evening's sortie(s). An example is included as attachment 8.
- c. News Conferences and news articles: Capt (b) (6) (b) (6) was the 910<sup>th</sup> Public Affairs representative who deployed initially to Barksdale, and then moved to FEMA's Baton Rouge facility in order to coordinate requests from news agencies for information concerning military mosquito sprays.

#### 10. LESSONS LEARNED

An after action report will follow to be submitted from the Aerial Spray Office after further discussion on items which can be improved upon.

Air Force Spray Flight

910 AW/PA  
YOUNGSTOWN AIR RESERVE STATION  
3976 KING GRAVES ROAD., UNIT 12  
VIENNA, OH 4473-5912

Dear Major (b) (6) and Captain (b) (6)

On September 13, 2008, Governor Bobby Jindal and I requested that the Air Force Reserve 757th Airlift Squadron (AS) be tasked to conduct aerial spray operations for mosquito infestations in the Hurricane Ike storm surge-affected Coastal Parishes of Louisiana. The mission of 757AS was to eradicate disease carrying and nuisance mosquitoes in the aftermath of Hurricane Gustav.

In response to this request the 757AS, commanded by Lt Col (b) (6) established operations from Barksdale Air Force Base, LA. The operation sustained and supported two Modular Aerial Spray System-equipped C-130 aircraft and 54 associated personnel and equipment from the 910 Airlift Wing (AW), Youngstown ARS Air Force Reserve Corps.

The 910thAW is the only unit in the Department of Defense tasked to maintain a full-time, fixed-wing aerial spray capability. Four specially modified C-130H aircraft from the 910th are used to conduct aerial spray missions to control insects, vegetation on military installations and oil spills.

Barksdale AFB was chosen as the base of operations for the aircrews and maintenance personnel because of its proximity to the spray area, ability to handle C-130H aircraft and ability to support the mission without conflicting with other relief efforts.

The 757 AS was ready for commencement of operations on September 18, but inclement weather precluded applications until September 21st, when the first mission was flown over Terrebonne Parish. The final mission will be a re-treatment of sections of Terrebonne Parish where mosquito counts have again risen above threshold limits. All treatments were done at the request of and in conjunction with the parish governments and their mosquito abatement districts. Following the completion of this mission, the 910 AW is hereby released from its mission in Louisiana.

**SITUATION:** Mosquito infestations in many Areas of Louisiana. The 757th AS has been requested by the Louisiana Governor and Louisiana Public Health Department, tasked by the SECDEF to conduct Aerial Spray Operations in these infested areas. The mission of Aerial Spray is to eradicate disease carrying mosquitoes in the aftermath of Hurricane Gustav.

**Current Objective Areas:** Lafourche Parrish/Terrebonne Parrish. B PLAN – Iberia Parrish.

**WEATHER DISCUSSION:** Isolated thunderstorms were forecast in areas of southern Louisiana until after sunset. Iberia Parrish (B PLAN) was forecast to be CAVOK. Ceilings were forecast to be better than 2000 feet overcast, in and around the Objective Areas. Winds were light and variable from the east.

## 1. OPERATIONS/CONCEPT OF OPERATIONS.

1.A. The 757 AS (P), in response to JOINT STAFF WASHINGTON DC EXORD, is established. Lt Col J.D. Williams, 757 AS/CC is commanding the squadron operation, from Barksdale AFB, LA, to support three Modular Aerial Spray System (MASS) equipped C-130 aircraft and associated personnel and equipment from the 910AW, Youngstown ARS, OH (AFRC)

## 2. SIGNIFICANT EVENTS/MISSION TOTALS

UNIT	DEPLOYMENT				SPRAY MISSIONS				SUPPORT				REDEPLOYMENT			
	SORT	HRS	PRSNL	CRG TONS	SORT	HRS	ACREAGE	GAL	SORT	HRS	PRSNL	CRG TONS	SORT	HRS	PRSNL	CRG TONS

PREVIOUS DAYS TOTAL					2	3.1	0	0								
CUMULATIVE TOTALS	5	15.7	56	14.3	4	13.3	80,108	414								

2.A. **SIGNIFICANT EVENTS PAST 24 HOURS:** 2 missions were launched to the primary objective areas – Terrabone/Laforuche. Iberia was planned and briefed as the weather backup. Spray 05/08 took off as scheduled and surveyed the spray areas prior to the “spray on” time. Sunset was 0000Z. Spray 08 RTB’d with a minor radar problem, but launched in time to meet the spray on window, two hours prior to sunset. Civil Air Patrol took photography of tonight’s mission in Lafourche Parrish. Capt (b) (6) 910 AW/PA remains TDY to Baton Rouge, LA in support of AFNSEP.

2.B. **SIGNIFICANT EVENTS NEXT 24 HOURS:** 2 Missions are scheduled for chemical dispersal in Terrebone Parrish/Lafourche Parrish to finish several odd shaped areas. With good weather, we expect to complete these areas tomorrow night. Iberia Parrish is the weather backup. Takeoff time is 2030Z. Local media/interviews scheduled at 1900Z, Barksdale AFB, LA, with assistance from the 917 FW/PA.

2.C. **SIGNIFICANT EVENTS >24 HOURS:** 2 x Comm personnel expected to return to Youngstown ARS.

2.D. **REQUESTS FOR ASSISTANCE (RFA):** NONE

2.E. **REQUESTS FOR INFORMATION:** NONE

3. **LOGISTICS:** 3 x C-130 MASS FMC/2 x C-130 Aircraft FMC/1 x C-130 Aircraft NMCMU for #4 oil quantity transmitter (ETIC, parts + 2 hours). Expect 3 Aircraft FMC for tomorrow.

3.A. **SIGNIFICANT LOGISTIC CHANGES:** 3 x C-130 Aircraft FMC.

MEMORANDUM FOR 757AS/DO

FROM: 757AS/DOS

SUBJECT: Pest Management Professional's Post Mission Report JTF Katrina/Rita

**1. SUMMARY**

On 8 September 2005, the 910<sup>th</sup> AW, Aerial Spray Flight deployed to conduct aerial spray operations for mosquito and filth fly control in support of the Federal Emergency Management Agency (FEMA) Hurricane Katrina relief effort and were officially tasked to the Joint Task Force (JTF) Katrina on 9 September 2005. Two spray aircraft, one spare aircraft, and three crews were placed at Duke Field, Florida. A total of 53 people were involved with the flying, entomology, maintenance, administrative, communication and life support issues relating to the mission. Following the landfall of Hurricane Rita (24 September), the State of Texas (TX) also requested mosquito control in counties affected by the storm. Still working from Duke Field, one plane sprayed in each state until Louisiana (LA) was complete, then both planes concentrated on completing the TX spray blocks. The mission was complete on 14 October 2005 and redeployment to Youngstown ARS, Ohio occurred on 18 October after spraying a total of 2.88 million acres.

**2. BACKGROUND:**

Hurricane Katrina made landfall on 29 August near Buras, LA. Prior to reaching LA, it crossed Florida as a Category 1 storm. Gathering strength in the Gulf of Mexico, Katrina became a Category 5 storm and eventually made landfall south of New Orleans as a Category 4 storm with 145 mph winds. Hurricane Katrina caused extensive damage as would be expected from such a powerful storm. High winds downed trees and destroyed homes, while heavy rain caused extensive flooding. When some levies in New Orleans collapsed, the City's worst nightmare was realized as widespread flooding ensued. Water rushed into homes and overran water treatment facilities to the point where travel by boat became most efficient. Pre-hurricane evacuations had been incomplete in New Orleans and the flooding now exacerbated the evacuation problem and significantly increased the difficulty of relief efforts. One major concern was the potential for filth fly production from habitat created by fecal contamination, muck, trash, and animal carcasses. It was the filth fly concern that prompted the quick deployment of the Aerial Spray Flight. The secondary concern was that Louisiana already had a background of West Nile Virus (WNV) circulating in mosquito pools and birds. The potential for a serious encephalitis outbreak is increased by post-hurricane conditions. In particular, power outages and living in temporary shelters expose people to additional mosquito bites. By early September 62 cases of WNV had been reported in LA and Mississippi and, thus, mosquito control was considered a high priority in the strategy to protect public health.

### 3. RESULTS:

A total of 2,880,622 acres were sprayed with 14,313 gallons of Dibrom during spray operations for JTF Katrina and Rita. In LA, 1,942,607 acres were and in TX, 938,015 acres. Over 19,000 man hours were spent in support of this operation. See attachment 1 for additional information and attachment 2 shows all areas sprayed. Aerial applications were very effective in reducing numbers of flies and mosquitoes. Military entomologists and the CDC entomologist observed first hand flies (sarcophagids, muscids, calliphorids, etc) suffering heavy mortality even within 15 minutes after spraying. Statistical data was not generated for fly control because of evacuations and limited personnel for surveillance during this timeframe. In contrast, mosquito control was well documented and nearly all areas showed reductions greater than 90%. In many cases mosquitoes disappeared completely for a period of time after the application.

### 4. OPERATION LOCATION:

Duke Field which is a 45-60 minute ferry flight was chosen as a base of operation because it was relatively proximal to the area of impact yet far enough removed to minimize the effects of the damaged infra-structure. The intelligent decision was to trade some ferry time for access to C-130 maintenance support, accommodations, vehicles, and fuel. The Duke Field Base Commander was extremely supportive, and it is difficult to imagine a better work environment. Essentially given a hanger to operate out of, this building included two air conditioned offices with telephones and computers. The Duke Field Communications Squadron established internet accounts and telephone lines for the operation. The choice to trade some ferry time for C-130 maintenance support yielded dividends on two occasions, first when an aircraft received leading edge wing damage, and later with an engine problem. Both incidences were the result of bird strikes, and both would have grounded the aircraft potentially for weeks if it were not for immediate access to C-130 support. It should be mentioned that the maintenance support received from the Duke Field went well beyond a normal support function; their staff worked around the clock, after the aforementioned events, to get spray planes back in the air after only 24 hrs!

### 5. ENTOMOLOGICAL FACTORS:

- a. Pesticide: Dibrom Concentrate was the pesticide chosen by the State of Louisiana (LA) and Texas (TX). This material is widely used in adult mosquito control operations in LA and has a historical precedent for use following mosquito outbreak emergencies. It is noted here that no DoD agency made recommendations for the use of a particular insecticide, but rather served as the applicator of a product chosen by the requesting State. It is for this reason that this unit trains with more than a single type of pesticide to have experience using many types of pesticides prior to actual contingencies and know how a particular material functions with the application equipment. The Spray Flight is very familiar with using Dibrom and has reported often on the efficacy of such sprays. This is certainly a positive aspect for using this chemical. However, Dibrom is very heavy and at times planes became weight-limited in regard to pesticide load, especially during applications at 0.75oz/acre over large spray blocks. The pyrethroid Anvil is less than half the weight of Dibrom and could have increased spray time and acreage on some sorties, but may not be as effective against some mosquito species.
- b. Spray areas: All spray boundaries were established by the State Entomologist with advisement from CDC entomologists and, where appropriate, from Air Force entomologists. For example, in LA, a strict criteria was followed to determine qualification to receive military sprays: 1. to receive sprays an area needed to be without a Mosquito Control District (MCD) and have some form of insect surveillance to verify a need for mosquito control; 2. If a Parish MCD had been temporarily disabled because of the storm, such a parish was also eligible to receive a military applied spray. The

preferred method for receiving spray areas was in electronic format. Specifically this meant that files were delivered using the \*.shp file format which functions with geographical information systems (GIS). This method assures that the boundaries are exactly as the state requested. This method was used for the majority of spray areas in LA. In TX, electronic maps were e-mailed or hardcopies faxed. See section 6 for more information on mapping aspects.

- c. Insect surveillance & efficacy: Validating the need for an area to receive military sprays was extremely important in prioritizing spray areas. The CDC entomologist was very helpful in this regard. Qualitative or anecdotal accounts of mosquito densities were not normally an acceptable means. Realizing that normal functions of local MCDs were compromised, a basic method of measuring mosquito densities (landing rates of mosquitoes per minute of time) was accepted. The level of expertise in identifying and monitoring mosquito populations was robust throughout both states and in communities where no formal MCD existed, direct mosquito landing rate counts functioned well, even if performed by individuals without entomological training. In general, reductions of greater than 90% were reported from the field. After Hurricane Rita, an emergence of *Psorophora* spp. was intense enough that the application rate was increased to 0.75oz/acre in order to maintain an appropriate level of control. It was particularly fortunate, that Air Force entomologists from the Air Force Research Laboratory at Brooks City Base, TX were released by their Commander to support the 910<sup>th</sup> AW mission on the ground in TX. Two active duty and one civilian entomologist worked for over two weeks gathering pre and post spray data on mosquito landing counts and trapping data. Data is shown for the TX spray block Skeeter2 in attachment 3. As the local MCDs operations return to normal it is expected that they will pass forward efficacy data. It is projected that this information will be compiled and eventually published in a scientific journal.
- d. Spray monitoring. All spray operations were directed by an onboard AF entomologist, certified in EPA category 11 for pesticide application. Both LA and TX recognized DoD pesticide applicator certification through a reciprocity program and confirmed such in writing. The majority of flights were also observed by DoD entomologists on the ground. While not mandatory, the role of these individuals was to gather environmental and biological data on the ground, confirm that the plane was operating safely, and lastly to serve as a spokesperson for the flight. In New Orleans, Navy entomologists and preventative health technicians participated in this role. Air Force Research Laboratory entomologists worked exclusively in this capacity in TX. In theory, ground monitors could use their mobile/satellite phones to relay information to base operations at Duke Field, in turn, the communications specialist could then relay that information on the high frequency antenna back to the airplane. Unfortunately, in practice, this did not prove effective. Satellite phones may be a quick fix for this problem in the future. Calls to Duke Field from entomologists in the field did serve the purpose of updating the Mission Commander of the status of the operation and environmental conditions during the application.
- e. Spray timing: Timing insecticide applications with the period of maximum exposure of the target pest is a critical component of any pest control operation. Different mosquito species have different periods of activity and certainly flies are more active during the day than at night. Keeping these facts in mind, as well as considering the best way to avoid killing bees, a spray schedule was created to include only the final two hours of daylight for mosquito control and three hours prior to sunset for fly control. Since fly control was only conducted in urban areas, there was less concern with causing honeybee mortality in these spray blocks. No negative feedback from beekeepers has been received

and it is believed that this was a highly successful policy. Operating under strict time constraints, large spray blocks were required for the C-130 airframe to be most effective. That is to say, the ability to rack up acreage would have been seriously hampered by multiple geographically separated spray blocks. Such spray blocks would require many more turns, equating to more time with the spray system off. Small blocks are better sprayed by smaller aircraft while large blocks better utilize the C-130's size and speed.

- f. Spray configuration: Fuselage booms with stainless steel flat fan (Tee Jet) nozzles were used. Sizes 8005 for mosquito control and 8008 for fly control were used. The number of nozzles open was calculated to maintain approximately 40 pound per square inch pressure in the spray lines.
- g. Spray swaths. Several swath widths were used during the operations. For filth fly control 1,000' foot swaths were used for more even control. This configuration is used during normal spray operations for biting flies at the Parris Island MCRD, SC. For adult mosquito control a 2,500 foot swaths was used in areas with a crosswind, which is the Spray Flight's accepted contingency swath width (routine mosquito control operations are conducted with 2,000 foot swaths). Data supporting the 2,500 foot swath width using caged mosquitoes has been previously reported on and presented in military and scientific venues. During sorties when there was very little wind, a 1,500 foot swath width was used.
- h. Application rates: The amount of chemical applied against a certain pest was determined by the state point of contact (POC) after consultation with Air Force and CDC entomologists. Against flies, the maximum mosquito control rate for Dibrom was applied (1.0 oz/acre). The operation began in LA using 0.5 oz/acre for mosquito control. Following the arrival of Hurricane Rita, woodland mosquito species appeared in large numbers and subsequently, the half ounce per acre was only reducing populations not eliminating them. Increasing the rate to 0.75 oz/acre was effective in eliminating these dense populations of mosquitoes. Later, 0.62 oz/acre was sufficient to eradicate local mosquito populations as numbers began to decrease. All spray systems were calibrated prior to leaving home station.
- i. Spray maintenance: Personnel from Spray Maintenance loaded and physically configured the aircraft on a daily basis. With over 46 hours of spray-on time during this mission the spray systems worked more in 5 weeks than in the previous 3 years of spray, to put such activity in perspective. Thus, the systems had tremendous demands placed on them. On one occasion, a main pump shaft seal failed resulting in fumes in the aircraft. Smoke and fume elimination procedures were accomplished, the crew donned oxygen masks and returned to Duke Field. Upon landing, the crew visited the Eglin AFB Clinic, were evaluated and released as asymptomatic to organophosphate exposure (information available on AMC Form 97). Apart from this instance the MASS units performed flawlessly which is a testament to the professionalism of the Aerial Spray Maintenance Flight.

## 6. MAPS

Mapping and chart making has previously been the bane of contingency aerial spray operations. The problem previously was in obtaining charts and matching swath lines on charts with those created in the software directing the onboard GPS. A simple solution has been developed in the Aerial Spray Office which is partly the product of the digital age (digital maps available). Using a relatively affordable software program (approx. \$300) charts are viewed on a computer utilizing USGS topographic maps in 15- and 7.5 minute series (DeLorme X-Map version 4.5). Polygons can be directly drawn on the topographic

background where the borders of important landmarks are readily seen (roads, water bodies, parish or county borders, wildlife areas, etc). This was one role for the forward deployed entomologist, particularly early on in LA. Next the actual proposed path of the aircraft is drawn over the spray areas. This path is the lane separation or swath width and was previously drawn on charts by hand which introduced some error. These polygons or spray blocks are then exported as shapefiles (\*.shp). A shapefile is a computer graphic representation of geographic features with lat/long coordinates associated with it. These shapefiles can then be directly entered into the spray plane's GPS software. Shapefiles were also entered into the software program FalconView, a flight planning tool universally used by the Air Force. This allowed intended flight paths and potential obstacles to be added to the charts before they were printed on a large scale printer. Additionally, navigators had the option to use FalconView on a laptop during the spray sortie, creating another platform to confirm position and course. During previous contingencies operations, complete days were lost dealing with the complex issue of charts. The method discussed here allowed for quick turnaround (< 3 hours) from receiving potential spray areas to production of a usable spray chart. Nonetheless, mapping remains an integral and energy consuming portion of the mission. It is recommended to use a non-flying crew member and/or entomologist to create charts to circumvent the problem of exceeding maximum duty day.

## 7. FLYING ACTIVITIES

- a. Developing a plan for unfamiliar areas: The aerial spray flight conducts training missions at DoD installations CONUS as part of a ongoing pest control program for those installations. One critical component of these training flights is the preparation for the different types of terrain over which spray flights are conducted. In this response, spray areas varied all the way from flying over forested areas to flying over urban landscapes (e.g., downtown New Orleans). All areas have hazards such as communications towers, power lines, other aircraft, birds, etc. While new charting technologies give a better projection of reality than was previously available, it is impossible to rely solely on charts. Upon reaching a new area, an aerial survey period was conducted at 300-500 feet above ground level (AGL). During the survey, the crew picked out ground reference points and obstacles from the air and confirmed them with the spray chart. Any flying hazards not appearing on the chart were noted. Following the aerial survey, a dry pass at spray altitude (150' AGL) was made to check the aircraft's heading, set drift kill, and make a Doppler wind reading. The onboard certified applicator (Entomologist) then determined if spray conditions were appropriate and signaled the crew to commence the application.
- b. Weather decisions: Spray operations always contend with weather. Some wind (3-5 knots) in at least a 45 degree crosswind component is desired. Strong winds or light and variable winds are not desirable. Weather conditions were outstanding during this mission and outside of the 5 days of weather cancellations during which Hurricane Rita passed, only 1 other cancellation was because of inclement weather. The Dibrom label indicates a maximum wind speed for application of 10 m.p.h. The decision to fly a spray sortie based on weather forecasts is made by the Mission Commander and Entomologist. Obviously, traveling 300 miles to begin spray operations only to find out that wind speeds are out of bounds or that there are active thunderstorms is not good. Conversely, canceling on a weather forecast, and hearing later that conditions were excellent is discouraging as well. In practice, if the forecast was only marginally negative the mission went forward and a final determination was made once the spray area was reached. In the case where more than one area had been validated to receive sprays, bad weather could be avoided by choosing another area where conditions were more favorable. For example, thunderstorms in LA on 6 October forced a sortie cancellation in that state but two planes then flew in TX where conditions were fine.

- c. Communications: Two members from the 910<sup>th</sup> Communications Flight deployed to Duke Field. The role of communications in ground monitoring is discussed in Entomological Factors item 4. In short, the radio communications link allowed for aircraft to contact base operations approximately 40 minutes prior to landing. This gave the Mission Commander a reasonable lead time to plan if any contingencies had occurred during the sortie. Later during the mission, the full capacity of the high frequency antenna was realized and communication with the spray aircraft and base operations at Duke Field was possible throughout the sortie.

#### 8. PUBLIC AFFAIRS:

- a. Public Notification Procedures. The responsibility for notifying the public about aerial spray operations was assumed at the state level for both LA and TX and coordinated with FEMA. Sample news releases are included in attachments 4 & 5. A blanket statement which covers a given area for a given amount of time allows for the most flexibility in completing mission assignments.
- b. Daily Reports: The Mission Commander issued a situation report (SITREP) generally within an hour of the completion of the evening's sortie(s). In addition, a daily "entomologist spray report" further served as a way to inform key military and civilian parties on the progress of the mission. The entomologist's report was written from the pest manager's point of view and contained a picture image of the areas sprayed (when possible), the flight of the aircraft, efficacy data on the reduction of mosquitoes or flies (where available), and the next day's projected spray area. An example is included as attachment 6.
- c. News Conferences and news articles. A 910<sup>th</sup> Public Affairs representative deployed to Duke Field and helped coordinate requests from news agencies for information concerning military mosquito sprays.

#### 9. CONTACTS:

##### a. FEMA

(b) (6) , Federal Coordinating Officer  
(b) (6) Capt, DCO TX (USA)

##### b. State of Louisiana

(b) (6) , Deputy Assistant Secretary, Office of Public Health  
(b) (6) , Medical Entomologist, Office of Public Health

#### 10. LESSONS LEARNED

An after action report will follow to be submitted from the Aerial Spray Office after further discussion on items which can be improved upon.

#### 11. ACKNOWLEDGEMENTS

The success of this operation was a direct result of an amalgamation of individuals who have trained and studied within their disciplines to develop a level of excellence in what they do professionally. In particular, Dr. (b) (6) and Mr. (b) (6) formed a synergy which administered aerial sprays in a timely manner in LA during a period of high entropy. All of the personnel at Duke Field, Florida deserve the Aerial Spray Flight's gratitude for being such amiable and gracious hosts. The entomologists and their commanders from the Air Force Research Laboratory also warrant special mention since their activities yielded important scientific information on the efficacy of these application methods. All FEMA, DoD, and State personnel involved with the mission provided excellent support.

### **LDHH Implements A Vector Control Management Plan**

The Louisiana Department of Health and Hospitals (LDHH) has developed a management plan in anticipation of the hatching of mosquitoes and flies due to the massive flooding in the area. Vector (disease carrying organisms) control is needed to protect public health from nuisances and diseases transmitted by mosquitoes and flies.

The LA DHH in coordination with LDAF, CDC, ATSDR, US EPA, DoD and in consultation with parish Mosquito Control Districts is implementing a vector control plan to reduce mosquitoes and flies in the areas affected by Hurricane Katrina.

Aerial application of routinely used pesticides, primarily Naled, will begin Sunday, September 11, 2005 on the East Bank of the Greater New Orleans area and surrounding areas. The spraying will occur during the last 3 hours of daylight. The US Air Force will conduct the aerial applications to assist vector control activities normally conducted by parish and local mosquito control districts.

The spraying will use the same pesticides as routinely sprayed to control mosquitoes in the south Louisiana region. "The timely initiation of preventive measures to control mosquitoes and flies is necessary to reduce the risk of vector-borne diseases" said Dr. (b) (6) .

Naled is a pesticide routinely used by Mosquito Control Districts in Louisiana. Naled is approved by US EPA and will be applied according to that agency's application rates. Studies have shown that Naled does not impact on human health or the environment when used for mosquito control.

The vector management plan will continue based on field monitoring of mosquitoes and flies in the region.

For more information call the Louisiana Department of Agriculture and Forestry's pesticide hotline at 225-925-3763.

October 13, 2005

### **Air Force to Spray in Hardin, Jasper, Newton, Orange Counties**

The Texas Department of State Health Services (DSHS) announced today that post-Hurricane Rita aerial spraying for mosquitoes will begin tomorrow afternoon in Hardin, Jasper and Newton counties and that spraying will continue in part of Orange County.

The spraying is to prevent the possible spread of mosquito-borne illnesses, such as St. Louis encephalitis and West Nile infection, and to reduce a proliferation of nuisance mosquitoes after heavy rains and flooding in Southeast Texas.

Specially equipped U.S. Air Force Reserve C-130H cargo planes from the 910<sup>th</sup> Airlift Wing will be used in the spraying operation.

The gray planes may be flying as low as 150 feet above ground level when spraying. The project is expected to take several days. Flights will begin two hours before dusk and last for four to six hours each day.

Dibrom, a U.S. Environmental Protection Agency-approved insecticide, will be used. The application rate is one ounce or less of Dibrom per acre. The spraying poses no hazard to humans, animals or plants.

However, beekeepers in the region should take protective measures to prevent damage to their hives.

Aerial spraying was recently completed in Jefferson, Chambers and Liberty counties and in part of Orange County.

Attachment 6. Entomologist's Spray Report 14 September 2005.

Last night (14 Sept) the southern spray block of "Bug1", which included the heavily urbanized, downtown sections of the Orleans Parish was sprayed. Spraying began approx. 3 hrs prior to sunset in order to target filth flies. We used a 1000ft swath; 1 oz Dibrom/acre to treat 58,496 acres. See image below.

While on the ground in the French Qtr, we observed flies (sarcophagids, muscids, calliphorids, etc) which suffered heavy mortality even within 15 minutes after the spray pass. I expect that the fly problem will be largely eliminated as soon as they begin remove the trash bags from these areas. The fact that most of the trash we have encountered had been put into plastic bags has contained the fly problem which could have been much worse. Flies that were resting on the sides of building or especially in trees near garbage piles were obviously more impacted by the sprays than those flies under canopies or crawling around under the trash bags/piles. Environmental parameters were excellent yesterday evening again with partly cloudy skies and a light steady wind 3-6 knots @180-210°. Temperatures were in the high to middle 80's. We expect good control from such conditions and we hope they hold.

Tonight (15 Sept), the 1 AF CAT has approved Washington Parish ("Bug 3 & 4) as the next priority and it is scheduled to be sprayed (0.5 oz/acre Dibrom with 2,500 ft swaths for treating woodland and floodwater mosquitoes e.g., *Ps ferox*; *Ae vexans*). These blocks will require more than one sortie. Approx. 390,000 acres.

MEMORANDUM FOR 757 AS/DO

FROM: 757 AS/DOS

SUBJECT: Swath Characterization Test and Training Mission, Langley AFB

**1. Purpose:** To confirm an appropriate swath width when spraying ULV insecticides with fuselage booms. This test was a continuation of fuselage boom testing from Dec03 and Jan04, which showed a 2,000 ft swath width was obtained with mineral oil sprays. The current test reported here, used naled, further characterized the swath width, and confirmed insect mortality along the length of the effective swath by using caged, live mosquitoes. We propose to use the fuselage configuration for most ULV applications because it can be configured quickly, without the need of additional equipment, as is the case for the wing booms. The fuselage configuration will decrease our footprint in theater when the Spray Flight deploys. Finally, the high-pressure spray system, under development, will also use the fuselage boom configuration, so we are generating baseline data for comparison when the new system becomes available.

**2. Participants:** A list of test participants are included in attachment 1.

**3. Spray Configuration:**

Mass-SP2G  
Aircraft Number: 99105  
Mission Identifier: QZNRKA153

**4. Spray Parameters:**

Booms—Fuselage only.  
Nozzles—8008 TeeJet.  
Number of Nozzles—3 and 4 per side respectively, oriented straight down.  
Airspeed—200 knots ground speed.  
Altitude—150' and 500' AGL.  
Wind—90 degree crosswind component.

**5. Itinerary:**

01 June: Personnel Arrive at Langley AFB, VA. Total ferry time was 1.5 hours.  
02 June: No sorties flown. Winds out of bounds for spray; waiting for public notification for Craney Island area.  
03 June: One testing sortie flown with 2 individual tests completed.  
04 June: Return to Youngstown ARS. Ferry time 1.4 hours.

## 6. Methods:

Ten data collection stations were setup with spinning impingers (“spinners”) and placed in a west-east orientation along an access road on the north end of Craney Island (see attachment 2). Spinners were located 700’ apart and were equipped with Teflon-coated microscope slides to document droplet size and drift distance from point of release. Collection points also included caged mosquitoes as bioassays. Mosquitoes were collected the night before and placed 25 individuals per cage (73% *Culex salinarius* : 12% *Ochlerotatus sollicitans* : 15% other). Two cages with mosquitoes served as controls and were deployed an hour prior to the application and then transferred outside the spray area. The aircraft flew a spray pass north to south along the east access road on Craney Island, perpendicular to the line of spinners. Spray-on time was 60 seconds, half of which was dispensed prior to the aircrafts’ point of intersection with the collection transect. During the first test, aircraft offset was 200 ft from the 1<sup>st</sup> spinner location on the first pass and by 1000’ on the second. Aircraft altitude was 150’ AGL and flow rate was reported as 3.9 gal/min. Following a 30 minute waiting period, microscope slides and mosquitoes were collected to be counted later and were replaced with fresh slides and bioassay cages. Mosquitoes were transported immediately to the laboratory where they were transferred to fresh holding containers. Mosquito mortality was determined at 2, 12, and 24 hr. intervals. The test was repeated with the same parameters, except a single pass was made rather than two. Spray droplets were measured under a compound microscope equipped with a reticule. The target number of droplets to be measured per slide was 100. Ground wind conditions were stable during both tests and winds were recorded during the first test between 60-95 degrees at an average speed of 5 knots. Winds at altitude were from the same direction but averaged 8 knots. During the second test ground winds were 106-138 degrees at an average speed of 6 knots (in the aircraft 140° @ 11 knots). The average flow rate for the first two passes was 4.0 gal/min and 3.4 gal/min for the single pass during the second test. Boom pressure was measured between 25-30 psi.

**7. Results:** Our findings here confirm our previous work determining the real swath width of the fuselage boom configuration. Results were outstanding with mosquito mortality at 100% over the first 2,000 feet in both tests validating our projected 2,000 foot swath for ULV mosquito control with fuselage booms. Twelve hour mortality data is shown graphically in attachment 3. The second test, which consisted of a single pass, resulted in 100% mortality of caged mosquitoes 3,500 feet downwind and 93% mortality at 4,900 ft downwind. The two caged mosquitoes serving as controls showed no mortality at the 12 hour mark and 12% mortality after 24 hours. Corresponding volume median diameter (VMD) values of droplets collected at downwind sampling stations are included in attachment 4. The relative size of droplets collected was greatest near the flight path of the aircraft, and dropped substantially as downwind distance from the flight path increased. Values for VMD established during these tests are similar to previous work with the fuselage boom configuration. The first test had a range between 22.6 to 5.8 microns over the 1.2 mile sampling transect while the droplets from the second test ranged between 19.3 to 5.9 microns.

**8. Conclusions:** Ultra Low Volume (ULV) mosquito control sprays using the fuselage boom configuration were shown to be an effective method of application with the USAFR C-130H spray system. High mosquito mortality combined with proper droplet

size make the fuselage configuration an excellent choice for adult mosquito control operations. Swath characteristics generated from the tests at Craney Island, VA are on par with previous tests of the C-130 ULV wing-boom configuration. Within the field of mosquito control, it is generally accepted that the most effective droplet size range is 7-22 microns. The current VMDs reported here largely fall within this range. In fact, the VMD ranges generated in this study are substantially smaller than are reported from smaller slower flying aircraft. Because the flat-fan nozzles used in the majority of aerial mosquito control operations rely on wind shear to break up droplets, the smaller VMDs reported here may be a result of the relatively high flight speed (200 knots) typical of the Air Force operation. Additionally, calculated droplet sizes using Teflon-coated slides is significantly smaller than the size of droplets measured in a wind tunnel with a Malvern laser. This is because the field method of using slides tends to bias the larger droplets, at the expense of excluding smaller droplet spectrum. While the exact correlation between underreported droplet sizes on Teflon slides and those measured with a laser is a work in progress, it is certain that the droplets described in this study are well within the acceptable range for mosquito control. Currently, there is not a domestic wind tunnel available that will accommodate the 200 knot requirement and allow chemical testing. Thus, a future research objective is to determine a coefficient that will allow for congruity between the field method of using Teflon-coated slides and laser/wind tunnel technology.

**9. Recommendations:** Use the fuselage boom configuration for adult mosquito control as needed to reduce operational footprint, maintenance configuration time, and chemical waste. Continue with preparations for implementation of high pressure system which will be designed to use a similar fuselage configuration. Further swath characterization with this configuration should be a testing priority with special attention given to additional pesticide formulations, efficacy in wooded areas, and different release altitudes.

**10. Acknowledgements:** Excellent work by both the Aircrew and Spray Maintenance helped assure a successful test. Langley AFB provided vehicle support. The Army Corps of Engineers gave access and approval to spray at Craney Island on short notice. The Portsmouth mosquito control staff offered their knowledge and technical support to the test.

YOUNGSTOWN AIR RESERVE STATION  
AERIAL SPRAY UNIT  
VIENNA OH 44473-5924

9 September 2008

MEMORANDUM FOR: FEMA

FROM: Colonel (b) (6)

SUBJECT: Air Force Aerial Spray Unit for vector control

1. In light of the recent hurricane activity, the resulting potential for transmission of mosquito-borne illness, and the impact on outdoor activities, including recovery efforts, I would like to confirm the ability of the Air Force Aerial Spray Unit as part of the emergency response package.
2. The Air Force Aerial Spray Unit trains year round maintaining the capability to respond to public health emergencies by participating in aerial spray operations in various locations throughout the United States. Our Unit always abides by federal, state, and local pesticide laws including any directions listed on a pesticide label. The Spray Unit has a great reputation among the Public Health Community, receiving the CDC's highest non-agency award in 2006, and a solid history for responding to vector control emergencies following Hurricanes. I am attaching documentation which describes the Spray Unit's history and success during Rita/Katrina efforts.
3. Response to past emergencies by the Unit has been swift. For example, following Hurricane Katrina the Unit was in place and ready to begin operations within 36 hours after receiving a Mission Assignment. Once assigned, the Unit has the largest capacity in the world to provide vector control! While private assets should be considered and utilized first, the requirements of a large area timely response may drive the need for utilizing the AF Spray Unit's large area spray capability.
4. During past hurricane relief efforts (Floyd and Rita/Katrina), the Spray Unit coordinated the purchase of pesticide and can do so again with approval and funding from FEMA. The host state has always selected the pesticide type. Therefore, use of the DOD as an aerial applicator should not result in a protracted waiting period.
5. When the Air Force Spray Unit is tasked for arthropod vector control, the cost per acre is relatively comparable to the civilian contractors. For example, if the Spray Unit had responded to Hurricane Dolly emergency mosquito spray applications, the estimated cost to FEMA would have been approximately \$0.95-1.01/acre. This value is based on cost estimates calculated to include aircraft flight hours, chemical acquisition, maintenance, personnel housing and transportation. This value is less than half what was charged by

commercial applicators using the same chemical based on costs posted in the Rio Grande Guardian 31 July. With good weather, the area could have been accomplished within 7 days of deploying the Unit with 2 C-130 aircraft spraying on an average 80K acres/day per aircraft.

6. Any further questions regarding the Air Force Aerial Spray Unit capabilities, operating practices, or ability to respond to a National Emergency can be directed to my point of contact: Maj (b) (6)

Regular labor of permanent federal agency personnel and overhead cost are not eligible for reimbursement except when costs incurred would normally be paid from a trust, revolving or other fund. The Financial Manager of the agency requesting reimbursement for these costs must provide written certification with the bill stating that costs would normally be paid from a trust, revolving or other fund.

Agencies that qualify and may be seeking reimbursement must submit certified annual overhead rate proposals to FEMA OFM/DFD for approval prior to billing. OMB Circular A-87 should be used as a guide for this purpose. Indirect cost pools must be defined to explain how the costs are derived and applied. Indirect rates should be negotiated with FEMA annually.

DHS FEMA VI  
IMAT - Operations Branch Director  
800 North Loop 288  
Denton, TX 76209

Dear Ms. (b) (6)

We have reviewed the landing count data provided to us by (b) (6) Texas Medical Entomologist, and others in Texas. Data sheets show that landing counts were made in a variety of locations within Hidalgo County on 7/29-30/2008. Most landing counts appear to have been conducted during daylight hours from 0730 to 1200, with a few collections made in the afternoon or evening hours. There are approximately 90 landing counts recorded that come from a variety of zones within the county, and the data appear to be representative of the flooded area.

Though there are a few areas with low counts (0-10), most are very high (30 or more per minute). This is consistent with observations from similar situations. The heavy rains associated with Hurricane Dolly have produced unusually large populations of floodwater mosquitoes across the affected area. Some of the species in these collections (based on identification provided by (b) (6) in a conference call) are quite mobile and can fly considerable distances from the larval habitats (floodplains, flooded pastures and fields, rice fields, standing water in woodlots) where they were produced.

We believe that biting mosquito populations at this density are having a significant impact on outdoor activities and are likely entering houses that are not adequately protected by window screens and/or air conditioning. It is also likely that evening/night time landing counts are even higher than recorded in the daytime counts, since most of the species encountered have their blood-feeding activity peaks in the evening and early nighttime hours. These are mosquito densities that would not be tolerated by most communities, even in normal situations where the community was not in the middle of recovering from a hurricane and flooding rains.

We believe that conducting aggressive mosquito control and providing repellents to residents and recovery workers are appropriate responses to this situation. Ground or/and aerial applications of mosquito adulticides when properly applied would provide short term relief from biting mosquitoes and benefit the recovery effort. Depending on the size of the area treated, weather patterns, and the mosquito species involved, the mosquito populations may rebound following treatment and may require re-treatment if the recovery operation is still in progress and exposure to the mosquitoes is unavoidable.

Applications of adulticides under the current conditions in Texas are addressed by the FEMA guidelines (see web site) which are copied or paraphrased below.

[http://www.fema.gov/government/grant/pa/9523\\_10.shtml](http://www.fema.gov/government/grant/pa/9523_10.shtml)

A large population of biting mosquitoes can pose an immediate threat to public health even when evidence of vector-borne diseases is not present or significant in the disaster affected area. Of particular concern are the following:

1. An extraordinary or unusual number of biting mosquitoes that can seriously impede response efforts. Workers that are required to work out-of-doors (i.e., debris removal operations, protection of damaged structures, restoration of power and telephone service, etc.) can often be significantly hampered in their work.
2. Housing may be compromised due to extended power outages (i.e., windows and doors are opened), which could increase the general public's exposure to mosquitoes. This could in turn result in secondary infections, especially among those with weakened immune systems such as the elderly, the very young, or the sick.

In addition, FEMA guidelines state:

Vector control measures may be eligible in the disaster area as emergency protective measures under 44 CFR §206.225(a)(3)(i). FEMA may provide reimbursement for such costs at the written request of the State or local public health officials after FEMA consults with the Centers for Disease Control and Prevention (CDC), based on the following:

2. A determination that a significant increase in the mosquito population and/or the change of biting mosquito species poses a threat to emergency workers who are required to work out-of-doors; thereby significantly hampering response and recovery efforts. Such evidence may include an abnormal rise in landing rates or trap counts, significant changes in species composition or estimate of infection rates, when compared to pre-disaster surveillance results.

We believe that the currently available data from Texas supports mosquito control activities such as adulticiding (e.g., ground and aerial applications), increased surveillance, and increased larvaciding. In addition, we feel that it is imperative that personal protective repellents be made readily available to residents, and recovery workers in the affected areas.

Sincerely,

August 2, 2008

MEMORANDUM FOR: Sandy Coachman, FCO  
FROM: Donald R. Fairley, REO  
SUBJECT: Vector Control in Cameron, Hidalgo and Willacy Counties for FEMA-DR-1780-TX

The purpose of this memo is to provide guidelines which must met in order to do aerial spraying in Cameron, Hidalgo and Willacy Counties.

1. Spraying must be the direct result of declared health and safety risk.
2. Spraying must be complete prior to August 23, 2008
3. Spray must be an adulticide (a pesticide designed to kill adult/mature mosquitoes).
4. The only approve chemicals are:
  - Products within the Pyrethrum family
  - Bayluscide
  - Dibromo/Bromex
5. Spraying is restricted to urban areas and Colonias. The attached map shows the aerial spraying target areas. However, within the target region, there are restricted zones which must not be sprayed. These sensitive areas are designated as Federal Lands/Sensitive Areas and Texas Parks and Wildlife Areas. Spray routes must be developed to avoid these sensitive areas and protect them from the effects of over-spray.

These parameters have been coordinated with the U.S. Fish and Wildlife Service (USFWS) and Texas Parks and Wildlife Department (TPWD) to insure compliance with the Endangered Species Act and other appropriate laws and regulations.

## Mosquito Spraying

### Justification:

In order for a state to request mosquito spraying or reimbursement for mosquito spraying, they must first provide one of the following support documents:

- Landing counts in accordance with CDC guidance, and/or
- Trapping and evidence of disease carrying mosquitoes in accordance with CDC guidance.

These methods must determine that the mosquito population meets the nuisance criteria through the landing counts or clearly identify that the current mosquito population is disease carrying, thereby creating a public health concern. This determination must be made by CDC in coordination with state and local health departments.

### Coordination Agencies:

Once the above criteria are met, coordination/approval with the following entities must occur:

- Approval from US Fish and Wildlife. This coordination usually performed by FEMA Environmental representative must include support documentation such as:
  1. Spraying must be the direct result of declared health and safety risk.
  2. Spraying must be complete prior to date determined by US Fish and Wildlife.
  3. Spray must be an adulticide (a pesticide designed to kill adult/mature mosquitoes).
  4. The only approved chemicals are:
    - Products within the Pyrethrum family
    - Bayluscide
    - Dibromo/Bromex
  5. Spraying is restricted to urban areas. Within the target region, there are restricted zones which must not be sprayed. These sensitive areas are designated as Federal Lands/Sensitive Areas and State Parks and Wildlife Areas. A preventative half mile to one mile buffer zone around these areas may be requested. Spray routes must be developed to avoid these sensitive areas and protect them from the effects of over-spray.
- If the State conducts the spraying additional coordination with following may need to occur:
  - Federal Air Administration (FAA)
  - Federal Prison Facilities
  - Customs and Border Patrol if spraying along a border area.

If the State does conduct spraying and wants costs to be reimbursed under Public Assistance they must meet the criteria outlined in *Eligibility of Vector Control (Mosquito Abatement) RP9523.10*.

- If FEMA determines to conduct the spraying using Stafford Act funds under DFA, two options are available:

- Contract with a commercial aerial applicator provider, licensed to spray mosquitoes. **This is the preferred option.**
- The second option is to Mission Assign Department of Defense (DOD). If this option is activated, in addition to the above coordination with CDC, USFWS, FAA, CBP (border areas) coordination must also be done with US Environmental Protection Agency and potentially Government Services Administration. DOD does not purchase chemicals for spraying and does not spray in accordance with the manufacturer's pesticide label. As a result, additional coordination with GSA to potentially purchase the chemical and coordination with EPA and CDC to ensure appropriate application of the chemical occurs. This generally results in a waiver from EPA. This process is a lengthy and time consuming process and can take up to a week or more to conduct all the coordination with state and federal agencies prior to movement of any personnel or aircraft.

### Justification for Emergency Mosquito Control Work

As a result of extremely high levels of rainfall and resulting flooding, at least eight counties are experiencing greatly increased levels of mosquitoes. The flooding has resulted in exponentially larger areas of habitat for mosquito production. Surveillance traps have collected in excess of 150,000 mosquitoes per trap night in some areas, with landing rate counts of 200 per minute.

At these mosquito population levels, recovery activities, such as debris removal and road and sewer repair, are delayed or postponed, and return to normal economic activity is severely impacted. Participation in outdoor activities is almost impossible, and exposure to extreme levels of mosquito bites for school age population at typical school transportation pickups is a major concern. In some areas, severe impacts on livestock are being reported.

These high population levels may also result in increased exposure of residents to arthropod borne virus (arbovirus) diseases, such as West Nile Virus (WNV) diseases. West Nile virus activity is still at low levels in the impacted area, but the greatly increased mosquito populations and increased exposure to residents, increases the potential for disease transmission if amplification in bird populations was to occur. Peak activity for WNV is between August and October in Florida. Due to the time lag between infection and the onset of clinical symptoms, high rates of infection will not be evident until several weeks after exposure. Delaying action until infection rates are evident is not an option, since high rates of infection will have already occurred.

The counties affected at this point are: Baker, Brevard, Dixie, Glades, Hendry, Madison, Okeechobee, Union and Volusia. Additional counties may be identified within the next week as mosquito populations increase.

VIENNA OH 44473-5924

1 November 2005

MEMORANDUM FOR 757AS/DO (Maj (b) (6))

FROM: 757AS/DOS (Maj (b) (6))

SUBJECT: Pest Management Professional's Post Mission Report

1. SUMMARY

On 8 September 2005, the 910<sup>th</sup> AW, Aerial Spray Flight deployed to conduct aerial spray operations for mosquito and filth fly control in support of the Federal Emergency Management Agency (FEMA) Hurricane Katrina relief effort and were officially tasked to the Joint Task Force (JTF) Katrina on 9 September 2005. Two spray aircraft, one spare aircraft, and three crews were placed at Duke Field, Florida. A total of 53 people were involved with the flying, entomology, maintenance, administrative, communication and life support issues relating to the mission. Following the landfall of Hurricane Rita (24 September), the State of Texas (TX) also requested mosquito control in counties affected by the storm. Still working from Duke Field, one plane sprayed in each state until Louisiana (LA) was complete, then both planes concentrated on completing the TX spray blocks. The mission was complete on 14 October 2005 and redeployment to Youngstown ARS, Ohio occurred on 18 October after spraying a total of 2.88 million acres.

2. BACKGROUND:

Hurricane Katrina made landfall on 29 August near Buras, LA. Prior to reaching LA, it crossed Florida as a Category 1 storm. Gathering strength in the Gulf of Mexico, Katrina became a Category 5 storm and eventually made landfall south of New Orleans as a Category 4 storm with 145 mph winds. Hurricane Katrina caused extensive damage as would be expected from such a powerful storm. High winds downed trees and destroyed homes, while heavy rain caused extensive flooding. When some levees in New Orleans collapsed, the City's worst nightmare was realized as widespread flooding ensued. Water rushed into homes and overran water treatment facilities to the point where travel by boat became most efficient. Pre-hurricane evacuations had been incomplete in New Orleans and the flooding now exacerbated the evacuation problem and significantly increased the difficulty of relief efforts. One major concern was the potential for filth fly production from habitat created by fecal contamination, muck, trash, and animal carcasses. It was the filth fly concern that prompted the quick deployment of the Aerial Spray Flight. The secondary concern was that Louisiana already had a background of West Nile Virus (WNV) circulating in mosquito pools and birds. The potential for a serious encephalitis outbreak is increased by post-hurricane conditions. In particular, power outages and living in temporary shelters expose people to additional mosquito bites. By early September 62 cases of WNV had been reported in LA and Mississippi and, thus, mosquito control was considered a high priority in the strategy to protect public health.

### 3. RESULTS:

A total of 2,880,622 acres were sprayed with 14,313 gallons of Dibrom during spray operations for JTF Katrina and Rita. In LA, 1,942,607 acres were and in TX, 938,015 acres. Over 19,000 man hours were spent in support of this operation. See attachment 1 for additional information and attachment 2 shows all areas sprayed. Aerial applications were very effective in reducing numbers of flies and mosquitoes. Military entomologists and the CDC entomologist observed first hand flies (sarcophagids, muscids, calliphorids, etc) suffering heavy mortality even within 15 minutes after spraying. Statistical data was not generated for fly control because of evacuations and limited personnel for surveillance during this timeframe. Mosquito control was better documented and nearly all areas showed reductions greater than 90%. In many cases mosquitoes disappeared completely for a period of time after the application.

### 4. OPERATION LOCATION:

Duke Field which is only a 20-30 minute ferry flight was chosen as a base of operation because it was relatively proximal to the area of impact yet far enough removed to minimize the effects of the damaged infra-structure. The intelligent decision was to trade some ferry time for access to C-130 maintenance support, accommodations, vehicles, and fuel. The Duke Field Base Commander was extremely supportive, and it is difficult to imagine a better work environment. Essentially given a hanger to operate out of, this building included two air conditioned offices with telephones and computers. The Duke Field Communications Squadron established internet accounts and telephone lines for the operation. The choice to trade some ferry time for C-130 maintenance support yielded dividends on two occasions, first when an aircraft received leading edge wing damage, and later with an engine problem. Both incidences were the result of bird strikes, and both would have grounded the aircraft potentially for weeks if it were not for immediate access to C-130 support. It should be mentioned that the maintenance support received from the Duke Field went well beyond a normal support function; their staff worked around the clock, after the aforementioned events, to get spray planes back in the air after only 24 hrs!

### 5. ENTOMOLOGICAL FACTORS:

- a. Pesticide: Dibrom Concentrate was the pesticide chosen by the State of Louisiana (LA) and Texas (TX). This material is widely used in adult mosquito control operations in LA and has a historical precedent for use following mosquito outbreak emergencies. It is noted here that no DoD agency made recommendations for the use of a particular insecticide, but rather served as the applicator of a product chosen by the requesting State. It is for this reason that this unit trains with more than a single type of pesticide to have experience using many types of pesticides prior to actual contingencies and know how a particular material functions with the application equipment. The Spray Flight is very familiar with using Dibrom and has reported often on the efficacy of such sprays. This is certainly a positive aspect for using this chemical. However, Dibrom is very heavy and at times planes became weight-limited in regard to pesticide load, especially during applications at 0.75oz/acre over large spray blocks. The pyrethroid Anvil is less than half the weight of Dibrom and could have increased spray time and acreage on some sorties, but may not be as effective against some mosquito species.
- b. Spray areas: All spray boundaries were established by the State Entomologist with advisement from CDC entomologists and, where appropriate, from Air Force entomologists. For example, in LA, a strict criteria was followed to determine qualification to receive military sprays: 1. to receive sprays an area needed to be without

a Mosquito Control District (MCD) and have some form of insect surveillance to verify a need for mosquito control; 2. If a Parish MCD had been temporarily disabled because of the storm, such a parish was also eligible to receive a military applied spray. The preferred method for receiving spray areas was in electronic format. Specifically this meant that files were delivered using the \*.shp file format which functions with geographical information systems (GIS). This method assures that the boundaries are exactly as the state requested. This method was used for the majority of spray areas in LA. In TX, electronic maps were e-mailed or hardcopies faxed. See section 6 for more information on mapping aspects.

- c. Insect surveillance & efficacy: Validating the need for an area to receive military sprays was extremely important in prioritizing spray areas. The CDC entomologist was very helpful in this regard. Qualitative or anecdotal accounts of mosquito densities were not normally an acceptable means. Realizing that normal functions of local MCDs were compromised, a basic method of measuring mosquito densities (landing rates of mosquitoes per minute of time) was accepted. The level of expertise in identifying and monitoring mosquito populations was robust throughout both states and in communities where no formal MCD existed, direct mosquito landing rate counts functioned well, even if performed by individuals without entomological training. In general, reductions of greater than 90% were reported from the field. After Hurricane Rita, an emergence of *Psorophora* spp. was intense enough that the application rate was increased to 0.75oz/acre in order to maintain an appropriate level of control. It was particularly fortunate, that Air Force entomologists from the Air Force Research Laboratory at Brooks City Base, TX were released by their Commander to support the 910<sup>th</sup> AW mission on the ground in TX. Two active duty and one civilian entomologist worked for over two weeks gathering pre and post spray data on mosquito landing counts and trapping data. Data is shown for the TX spray block Skeeter2 in attachment 3. As the local MCDs operations return to normal it is expected that they will pass forward efficacy data. It is projected that this information will be compiled and eventually published in a scientific journal.
- d. Spray monitoring. All spray operations were directed by an onboard AF entomologist, certified in EPA category 11 for pesticide application. Both LA and TX recognized DoD pesticide applicator certification through a reciprocity program and confirmed such in writing. The majority of flights were also observed by DoD entomologists on the ground. While not mandatory, the role of these individuals was to gather environmental and biological data on the ground, confirm that the plane was operating safely, and lastly to serve as a spokesperson for the flight. In New Orleans, Navy entomologists and preventative health technicians participated in this role. Air Force Research Laboratory entomologists worked exclusively in this capacity in TX. In theory, ground monitors could use their mobile/satellite phones to relay information to base operations at Duke Field, in turn, the communications specialist could then relay that information on the high frequency antenna back to the airplane. Unfortunately, in practice, this did not prove effective. Satellite phones may be a quick fix for this problem in the future. Calls to Duke Field from entomologists in the field did serve the purpose of updating the Mission Commander of the status of the operation and environmental conditions during the application.
- e. Spray timing: Timing insecticide applications with the period of maximum exposure of the target pest is a critical component of any pest control operation. Different mosquito

species have different periods of activity and certainly flies are more active during the day than at night. Keeping these facts in mind, as well as considering the best way to avoid killing bees, a spray schedule was created to include only the final two hours of daylight for mosquito control and three hours prior to sunset for fly control. Since fly control was only conducted in urban areas, there was less concern with causing honeybee mortality in these spray blocks. No negative feedback from beekeepers has been received and it is believed that this was a highly successful policy. Operating under strict time constraints, large spray blocks were required for the C-130 airframe to be most effective. That is to say, the ability to rack up acreage would have been seriously hampered by multiple geographically separated spray blocks. Such spray blocks would require many more turns, equating to more time with the spray system off. Small blocks are better sprayed by smaller aircraft while large blocks better utilize the C-130's size and speed.

- f. Spray configuration: Fuselage booms with stainless steel flat fan (Tee Jet) nozzles were used. Sizes 8005 for mosquito control and 8008 for fly control were used. The number of nozzles open was calculated to maintain approximately 40 pound per square inch pressure in the spray lines.
- g. Spray swaths. Several swath widths were used during the operations. For filth fly control 1,000' foot swaths were used for more even control. This configuration is used during normal spray operations for biting flies at the Parris Island MCRD, SC. For adult mosquito control a 2,500 foot swaths was used in areas with a crosswind, which is the Spray Flight's accepted contingency swath width (routine mosquito control operations are conducted with 2,000 foot swaths). Data supporting the 2,500 foot swath width using caged mosquitoes has been previously reported on and presented in military and scientific venues. During sorties when there was very little wind, a 1,500 foot swath width was used.
- h. Application rates: The amount of chemical applied against a certain pest was determined by the state point of contact (POC) after consultation with Air Force and CDC entomologists. Against flies, the maximum mosquito control rate for Dibrom was applied (1.0 oz/acre). The operation began in LA using 0.5 oz/acre for mosquito control. Following the arrival of Hurricane Rita, woodland mosquito species appeared in large numbers and subsequently, the half ounce per acre was only reducing populations not eliminating them. Increasing the rate to 0.75 oz/acre was effective in eliminating these dense populations of mosquitoes. Later, 0.62 oz/acre was sufficient to eradicate local mosquito populations as numbers began to decrease. All spray systems were calibrated prior to leaving home station.
- i. Spray maintenance: Personnel from Spray Maintenance loaded and physically configured the aircraft on a daily basis. With over 46 hours of spray-on time during this mission the spray systems worked more in 5 weeks than in the previous 3 years of spray, to put such activity in perspective. Thus, the systems had tremendous demands placed on them. On one occasion, a main pump shaft seal failed resulting in fumes in the aircraft. Smoke and fume elimination procedures were accomplished, the crew donned oxygen masks and returned to Duke Field. Upon landing, the crew visited the Eglin AFB Clinic, were evaluated and released as asymptomatic to organophosphate exposure (information available on AMC Form 97). Apart from this instance the MASS units

performed flawlessly which is a testament to the professionalism of the Aerial Spray Maintenance Flight.

## 6. MAPS

Mapping and chart making has previously been the bane of contingency aerial spray operations. The problem previously was in obtaining charts and matching swath lines on charts with those created in the software directing the onboard GPS. A simple solution has been developed in the Aerial Spray Office which is partly the product of the digital age (digital maps available). Using a relatively affordable software program (approx. \$300) charts are viewed on a computer utilizing USGS topographic maps in 15- and 7.5 minute series (DeLorme X-Map version 4.5). Polygons can be directly drawn on the topographic background where the borders of important landmarks are readily seen (roads, water bodies, parish or county borders, wildlife areas, etc). This was one role for the forward deployed entomologist, particularly early on in LA. Next the actual proposed path of the aircraft is drawn over the spray areas. This path is the lane separation or swath width and was previously drawn on charts by hand which introduced some error. These polygons or spray blocks are then exported as shapefiles (\*.shp). A shapefile is a computer graphic representation of geographic features with lat/long coordinates associated with it. These shapefiles can then be directly entered into the spray plane's GPS software. Shapefiles were also entered into the software program FalconView, a flight planning tool universally used by the Air Force. This allowed intended flight paths and potential obstacles to be added to the charts before they were printed on a large scale printer. Additionally, navigators had the option to use FalconView on a laptop during the spray sortie, creating another platform to confirm position and course. During previous contingencies operations, complete days were lost dealing with the complex issue of charts. The method discussed here allowed for quick turnaround (< 3 hours) from receiving potential spray areas to production of a usable spray chart. Nonetheless, mapping remains an integral and energy consuming portion of the mission. It is recommended to use a non-flying crew member and/or entomologist to create charts to circumvent the problem of exceeding maximum duty day.

## 7. FLYING ACTIVITIES

- a. Developing a plan for unfamiliar areas: The aerial spray flight conducts training missions at DoD installations CONUS as part of a ongoing pest control program for those installations. One critical component of these training flights is the preparation for the different types of terrain over which spray flights are conducted. In this response, spray areas varied all the way from flying over forested areas to flying over urban landscapes (e.g., downtown New Orleans). All areas have hazards such as communications towers, power lines, other aircraft, birds, etc. While new charting technologies give a better projection of reality than was previously available, it is impossible to rely solely on charts. Upon reaching a new area, an aerial survey period was conducted at 300-500 feet above ground level (AGL). During the survey, the crew picked out ground reference points and obstacles from the air and confirmed them with the spray chart. Any flying hazards not appearing on the chart were noted. Following the aerial survey, a dry pass at spray altitude (150' AGL) was made to check the aircraft's heading, set drift kill, and make a Doppler wind reading. The onboard certified applicator (Entomologist) then determined if spray conditions were appropriate and signaled the crew to commence the application.
- b. Weather decisions: Spray operations always contend with weather. Some wind (3-5 knots) in at least a 45 degree crosswind component is desired. Strong winds or light and variable winds are not desirable. Weather conditions were outstanding during this

mission and outside of the 5 days of weather cancellations during which Hurricane Rita passed, only 1 other cancellation was because of inclement weather. The Dibrom label indicates a maximum wind speed for application of 10 m.p.h. The decision to fly a spray sortie based on weather forecasts is made by the Mission Commander and Entomologist. Obviously, traveling 300 miles to begin spray operations only to find out that wind speeds are out of bounds or that there are active thunderstorms is not good. Conversely, canceling on a weather forecast, and hearing later that conditions were excellent is discouraging as well. In practice, if the forecast was only marginally negative the mission went forward and a final determination was made once the spray area was reached. In the case where more than one area had been validated to receive sprays, bad weather could be avoided by choosing another area where conditions were more favorable. For example, thunderstorms in LA on 6 October forced a sortie cancellation in that state but two planes then flew in TX where conditions were fine.

- c. Communications: Two members from the 910<sup>th</sup> Communications Flight deployed to Duke Field. The role of communications in ground monitoring is discussed in Entomological Factors item 4. In short, the radio communications link allowed for aircraft to contact base operations approximately 40 minutes prior to landing. This gave the Mission Commander a reasonable lead time to plan if any contingencies had occurred during the sortie. Later during the mission, the full capacity of the high frequency antenna was realized and communication with the spray aircraft and base operations at Duke Field was possible throughout the sortie.

#### 8. PUBLIC AFFAIRS:

- a. Public Notification Procedures. The responsibility for notifying the public about aerial spray operations was assumed at the state level for both LA and TX and coordinated with FEMA. Sample news releases are included in attachments 4 & 5. A blanket statement which covers a given area for a given amount of time allows for the most flexibility in completing mission assignments.
- b. Daily Reports: The Mission Commander issued a situation report (SITREP) generally within an hour of the completion of the evening's sortie(s). In addition, a daily "entomologist spray report" further served as a way to inform key military and civilian parties on the progress of the mission. The entomologist's report was written from the pest manager's point of view and contained a picture image of the areas sprayed (when possible), the flight of the aircraft, efficacy data on the reduction of mosquitoes or flies (where available), and the next day's projected spray area. An example is included as attachment 6.
- c. News Conferences and news articles. A 910<sup>th</sup> Public Affairs representative deployed to Duke Field and helped coordinate requests from news agencies for information concerning military mosquito sprays.

#### 9. CONTACTS:

##### a. FEMA

(b) (6) Federal Coordinating Officer  
(b) (6) , Capt, DCO TX (USA)

##### b. State of Louisiana

(b) (6) Deputy Assistant Secretary, Office of Public Health  
(b) (6) Medical Entomologist, Office of Public Health  
(b) (6) Director, Vermilion Parish Mosquito Control  
(b) (6) , Director, Acadia Parish Mosquito Control

Lucas Terracina, Director, Calcasieu Parish Mosquito Control

c. State of Texas

(b) (6) State Vector Control Entomologist, Texas Dept of State Health Services  
(b) (6) Director, Jefferson County Mosquito Control District  
(b) (6) Director, Orange County Mosquito Control District

d. Centers for Disease Control

(b) (6) Chief Entomologist, Division of Vector-Borne Infectious Diseases  
(b) (6) Emergency Coordinator & Entomologist, Division of Vector-Borne Infectious Diseases

e. JTF Katrina

(b) (6) Maj, Force Protection Officer (USA)

f. Armed Forces Pest Management Board

(b) (6) LTC, Contingency Liaison Officer

g. Military Entomologists in the Joint Area of Operations

(b) (6) GS-13, AFIOH, Brooks City-Base (USAF)  
(b) (6) 1LT, Air Force Research Laboratory (USAF)  
(b) (6) 1LT, Air Force Research Laboratory (USAF)  
(b) (6) LTJG, Navy Disease Vector Ecology & Control Center (USN)  
(b) (6) 1LT, Executive Officer, 224th MEDDET

10. LESSONS LEARNED

An after action report will follow to be submitted from the Aerial Spray Office after further discussion on items which can be improved upon.

11. ACKNOWLEDGEMENTS

The success of this operation was a direct result of an amalgamation of individuals who have trained and studied within their disciplines to develop a level of excellence in what they do professionally. In particular, Dr. (b) (6) and Mr. (b) (6) formed a synergy which administered aerial sprays in a timely manner in LA during a period of high entropy. All of the personnel at Duke Field, Florida deserve the Aerial Spray Flight's gratitude for being such amiable and gracious hosts. The entomologists and their commanders from the Air Force Research Laboratory also warrant special mention since their activities yielded important scientific information on the efficacy of these application methods. All FEMA, DoD, and State personnel involved with the mission provided excellent support.

### **LDHH Implements A Vector Control Management Plan**

The Louisiana Department of Health and Hospitals (LDHH) has developed a management plan in anticipation of the hatching of mosquitoes and flies due to the massive flooding in the area. Vector (disease carrying organisms) control is needed to protect public health from nuisances and diseases transmitted by mosquitoes and flies.

The LA DHH in coordination with LDAF, CDC, ATSDR, US EPA, DoD and in consultation with parish Mosquito Control Districts is implementing a vector control plan to reduce mosquitoes and flies in the areas affected by Hurricane Katrina.

Aerial application of routinely used pesticides, primarily Naled, will begin Sunday, September 11, 2005 on the East Bank of the Greater New Orleans area and surrounding areas. The spraying will occur during the last 3 hours of daylight. The US Air Force will conduct the aerial applications to assist vector control activities normally conducted by parish and local mosquito control districts.

The spraying will use the same pesticides as routinely sprayed to control mosquitoes in the south Louisiana region. "The timely initiation of preventive measures to control mosquitoes and flies is necessary to reduce the risk of vector-borne diseases" said Dr. Fred Cerise.

Naled is a pesticide routinely used by Mosquito Control Districts in Louisiana. Naled is approved by US EPA and will be applied according to that agency's application rates. Studies have shown that Naled does not impact on human health or the environment when used for mosquito control.

The vector management plan will continue based on field monitoring of mosquitoes and flies in the region.

For more information call the Louisiana Department of Agriculture and Forestry's pesticide hotline at 225-925-3763.

October 13, 2005

### **Air Force to Spray in Hardin, Jasper, Newton, Orange Counties**

The Texas Department of State Health Services (DSHS) announced today that post-Hurricane Rita aerial spraying for mosquitoes will begin tomorrow afternoon in Hardin, Jasper and Newton counties and that spraying will continue in part of Orange County.

The spraying is to prevent the possible spread of mosquito-borne illnesses, such as St. Louis encephalitis and West Nile infection, and to reduce a proliferation of nuisance mosquitoes after heavy rains and flooding in Southeast Texas.

Specially equipped U.S. Air Force Reserve C-130H cargo planes from the 910<sup>th</sup> Airlift Wing will be used in the spraying operation.

The gray planes may be flying as low as 150 feet above ground level when spraying. The project is expected to take several days. Flights will begin two hours before dusk and last for four to six hours each day.

Dibrom, a U.S. Environmental Protection Agency-approved insecticide, will be used. The application rate is one ounce or less of Dibrom per acre. The spraying poses no hazard to humans, animals or plants.

However, beekeepers in the region should take protective measures to prevent damage to their hives.

Aerial spraying was recently completed in Jefferson, Chambers and Liberty counties and in part of Orange County.

(b) (6)*

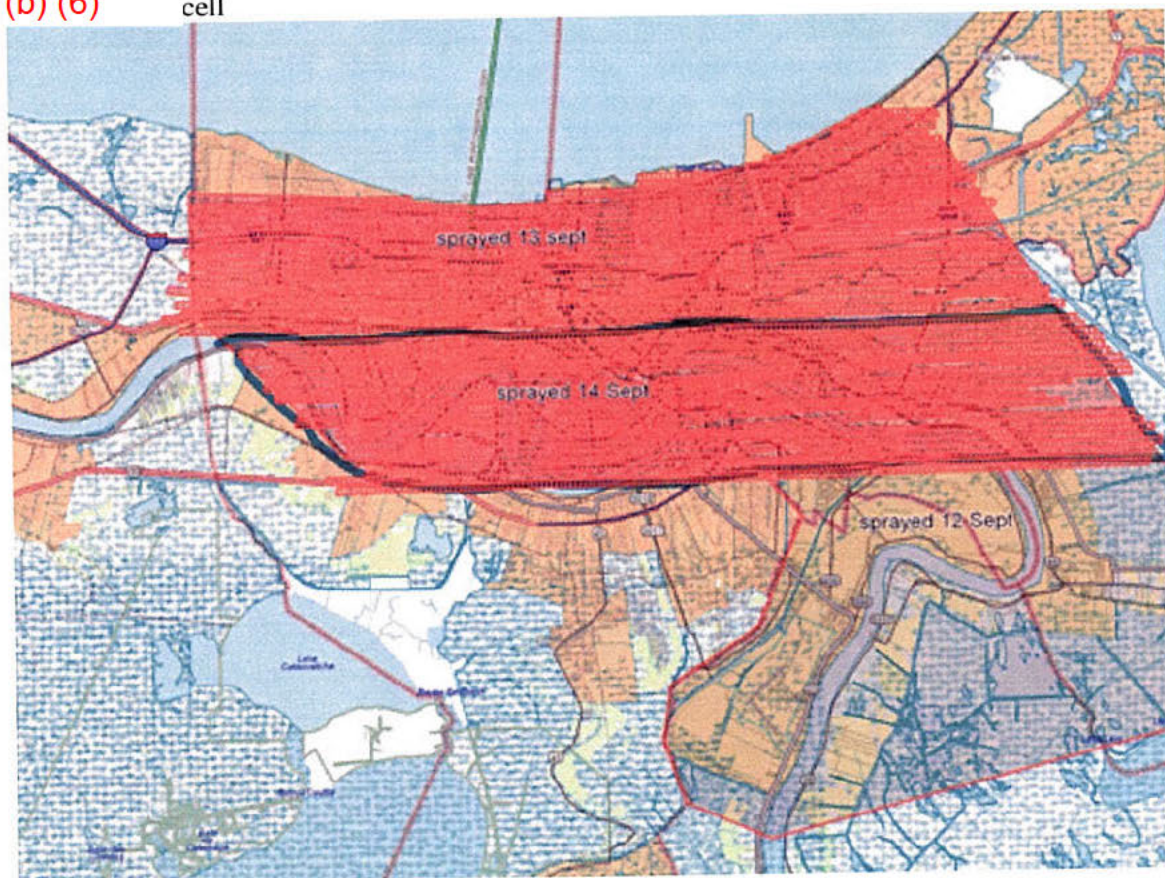

Attachment 6. Entomologist's Spray Report 14 September 2005.

Last night (14 Sept) the southern spray block of "Bug1", which included the heavily urbanized, downtown sections of the Orleans Parish was sprayed. Spraying began approx. 3 hrs prior to sunset in order to target filth flies. We used a 1000ft swath; 1 oz Dibrom/acre to treat 58,496 acres. See image below.

While on the ground in the French Qtr, we observed flies (sarcophagids, muscids, calliphorids, etc) which suffered heavy mortality even within 15 minutes after the spray pass. I expect that the fly problem will be largely eliminated as soon as they begin remove the trash bags from these areas. The fact that most of the trash we have encountered had been put into plastic bags has contained the fly problem which could have been much worse. Flies that were resting on the sides of building or especially in trees near garbage piles were obviously more impacted by the sprays than those flies under canopies or crawling around under the trash bags/piles. Environmental parameters were excellent yesterday evening again with partly cloudy skies and a light steady wind 3-6 knots @180-210°. Temperatures were in the high to middle 80's. We expect good control from such conditions and we hope they hold.

Tonight (15 Sept), the 1 AF CAT has approved Washington Parish ("Bug 3 & 4) as the next priority and it is scheduled to be sprayed (0.5 oz/acre Dibrom with 2,500 ft swaths for treating woodland and floodwater mosquitoes e.g., *Ps ferox*; *Ae vexans*). These blocks will require more than one sortie. Approx. 390,000 acres.

9 June 2008

MEMORANDUM FOR: 757 AS/DO

FROM: 757 AS/DOS

SUBJECT: Trip Report MEXUS GULF 2008 Full-Scale Exercise, South Padre Island, TX (2-6 June 2008).

**1. Introduction:** The Aerial Spray Unit deployed to South Padre Island, Texas (2-6 June 2008) to participate in the multiple agency, international full-scale exercise MEXUS GULF 2008, hosted by US Coast Guard. The operational objective of the exercise was to test the effectiveness of the recently modified MEXUSGULF Annex of the MEXUS Plan; a treaty between the United States and Mexico to respond to oil or hazmat spills that threaten to migrate across the border. The scope of this exercise included a host of participants from regional services to federal and international.

The exercise scenario begins with the sinking of the M/V VOYGER 10 miles off South Padre Island, TX, with the subsequent spill of fuel oil threatening sensitive bay-side estuary complexes in southern Texas and Tamaulipas, Mexico. While oil spill response scenarios have been exercised repeatedly, working on an international border adds considerable complexity to the resolution of such a disaster.

The Aerial Spray Unit's role (hereafter Spray10) in this exercise was to respond as part of the real-equipment used to mitigate negative effects of the oil spill and by working in conjunction with USCG airborne and surface assets to apply a simulated oil dispersant (water) to the "oil slick". Coordination and direction of the C-130 application was carried out by two spotter aircraft and a diagrammatic representation is shown in Attachment 1 along with a photo taken from Spotter1. A discussion of the effectiveness of spotter directed dispersant application is given in Attachment 2.

Spray10 also made a Mexican government requested and approved demonstration flight for the Mexican Navy off-shore near the port of Mezquital.

## **2. Operational Schedule (local times)**

### **2 JUNE (Monday)**

1200: Showtime

1400: Depart KYNG

1730: Land KBRO/Safety Briefing

**3 JUN (Tuesday):**

0800-1600: Exercise training and briefings. Dispersant, JRC Set up, ICS (all crew to attend)

**4 JUN (Wednesday):**

\*\*0700: Alert/Show time

ASAP after show: Load Chemical

0845 Take off KBRO to be at spill location at 0900

1030 Upload of additional simulated dispersant (water)

1100 Take off KBRO for demonstration in Mexican waters off the port of Mezquital

**5 JUN (Thursday):**

0800: Show time

0830 Load Chemical

0930: Take off KBRO

1100 Land KBRO

1300-1700: Debrief and Hotwash with entire exercise group

**6 JUN (Friday):**

0700 Show

0900 Depart KRBO

1530 Land KYNG

**3. Spray Parameters:**

- a. Nozzles – Raindrop nozzles oriented straight back.
- b. 8 (16 total) on each fuselage boom; evenly spaced.
- c. Booms – fuselage only
- d. Airspeed – 200 knots ground speed.
- e. Altitude – 100 feet above water.
- f. Application Rate – 7 Gal/Acre
- g. Flow Rate – 277 Gal/Min
- h. Spray -- water (as simulated dispersant).
- i. Number of passes –
- j. Pressure – 50-60 psi
- k. Total spray applied – 300 gallons
- l. Flight times: 2 ferry sorties (9.6 hrs); 3 spray sorties 4.9 hrs

**4. 910 AW Participants:****a. Aircrew:**

- 1) Mission Commander: Capt (b) (6) (b) (6)
- 2) Pilots: LTC (b) (6) (b) (6) Capt (b) (6) , Capt (b) (6) (b) (6)
- 3) Navigators: LTC (b) (6)
- 4) Flight Engineers: MSgt (b) (6) TSgt (b) (6)
- 5) Spray Operators: MSgt (b) (6) MSgt (b) (6)

**b. Maintenance:**

- 1) Spray Maintenance: MSgt (b) (6) MSgt (b) (6) MSgt (b) (6)  
SSgt (b) (6)
  - 2) Crew Chief(s): SSgt (b) (6) SSgt (b) (6)
  - 3) Avionics: MSgt (b) (6) (b) (6)
- c. **Scientific Advisor:** Maj (b) (6) (b) (6)

**5. Discussion:** The exercise was largely considered a success, and very favorable comments were given by the Executive Directors, regarding the groups ability to overcome the language barrier as well as the geographical barrier of the international border. Because the Air Force Spray Unit has participated in such exercises before, Spray Unit members were instrumental in the air operational planning and execution of this exercise. In particular, Capt (b) (6) and Maj (b) (6) served as exercise evaluators with a primary responsibility for the areas of “Dispersant response” and “testing the Memorandum of Agreement (MOA)” between the Director of Military Support and the United States Coast Guard and the Air Force Reserve Command. Evaluations of these aspects are included in Attachment 3. The Aerial Spray Unit next deploys to San Diego, CA to participate in San Diego Prep2008. Additional exercise details can be obtained by contacting Maj. (b) (6) (b) (6)  
(b) (6) (b) (6) (b) (6)

**6. Recommendations:** Continue to participate and practice the application of oil dispersants. A tasking was given to USCG 8<sup>th</sup> District personnel to update MOA with AFRC and recommend the 910<sup>th</sup> AW representative be Capt (b) (6) with Maj (b) (6) as secondary. Recommend practicing quick turning the aircraft with rapid reloading of the MASS by spray maintenance personnel in place of cancelled summer mosquito control missions with water applications for droplet analysis at the Ravenna Arsenal, OH.

**7. Acknowledgements:** CAPT (b) (6), CDR (b) (6), and Mr. (b) (6) of the USCG deserve special mention for their coordination efforts and insight. An additional thank you to the USCG HH-65 flight crew and USCG Aux pilots for their efforts as airborne spotters for dispersant application training.

//Signed//

(b) (6) (b) (6) MAJ, USAFR  
Research Entomologist

**Attachments:**

2. Evaluation of spray exercise of oil dispersants.

Attachment 1. Diagrammatic representation of flight pattern for dispersant application and spotter aircraft (adapted from Matt Weakly). Photo is USAFR C-130H spraying water as a simulated oil dispersant, 4 June 2008.

## **Evaluation of Spray Exercise:**

Background: An airborne spotter is necessary to make functional and effective dispersant applications with aircraft. At the low altitude of a fixed wing spray aircraft, the crew cannot determine the position of the slick and proper start and stop of the dispersant application.

The use of two types of spotter aircraft served as an excellent contrast of methods between rotary and fixed wing platforms. On 4 Jun (Wed), a Coast Guard HH-65 Dolphin (hereafter Spotter 1), from Sector Corpus Christi with a crew of 3, served as the rotary wing spotter. This aerial platform also facilitated marking the simulated oil spill (hereafter spill) area with dye markers after the spill boundaries had been marked with buoys by the USCGC BRANDT.

Buoys were difficult to observe from the air at 300 ft and only 1/7 of the dye markers actuated but despite these difficulties Spotter 1 made radio contact with the USAF C-130 (hereafter Spray10) and with the BRANDT and began the exercise.

Spotter 1 decided to guide the first three simulated oil dispersion passes from a hover position 1,000 ft east of the spill at 1,000 ft above ground level (AGL) with the Aviation Electrical Technician making the actual radio calls to Spray10. This position gave Spotter 1 the ability to clearly see Spray 10's approach by looking away from the sun. At 1,000 ft AGL and 1,000 feet separation from Spray 10, the angle also made it difficult for the spotter to accurately determine when to direct Spray 10 to turn the dispersant on and, especially, off. The 4<sup>th</sup>-6<sup>th</sup> passes were spotted by attempting to move in transit with Spray10, radio commands to Spray10 were now from the Spotter1 copilot. On the 4<sup>th</sup> pass, Spotter 1 was in front of Spray10 which made calling spray-on and spray-off difficult. On the 5-6<sup>th</sup> passes, Spotter 1 was better positioned by guiding from behind. Subsequently, these passes proved to be the most successful of the sortie. Spotter 1 next tried using their aircraft as a landmark for the turn-on point for Spray10 on the 7<sup>th</sup>, this method functioned well enough but calling the spray-off was still more difficult than during the 5-6<sup>th</sup> passes. The final passes (8-10) used the same technique as passes 5-6. Excellent piloting but additional verbal inputs to Spray10 were needed at times. This would have been easier if the oil slick had been better marked.

Recommendation: The modern HH-65 Dolphin along with the highly adept crew is recommended for use as a rotary wing spotter aircraft. Minimum crew of 2 required for this engaging mission. Suggest that minimum length of oil sick be 1 mile for C-130 operations. Anything smaller would likely be treated with another aircraft type (e.g., King Air). The half-mile slick in this scenario only allowed for about 8 seconds of spray-on time for Spray10. For demonstration purposes, it would also be nice to have an extended spray period. Consider trial use of HU-25 Falcon as a high-level spotter aircraft equipped with forward looking infrared.

On 5 June (Thurs.), a Cessna 172 USCG Auxiliary was used as a spotter aircraft (Spotter 2). Spotter 2 setup a shorter but synchronous orbit with Spray10, positioning themselves 1500 ft east of the slick and maintaining an altitude of 1,500 ft. Excellent piloting by Spotter2 kept their aircraft in position to call for spray-on and spray-off. Eight spray passes were flown.

Recommendation: The Cessna 172, is a slightly underpowered but functional platform for directing dispersant applications. Recommend closer separation than 1,500 ft for better accuracy once air controller is comfortable with the spotter and spray aircraft's ability to function together safely. Completion of the Memorandum of Agreement with the U.S. Coast Guard and the Air Force Reserve Command should be revised and signed by current leadership. Once complete, the MOA should be properly tested for functionality during a future exercise of this nature.

5. Lt Col (b) (6) will act as Aircraft Commander.
6. Support required at Minot AFB, ND has been completed.

(b) (6) (b) (6) Capt, USAFR  
Aerial Spray Coordinator

**AC/MC Notes:**

1. Look in the plan for contact information at Kings Bay and Jacksonville Center. Primary contact at Kings Bay is (b) (6) (b) (6). His home phone number if needed is (b) (6). He should be in the office, but may have you contact him at home if any needs are outside of his work hours.
2. Obtain cell phone numbers for spray maintenance and aircraft commander. Phone contact with the personnel at KNIP is needed to determine if loading of chemical should take place.
3. Contact (b) (6) of Jacksonville special missions section 2 hours prior to mission with an update on plan to spray or not spray. The decision does not need to be made by the time you call, but if there is no chance of spraying or the mission is cancelling for sure, he wants to know as early as possible. His #'s: (b) (6). He has the Aircraft Commander's cell number.
4. SWFLANT is the primary scheduler of activities in P-50 at ground level. If anything changes in their schedule, it could effect or clearance into the spray area. If you need to check with them, contact Steve Mallone.
5. Billeting has 16 rooms reserved. If the mission delays or is unable to depart on Thursday, please contact billeting and enterprise at the numbers listed in the plan.
6. A driver should be assigned from Kings Bay to transport the chemical to the aircraft and take away the waste materials. If no one's there, contact either Keith Scott or Lt Rico to find out what the situation is.
7. If Kings Bay is sprayed on Friday, the plan is to return on Saturday.
8. All waiver information is placed in the back of the blue binder under P-50 info. The physical copy of the P-50 waiver is there, and I have the electronic copy in my email.
9. File IFR: KNIP to P-50 with a 2 hour delay at P-50 at 3000'. Ensure the aircraft is squawking 5107 prior to entering P-50. If ATC fails to give this in the clearance....WTF them. Please follow all information as listed in the plan. It should be in accordance with the emails from JAX center. Pre-printed 175's are in the folder.
10. Please return the Blue folder to my office along with copies of all 781's, call AFRC each evening, and fill out the Mission Report with the spray data.

If you encounter any significant difficulties or areas I can improve this plan, please ensure I am notified so I can make appropriate changes in the future. This is still a new mission, so some items may have been overlooked or not encountered as of yet. Thanks.

(b) (6) (b) (6)

### Mission Commander Notes:

1. Look in the plan for contact information at Kings Bay and Jacksonville Center. Primary contact at Kings Bay is (b) (6) . His home phone number if needed is (b) (6) . He should be in the office, but may have you contact him at home if any needs are outside of his work hours.
2. Obtain cell phone numbers for spray maintenance and aircraft commander. You and the Entomologist will most likely be driving up to Kings Bay to make a weather call and be on the ground for the spray operation. Phone contact with the personnel at KNIP is needed to determine if loading of chemical should take place.
3. Contact (b) (6) of Jacksonville special missions section 2 hours prior mission with an update on plan to spray or not spray. The decision does not need to be made by the time you call, but if there is no chance of spraying or the mission is cancelling for sure, he wants to know as early as possible.
4. SWFLANT is the primary scheduler of activities in P-50 at ground level. If anything changes in their schedule, it could effect or clearance into the spray area. If you need to check with them, contact Steve Mallone.
5. Billeting should have 16 rooms reserved. I had sent you an email saying (b) (6) room was cancelled, but I was unable to contact billeting that night to cancel it. Msgt (b) (6) was added to the mission Thursday, so he can take Hodors room now. The name will just need changed upon arrival. If the mission delays or is unable to depart on Monday, please contact billeting and enterprise at the numbers listed in the plan.
6. A driver should be assigned from Kings Bay to transport the chemical to the aircraft and take away the waste materials. If no one there, contact either (b) (6) or Lt (b) (6) to find out what the situation is. Maj (b) (6) was working this issue when I left.
7. Plan objectives: #1 is to spray Kings Bay. If King's Bay is sprayed on Tuesday, then Wednesday should follow the schedule of events listed in the plan on the right side in red. No additional days are built in or expected. KNIP has a large number of aircraft arriving for an exercise on 25 APR, so we are not planning to extend the mission for any reasons at this time. Please ensure (b) (6) at NBC is notified of times and the plan to spray NBC should the plan work out that way.
8. All waiver information is placed in the back of the blue binder under P-50 info. The physical copy of the P-50 waiver is there, and I have the electronic copy in my email.
9. Aircrew is to file IFR: KNIP to P-50 with a 2 hour delay at P-50 at 3000'. Please follow all information as listed in the plan. It should be in accordance with the emails from Jax center.
10. Please return the Blue folder to my office along with copies of all 781's, call AFRC each evening, and fill out the Mission Report with the spray data.

If you encounter any significant difficulties or areas I can improve this plan, please ensure I am notified so I can make appropriate changes in the future. This is will only be our 2<sup>nd</sup> application at Kings Bay, so some items may have been overlooked or not encountered as of yet. Thanks.

(b) (6) (b) (6) CAPT, USAFR

## Mission Commander Summary For Hill Spray 2006—31 March through 9 April

The overall plan was adjusted to accommodate the loss of one plane for 3 days (due to engine change) and weather (Tuesday 4/3 cancelled due to winds, Wednesday 4/4 canceled due to rain/winds, and Thursday 4/5 cancelled due to low visibility/snow).

Some problems were related to using Hill Air Force Base personnel to mix chemical (3 civilian, 3 military people). Unfamiliarity with mixing equipment and a tendency of Krovar to solidify led to delays, loss of sorties, and damaged equipment (blown seals). No sense of urgency was present with the Hill personnel; they were often the limiting factor in the efficiency and number of sorties that could be accomplished in a day.

15 flying sorties were needed to complete the spraying of targets 24, 21, and North LZ. Nine sorties were done in the first three days with one airplane: 1 sortie on 4/1, 5 sorties on 4/2, and 3 sorties on 4/3. Six sorties were accomplished with two airplanes on Friday, 4/7, to complete the mission (plus two additional flush flights). Compared to September, spraying, winds did not consistently pick up as the day wore on. Spraying was accomplished well into the afternoon (5 pm on Sunday) as lower temperatures did not create thermal heating and afternoon wind gusts. There is however, more of a chance for severe weather at this time of year (pot luck—week before had great weather with low winds throughout the day).

### Recommendations:

- Adjust plan to reflect a need for only 16 sorties to complete 24, 21, and North LZ (18 if you include flushing)
- Have advance team secure at least 2 passes for the gate near base ops and weather (one for mission commander, one for first crew of the day). Crews were sometimes delayed up to a half hour trying to get base ops to let them in.
- Consider bringing Youngstown people out to mix chemical. We can control them and we will probably also benefit from less damaged equipment.
- Include reporting phone numbers and information to be passed to 22<sup>nd</sup> Air Force in plan.
- Include commercial phone numbers in the plan:

--Automatic weather at Eagle range is 801 586-1795

--Hill exchanges are 801 777-xxxx, or 801 776-xxxx

    - (a) Spray A/C 99106: 2 Ferries; 11.5 Hours

**3. PESTICIDE:**

- a. Trade Name: Plateau<sup>®</sup>
- b. EPA Registration Number: 241-365
- c. Formulation Sprayed: Liquid herbicide (23.6% active ingredient)
- d. Gallons Pesticide Loaded: 16 (16 Sept); 7 (17 Sept); 14 (18 Sept); 14 (19 Sept); 14 (20 Sept); 21 (21 Sept); 14 (25 Sept)
- e. Gallons Pesticide Applied: 16 (16 Sept); 7 (17 Sept); 14 (18 Sept); 14 (19 Sept); 14 (20 Sept); 21 (21 Sept)

- Sept); 14 (25 Sept)
- f. Gallons and Name Diluent Used: 1,800 gallons water per lift
- g. Gallons and Name of Flush Used: 200 per final daily lift; 600 Gal of water final flush
- h. Other Additives Used: gallons of Sta-Put®; 28 (16 Sept); 14 (17 Sept); 28 (18 Sept); 21 (19 Sept); 21 (20 Sept); 20 (21 Sept); 10 (25 Sept)
- i. Application Rate: 7 Gal/Acre 15-20 Sept 06 (4 oz/acre Plateau®)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): C-130 (99105)
- b. Spray System (Modules Used) and System ID #: SP-3G
- c. Spray System Configuration: Wing and fuselage booms
- d. Nozzle Type/Size: Raindrop nozzles
- e. Nozzle Orientation & Number Used: Fuselage; Straight Back; 17 total (8 right, 9 left)
- f. Pressure: 40 psi
- g. Flow Rate: 325 gpm

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100 Ft
- b. Spray Offset: weather dependant. No offset when flown into the wind.
- c. Spray Release Altitude: 100 Ft AGL
- d. Ground Speed: 200 knots

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):  
Ground: 120-160°/5-8 mph (16 Sept); 286°/8-10 mph (17 Sept); 240-260°/6-8 mph (18 Sept); 60-110°/3-6 mph (19 Sept); 220°/4-5 mph (20 Sept); 270°/6-7 mph (21 Sept); 090°/7-8 mph (25 Sept)
- b. Temperature (Degrees Fahrenheit): 55° (17 Sept); 51-60° (18 Sept); 46-49° (19 Sept); 43-45° (20 Sept); 42° (21 Sept); 34° (25 Sept)
- c. Relative Humidity: 51-55% (16 Sept); 40% (17 Sept); 41-46 % (18 Sept); 66-69% (19 Sept); 60% (20 Sept); 33% (21 Sept); 34 (25 Sept)
- d. Source: Ground observations

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: Visual observation from PMP on range
  - (2) Results: See remarks
- b. Effectiveness:
  - (1) Technique/s Used: Vegetation measurements
  - (2) Results: Will be determined in the spring of 2008

**8. REMARKS:** This mission is the follow-on to the extremely successful application of Plateau herbicide completed in 2006. As can be seen in attachment 2, cheatgrass was effectively controlled in the areas where herbicide was aerially applied. Based on last years success the acreage which was applied with Plateau in 2007 nearly doubled. As before, the purpose was to control cheatgrass and minimize fire hazards, thereby preserving some of the remaining scrub sage habitat. Plateau is an excellent material to work with, and it is biologically active at low concentration levels (e.g., 4oz/acre). The integrated pest management approach is to prevent germination of cheatgrass seeds the following year while allowing native grasses and vegetation (less prone to burn) to become established. The fuselage boom configuration and resulting 100 foot swath width was tested and confirmed at home station & Youngstown ARS) prior to the 2006 mission. All other spray parameters remained the same from last year. On the Saylor Creek range the same swath width was confirmed visually by ground support. Coverage of the

spray block was excellent, as shown in attachment 1. The majority of the sorties were flown with a headwind or tailwind with less than a 45% crosswind component. Efficacy for the 2007 application of Plateau will be determined by Mountain Home AFB Office of Natural Resources during the spring season 2008. If the 2007 application is as successful as the previous, and if additional money is available, an application on another section of the range will likely be planed for 2008. We would like to thank the folks at Mountain Home AFB, particularly (b) (6) (b) (6) for the excellent support we received. We also appreciate the vehicle support and the Fire Department who filled us up with water just before dawn daily and played along with a quick turn on our final flush sortie. Finally, many thanks to the members of the crew who remained for the entire 2 week deployment.

**PUBLIC AFFAIRS RELEASE: AERIAL SPRAY FOR MOSQUITOES**

King's Bay has requested assistance from the 910th Airlift Wing, Air Force Aerial Spray Squadron to conduct aerial spraying for mosquito control 11-13 April 2008.

Spring precipitation and recent rains have produced large populations of mosquitoes. Base Public Health and Pest Management personnel have determined areas on base where mosquito larvae develop. Many of these mosquitoes are efficient vectors of Eastern Equine Encephalitis and West Nile virus, as well as presenting a serious nuisance to personnel working outside. Surveillance using light traps, larval counts, and biting complaints are used to determine where and when pesticide applications are justified.

The Air Force Aerial Spray Squadron will be applying US Environmental Protection Agency registered pesticides. Adult mosquito control will occur during the final 3 daylight hours prior to sunset on April 12. Operations may be rescheduled for April 13 if foul weather prevents scheduled operations. The applications will be made using a modified C-130H cargo aircraft at 100-150 above ground level. The Public Works Department will conduct an in-brief on 11 April to confirm the areas to be treated, ensure safety and environmental preparations have been addressed, and resolve any questions from surrounding communities.

The public has been notified of Kings Bay's intent to conduct aerial spraying for mosquitoes to protect public health, ease working conditions, and improve quality of life for members on Station. Concerned citizens should contact the Kings Bay Public Affairs Office at (912) 573-4718.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## TYNDALL AFB, FL

### 20-21 AUGUST 2008

**OBJECTIVE/PURPOSE AND BENEFIT:** Mission is in support of visit with 1<sup>st</sup> AF to include brief, static display and spray sortie.

#### 1. 910 AW PARTICIPANTS:

- a. **Commander:** Col McGregor
- b. **Aircrew:**
  - (1) Pilots: Col (b) (6) Maj (b) (6) Capt (b) (6) Capt (b) (6)
  - (2) Navigators: Maj (b) (6)
  - (3) Flight Engineers: MSgt (b) (6) TSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) MSgt (b) (6)
- b. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) MSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) SRA (b) (6)
  - (3) Avionics: SSgt (b) (6)
- c. **Entomologist:** Maj (b) (6)

#### 2. PPR REQUIREMENTS: PAM 082002

#### 3. PLANNED SEQUENCE OF EVENTS: All times are local

##### 20 AUG (Wednesday)

1300 Show  
1500 Depart KYNG  
1645 Land KPAM

##### 21 AUG (Thursday)

0900-1000 AOC tour (optional) \*\*Meet at AOC main turnstile  
1100-1200 1<sup>st</sup> AF Briefing  
1100-1200 Working lunch/brief 1<sup>st</sup> AF (\$8.00)  
1200-1300 Static Display  
1300-1600 Spray Flight (Duration of flight will be approximately 1-1.5 hrs)  
1700 Depart KPAM  
2045 Land KYNG

**Special Notes:** Attendees will be Maj Gen (b) (6) 1<sup>st</sup> AFNORTH/CC, COL (b) (6) 22<sup>nd</sup> AF, Mr (b) (6) AFRC; LTC (b) (6) 601 AOC/1<sup>st</sup> AF, MAJ (b) (6) 601 AOC/1<sup>st</sup> AF. Possible attendees not confirmed at this time: Mr. (b) (6) -Chief of Staff/1<sup>st</sup> AF, Col (b) (6) -601 AOC/CC, CAPT Carson (USN)

- All Briefings will be conducted at the 601<sup>st</sup>.
- PA/Media may be present for Static Display and Flight

#### 4. SPRAY CONFIGURATION: SP-2G, Fire Dept (ext 4777) supplying water POC Chief (b) (6)

- a. **Mass:** 2-Module System with 10-8070's installed
- b. **Differential GPS:** Wingman Installed
- c. **Aircraft:** 89-9106
- d. **Mission Identifier:** QZNRKA204233

#### 5. SPRAY PARAMETERS: AS NEEDED

#### 6. AIR TO GROUND RADIO FREQUENCIES:

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Parris Island MCRD, SC

1. One C-130 will be available 22-25 Jun 09 for the requested adulticide spray mission. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in biting midge and mosquito populations effecting the health and welfare of the recruits and other personnel at Parris Island MCRD, SC. Operations will be conducted out of Beaufort MCAS, SC.

2. Concept of Operations:

- a. 22 Jun (Monday)  
1400 Show KYNG  
1600 Depart KYNG  
1800 Land KNBC
- b. 23 Jun (Tuesday)

Aerial Spray Coordinator

**910 AW AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**PARRIS ISLAND MCRD, SC 21 – 24 APR 2008**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island Marine Corps Recruit Depot, South Carolina
- b. Mission Duration: 21-24 APR 2008
- c. Purpose of Application: Biting Midge (*Culicoides* spp.)/Mosquito Control
- d. Application Dates: 22 APR and 23 APR 2008
- b. **Aircrew:**
  - (1) Pilots: COL (b) (6), Mission Commander, LTC (b) (6), MAJ (b) (6)
  - (2) Navigator: MAJ (b) (6)
  - (3) Flight Engineers: MSGT (b) (6)
  - (4) Spray Operators: MSGT (b) (6), MSGT (b) (6), TSGT (b) (6)
- b. **Maintenance:**
  - (1) Spray Maintenance: TSGT (b) (6), TSGT (b) (6), TSGT (b) (6)
  - (2) Crew Chiefs: TSGT (b) (6), SSGT (b) (6)
  - (3) Avionics: (b) (6)
- c. Entomologist: LTC (b) (6)
- d. **Flying Data:**
  - (1) Spray Sorties 22 APR 1.0 and 1.2
  - (2) Spray Sortie 23 APR 1.0
  - (3) Ferry Sorties/Hours: 2.0/2.0 on 21 APR and 24 APR

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 44 Gal Dibrom<sup>®</sup> (22 APR)
- e. Gallons Pesticide Applied: 42
- f. Gallons and Name Diluent Used: N/A
- g. Gallons and Name of Flush Used: 7 gal Marvel Mystery Oil
- h. Other Additives Used: None
- i. Application Rate: 0.75 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet<sup>®</sup> 8005 Flat Fan
- e. Nozzle Orientation & Number Used: 7 oriented straight down
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 2.7 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 3000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) 22 APR 08 – 300°/6 knots at 1800; 330°/4.5 knots at 1930
  - (2) 23 APR 08 -- 60°/6 knots with gusts to 10 knots at 1825; dropped to 5-8 knots at 1830
- b. Temperature (Degrees Fahrenheit):
  - (1) 22 APR 08 – 73 at 1800; 69 at 1930
  - (2) 23 APR 08 – 71 at 1825
- c. Relative Humidity:
  - (1) 22 APR 08 – 51% at 1800; 56% at 1930
  - (2) 23 APR 08 – 71% at 1825
- d. Cloud Cover: 25% on 22 APR 08; 50% on 23 APR 08 following a brief shower
- e. Source: Ground observations at Parris Island MCRD

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Acres sprayed and gallons used:
  - (1) 22 APR 2008 – 6,060 acres; 38 gallons.
  - (2) 23 APR 2008 – 1,311 acres; 4 gallons.
- b. Deposition Pattern:
  - (1) Technique/s Used: visual observation of aircraft course (GPS); 2 Bald eagle's nests were given a 0.5 mile radius for no-fly
  - (2) Results: Good coverage throughout spray area, but see remarks
- c. Effectiveness:
  - (1) Technique/s Used: Weekly collections of midges and mosquitoes with light traps and landing rates in regions frequented by recruits involved in training
  - (2) Results: Control efficacy will be determined by Parris Island MCRD staff.

**8. REMARKS:** Two sorties were flown on 22 APR 2008 due to partially plugged nozzles on the first sortie. The aircraft returned to Beaufort MCAS for maintenance between sorties, so did not have enough time to finish the spray on 22 APR 2008. Spray swaths 1 and 2 on the 51/231 chart were not sprayed. All other swaths up to swath 19 were flown. Biting midges were active during the spray. Landing counts for biting midges and mosquitoes were conducted in shaded areas protected from the wind on 23 APR 2008 during the middle of the day because it was overcast and temperatures were relatively cool. All counts were zero with the exception of Horse Island which, with the wind drift on 22 APR 2008 would not have been sprayed. Landing counts were two per minute for biting midges, and six per minute for mosquitoes. Priorities for the 23 APR 2008 spray were first to complete the area not sprayed on 22 APR which included training areas on the south end of the Island, second, Horse Island, and third, the area between the administrative area on the east side of the Island and the rifle range. The evening of 23 APR 08 at 1900 following the spray, biting midges were very active in the administrative area, and on the western causeway. Landing counts from 24 APR 2008 are below:

- (1) Horse Island – 1828 to 1833 – 2 biting midges/5 min; no mosquitoes
- (2) Rifle Range – 1844 – no midges or mosquitoes, but breezy
- (3) Water Tower – 1850 – no midges or mosquitoes
- (4) Golf Course – 1900 – no midges or mosquitoes
- (5) Jim Clark's Office – 1819-1922 – 2 biting midges/3 min; no mosquitoes

It appears that a few spots did not receive complete coverage because of wind direction and avoiding the no spray areas for eagle's nests, and the problem with some nozzle plugging on 22 APR.

- (5) Ferry Sorties/hours: 5/25.8
- (6) Spray sorties/hours: 16/20.8

**3. PESTICIDE:**

- a. Trade Name: Krovar® IDF

- b. EPA Registration Number: 352-505
- c. Formulation Sprayed: 10 lbs Krovar® per 22.5 gallons formulation.
- d. Gallons Pesticide Mix Loaded: 24,295
- e. Gallons Pesticide Mix Applied: 24,215
- f. Formulation Used: 450 lbs Krovar®, 4.0 gal StaPut®, ½ gal No-Foam®, 200 ounces Hi-Light® Dye, remainder water per 1000 gal of spray mix.
- g. Gallons and Name of Flush Used: 900 gal water
- h. Other Additives Used: 99.8 gal StaPut®; 40 gal Hi-Light® dye; 12.5 gal No-foam
- i. Application Rate: 22.5 gal/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99106, 99108
- b. Spray System (Modules Used) and System ID #: 3 and 5.
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 2 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 366 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 35'
- b. Spray Off-set: Given by spray ground
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) 2 APR – beginning 160° at 15 knots; ending 160° at 19 knots
  - (2) 6 APR – beginning 360° at 1.5 knots; ending 20° at 3 knots.
  - (3) 7 APR – beginning 20° at 3 knots; ending 270° at 5 knots.
- b. Temperature (Degrees Fahrenheit):
  - (1) 2 APR – 37° F - 45° F
  - (2) 6 APR – 37° F - 53° F
  - (3) 7 APR – 32° F - 48° F
- c. Relative Humidity:
  - (1) 2 APR – 41- 30 %
  - (2) 6 APR – 60-26 %
  - (3) 7 APR – 56-45 %
- d. Cloud Cover: Partly cloudy to overcast during the 2 April spray and clear on 6-7 April.
- e. Source: Ground observations at UTTR Target 21.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: blue dye pattern on targets and observations from ground markers.
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring.
  - (2) Results: will be determined this spring by range personnel.

**8. REMARKS:**

- a. A factor in the planning for this mission was the grounding of the C-130 fleet pending replacement of a series of structural bolts just prior to the start dates. 910<sup>th</sup> MXS worked

diligently to provide the 388<sup>th</sup> RANS with 2 spray aircraft. Consequently, spray aircraft also flew additional self-supporting ferry sorties to put personnel and equipment in place. Construction on the Hill AFB runway and specifically on the alert ramp prevented the mission from using Zulu Ops as a command post this year. Instead, we mixed and loaded near Air Freight terminal ramp, an acceptable but not ideal location as it is logistically difficult to access. Herbicide applications on the UTTR began 2 April but were discontinued early morning after wind speeds on the targets made controlling the swath difficult. Two subsequent poor weather days further delayed the mission. The range was closed 4-5 April. On 6 April conditions improved significantly and the operation encountered what may be described as the “perfect calm”; a record 7 sorties were completed as environmental conditions miraculously remained favorable throughout the day. Excellent conditions prevailed again on 7 April and the Spray Flight finished all assigned targets. In addition, good coverage for the current application was observed by the onboard entomologist. However, some lane skips undoubtedly occurred on Target 21 resulting from pesticide drift, as fewer gallons were applied there this year. The additional herbicide was used to treat the Wildcat Mountain target which has not been treated for at least 10 years. The lack of a proper command post notwithstanding, we received good support from various organization on Hill including the 75 CES personnel lead by (b) (6) (b) (6). His team of 4 individuals mixed over 3 tons of Krovar on 6 April, during the record-setting application day. This was demanding physical labor and the team worked diligently to get the two spray aircraft back on target as quickly as possible. The 388 RANS (b) (6) ) did a great job in providing timely communication, information, and direction, which directly contributed to mission success. SMSgt (b) (6) (75 LRS) ensured we had access to Bldg. 900 during mission hours. Finally, we extend a special thanks to LtCol (b) (6) (514 FLTS) for serving, once again, as our base sponsor.

- b. An aerial review of the target areas by the entomologist found control from the 2008 application was effective. This finding, coupled with logistic factors for the 388<sup>th</sup>, indicate that the 2010 application will be scheduled again near the end of March or early April timeframe. There is also discussion of increasing the number of potential spray targets in the near future.

# USCG HH-65 Dolphin

## **Objectives**

E.iii.--Conduct all field operations in accordance with the Site Safety Plan.

E.iv. Conduct all field operations in accordance with restrictions relating to marine mammals, endangered species, and cultural resources.

E.vii.--Deploy observation technologies for water surface, water column, shoreline, and the seafloor to collect operationally relevant data in real time and near real time.

F.iv.--Conduct fieldwork to collect ephemeral data including SCAT, water samples, wildlife, shellfish, and economic information.

**Figure 1. A USCGC HH-65 Dolphin will be the first Aircraft on Scene at Safe Seas 2006.**

## **Overview**

### **Aerial Observation Training**

NOAA HAZMAT personnel will provide oil spill observation training to US Coast Guard Aviators using deployed drift cards and real environmental conditions present during the exercise.

### **Aerial Observations**

The observations observed in the training will be properly recorded and mapped in order to provide over-flight information to command post personnel and to help initiate oil spill trajectory models.

## **Overview**

The USCG HH-65 will be available for one AM sortie on Wednesday 9 August. The helicopter can execute tasking from the IC (Incident Commander) as appropriate. On scene time is approximately 1 hr 45 min. This helicopter can carry one passenger as designated by the NOAA Safe Seas organizers.

## **Team**

LEAD:	LT (b) (6)	/LT (b) (6) (b) (6)
Air Boss:	LT (b) (6)	
NOAA Trainer:	(b) (6) (b) (6)	NOAA HAZMAT

## **Location**

Based out of USCG Air Station San Francisco at SFO Int'l Airport. Operation center phone: 650-808-2901/2902. Sortie details must be given to Air Station schedule officer, LT (b) (6) (b) (6) by 2 August 2006. This includes requested on scene time, location, passenger information, and any modification to the concept of operations below.

The primary operating area shall be offshore from Bolinas Bay, IVO N37° 49.5' W122° 41.5'

## **Concept of Operations**

This will be the first aircraft on scene for the exercise. It will be simulating a request from USCG Sector San Francisco regarding the surveillance of a simulated oil spill in vicinity of position N37° 39.00' W122° 38.0'.

The HH-65C will conduct area surveillance and provide a pollution and weather report to the Incident Commander.

The HH-65C will take video of the scene. This video tape can either be transported directly to Coast Guard Island in Alameda, or will be taken to Air Sta San Francisco. (Note: Depending on the location of the Incident Command Post, the tape can be taken directly to it – further discussion should be had with either LT (b) (6) or LT (b) (6) regarding the feasibility of this.)

The HH-65 will be off scene prior to the commencement of the spray dispersant exercise conducted with the USAF C-130, the NOAA amphibious aircraft, and charter aircraft. No exercise aircraft will be flying in conjunction with the HH-65's on scene time.

## **Comms Plan**

CALL SIGN: "Coast Guard 65 \_\_ \_\_"

**HH65 Comms Capabilities:**

Radio	VHF-AM	UHF	FM	HF
1	Yes	Yes	Yes	
2	Yes	Yes	Yes	
3			Yes	
4				Yes

**Comms Plan:**

Call Sign	VHF-AM	UHF	FM	HF
Incident Command	?	?	?	?
Sector San Francisco			CH 21	
NOAA 64	122.85			
Golden Gate Common	124.3			
Pacific Responder	122.85	345.0	?	?
Spray 1	122.85	345.0		
Spotter 6	122.85	345.0		

Call Sign	Unit Description
Incident Command	Incident Command Post
Sector San Francisco	Sector San Francisco
NOAA 64	NOAA Lake Amphibian aircraft used for dispersant exercise. N64RF. Will be a high cover safety aircraft and used for aerial surveillance.
Spray 1	USAF C-130 for dispersant exercise
Spotter 6	Charter aircraft for dispersant exercise
Pacific Responder	Research Vessel Pacific Responder
Golden Gate Common	General aviation frequency used for low flying aircraft in the vicinity of San Francisco Bay

**Data Plan**

Information will be relayed to the command post via the NOAA observer.

**Safety Plan**

A representative from this mission will participate in the Aviation Flight Safety and Planning meeting to be held on Tuesday, August 8<sup>th</sup> at the USCG Air Station, SF at 1400.

The HH-65 will be off scene prior to the commencement of the spray dispersant exercise conducted with the USAF C-130, the NOAA amphibious aircraft, and charter aircraft. No exercise aircraft will be flying in conjunction with the HH-65's on scene time.

The HH-65 will maintain Air Station San Francisco training weather minimums (500 ft, 2 NM) at all times.

The HH-65C is TCAS equipped.

### **Contingencies**

If weather conditions prohibit over flight offshore, the HH-65 will conduct over flights in San Pablo Bay and report weather conditions to the IC.

## **Objectives**

E.iii.--Conduct all field operations in accordance with the Site Safety Plan.

E.iv. Conduct all field operations in accordance with restrictions relating to marine mammals, endangered species, and cultural resources.

E.viii-- Deploy dispersant application assets and follow-on Special Monitoring of Applied Response Technologies (SMART) in order to test the California Dispersant Plan.

**Figure 1** Figure 1 The NOAA Lake Amphibian Aircraft will fly as the Task Force Command plane and provide safety coordination from the highest altitude of the evolution.

## **Dispersant Application**

The U.S. Air Force Reserve will deploy from Youngstown, Ohio, in order to simulate the application of oil dispersants that were approved by the Regional Response Team during the Table Top portion of the exercise in July.

This evolution will also involve the participation of the NOAA Lake Amphibian aircraft as well as an California Department of Forestry and Fire Prevention Air Attack fire response aircraft. The C-130 and Air Attack aircraft will fly in opposing racetrack formation applying water over the drift card/fluorocine dye "slick". The C-130 will do eight passes at 100 feet altitude applying approximately 1000 gallons of water. The NOAA aircraft will serve as a safety plane, and will include an expert tactical commander to assist in this capacity.

**Figure 2** The California State Air Attack Aircraft provides spray spotting for fire fighting and dispersant application.

**Figure 3** The U.S. Air Force Reserve's 910th Air Wing will provide a Spray equipped C-130 to simulate dispersant application from an altitude of 100 feet.

# NOAA Lake Amphibian

## **Objectives**

E.iii.--Conduct all field operations in accordance with the Site Safety Plan.

E.iv. Conduct all field operations in accordance with restrictions relating to marine mammals, endangered species, and cultural resources.

E.vii.--Deploy observation technologies for water surface, water column, shoreline, and the seafloor to collect operationally relevant data in real time and near real time.

E.viii-- Deploy dispersant application assets and follow-on Special Monitoring of Applied Response Technologies (SMART) in order to test the California Dispersant Plan.

F.iv.-- Conduct fieldwork to collect ephemeral data including SCAT, water samples, wildlife, shellfish, and economic information.

## **Overview**

### **Dispersant Application Safety Plane**

The NOAA Lake Amphibian will be conducting two missions during the simulated dispersant application. In the first mission the plane will fly over the northern and southern operations areas in order to map the spatial extent of trust resources. This survey will then be used to facilitate the second mission, which is to serve as the Safety Plane during the application of simulated dispersant.

### **Wildlife Survey**

In advance of the C-130 led aerial dispersant application, NOAA, assisted by trained wildlife observers will conduct a wildlife survey in order to ensure the absence of trust resources that might be affected during the exercise. The results of this survey will be fed into the operations cycle.

## **Team**

NOAA Pilot: LCDR (sel) (b) (6)  
Air Boss: LT (b) (6), USCG  
Observer: (b) (6), Channel Islands National Marine Sanctuary  
Videographer:

## **Location**

Aircraft will take off from Half Moon Bay (KHAF). LT (b) (6) is the Pilot in Command, cell phone (b) (6).

On scene times will be established on Tuesday 8 August at the Air Ops Planning and Safety Meeting..

The primary operating area shall be offshore from Ocean Beach, IVO N37° 39.00' W122° 38.0'.

## **Concept of Operations**

Altitudes and operating details shall be thoroughly briefed with all pilots prior to the exercise.

Check in with the IC to establish the location of the Coast Guard helicopter. If the helo is still in the area, make traffic calls on Golden Gate Common (124.3) or maintain flight following with NORCAL approach (135.1)

NOAA 64 will conduct an aerial surveillance IAW Incident Command tasking. This will include a survey and report to the IC regarding marine wildlife, reports on the simulated oil spill status, and weather.

In preparation for the dispersant exercise, NOAA 64 will climb to the pre-briefed cover altitude and check in with NORCAL approach on 135.1. Once established in an orbit, NOAA 64 will direct SPRAY 1 and SPOTTER 6 into the exercise area on 122.85. Visual traffic advisories and advisories from NORCAL approach will be relayed to exercise aircraft via 122.85.

RV PACIFIC RESPONDER will monitor 122.85 as well. Any advisories to the dispersant operation from the IC shall be made via RV PACIFIC RESPONDER.

## **Comms Plan**

**CALL SIGN: "NOAA 64"**

**N64RF Comms Capabilities:**

<b>Radio</b>	<b>VHF-AM</b>	<b>UHF</b>	<b>FM</b>	<b>HF</b>
<b>1</b>	Yes			
<b>2</b>	Yes			

**Comms Plan:**

<b>Call Sign</b>	<b>VHF-AM</b>	<b>UHF</b>	<b>FM</b>	<b>HF</b>
<b>Incident Command</b>	?	?	?	?
<b>Sector San Francisco</b>			CH 21	
<b>Coast Guard 65</b>	124.3	345.0	CH 21	5696
<b>Golden Gate Common</b>	124.3			
<b>Pacific Responder</b>	122.85	345.0	?	?
<b>Spray 1</b>	122.85	345.0		
<b>Spotter 6</b>	122.85	345.0		

<b>Call Sign</b>	<b>Unit Description</b>
<b>Incident Command</b>	Incident Command Post
<b>Sector San Francisco</b>	Sector San Francisco
<b>Coast Guard 65</b>	USCG HH-65C helicopter.
<b>Spray 1</b>	USAF C-130 for dispersant exercise
<b>Spotter 6</b>	Charter aircraft for dispersant exercise
<b>Pacific Responder</b>	Research Vessel Pacific Responder
<b>Golden Gate Common</b>	General aviation frequency used for low flying aircraft in the vicinity of San Francisco Bay

## **Data Plan**

## **Safety Plan**

Maintain VMC at all times.

Ensure altitudes, comms, and procedures are briefed with all pilots prior to the exercise.

Utilize visual scanning and NORCAL approach to provide aircraft traffic advisories to SPRAY 1 and SPOTTER 6.

Do not over-fly within ½ NM of the coast lower than 2000 feet due to the sensitivity of nesting birds.

Remain clear of SFO Class B Airspace at all times.

### **Contingencies**

If weather conditions prohibit over flight offshore, the spray dispersant exercise will be moved to the San Pablo Bay (SGD/170/15NM), 15 NM South of Scaggs Island VOR. This decision will be made by the IC based on weather reports from the HH-65 and NOAA 64.

An A-B line in the San Pablo bay will be based on GPS positions:

A: N38° 02.1' W122° 24.0'

B: N38° 03.0' W122° 22.9'

In this case, the dispersant exercise will be conducted with air assets only, specifically NOAA 64, SPOTTER 6, and SPRAY 1.

The San Pablo Bay has a higher concentration of air traffic than offshore. Pilots must be extra diligent of possible non-exercise traffic interference.

NOAA 64 shall orbit at the pre-briefed altitude check in with Oakland Center (freq TBD) to receive traffic advisories. Advisories will be given to SPOTTER 6 and SPRAY 1 via 122.85.

# USAF 910<sup>th</sup> Air Wing C-130 (Spray 1)

## Overview

The U.S. Air Reserve will deploy from Youngstown, Ohio in order to simulate the application of dispersants.

During the exercise, the C-130 will be based out of Moffet Field (KNUQ).

## Team

### 910 AW PARTICIPANTS:

#### a. Aircrew:

- (1) Mission Commander: MAJ (b) (6) (6)
- (2) Pilots: MAJ (b) (6) (b) (6) MAJ (b) (6)
- (3) Navigators: MAJ (b) (6) (6)
- (4) Flight Engineers: MSG (b) (6)
- (5) Spray Operators: SMS (b) (6) , MSG (b) (6) (b) (6)

#### b. Spray Maintenance:

- (1) Spray Maintenance: TSG (b) (6) , TSG (b) (6) , TSG (b) (6)
- (2) Crew Chiefs:

#### c. CPMP: MAJ (b) (6) (b) (6) CPT (b) (6) ?

#### d. Public Affairs: CPT (b) (6) (b) (6)

## Location

The C-130 will be based out of Moffet Field.

The NOAA Lake Amphibian and chartered spotter aircraft will be based out of Half Moon Bay (KHAF).

If offshore weather permits, the evolution will occur in the vicinity of the Southern Operating area (37° 39.00N, 122° 38.00W).

## **Concept of Operations**

### **PART 1: LOGISTICS**

#### **A. TIMELINE:**

##### **6 Aug (Sunday):                    PPR 0601**

- 1000: Show Time
- 1     200: Depart KYNG
- 1630: Land KNUQ
- 1630: Safety Briefing

##### **7 Aug (Monday):**

- 1200-1500: Safe Seas Media Day, Piers 30-32  
(b) (6) (b) (6)                    (b) (6)    (b) (6)                    all YNG personnel invited

##### **8 Aug (Tuesday):**

- 1200: Safe Seas 2006 Emergency Response Exercise Planning Meeting  
Dispersant application Training.  
USCG San Francisco Air Station, Bldg ?
- 1900: Safe Seas 2006 Reception at Hyde Street Marina—all invited to attend

##### **9 Aug (Wednesday):**

- 0900: Show Time
- 1030: Depart KNUQ - Safe Seas 2006 Emergency Response Exercise
- 1115: Disperse Applications over simulated oil spill
- 1230: Land KNUQ

##### **10 Aug (Thursday):**

- 1230: Safe Seas 2006 Emergency Response Exercise Hot Wash  
USCG San Francisco Air Station, Command Post

##### **11 Aug (Friday):**

- 0600: Show Time
- 0800: Depart KNUQ
- 1730: Land KYNG

#### **B. SPRAY CONFIGURATION:**

- a.     MASS – SP2G
- b.     Aircraft Number: 106
- c.     Mission Identifier: QZNRKA025218

#### **C. SPRAY PARAMETERS:**

- a.     Nozzles – Raindrop nozzles oriented straight back.

- b. 8 (16 total) on each fuselage boom; evenly spaced.
- c. Booms – fuselage only
- d. Airspeed – 170 knots ground speed.
- e. Altitude – 100 feet above water.
- f. Application Rate – 7 Gal/Acre
- g. Flow Rate – 277 Gal/Min
- h. Spray -- water only.
- i. Number of passes – as needed.
- j. Pressure – 40 psi

#### **D. LOADING:**

- a. 950 gallons of water
- b. **Furnished by Installation:**
  - (1) Water
  - (2) Truck
  - (3) Two B-5 or B-1 Stands

#### **E. TRANSPORTATION:**

*ENTERPRISE RENTAL CAR AGENCY-pick up at Base Ops*

- #079918 confirmation, 6 Full Size @ \$47 per day or \$282 per week, 650-934-0760, poc Meg

- (b) (6)
- (b) (6)
- (b) (6)
- (b) (6)
- **Crew Chiefs**
- (b) (6)

#### **F. QUARTERS:**

Lodging Rate \$99.50, per diem rate \$101.

- Quality Inn Mountain View, 650-934-0155, (b) (6) Confirmations 122081-122097

## G. CONTACTS:

## PART 2: DISPERSANT EVOLUTION

Three aircraft will be involved in the evolution:

Aircraft	Purpose	Point of Contact
USAF C-130 "SPRAY 1"	Product Application	(b) (6) (b) (6) Research Entomologist Youngstown Air Reserve Station (757 AS/DOS) Vienna, Ohio 44473 (b) (6) office DSN (b) (6) 330.609.1616, fax (b) (6) (b) (6) (b) (6)
NOAA Lake Amphibian "NOAA 64"	Safety / Cover	LT (b) (6) XO, CINMS Work: (b) (6) Mobil
Chartered Aircraft "SPOTTER 6"	Spotter	(b) (6)

The primary operating area shall be offshore from Ocean Beach, IVO N37° 39.00' W122° 38.0'.

All altitudes and procedures shall be pre-briefed by all pilots prior to the evolution.

The evolution will start with NOAA 64 taking a high cover position IVO of the reported spill.

NOAA 64 shall establish comms with RV *PACIFIC RESPONDER* on 122.85 as well as NORCAL approach on 135.1.

The A-B line shall be IVO position 37° 39.00N, 122° 38.00W. This A-B line will either be pre-briefed or communicated to SPRAY 1 via the IC. Depending on comms capabilities of the IC, this information may need to be relayed through RV *PACIFIC RESPONDER*.

The C-130, SPRAY 1, shall establish a holding pattern at 1800 ft MSL on the SFO 230 radial at 20 DME (SFO/230/20). Establish comms with NOAA 64 on 122.85.

The charter aircraft, SPOTTER 6, shall hold at 2800 ft MSL on the SFO 210 radial at 20 DME (SFO/210/20). Establish comms with NOAA 64 on 122.85.

When NOAA 64 is established in orbit and ready to begin the exercise, NOAA 64 shall direct SPRAY 1 and SPOTTER 6 on scene to commence dispersant operations. NOAA 64 shall provide traffic and safety advisories to SPRAY 1 and SPOTTER 6 on 122.85.

Air to air comms between SPRAY 1 and SPOTTER 6 shall be on 122.85.

Remain clear of SFO Class B airspace at all times.

Do not over-fly within ½ NM of the coast lower than 2000 feet due to the sensitivity of nesting birds.

## Comms Plan

**CALL SIGN: "NOAA 64"**

**N64RF Comms Cababilities:**

Radio	VHF-AM	UHF	FM	HF

Pacific Responder	122.85	345.0	?	?
Spray 1	122.85	345.0		
Spotter 6	122.85	345.0		
NOAA 64	122.85			

<b>Call Sign</b>	<b>Unit Description</b>
<b>Incident Command</b>	Incident Command Post
<b>Sector San Francisco</b>	Sector San Francisco
<b>Coast Guard 65</b>	USCG HH-65C helicopter.
<b>Spray 1</b>	USAF C-130 for dispersant exercise
<b>Spotter 6</b>	Charter aircraft for dispersant exercise
<b>NOAA 64</b>	NOAA Lake Amphibian aircraft used for dispersant exercise. N64RF.
<b>Pacific Responder</b>	Research Vessel Pacific Responder
<b>Golden Gate Common</b>	General aviation frequency used for low flying aircraft in the vicinity of San Francisco Bay

### **Data Plan**

### **Safety Plan**

Maintain VMC at all times.

Ensure altitudes, comms, and procedures are briefed with all pilots prior to the exercise.

NOAA 64 shall provide traffic advisories to SPRAY 1 and SPOTTER 6 on 122.85.

Do not over-fly within ½ NM of the coast lower than 2000 feet due to the sensitivity of nesting birds.

SPRAY 1 is TCAS equipped.

Remain clear of SFO Class B Airspace at all times.

### **Contingencies**

If weather conditions prohibit over flight offshore, the spray dispersant exercise will be moved to the San Pablo Bay (SGD/170/15NM), 15 NM South of Scaggs Island VOR. This decision will be made by the IC based on weather reports from the HH-65 and NOAA 64.

An A-B line in the San Pablo bay will be based on GPS positions:

A: N38° 02.1' W122° 24.0'

B: N38° 03.0' W122° 22.9'

In this case, the dispersant exercise will be conducted with air assets only, specifically NOAA 64, SPOTTER 6, and SPRAY 1.

The San Pablo Bay has a higher concentration of air traffic than offshore. Pilots must be extra diligent of possible non-exercise traffic interference.

NOAA 64 shall orbit at the pre-briefed altitude check in with Oakland Center (freq TBD) to receive traffic advisories. Advisories will be given to SPOTTER 6 and SPRAY 1 via 122.85.

SPRAY 1 shall hold at SAU/300/15 at 5500 ft MSL and establish comms with NOAA 64.

SPOTTER 6 shall hold at SAU/280/15 at 4500 ft MSL and establish comms with NOAA 64.

NOAA shall direct SPRAY 1 and SPOTTER 6 over San Pablo Bay when ready to commence the exercise.

Pilots should make every effort to remain “feet wet” at all times when operating below 1000 feet – particularly the C-130. A-B line adjustments should be made to accommodate this. Also, avoid the north shore of San Pablo Bay due to a wildlife refuge (see the SFO Terminal Area Chart). Also, A-B line adjustments should be made to stay reasonably clear of any non-exercise vessel traffic.

# Cal DFG *Partenavia*

## **Objectives**

E.iii.--Conduct all field operations in accordance with the Site Safety Plan.

E.iv. Conduct all field operations in accordance with restrictions relating to marine mammals, endangered species, and cultural resources.

E.vii.—Conduct geo-referenced aerial photography of #2 dye plume in real time for as long as the plume is visible or conditions allow in order to test the California Dispersed Oil Monitoring Plan.

## **Overview**

After a dispersant application, decision makers need to know whether or not it was effective and trustee agencies need to know the amount of oil forced into the water column for Natural Damage Assessment. Special Monitoring of Applied Response Technologies (SMART) is a systems of observation protocols intended to answer these questions.

SMART monitoring will be led from scientists aboard the California Fish and Game Partenavia Aircraft. As they conduct aerial geo-referenced imagery, they will direct the NOAA Research Vessel Shearwater (see above mission description) to the location of the dispersed oil plume (dye in the case of this exercise). Scientists from Louisiana State University and the U.S. Coast Guard Pacific Strike Team who will be aboard Shearwater will use special fluorometers to measure amount and distribution of particles in the water column.

## **Team**

DFD pilot: (b) (6)

DFG observer: Dr. (b) (6)

ASA observer: Dr. (b) (6)

## **Concept of Operations**

Conduct aerial photography of dye dispersion. The aircraft will continuously circle over the dye plume taking photographs at approximately 3 minutes interval. The altitude will increase as the dye plume expands. Expected altitudes will begin at 2000' and may reach as high as 8000' later in the day. Operations may be restricted due to low visibility, overcast, or air traffic control.

## **Comms Plan**

The aircraft will maintain two-way radio communications with air traffic control on assigned airband frequencies.

The aircraft will also monitor channel 81A and/or 83A.

Furthermore direct communication with the *Pacific Responder* and/or the *Shearwater* will be established using DFG radios. Hand-held radio(s) will be provided by Dr. Nordhausen.

## **Data Plan**

Digital photographs and GPS information will be collected, analyzed, and archived by Dr. Nordhausen and Dr. French McCay.

## **Safety Plan**

The aircraft will be operated in accordance with all applicable laws and DFG SOPs

## **Contingencies**

**Cell phone numbers:**

(b) (6)

(b) (6)

## Safe Seas 2006 Emergency Response Exercise

Safe Seas 2006 (SS2006) is a multi-agency effort lead by the National Oceanic and Atmospheric Administration (NOAA) in collaboration with U.S. Coast Guard, California Office of Spill Prevention and Response, Harley Marine Services, and the Department of Interior. More than 300 people will participate in training, field operations, oceanographic surveys, and incident command post activities. Vessels and aircraft from NOAA, the U.S. Coast Guard, U.S. Air Force Reserve, Marine Spill Response Corporation, Alameda County Sheriff's Department, and Bodega Marine Laboratory are expected to participate in the exercise. Additionally, the Central and Northern California Ocean Observing System will activate the new surface current mapping radar in support of exercise data requirements.

The Safe Seas 2006 exercise will build on the successful Safe Sanctuaries 2005 exercise held in the Florida Keys National Marine Sanctuary, as well as agency-wide experience in response to the 2005 Hurricanes Katrina, Rita, and Wilma.

**R/V Mussel Point**

- Oceanographic Ops
- UAS Control

**P/B ALCO 85**

- AUV Ops
- POPEIE Buoy Recovery
- Drift Cards

**USCGC Aspen**

- SORS (Tech. Demo)
- VIP Escort

**Air OPS:**

- Lake Amphib Surveys
- HH65 Dolphin Surveys & POPEIE Buoy release
- C-130 Dispersant Ops

**R/V Shearwater**

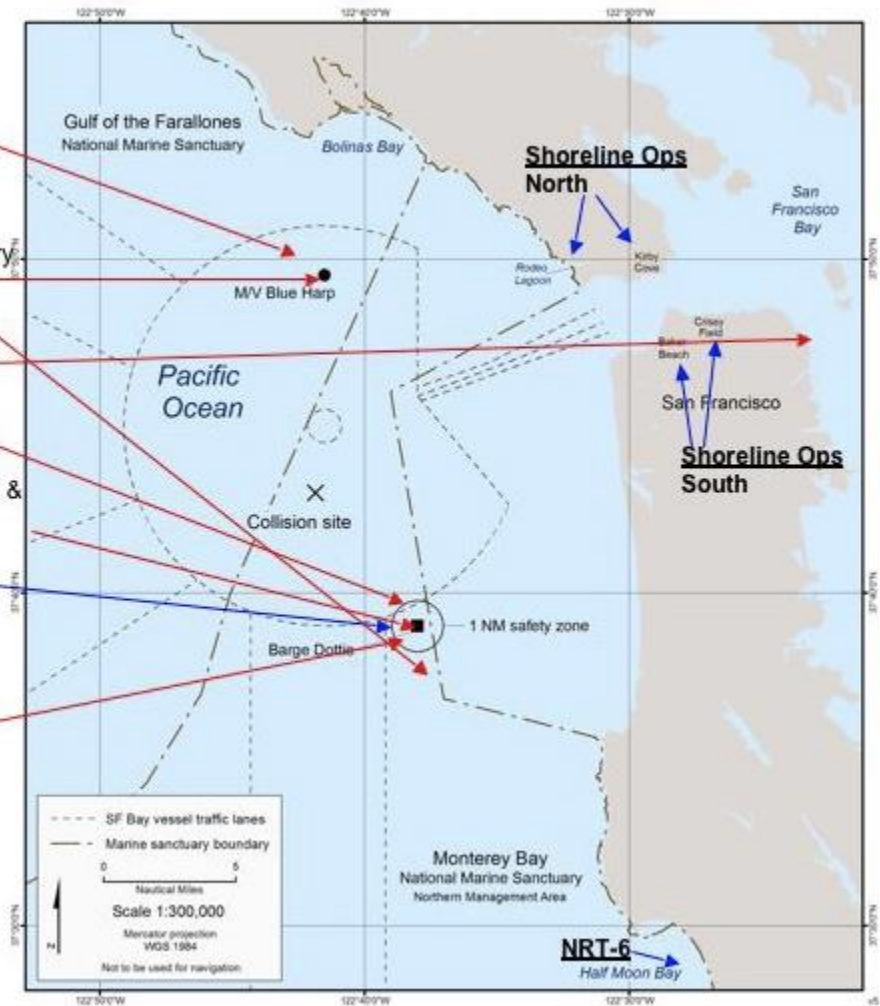

- Driftcards
- QREB
- SMART
- Oceanographic Ops

**W/C Pacific Responder**

- Skimming Ops
- Forward CMD Post

Barge Dottie:  
37° 39.0' N 122° 38.0' W

M/V Blue Harp:  
37° 49.5' N 122° 41.5' W

The SS2006 exercise design will focus on a simulated marine collision occurring about 17 nm from Golden Gate in central California.

## Proposed Scenario

The SS2006 exercise design focuses on the marine collision of a bulk freight cargo ship **M/V Blue Harp** inbound to San Francisco from Long Beach, with the outbound **tug Earnest Campbell**, towing the **tank barge Dottie**, en route to Los Angeles. The barge sinks from the collision, with oil spilling from both the barge and damaged cargo ship. As a result of the collision, Dottie releases oil and the Blue Harp threatens to release its fuel due to sustained damage.

A simulation of the tug Earnest Campbell with the tank barge Dottie under tow.

The pollutants spilled during this exercise will be simulated by the release of hundreds of drift cards, which are designed to model floating pollutants at the site of the hypothetical collision and sinking. Using this scenario, the Safe Seas 2006 exercise will bring together federal, state, and local responders in order to increase response readiness to a large oil spill in a National Marine Sanctuary in central California.

## Activities Timeline

The following activities and training are planned for SS2006:

Date	Activity	Location
7 August	Short Courses / Technology Demonstration	Lower Fort Mason, San Francisco
8 August	Short Courses	Lower Fort Mason, San Francisco
9-10 August	Full Scale Exercise	Mission Bay Conference Center, San Francisco

## Safe Seas 2006 Participants

More information on event participants.

- [National Marine Sanctuary Program](#) Information about our nation's marine sanctuaries--their history and current management, their scientific and educational programs, and their continuing efforts to conserve our ocean and coastal resources. [leaves OR&R site]
- [California Office of Spill Prevention and Response \(OSPR\)](#) The Office of Spill Prevention and Response works to provide the best achievable protection of California's natural resources by preventing, preparing for, and responding to oil and chemical spills, and through restoring and enhancing affected resources.

[leaves OR&R site]

- [U.S. Coast Guard: Sector San Francisco](#) USCG Sector San Francisco works to protect the public, the environment, and U.S. economic interests in its region's ports and waterways, along the coast, on international waters, or in any maritime region as required to support national security. [leaves OR&R site]
- [Harley Marine Services, Inc.](#) Harley Marine Services is a family of customer service oriented marine services companies whose primary focus is spill prevention. Harley Marine subsidiaries are continually training their operators to meet federal and state regulatory requirements for dealing with the products they transport. [leaves OR&R site]
- [Golden Gate National Recreation Area](#) The Golden Gate National Recreation Area (GGNRA) is one of the largest urban national parks in the world. Rich in natural resources, the park also contains numerous historical and cultural resources. [leaves OR&R site]
- [NOAA's Marine Debris Program](#) The NOAA Marine Debris Program is committed to identifying, removing, reducing, and preventing debris in the marine environment, on a national and an international level. The Program has identified a number of strategies to address marine debris. [leaves OR&R site]

The CeNCOOS site provides information about Safe Seas activities and data access, partner institutes, and other resources. [leaves OR&R site]

**SAFE SEAS MEDIA DAY ACTIVITIES**  
**Monday, August 7, 12:30 p.m. - 2:00 p.m.**  
**Pier 30-32, The Embarcadero, San Francisco, CA**

A one and a half hour media opportunity --- on Monday afternoon, August 7 at Pier 30-32 --- to interview key drill participants and get a first hand close-up look as some of the equipment that will be deployed during the actual Safe Seas drill on Wednesday, August 9. Listed below are the participants we currently anticipate being present.

**U.S. COAST GUARD**

**USCG Cutter *Aspen***

The *Aspen* will deploy its Spilled Oil Spill Recovery System (SORS). The SORS is a self-contained mechanical containment and recovery system that allows the *Aspen* to act as a first responder to any petroleum spills and begin the process of its removal from navigational waters and the open ocean. The *Aspen* is 225-foot long, 46-foot beam, 2000 LT, 18-foot navigable draft, bow and stern thrusters, single screw controllable pitch propeller, and has 42 crew and seven officers onboard.

As this will be a live demonstration, the Alameda County Sheriff's Department high speed 85-foot patrol boat, the *Alco 85*, will be on scene to ensure on-water navigational safety. On Wednesday the patrol boat will be the platform for launch on an autonomous underwater vehicle (AUV).

**Mobile Satellite Communications Trailer**

The Coast Guard will demonstrate its newly developed mobile communications trailer that can provide satellite and other communications links to provide communications capabilities to remote and forward deployed command posts.

**Pacific Strike Team**

The Pacific Strike Team will be on hand to explain their role as part of the SMART demonstration (See R/V *Shearwater*). The Strike Teams are the Coast Guard's highly trained, highly mobile, first responders that are used to respond to a variety of emergencies throughout the nation. Their role was critically displayed in the response to hurricanes Katrina and Rita.

**NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION (NOAA)**

**National Marine Sanctuaries - NOAA R/V *Shearwater***

The NOAA R/V *Shearwater* is the primary research vessel of the Channel Islands National Marine Sanctuary. It is a 62-foot high-speed Teknicraft catamaran used primarily as a research platform, conducting biotic and abiotic oceanographic research in the waters of the Santa Barbara Channel in Southern California. In addition to this role the vessel serves as a host for educational field trips and emergency response in and around the Channel Islands National Marine Sanctuary. The A-frame and winch configuration are used for a variety of projects including trawls, sediment sampling, and towing equipment such as sidescan sonar and remotely operated vehicles. The wet and dry labs allow on-board processing of samples and

data. Extensive dive operations are supported by onboard facilities and equipment. Recent efforts within the Sanctuary have included sea bird research, archeological/cultural research (primarily shipwrecks) and collecting baseline data for emerging management issues. On board berthing, stowage, galley and safety equipment allow for multiple-day excursions with crews of up to ten scientists.

For the Safe Seas drill the *Shearwater* will conduct three primary missions. First, it will serve as the deployment and recovery platform for the Quick Response Estuarine Buoy (below). It will then collect environmental information that is critical to NOAA's emergency response oceanographers that leads to increased accuracy of oil spill trajectory forecasts and a better understanding of the fate of dispersed oil (simulated for this exercise). Lastly, *Shearwater's* stability and maneuverability make her an excellent vessel to conduct Special Monitoring of Applied Response Technologies (SMART). After dispersants are applied during a real incident, decision makers need to know if they are effective and trustee agencies need to have an idea of how much oil has been dispersed. SMART Monitoring uses a technical flurometer protocol to measure the distribution of dispersed oil (non-toxic dye for the exercise). One of these flurometers, a Hydrolab multi-parameter water meter and other field data collection equipment will be presented during the demonstration by Louisiana State University's team of response chemists.

#### **Quick Response Estuarine Buoy (QREB)**

NOAA's Quick Response Estuarine Buoy (QREB) will be deployed by the *R/V Shearwater* in the southern operating area near the simulated site of the sinking of the barge *Dottie*. Data from the moored QREB includes ocean current profiles from an Acoustic Doppler Current Profiler (ADCP), ocean temperature and salinity data, and meteorological data which will be transmitted real-time to oil spill modelers and decision makers in the command post.

#### **NOAA Office of Coast Survey AUV Team - Hydrographic Autonomous Underwater Vehicle**

NOAA's Office of Coast Survey AUV Team will display its Hydrographic Autonomous Underwater Vehicle (AUV). The AUV is a hand-deployable vehicle that can be programmed to operate independently from shore, pier, or support vessel. The AUV is equipped with side scan sonar that can be used to detect and map submerged wrecks, rocks, and obstructions that could pose a hazard to navigation for commercial and recreational vessels. NOAA intends to use AUV's to increase the efficiency of its survey fleet and provide rapid response for port and harbor surveys.

The AUV will be deployed during the Safe Seas Exercise to map several existing wrecks in the immediate vicinity of the simulated sunken barge *Dottie* in order to demonstrate the type and quality of data that can be obtained to assist responders in evaluating the position and condition of a submerged wreck.

#### **NOAA Office of Coast Survey - Navigational Response Team (NRT) Boat**

NOAA's Office of Coast Survey will display equipment used in providing rapid response capability to identify and assist in clearing of navigational waterways following a natural or manmade disaster such as a ship collision, oil spill or hurricane. Equipment display will include the 30-foot outboard trailer-transported response boat and its on board survey equipment. The NRT Team #6 unit is California-based but responds as needed anywhere in country. The three-person crew, who will be available for interviews, participated in reopening of navigational waterways last fall in the Gulf of Mexico following Hurricanes Katrina and Rita.

### **NOAA Office of Response and Restoration - Data Collection From Remote Sites**

NOAA's Office of Response and Restoration will demonstrate its new field tools: a new database for managing Shoreline Cleanup Assessment Technique (SCAT) data and eSCAT, an electronic interface for SCAT data collection using GPS enabled Pocket PC handheld devices. These tools integrate Marine Debris assessment. Safe Seas is an opportunity to showcase the advancement of information technology and integration of marine debris assessment into the SCAT framework. Demonstration format will include: a poster to describe the systems, laptop demonstrations of the database and photo-logging software, demos of the hand-held devices, and examples of products to support response decision-making.

### **OILED WILDLIFE CARE NETWORK**

#### **Field Stabilization Unit and Capture Equipment:**

The Oiled Wildlife Care Network (OWCN) will display and demonstrated marine mammal and bird response capabilities, including demonstration of field stabilization unit and specialized capture gear. Included will be display of a 21-foot mobile field animal hospital and a "capture" truck. The field hospital includes animal examination station and caging while the capture truck includes a specially modified all-terrain vehicle for tracking and capturing injured or threatened marine mammals and other animals.

The OWCN strives to ensure that wildlife exposed to petroleum products in the environment receive the best achievable treatment by providing access to permanent wildlife rehabilitation facilities and trained personnel that are maintained in a constant state of readiness for oil spill response within California. The OWCN is sponsored by OSPR from interest earned on the state's Oil Spill Response Trust Fund, and its management is a collaborative program with the Wildlife Health Center located in the UC Davis School of Veterinary Medicine.

Quick, expedient and effective response is essential to saving lives during an oil spill. Every minute the animals are exposed the toxins means greater risk for severe, life-threatening health problems. The OWCN is proud to have a 50-75% save rate of oiled animals they have helped.

### **MARINE SPILL RESPONSE CORPORATION**

#### **OSRV *Pacific Responder***

The Marine Spill Response Corporation (MSRC) will have available one of its fleet of 210-foot response vessels (OSRVs) and will demonstrated the use of oil spill response vessel boom deployment and skimmer recovery technology and offer ship tours. The OSRVs have temporary storage for 4,000 barrels of recovered oil, and have the ability to separate oil and water aboard ship using two oil-water separation systems. To enable the OSRV to sustain cleanup operations, recovered oil is transferred into other vessels or barges. In addition to these 15 OSRVs, MSRC also operates two other OSRVs in the San Francisco Bay and four in Southern California.

MSRC is an independent, non-profit, national spill response company dedicated to rapid response. MSRC's capabilities include a large inventory of vessels, equipment, and trained personnel, complemented by a large contractor workforce in numerous locations in the continental U.S., Hawaii, and the Caribbean. MSRC also provides dedicated access to alternative response technologies such as in situ burn kits and aerial and vessel dispersant spraying. Although MSRC was created to respond to catastrophic spills, today's MSRC has broadened its scope of services. MSRC's mission now includes response to oil spills of any size, shoreline cleanup and, as appropriate, hazardous material spill response and response to spills outside the U.S.

## **NATIONAL PARK SERVICE**

Personnel from the Golden Gate National Recreation Area unit of the National Park Service will be available for interviews and informational guidance.

During the Wednesday exercise the Golden Gate National Recreation Area (GGNRA), the Marine Spill Response Corporation (MSRC), and the California Office of Spill Prevention and Response (OSPR), will join together to test oil spill response protective strategies at Crissy Field in San Francisco, CA. These strategies have been developed by OSPR, GGNRA, and MSRC as a part of the San Francisco Bay Area oil spill contingency planning process and are the first line of defense in protecting the rich habitat at Crissy Field.

This partnership is a valuable tool in protecting cultural and natural resources of GGNRA. OSPR and MSRC provide technological and technical support, whereas GGNRA provides local knowledge of the resources and aids in the development of effective strategies.

## **CENTRAL AND NORTHERN CALIFORNIA OCEAN OBSERVING SYSTEM (CeNCOOS ) High Frequency Radar Coastal Current Monitors**

A system of high frequency (HF) radars for monitoring coastal currents is a core component of NOAA's planned Integrated Ocean Observing System (IOOS). To date, the most significant network of HF radars is in California where voter-approved propositions funded the Coastal Ocean Currents Monitoring Program (COCMP).

The Safe Seas 2006 exercise will occur in an area represented by the Central and Northern California Ocean Observing System (CeNCOOS) Regional Association, a COCMP member. CeNCOOS is providing ocean current data from their HF radars in near-real-time to the Safe Seas Incident Command Post. This CeNCOOS-NOAA effort shows the potential for regional HF radar observing systems to aid NOAA and USCG missions in spill response, search and rescue, and ecosystem monitoring.

NOAA's IOOS Team has recently been partnering with COCMP members to facilitate the transition to 24/7 operations the dozens of existing HF radars in US coastal states. This partnership has resulted in the development of quality control and quality assurance metrics in addition to the creation of a prototype NOAA national HF radar data server.

## **CALIFORNIA OFFICE OF SPILL PREVENTION AND RESPONSE (OSPR)**

The California Department of Fish and Game's Office of Spill Prevention and Response (OSPR) is the state's lead agency in responding to hazardous spills in both marine and inland environments. The mission of OSPR is to provide the best achievable protection of California's natural resources by preventing, preparing for, and responding to spills of oil and other deleterious materials, and through restoring and enhancing affected resources. OSPR's mobile exhibit will be on display with a host of pamphlets, brochures posters and a video display with educational information geared toward the public and the news media.

## **U.S. AIR FORCE RESERVE**

The U.S. Air Force Reserve's 910<sup>th</sup> Airlift Wing, based at Youngstown Air Reserve Station, in Vienna, Ohio maintains the Defense Department's only full-time, fixed-wing aerial spray capability. The 757<sup>th</sup> Airlift Squadron of the 910<sup>th</sup> Airlift Wing conducts aerial spray missions capable of controlling insects having public health significance, and missions for vegetation management on military bombing ranges, and missions responding to oil spill

contingencies. Four specially-modified C-130H aircraft, equipped with the Modular Aerial Spray System (MASS), are used for aerial spray operations.

In the Safe Seas drill the oil spill response capabilities of the 910th Airlift Wing will be incorporated with passes of C-130H aircraft over the site of the spill simulating the aerial spray dispersing detergent use to control oil spill spread. The 910<sup>th</sup>'s mobile exhibit will be on display with a host of fact sheets explaining the mission of the 910th Airlift Wing and the aerial spray capability as well as a video geared toward educating public audiences about the military's reason for being involved with aerial spray applications.

16 August 2006

MEMORANDUM FOR 757 AS/DO

FROM: 757 AS/DOS

SUBJECT: Trip Report Safe Seas Exercise, San Francisco, CA. 7-11 August 2006

**1. Introduction:** The Aerial Spray Unit deployed to Moffet Federal Field, California (7-11 Aug 2006) to participate in the multiple agency exercise Safe Seas 2006, hosted by the National Oceanic & Atmospheric Administration (NOAA). This exercise marked the return of Air Force aerial spray participation in oil dispersant exercises, as this group had not participated in such an exercise since Santa Barbara, California in 2002. More than 250 personnel participated in this drill, including representatives from the host organization NOAA, the U.S. Coast Guard, the U.S. Department of the Interior, the California Department of Fish and Game, U.S. Air Force, Office of Spill Prevention and Response, other state trustees, and oil and marine transportation industry representatives. This was the largest such emergency drill to date.

The Safe Seas 2006 exercise design focused on a collision between a bulk freight cargo ship, inbound to San Francisco, with an outbound tug, towing the tank barge Dottie. The barge sinks from the collision, with oil spilling from both the barge and damaged cargo ship inside the Monterey Bay National Marine Sanctuary (attachment 1). The pollutants spilled during this exercise were simulated by the release of thousands of drift cards, which are designed to model floating pollutants at the site of the hypothetical collision and sinking. Additionally, 500 gallons of sodium fluorescein, a marine safe dye were put into the water to simulate an oil slick and give participants a visual target during operations (attachment 2). The Aerial Spray Unit's role in this exercise was to apply a simulated oil dispersant (water) to the "oil slick". Coordination of the application was carried out by "Spotter 6", a Cessna 337 aircraft operating at medium altitude (600-800 AGL), which called the spray on and off to the C-130 navigator. Air operations were further managed by "Calif. Fish and Game 8", a Partenavia aircraft, who served as the air operations supervisor during the operation.

The operational objective was to practice the application of oil dispersants within a realistic multi-agency contingency response exercise.

**2. Operational Schedule (local times)**

**7 Aug (Monday):**

0500: Show Time

0645: Depart KYNG

1145: Land KNUQ

1200-1500: Safe Seas Media Day, Piers 30-32 on San Francisco Warf.

Technology and equipment display for emergency response drill.

**8 Aug (Tuesday):**

1000-1630: Safe Seas 2006 Emergency Response Exercise Planning Meeting, USCG San Francisco Air Station, Hanger Admin Bldg. Discussed the application of oil dispersants in California, principles and practices/pre-approval status. Developed operational plan for exercise. Developed final communication guidelines and frequencies.

**9 Aug (Wednesday):**

0800: Show Time

1040: Depart KNUQ - Safe Seas 2006 Emergency Response Exercise

1130: Dispersed water over simulated oil spill

1340: Land KNUQ

**10 Aug (Thursday):**

1000: Safe Seas 2006 Emergency Response Exercise Hot Wash

USCG San Francisco Air Station, Command Post

**11 Aug (Friday):**

0600: Show Time

0800: Depart KNUQ

1730: Land KYNG

**3. Spray Parameters:**

- a. Nozzles – Raindrop nozzles oriented straight back.
- b. 8 (16 total) on each fuselage boom; evenly spaced.
- c. Booms – fuselage only
- d. Airspeed – 200 knots ground speed.
- e. Altitude – 100 feet above water.
- f. Application Rate – 7 Gal/Acre
- g. Flow Rate – 277 Gal/Min
- h. Spray -- water only.
- i. Number of passes – 7 passes over oil slick
- j. Pressure – 40 psi
- k. Total spray applied – 300 gallons
- l. Flight times: 2 ferry sorties (8.0; 6.6/total 14.6 hrs); 1 spray sortie 3.0 hrs

**4. 910 AW Participants:****a. Aircrew:**

- (1) Mission Commander: MAJ (b) (6) (6)
- (2) Pilots: MAJ (b) (6) (6) MAJ (b) (6)
- (3) Navigators: LTC (b) (6) (b) (6)
- (4) Flight Engineers: MSG (b) (6)
- (5) Spray Operators: MSG (b) (6) , MSG (b) (6) (b) (6)

**b. Spray Maintenance:**

- (1) Spray Maintenance: TSG (b) (6) , TSG (b) (6) , TSG (b) (6) (b) (6)
- (2) Crew Chiefs: MSG (b) (6) , A1C (b) (6)

- c. **Scientific/Technological advisor:** MAJ (b) (6) (b) (6)
- d. **Public Affairs:** CPT (b) (6) (b) (6)

**5. Discussion:** The exercise was considered a success, in particular, the normally foggy marine layer associated with San Francisco weather cooperated with an outstanding day for these operations and none of the contingency plans had to be initiated. There were a few items which could have been improved on. Relying on surface vessels to create a visual A-B line was counter productive as they physically were not orientated with an into the wind run as is required to maintain the proper application swath width. The spotter aircraft or the spray aircraft, at a higher altitude could easily set the A-B line. If the spotter aircraft is slow in comparison to the speed of a C-130 sprayer, then they can be more effective by calling the spray on and off at a higher altitude. This will allow the spotter to orbit and easily get into position to call spray on and off over the radio. Several times during the operation, the spotter aircraft was poorly positioned to make these calls which was a result of the difference of airspeed between aircraft and misjudging position, even with the excellent piloting and appropriately timed spray on and off calls; the higher altitude will eliminate this problem. Another important aspect of this exercise for the Air Spray Unit was the many contacts that were made during the drill. The Spray flight has been invited to participate in the U.S. Coast Guard oil spill exercise in the pacific northwest during Spring 2007 (exact location undetermined) and the Texas Land Management exercise along the Gulf Coast 2007 (exact location undetermined). Full details of the exercise can be obtained by contacting Maj. (b) (6) (b) (6) (b) (6) (b) (6)

**6. Recommendations:** Continue to participate and practice the application of oil dispersants. Recommend practicing quick turning the aircraft with rapid reloading of the MASS by spray maintenance personnel during winter training opportunities at Avon Park, FL. Carry on with working the Memorandum of Understanding (MOU) between the Coast Guard and 910 AW Aerial Spray Unit for Oil Spill Dispersant Application. With a more robust agreement in place, consider storing the primary dispersant, Corexit, at a Youngstown facility so that spray aircraft leaving Youngstown ARS can arrive at the spill location with a full load. Expediency is often paramount in the application of oil dispersants since the window of opportunity is narrow.

**7. Acknowledgements:** Lt (b) (6), (b) (6), and (b) (6) of NOAA, along with LT (b) (6) and (b) (6) from the USCG deserve special mention. Their insight and planning insured that the Oil Dispersant Task Force portion of the exercise was accomplished without incident.

16 June 2008

MEMORANDUM FOR 757 AS/DO

FROM: 757 AS/DOS

SUBJECT: Trip Report Oil Spill Response Exercise, San Diego, CA. 9-13 June 2008

**1. Introduction:** The 757 AS Aerial Spray Unit deployed to Halsey Field, North Island NAS, California (9-13 Jun 2008) to participate in the multiple agency exercise Safe Seas 2006, hosted by the United States Coast Guard (USCG). More than 300 personnel participated in this drill, including representatives from the host organization the USCG, the U.S. Department of the Interior, the California Department of Fish and Game, National Oceanic and Atmospheric Administration, Office of Spill Prevention and Response, other state trustees, and oil and marine transportation industry representatives.

The operational objective was to practice the application of oil dispersants within a realistic multi-agency contingency response exercise. This exercise focused on a simulated collision between an oil tanker, inbound to San Diego, with a US Navy ship approximately 30 nm from the coast. Due to this simulated collision, both ships began leaking oil. The pollutants spilled during this exercise were simulated by the release of 500 gallons of sodium fluorescein, a marine safe dye was put into the water to simulate an oil slick and give participants a visual target during operations (attachment 1). The 910AW Aerial Spray Unit's role in this exercise was to apply a simulated oil dispersant (water) to the "oil slick". Application coordination was carried out by two different aircraft, a USCG HH-60, "Coast Guard Helo" and "Fish and Game 8", a Partenavia aircraft. Each aircraft was on site at different times providing the 910AW an opportunity to work with both rotary and fixed wing spotters.

**2. Operational Schedule (local times)**

9 JUNE (Monday)

0800: Showtime

1000: Depart KYNG

1330: Land KNZY/Safety Briefing

1600: MC and AC brief with Spotter Aircraft personnel and USCG

10 JUN (Tuesday):

Briefings: Emergency Response Exercise Planning Meeting, San Diego Convention  
Discuss the application of oil dispersants in California, principles and practices/pre-approval status. Review operational plan for exercise and communication guidelines.

11 JUN (Wednesday):

1030: Show time

1045: Load water  
1200: Takeoff KNZY  
1300: Land KNZY, reload water for MX training  
1400: Takeoff KNZY  
1500: Land KNZY, reload water for MX training  
1600: Takeoff KNZY (No sortie - no spotter support)  
1700: Land KNZY

12 JUN (Thursday):

0730: Show time  
0745: Load water  
0900: Takeoff KNZY  
1000: Land KNZY, reload water for MX training  
1100: Takeoff KNZY  
1200: Land KNZY, reload water for MX training

1400: Land KNZY

13 JUN (Friday):

0700 Show  
0900 Depart KNZY  
1830 Land KYNG

CONFIGURATION: SP2G

- a. System: 2-Module System/ Fuselage Booms
- b. Nozzle Tips/Orientation: Raindrop nozzles straight back
- c. Number: Fuselage only, 16 total (8 each side) straight back
- d. Booms: Fuselage
- e. Aircraft: 899107
- f. Mission Identifier: QZNRKA537161

SPRAY PARAMETERS:

- a. Nozzles – Raindrop nozzles oriented straight back.
- b. 8 (16 total) on each fuselage boom; evenly spaced.
- c. Booms – fuselage only
- d. Airspeed – 200 knots ground speed.
- e. Altitude – 100 feet above water.
- f. Application Rate – 7 Gal/Acre
- g. Flow Rate – 277 Gal/Min
- h. Spray -- water only.
- i. Number of passes – max # per sortie. No flow rate decrease to increase passes.
- j. Pressure – 40 psi

LOADING: Water from fire hydrant at KNZY 900 gallons of water per sortie

. 910 AW PARTICIPANTS:

Aircrew:

1) MC: Maj (b) (6)  
2) Pilots: LTC (b) (6) Maj (b) (6)  
3) Navigators: LTC (b) (6)  
4) Engineers: MSgt (b) (6)  
5) Spray Operators: MSgt (b) (6) MSgt (b) (6)  
Maintenance:  
1) Spray Maintenance: TSgt (b) (6) TSgt (b) (6) TSgt (b) (6) SRA (b) (6)  
2) Crew Chief(s): TSgt (b) (6) A1C (b) (6)  
3) Avionics: TSgt (b) (6) (b) (6)  
Scientific Advisors: Maj (b) (6) Maj (b) (6)  
  
Public Affairs: Maj (b) (6) 22AF PA

**5. Discussion:** The exercise was considered a success for several reasons. Although the aircraft arrived at San Diego with two grounding maintenance problems, hard work by the maintenance team prevented any training sorties from being lost. The 910 AW was able to accomplish numerous events during the exercise. For several aircrew members and maintainers this was their first oil spill exercise. Additionally, the opportunity for much needed rapid reload training was accomplished. Lastly, the 910 AW was able demonstrate its capability to USCG, 22AF, and multiple other government and civilian organizations.

During the exercise both fixed wing aircraft and helicopters were utilized as spotters. Although each worked well; the helos, with their ability to hover, seemed to provide more accurate and timely information to the spray crew. On the first day, an USAFR observer rode along with both spotter aircraft to help relay information and calls to the spray aircraft. On the second exercise day, the spotter helo carried no experienced observer. Subsequently, the information flow from the spotter to the C-130 was reduced but effective. Also the final planned sortie on both days was cancelled due to no availability of spotter aircraft. The use of surface vessels to create a visual A-B line was discussed but ruled out due to past counterproductive experiences utilizing this type of targeting. Full details of the exercise can be obtained by contacting Maj. (b) (6)

**6. Recommendations:** Continue to participate and practice the application of oil dispersants. Recommend the refinement of a quick turn checklist for rapid reloading of the MASS by spray maintenance personnel. Consider the use of smoking flares to mark the edge of slick (recommendation per CA Fish & Game pilot). Clarify the Memorandum of Agreement (MOA) between the Coast Guard and 910 AW Aerial Spray Unit for Oil Spill Dispersant Application. With this new MOA in hand, test the system by having the 910AW be requested through the proper channels during the exercise. (The 910AW can already be prepositioned.) Lastly, continue increase the knowledge of 910AW capabilities among the entire community: government, civilian, and corporate entities in case of a major oil spill.

**7. Acknowledgements:** The aerial spray maintenance team along with the crew chiefs and MSgt Sharbon from Avonics deserve special recognition. Their proactive mind-set and actions permitted the aircraft to be fixed without the loss of any sorties. This crucial support enabled the 910 AW to demonstrate its unique abilities to the other organizations involved in the exercise.

**a. Target 21:**

- (1) Dimensions: 4,980' X 7,770'
- (2) Acreage: 888
- (3) Acres Sprayed in 2004: 888
- (4) Aircraft Loads: 18,869 Gal
- (5) Sorties: 17
- (6) Passes (35' Swath): 157
- (7) Spray-On Time/Pass: 23 Seconds
- (8) Spray Heading: 00/180

**b. Target 24:**

- (1) Dimensions: 1,600' X 6,080'
- (2) Acreage: 223
- (3) Acres Sprayed in 2004: 223
- (4) Aircraft Loads: 5,263 Gal
- (5) Sorties: 7
- (6) Passes (35' Swath): 47

- (7) Spray-On Time/Pass: 18 Seconds
- (8) Spray Heading: 00/180

### **UTTR GEOGRAPHIC LOCATION**

Target areas on UTTR are geographically located in northwestern Utah, directly west of the Great Salt Lake and Hill Air Force Base. The complex is positioned between 40 and 41 degrees north latitude and close to 113 degrees ten minutes west longitude. The targets are within range 12 west and Township two and three north, Salt Lake Baseline Meridian.

# **AERIAL SPRAY OPERATIONAL SCHEDULE**

## **AVON PARK, FL**

### **4-8 JAN 2010**

**PURPOSE/OBJECTIVE/BENEFIT:** Aerial Spray flight training for aircrews over Avon Park Bombing range. (Initial training for (b) (6) )

#### **1. 910 AW PARTICIPANTS:**

##### **a. Aircrew:**

1. Pilots: Maj (b) (6) , Maj (b) (6) , Capt (b) (6)
2. Navigators: LtCol (b) (6)
3. Flight Engineers: MSgt (b) (6) , TSgt (b) (6)(b) (6)

##### **b. Spray Operators: MSgt (b) (6) , MSgt (b) (6) , SSgt (b) (6)**

##### **c. Maintenance:**

1. Spray Maintenance: TSgt (b) (6) , TSgt (b) (6)
2. Avionics: MSgt (b) (6)
3. Crew Chiefs: TSgt (b) (6) , SSgt (b) (6)

##### **d. Entomologist/Ground Support: None**

#### **2. SCHEDULE: (All time Local) All times and sequence of events are subject to change depending upon the needs of the training and range.**

##### **4 JAN (MON):**

1100: Show Time KYNG  
1300: Depart KYNG  
1600: Land KMCF (MCF PPR 004AB02)

##### **5 JAN (TUE): Range scheduled: 1130-1330**

0900: Show Time  
1100: Takeoff  
1400: Land

##### **6 JAN (WED): Range scheduled: 1130-1330**

0900: Show Time  
1100: Takeoff  
1400: Land

##### **7 JAN (THUR): Range Times 1130-1330**

0900: Show at aircraft  
1100: Takeoff  
1400: Land

##### **8 JAN (FRI): Range Times 1130-1330**

0900: Show  
1100: Takeoff KMCF  
1300: Land  
1400: Depart KMCF  
1700: Land KYNG

\*If using range time for training, otherwise departure TBD by MC/AC.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## LANGLEY AFB, VA

### 12-15 October 10

**Purpose/Objectives/Benefits:** Aerial application of insecticide to control the populations of nuisance and disease carrying mosquitoes at LFI and the surrounding communities.

**1. 910 AW PARTICIPANTS:**

**a. Aircrew:**

- (1) Pilots: Lt Col (b) (6) , Lt Col (b) (6)
- (2) Navigator: Lt Col (b) (6)
- (3) Flight Engineers: Msgt (b) (6)
- (4) Spray Operators: MSgt (b) (6)(b) (6) , Tsgt (b) (6)

**b. Maintenance:**

- 1. Spray Maintenance: TSgt (b) (6) , Ssgt (b) (6) , Msgt (b) (6)
- 2. Crew Chiefs: Ssgt (b) (6)(b) (6) SRA (b) (6)
- 3. Avionics: TSgt (b) (6)

**c. Entomologist:** Maj (b) (6)

**2. Vehicles:** Langley will supply us with 2x9pax vans and 2 cars

- **MC / Entomologist:** One Car
- **Ops:** One van (9 pax), One car
- **Mx:** One Van (9 pax)

**3. Billeting:** 14 rooms on base DSN 574-4667 or Comm (757) 764-4667 FAX DSN 574-3038

**4. PPR:** 1013AS01

**5. SCHEDULE: (All times local) THIS MISSION WILL RETURN EARLY IF ABLE**

**12 Oct (Tuesday): Deploy to LFI**

- 0800: Show time
- 1000: Takeoff YNG
- 1130: Land LFI w/safety briefing immediately following
- 1230: Installation briefing and aircraft configuration
- 1400: Load/Weather call
- 1500: Calibrate system
- 1630: T/O LFI
- 1835: Sunset
- 1900: Land LFI

**13-14 Oct (Wednesday-Thursday): Spray LFI**

- 1415: Show time
- 1430: WX decision, load Dibrom
- 1630: Takeoff LFI
- 1835-1833: Sunset
- 1900: Land LFI

**15 Oct (Friday): Redeploy to YNG**

- 0800: Show time
- 1000: Takeoff LFI
- 1130: Land KYNG

**6. ITEMS TO TAKE:**

- a. Entomologist:** Kestrel Weather Monitor, Compass, PCM Card, Pest Safety Binder, VHF Radios, Laptop Computer
- b. Navigator:** Maps/Map Bag, Validation Map
- c. Spray Operator:** Safety Gear, Calibration Tables
- d. Spray Maintenance:** Deployment Kit/Supply Kit

**7. NOTIFICATION NECESSARY FOR THIS MISSION:**

- a. **Langley Tower:** DSN 574-5326
- b. **Langley Base Ops:** DSN 574-2504
- c. **Camp Perry:** (757) 229-2121 ext 2263
- d. **Consideration calls:**
  - i. Newport News
  - ii. Ft Eustis/Felker AAF Tower
  - iii. Norfolk NS/Chambers Tower

**8. PARKING PLAN: Taxiway Foxtrot with the North Ramp as an alternate**

**9. RADIO FREQUENCIES:**

- a. **Felker AAF Tower (Ft Eustis): 126.3, 269.25, 248.2, 241.0**
  - (1) Ops phone DSN 826-3588
  - (2) Tower phone DSN 826-3530
  - (3) Flight Service 122.2
- b. **Newport News-Williamsburg Int: CTAF – 118.7 or 257.9(Operating Hours 1000Z-0200Z)**
  - (1) Ground – **121.9** or 348.6 (phone 877-0221 ops)
  - (2) Tower – **118.7** (phone 877-2862) voice mail 7-2962
  - (3) FSS – 122.1R, 122.2, 122.65, OR 124.9
- c. **Langley AFB: Tower DSN 574-7999**
  - (1) Tower - **125.0** or 253.5
  - (2) Ground - **121.7** or 275.8
  - (3) Clearance – **118.85** or 257.625
  - (4) Metro - **239.8**
  - (5) ATIS – 270.1
- d. **Norfolk NAS (Chambers Fld): Tower –124.3, 379.15, Base Ops, DSN 262-3419, will transfer to TWR**
- e. **Norfolk Approach: 118.9 or 353.7**
- f. **Spray Ground: 123.4**

**10. IN-BRIEFING: 1200 hrs on Tuesday in the CE Conference Room**

**11. SPRAY CONFIGURATION:**

- a. **System:** SP2G - MASS ULV; Fuselage booms
- b. **Nozzle Tips/Orientation:** 9 8005 nozzles -- straight down (4 left - 5 right)
- c. **Aircraft:** 90-9107
- d. **Mission Identifier:** QZNRKA097286

**12. SPRAY PARAMETERS:**

- a. **Altitude:** 150' AGL
- b. **Ground Speed:** 200 KNOTS
- c. **Pesticide:** Dibrom® Concentrate
- d. **Application Rate:** 0.5 oz/acre
- e. **Flow Rate:** 3.6 Gallons/Minute
- f. **Acreage:** Potentially 125,000 acres on the peninsula but final acreage TBD
- g. **Swath Width:** 2000 foot

**13. PESTICIDE LOADING:**

- a. **How Much Pesticide:** see entomologist
- b. **Where:** Taxi Way F Aero Club Ramp or North Ramp if constructions isn't complete
- c. **When:** 1430 hrs each day pending weather and heat index.\*\*Calibration performed unless otherwise directed by the Entomologist or Mission Commander
- d. **Furnished by Installation:**
  - (1) Pesticide
  - (2) Loading Equipment/Crew
  - (3) Hazardous Waste Disposal
  - (4) Two B-5 or B-1 Stands

#### **4. ITEMS TO TAKE/NOTES:**

- a. Mission Commander:**

- (1) Mission Commander Cell Phone
- (2) Blue Force Tracker

**b. Entomologist/CPMP:**

- (1) New and Improved Wind Gauge & Compass
- (2) VHF Radios and Cellular Phone
- (3) Pesticide Safety Binder

**c. Navigators:**

- (1) Maps
- (2) Templates

**d. Spray Maintenance:**

- (1) Spill Kit
- (2) Safety Equipment
- (3) Loading and Clean-up Equipment and Supplies

**5. SPRAY CONFIGURATION: SP-2G**

- a. **Mass:** 2-Module System (PI)
- b. **Booms:** Stainless Steel ULV Fuselage Booms
- c. **Nozzles:** 15 open for 8003's oriented straight down
- d. **Differential GPS:** Installed
- e. **Aircraft:** 89-9106
- f. **Mission Identifier:** QZNRKA013278

**6. SPRAY PARAMETERS: (PARRIS ISLAND MCRD SC)**

- a. **Pesticide:**  
Duet -- Prallithrin (1%); Sumithrin (5%); Piperonyl Butoxide (5%)  
Signal Word: Caution  
Flushing Agent: BVA oil
- b. **Application:** 1.24 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 1,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** 7,500 Acres
- g. **Spray-On Time:** 16 Minutes
- h. **Flow Rate:** 4.5 gallons/Minute

**7. AMOUNT OF SPRAY MATERIAL AVAILABLE:** Plan on loading 2.5 drums of Duet

**8. PARKING PLAN:** Beaufort MCAS Ramp

**9. AIR TO GROUND RADIO FREQUENCIES:**

- Air Traffic Control: 119.05 Beaufort MCAS TWR
- Hilton Head Arpt: 118.8 CTAF
- Beaufort Co Arpt: 122.7 UNI
- Spray Ground: Primary 123.45 Secondary 130.30**

**10. TRANSPORTATION:** Parris Island will provide two vans and staff car for transportation to and from quarters and for messing. (1 Van for MX, 1 Van for Aircrew E's, Staff Car for O's)

**11. SPRAY MONITORING/TESTING:** This is an evaluation test of Duet for control of mosquitoes and biting midges. Please see Entomologist for application parameters. There will be caged mosquitoes and droplet collection devices used. Ms. (b) (6) and Mr. (b) (6) of Clarke Mosquito Control will be participating.

**12. CONTACTS:**

**POST-MISSION REPORT (replaces AFRC Form 55)**  
**PARRIS ISLAND MCRD, SC 5-9 Oct 2009**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island Marine Corps Recruit Depot, South Carolina
- b. Mission Duration: 5-9 October 2009
- c. Purpose of Application: Biting midge control
- d. Application Date: 6 October 2009
- e. Time/s of Application (Local): 1730-1930
- f. Acres Treated: 6,013
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6)  
Environmental/Spray Coordinator, DSN (b) (6)
- h. Date Spray Map Last Approved: 6 October 2009
- i. Date of Waste Generation Letter: 10 April 2000
- j. Installation In-Briefing: (When/Where/Briefer/s): 6 Oct; Assistant Chief of Staff,  
Installations and Logistics, COL (b) (6) briefed by Maj (b) (6) Maj (b) (6)
- k. Mission Identifier: QZNRKA013278

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6)
- b. Aircrew:
  - (1) Pilots: Maj (b) (6) , Maj (b) (6)
  - (2) Navigators: Maj (b) (6)
  - (3) Flight Engineers: CMSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6) , MSgt (b) (6) , MSgt (b) (6)
- c. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6) , TSgt (b) (6) , MSgt (b) (6)  
(b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) , SSgt (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. Entomologists: Maj (b) (6) Maj (b) (6)
- e. Public Affairs: Maj (b) (6) TSgt (b) (6)
- f. Flying Data:
  - (1) Spray Sorties/Hours: 2.0
  - (2) Ferry Sorties/Hours: 2/4.2

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Duet®
- b. EPA Registration Number: 1021-1795-8329
- c. Formulation Sprayed: Prallithrin (1%); Sumithrin (5%); Piperonyl Butoxide (5%)
- d. Gallons Pesticide Loaded: 70 gal
- e. Gallons Pesticide Applied: 58 gal
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 10 gal/BVA oil
- h. Other Additives Used: None
- i. Application Rate: 1.24 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 16 oriented straight down
- f. Pressure: 35 p.s.i.
- g. Flow Rate: 4.5 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 270-330°/3-0 Knots
  - (2) Release Altitude: 300° /5-3 Knots
- b. Temperature (Degrees Fahrenheit): 75° F
- c. Relative Humidity: 76-87%
- d. Cloud Cover: Partly Cloudy
- e. Source: Ground observations at the MCRD Rifle Range/Aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: glass microscope slides; caged mosquitoes
  - (2) Results: coverage throughout spray area
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito and midge numbers were determined prior to and after spraying using CO<sub>2</sub>-baited traps, landing counts, and caged mosquitoes.
  - (2) Results: Inconclusive based on poor sites (golf course & village housing) was 90% two days following application, marked improvement was reported by other personnel on the Depot.

**8. REMARKS:** A relatively new public health pesticide for mosquito control (Duet) was analyzed for its effect on biting midges. This insecticide boasts a low mammalian toxicity and contains an insect irritant that, in theory, will excite biting flies to take to the wing where contact with the active ingredient component is more likely. Considerable effort was input into this trial from the Marine Corps, Air Force, and the Manufacturer in regard to pre- and post-analysis of the spray. Mosquitoes and midge numbers were closely monitored and identified to species. Unfortunately, environmental conditions were extremely poor during the application. Wind speed was initially good but dropped to zero within 10 minutes of beginning the application. While there were reasonable mosquito mortalities in the exposed cages, trap collections and landing rates of biting midges showed little to no effect. It is important that this pesticide receive a thorough and fair examination, thus, one or two applications will be repeated in the spring.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## NSB, KINGS BAY, GA

### 6-9 May 2010

**OBJECTIVE/PURPOSE AND BENEFIT:** Control nuisance biting midges and mosquitoes with aerial spray insecticide applications to reduce negative impact of insect bites on outdoor training at NSB, Kings Bay, GA.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: : Maj (b) (6) (b) (6) Maj (b) (6)
- (2) Navigators: Maj (b) (6)
- (3) Flight Engineers: SrA (b) (6)

- e. Flying Data:
  - (1) Spray Sorties/Hours: 31 + 2 flush/44.7
  - (2) Ferry Sorties/Hours: 6/23.0

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Vectobac 12AS (1200 ITU/mg)
- b. EPA Registration Number: 73049-38
- c. Gallons Pesticide Loaded: 2,579
- d. Pesticide Applied: 2,579 gal
- e. Diluent: 52,485 gallons water and 1,000 gallons of water rinse and flush
- f. Other Additives Used: Poly Control® drift reduction agent (32oz/load; 8 gal total)
- g. Application Rate: 24 oz/acre Vectobac 12AS®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 9107
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: SP3-Module System/Fuselage Booms
- d. Nozzle Type/Size: Raindrop nozzles
- e. Nozzle Orientation & Number Used: 24- straight back
- f. Pressure (PSI): 59-60
- g. Flow Rate: 372 gpm

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 200'
- b. Spray Offset: none
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): variable conditions at speeds varying calm to 15 kts. Sprays were conducted into the wind.
- b. Temperature (Degrees Fahrenheit): 43-72° F
- c. Relative Humidity: 35-93%
- d. Cloud Cover: varied between cloudy to clear
- e. Source: Ground observations/aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Areas were sampled using standard larval surveillance techniques to determine pest densities. Larval density ranged between 9-200 larvae per dip depending on location
- b. Effectiveness:
  - (1) Technique/s Used: Larval dip samples
  - (2) Results: Good results were encountered in treated areas. Attachment 3.

**8. REMARKS:** This is the second application at the Williston Army Corps of Engineers (ACE) property near Williston ND. Based on the success of last year's application, the treatment area has been doubled this year in an effort to further reduce mosquito breeding in the river confluence near Williston. Attachment 2 shows that overall numbers of adult

mosquitoes were reduced in 2009 following the aggressive aerial larviciding by the Air Force. The success of last year's application resulted in additional congressional funding for the project and allowed for the increased acreage. Attachment 4 shows the portion of the proposed spray blocks actually treated by the Air Force. Portions of the spray blocks were left for smaller aircraft and priorities were determined daily by Williston Vector Control. Post-application sampling was very encouraging with many locations exhibiting greater than 95% reductions in mosquito numbers (Attachment 3). We appreciate the support of all the agencies involved, but specifically Minot AFB 5CES who received and temporarily stored the larvicide and helped coordinate the loading and mixing location. Adult mosquito control may occur at Williston during the 19-23 July mission to Minot AFB, if this can be coordinated.

\*Because of weather and other factors, the Confluence area was not revisited for post- sampling. Almost all post-application sample dips contained only late instar and pupae, indications of an effective application.

Pre-sampling occurred 4-13 Jun 10. Post-sampling was done from 11-20 Jun 10.

Attachment 4. Maps of larvicide spray locations on Army Corps of Engineers property near Williston ND. Colored lines indicate sprays on various days. Priority of spray blocks was dictated by the Williston Vector Control and weather conditions.

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND (AFRC)**

7 Jan 2010

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for NAS Jacksonville, FL Static Display

1. One Aerial Spray equipped C-130 will be available 8-9 Feb 2010 to provide a static display for the attendees of the Tri-Services pest Management Convention. The personnel attending are DoD members serving the Air Force, Army and Navy installations. The 757AS was invited to provide this static display and give presentations regarding the Aerial Spray Mission.

2. Concept of Operations:

- a. 8 Feb (Monday)  
1500 Show KYNG  
1700 Depart KYNG  
2000 Land KNIP
- b. 9 Feb (Tuesday)  
1330-1700 Static Display KNIP  
1900 Depart KNIP  
2130 Land KYNG

3. Aircraft will be SP2G configured with ULV booms.

5. Maj Tom Markovich will act as Aircraft Commander.

6. Support required at Jacksonville NAS, FL has been completed.

(b) (6)  
757 Aerial Spray

, Capt, USAFR

# AERIAL SPRAY OPERATIONAL SCHEDULE

## NAS JACKSONVILLE, FL

### 8-9 FEB 2010

**OBJECTIVE/PURPOSE AND BENEFIT:** Provide a static display for the members of the Tri-Services Pest Management Convention to include DoD personnel serving Air Force, Army and Navy installations.

**1. 910 AW PARTICIPANTS:**

**a. Aircrew:**

1. Pilots: Maj (b) (6) (b) (6) Capt (b) (6)
2. Navigators: LTC (b) (6)
3. Flight Engineers: MSgt (b) (6)
4. Spray Operators: MSgt (b) (6) rgett, TSgt (b) (6)

**b. Maintenance:**

1. Spray Maintenance: TSgt (b) (6) , TSgt (b) (6)
2. Crew Chiefs: SSgt (b) (6) , SrA (b) (6) (b) (6)

**c. Entomologist:** Maj (b) (6) Maj (b) (6) (Both will be in place and will remain in place)

**2. PPR REQUIREMENTS: 20801**

**3. PLANNED SEQUENCE OF EVENTS:** (All times local) Scheduled times may vary depending upon weather, and needs of the Entomologist.

**08 Feb Monday**

1500 Show  
1700 Depart KYNG  
1930 Land KNIP

**09 Feb Tuesday**

1330-1700 Static Display  
1900 Depart KNIP  
2130 Land KYNG

**4. SPRAY CONFIGURATION: SP-2G**

- a. Mass:** 2-Module System
- b. Booms:** Stainless Steel ULV Fuselage Booms
- c. Nozzles:** 8005's.
- d. Differential GPS:** Wingman Installed
- e. Aircraft:** 90-9108
- f. Mission Identifier:** QINRKA485039

# AERIAL SPRAY OPERATIONAL SCHEDULE

## GRAND FORKS AFB, ND

### 9-13 Aug Jul 2010

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes in order to improve working conditions for members operating at Grand Forks and Grand Forks AFB, North Dakota.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- 1) Pilots: Maj (b) (6) , Lt Col (b) (6)
- 2) Navigators: Maj (b) (6)
- 3) Flight Engineers: MSgt (b) (6)
- 4) Spray Operators: MSgt (b) (6) , MSgt (b) (6) , SSgt (b) (6)
- 5) Mission Commander: Maj (b) (6) (b) (6)

##### b. Maintenance:

- 1) Spray Maintenance: MSgt (b) (6) , MSgt (b) (6) , A1C (b) (6)
- 2) Crew Chief(s): SSgt (b) (6) , SSgt (b) (6)
- 3) Avionics: TSgt (b) (6)

##### c. Entomologist: Maj (b) (6)

#### 2. SCHEDULE: (All Local Times)

- a. 9 Aug (Monday)  
1500L Show KYNG  
1700L Depart KYNG  
1900L Land KRDR
- b. 10Aug (Tuesday)  
1300L Installation in-brief CE Conference Rm (msn cdr + ento, mandatory)  
1700L Show KRDR Weather decision (load + calibrate)  
1930L Depart KRDR spray GFAFB  
2050L Sunset  
2130L Land KRDR
- c. 11 Aug (Wednesday)  
1700L Show KRDR  
1900L Depart KRDR Spray City of GF  
2048L Sunset  
2130L Land KRDR
- d. 12 Aug (Thursday)  
1700L Show KRDR  
1930L Depart KRDR Weather backup/training  
2048L Sunset  
2130L Land KRDR
- e. 13 Aug (Friday)  
1130 Show KRDR  
1330 Depart KRDR  
1600 Land KYNG

#### 3. ITEMS TO TAKE

- a. **Mission Commander:** Cellular Phone, Mission Folder, FFT
- b. **Entomologist:** Cell Phone, Wind Gauge, 2 Compasses, Pest Safety Binder,  
1 VHF Radio, Water Sensitive Cards, Card Holders with  
Index Cards, 2 Spotlights, 1 Measuring wheel, 2 Signal Mirrors,  
Project Notebook, Entomologist's Tool Kit
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables
- e. **Spray Maintenance:** Deployment Kit, Support Equipment, Control®

**4. PPR: 08-09-01/AN**

**5. RADIO FREQUENCIES: Air To Ground Primary VHF 123.45 KRDR Tower 124.9 V; Grand Forks International 118.4 V**

**6. CONFIGURATION: SP2G**

- a. System:** 2-Module System/Stainless Steel ULV Fuselage Booms
- b. Nozzle Tips/Orientation:** ULV (adulthood): 8005 Tee Jet oriented straight down
- c. Number:** ULV: 18 8005s total (9 each side)
- e. Aircraft:** 89-9105
- f. Mission Identifier:** QZNRK9901221

**7. SPRAY PARAMETERS:**

**a. Adulthood**

- (1) **Area to be treated:** 11,518 acres (Grand Forks AFB), 18,346 (Grand Forks) and 877 (Grand Forks Intl)
- (2) **Altitude:** 150' for Adulthood application
- (3) **Swath Width.** 2000 feet
- (4) **Flow Rate.** 7.26 gallons/minute ULV
- (5) **Application Rate.** 1.0 oz/acre Trumpet, ULV
- (6) **Ground Speed:** 200 Knots
- (7) **Flush:** With water, triple rinse, then air purge

**8. SPRAY MIXING AND LOADING:** The amount of Trumpet to load will be determined on site

**9. TRANSPORTATION: Transportation provided by base (DSN362-3976): One 15 pax van (OPS), three 6 pax trucks (MC, OPS, MX), one 1.5 ton truck (spray MX). Vehicles at base ops with the exception of Trumpet loaded truck**

**10. LODGING: Onbase Billeting :** DSN 362-7200 or (701) 594-8431, FAX 362-3069 14 Rooms Reserved

# 910 AW AERIAL SPRAY UNIT POST-MISSION REPORT

## GRAND FORKS AFB – ADULT MOSQUITO CONTROL 9-13 August 2010

### 1. MISSION BASICS:

- a. Installation Sprayed: Grand Forks AFB, ND
- b. Mission Duration: 9-13 August 2010
- c. Purpose of Application: Control adult nuisance and vector mosquitoes
- d. Application Date: 11 Aug 2010
- e. Time of Application (Local): 1945-2100 hrs
- f. Acres Treated: 12,544
- g. Project Coordinator/s (Name/Rank, Title, Phone #): TSgt (b) (6) NCOIC Pest Management Shop, DSN (b) (6)
- h. Date Spray Map Last Approved: 10 Aug 2010
- i. Date of Waste Generation Letter: 22 June 2001
- j. Installation In-Briefing: (When/Where/Briefer/s): GFAFB CE Conference Room, Maj (b) (6) (b) (6) Maj (b) (6) Maj (b) (6) , LtCol (b) (6)

### 2. OPERATIONAL:

- a. Mission Commander: Maj (b) (6) (b) (6)
- b. Entomologist (Category 11): Maj (b) (6)
- c. Aircrew:
  - 1) Pilots: Maj (b) (6) , Lt Col (b) (6)
  - 2) Navigators: Maj (b) (6)
  - 3) Flight Engineers: MSgt (b) (6)
  - 4) Spray Operators: MSgt (b) (6) , MSgt (b) (6) , SSgt (b) (6)
- b. Maintenance:
  - 1) Spray Maintenance: MSgt (b) (6) , MSgt (b) (6) , A1C (b) (6) (b) (6)
  - 2) Crew Chief(s): SSgt (b) (6) , SSgt (b) (6)
  - 3) Avionics: TSgt (b) (6)

#### Flying Data:

- (1) Spray Sorties/Hours: 1/1.3
- (2) Ferry Sorties/Hours: 2/6.7
- (3) Mission ID: QZNRK9901221

### 3. PESTICIDES:

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 120 gal Trumpet® (11 Aug)
- d. Gallons Pesticide Applied: 98 gal Trumpet® (29 June)
- e. Gallons and Name of Flush Used: none
- f. Other Additives Used: none
- g. Application Rate: 1.0 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99107
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8005 Flat Fan
- e. Nozzle Orientation & Number Used: 20 straight down
- f. Pressure (PSI): 38 PSI
- g. Flow Rate: 7.26 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 4000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 275-285° @ 5-6 knots (aerial observation)
- b. Temperature (Degrees Fahrenheit): 84-78 °F
- c. Relative Humidity: 63-80%
- d. Cloud Cover: Clear
- e. Source: Ground observations and National Weather Service

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 MDG/ADS conducts adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito traps
  - (2) Results: Trap data pending from 319 MDG/ADS

**8. REMARKS:** The threat of West Nile virus (WNV) prompted GFAFB public health to make the decision to spray the base with Trumpet EC. The application began 1.5 hrs before sunset and continued for 20 minutes after sunset to maximize the efficiency of our spray effort to peak mosquito activity. The activity period of the primary vector of WNV in North Dakota (*Culex tarsalis*) is after sunset. A night operations profile is currently being developed. Had such a practice been in place, both the base and the City of Grand Forks could have been sprayed on 11 August, as meteorological conditions were favorable during the AFB application. Since the current mission was restricted after sunset flight time, only the Base proper was covered on 11 August. Unfortunately, weather conditions did not support an application the following day; consequently, we were unable to complete the City of Grand Forks spray area before the end of the allotted mission. Preliminary post-spray observations indicate excellent control of mosquitoes. Pending trap count data should confirm this. The city of Larimore, ND was also included in this adulticide application. Many thanks to TSGT (b) (6) and the staff of the GFAFB pest control shop.

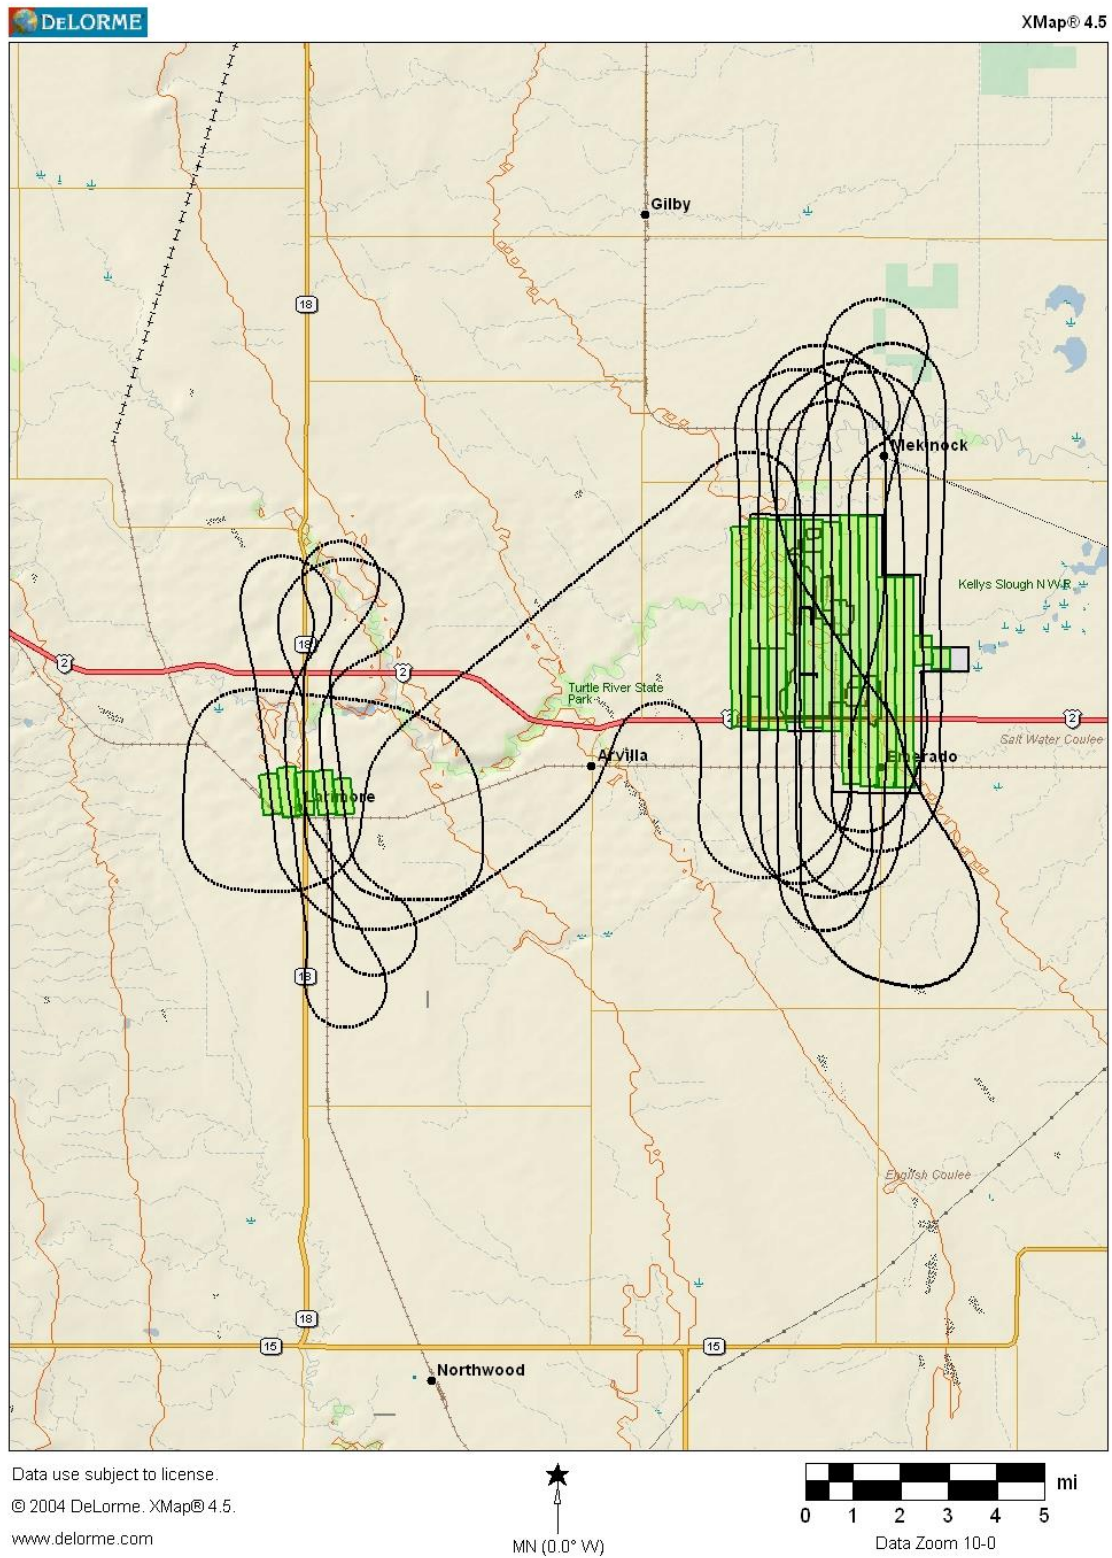

//signed//

(b) (6)

Maj, USAFR

DoD CERTIFIED PEST MANAGEMENT PROFESSIONAL

**Attachment 1. Image shows Grand Forks AFB, City of Larimore spray blocks (black) and pesticide application swaths (green) during application on 11 Aug 2010. A 4000' offset was used to compensate for winds.**

# AERIAL SPRAY OPERATIONAL SCHEDULE

## MCRD, PARRIS ISLAND, SC

### 12-15 April 2010

**OBJECTIVE/PURPOSE AND BENEFIT:** Control nuisance biting midges and mosquitoes with aerial spray insecticide applications to reduce negative impact of insect bites on outdoor training at Parris Island MCRD SC. Conduct trial with Duet for efficacy evaluation against biting midges.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: LTC (b) (6) , LTC (b) (6) , Maj (b) (6)
- (2) Navigators: LTC (b) (6) , LTC (b) (6) (b) (6)
- (3) Flight Engineers: SSgt (b) (6)
- (4) Spray Operators: SMSgt (b) (6) , MSgt (b) (6)

##### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6) , SSgt (b) (6) , SrA (b) (6)
- (2) Crew Chiefs: TSgt (b) (6) , SrA (b) (6)
- (3) Avionics: TSgt (b) (6)

##### c. Entomologist: Maj (b) (6) Maj (b) (6) (MC)

#### 2. PPR REQUIREMENTS: 102-01 SPRAY07

**3. PLANNED SEQUENCE OF EVENTS:** (All times local) Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated through the mission commander.

##### 12 APR (Monday)

0800: Show  
1000: Depart KYNG  
1200: Land KNBC  
1915: Safety Brief

##### 13 APR (Tuesday)

**TBD Installation Brief**

1630: Show  
1700: WX Decision and Load Chemical  
1830: Depart KNBC  
2000: Land KNBC  
Sunset: 1951

##### 14 APR (Wednesday) WX Backup or Training

1630: Show (Earlier if Training)  
1700: WX Decision and Load Chemical  
1830: Depart KNBC  
2000: Land KNBC  
Sunset: 1952

##### 15 APR (Thursday) **\*\*Departure time may slip depending upon Wednesday evening completion time.**

0900: Show  
1100: Depart KNBC  
1300: Land KYNG

**4. ITEMS TO TAKE/NOTES:**

- a. **Mission Commander:**
  - (1) Mission Commander Cell Phone
- b. **Entomologist:**
  - (1) Wind Gauge & Compass
  - (2) VHF Radios and Cellular Phone
  - (3) Pesticide Safety Binder
- c. **Navigators:**

- c. **Nozzles:** size = 8003; 13 open
- d. **Differential GPS:** Wingman Installed
- e. **Aircraft:** 90-9107
- f. **Mission Identifier:** QZNRKA902102

**6. SPRAY PARAMETERS: (PARRIS ISLAND MCRD SC)**

- a. **Pesticide:**
  - Duet—Prallithring (1%); Sumithrin (5%); Piperonyl Butoxide (5%)
  - Signal Word: Caution
  - Flushing Agent: BVA Oil
- b. **Application:** 1.24 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 1,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** 7,500 Acres
- g. **Spray-On Time:** 16 Minutes
- h. **Flow Rate:** 4.7 gallons/Minute

**9. PARKING PLAN:** NAS Beaufort, SC. Please limit number of vehicles and trips on the flight line

**10. AIR TO GROUND RADIO FREQUENCIES:**

Beaufort Tower:	119.05/340.2 MCAS TWR
Beaufort Approach	123.7
Hilton Head Arpt:	118.975 Tower, 123.0 CTAF (tower open until 0100 hrs Z)
Beaufort Co Arpt:	122.7 UNI
Spray Ground:	123.4

**11. TRANSPORTATION:** Parris Island will provide 3 vehicles for transportation to and from quarters and for messing. Vehicles will be at Base Operations.

**12. SPRAY MONITORING/TESTING:** Ground monitoring by CPMP &Parris Island MCRD Project Coordinator.

**910 AW AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S**  
**POST-MISSION REPORT (replaces AFRC Form 55)**  
**PARRIS ISLAND MCRD, SC 12-15 Apr 2010**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island Marine Corps Recruit Depot, South Carolina
- b. Mission Duration: 12-15 April 201009
- c. Purpose of Application: Biting midge control; testing effects of the mosquito adulticide Duet
- d. Application Date: 14 April 2010
- e. Time/s of Application (Local): 2034-2145 hrs
- f. Acres Treated: 5,759
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) ,  
Environmental/Spray Coordinator, DSN <sup>(b)</sup>(b) (6)
- h. Date Spray Map Last Approved: 6 October 2009
- i. Date of Waste Generation Letter: 10 April 2000
- j. Installation In-Briefing: (When/Where/Briefer/s): 13 Apr; Assistant Chief of Staff,  
Installations and Logistics, COL (b) (6) briefed by Maj (b) (6) Maj (b) (6)
- k. Mission Identifier: QZNRKA902102

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6)
- b. Aircrew:
  - (1) Pilots: Lt Col (b) (6) , Lt Col (b) (6) , Maj (b) (6)
  - (2) Navigators: Lt Col (b) (6) , Lt Col (b) (6) (b) (6)
  - (3) Flight Engineers: SSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) , MSgt (b) (6)
- c. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6) , SSgt (b) (6) , SrA (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) , SrA (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. Entomologists: Maj (b) (6) Maj (b) (6)
- f. Flying Data:
  - (1) Spray Sorties/Hours: 2.0 + 1 training sortie 1.5 hrs
  - (2) Ferry Sorties/Hours: 2/4.2

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Duet®
- b. EPA Registration Number: 1021-1795-8329
- c. Formulation Sprayed: Prallithrin (1%); Sumithrin (5%); Piperonyl Butoxide (5%)
- d. Gallons Pesticide Loaded: 70 gal
- e. Gallons Pesticide Applied: 59 gal
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 10 gal/BVA oil
- h. Other Additives Used: None
- i. Application Rate: 1.24 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99107
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 16 oriented straight down
- f. Pressure: 35 p.s.i.
- g. Flow Rate: 4.5 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 096-125°/3.4-4.7 knots
  - (2) Release Altitude: 090-130/12-19 knots
- b. Temperature (Degrees Fahrenheit): 64° F
- c. Relative Humidity: 76-87%
- d. Cloud Cover: mostly cloudy
- e. Source: Ground observations at the MCRD Rifle Range/Aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: glass microscope slides; caged mosquitoes; landing rates
  - (2) Results: coverage throughout spray area
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito and midge numbers were determined prior to and after spraying using CO<sub>2</sub>-baited traps, landing counts, and caged mosquitoes.
  - (2) Results: mosquito numbers were reduced; biting midge numbers did not appear to be affected by the application.

**8. REMARKS:** A relatively new public health pesticide for mosquito control (Duet) was analyzed for its effect on biting midges. This insecticide boasts a low mammalian toxicity and contains an insect irritant that, in theory, will excite biting flies to take to the wing where contact with the active ingredient component is more likely. Considerable effort was input into this trial from the Marine Corps, Air Force, Beaufort County Mosquito Control, and Clarke (the manufacturer) in regard to pre- and post-analysis of the spray. The flight of the spray aircraft is shown in Attachment 1. Mosquitoes and midge numbers were closely monitored and identified to species. Biting midges were present in high densities and mosquito numbers were low/moderate. Caged mosquitoes were favorably impacted by the sprays with an average mortality of 95% and 3/4 locations reporting 100% (Attachment 2). Likewise, wild mosquitoes numbers were also reduced following the sprays (Attachment 3). Unfortunately, the purpose of this test was specifically aimed at biting midges and our results were less than exciting regarding the reduction of *Culicoides* spp. Attachment 4 shows the numbers of midges collected before and after the spray. While a decrease in midge numbers was observed the day after the spray, a decrease was also observed at the control site. Overall, midge numbers actually increased following the duet application while numbers increased at the control site. The statistical significance of trapping densities and landing rates of biting midges before and after was measured with the Wilcoxon's signed rank test. The only significant change ( $P<0.05$ ) detected was the difference in landing rates, which were lower overall on Parris Island after the sprays (see attachment 5). However, landing rates were lower at the control site as well. Since there were only 2 measurements made at the control site compared to 4 measurements (4 trapping locations) on

Parris Island, the strength of these analysis is rather weak. The power of these comparisons could be improved in the future by increasing the number of samples for the control category. An additional factor worth noting is the sudden change in environmental conditions just as the application began. While daytime temperatures had been in the mid-70's, the temperature suddenly dropped to 64°F about 30 minutes before the application began. There were few if any midges actually flying during the spray. This was not the preferred situation but with only the single opportunity the application was continued. Nonetheless, we found corroborating evidence that pesticide droplets were distributed throughout the spray area in droplet densities reported on microscope slides and with high mortality of mosquitoes in bioassay cages. Midges are not normally put into bioassay cages as the tight mesh fabric required to contain them does not permit pesticide drops to pass through the cage interior. Also worth noting is that some of the Duet loaded and sprayed appears to have been irregular. Spray Maintenance personnel found a sandy substance in the MASS filters following the application. Upon further inspection the 30 gal drum of Duet had material that resembled pond scum floating on the surface of the remaining product. The manufacturer is investigating this issue and will provide more information at a later date. The next opportunity for Parris Island MCRD to receive military aerial sprays is scheduled for 10-14 May 2010. At present, an additional trial with Duet is planned, if pest populations are present. A special thanks to Beaufort Co. Mosquito Control for use of their excellent facilities.

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND (AFRC)**

5 Aug 10

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Mountain Home AFB, ID

1. Aerial Spray flight proficiency training will be accomplished at Saylor Creek Bombing Range near Mountain Home AFB, ID. Spray will aid their fire prevention program treating an invasive grass species (Cheat grass) that creates a fire hazard and has overtaken many of the areas on the bombing range. The operation applies herbicides targeting Cheat grass but allowing native fire resistant vegetation (sagebrush) to re-establish and become competitive.

2. Concept of Operations:

- a. 13 September (Monday)
  - 0900 Show KYNG
  - 1100 Spray aircraft depart KYNG
  - 1105 Support aircraft depart KYNG
  - 1430 Spray aircraft land KMUO
  - 1435 Support aircraft land KMUO
  - 1600 Installation briefing
- b. 14-17 September (Tuesday-Friday)
  - Spray aircraft:
    - 0500 Show KMUO
    - 0700 Depart KMUO
    - 0815 Land MUO
    - 0900 Depart KMUO
    - 1015 Land KMUO
- c. Saturday and Sunday airfield closed
  - \*\*Swap out crew members on Saturday as needed

- d. 20-23 September (Monday-Thursday)
  - 0500 Show KMUO
  - 0700 Depart MUO
  - 0815 Land MUO
  - 0900 Depart KMUO
  - 1015 Land KMUO
- e. 23 September (Thursday) Support aircraft
  - 0900 Show KYNG
  - 1100 Depart KYNG
  - 1430 Land KMUO
- f. 24 September (Friday)
  - 0700 Show KMUO
  - 0900 Spray aircraft depart KMUO
  - 0905 Support aircraft depart KMUO
  - 1630 Spray aircraft land KYNG
  - 1635 Support aircraft land KYNG

- 3. Maj (b) (6) (b) (6) will act as Mission Commander.
- 4. Lt Col (b) (6) will act as Aircraft Commander
- 5. Support required at Mountain Home AFB and Saylor Creek has been completed.

(b) (6) (b) (6) Maj, USAFR  
757AS Chief of Aerial Spray

# AERIAL SPRAY OPERATIONAL SCHEDULE

## MOUNTAIN HOME AFB RANGE, ID

### 13-24 SEPTEMBER 2010

**PURPOSE/BENEFITS/OBJECTIVES.** To prevent fire hazards, inhibit annual re-growth of cheatgrass on Saylor Creek Range and allow native vegetation to establish and be competitive.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- 1) Mission Commander: Maj (b) (6)
- 2) Pilots: Lt Col (b) (6) 13-24 Sep, Lt Col (b) (6) (13-18 Sep); Lt Col (b) (6) (13-18 Sep), IP??
- 3) Navigator: Capt (b) (6) ;
- 4) Flight Engineer: SSgt (b) (6) (b) (6) 13-18 Sep; Msgt (b) (6) , Smsgt (b) (6) 18-23 Sep
- 5) Spray Operators: Msgt (b) (6) , Msgt (b) (6) , Msgt (b) (6) (17-23)

##### b. Maintenance:

- 1) Spray MX:\*TSgt (b) (6) , Tsgt (b) (6) , Tsgt (b) (6) , Tsgt (b) (6)
- 2) Crew Chiefs: Msgt (b) (6) , Tsgt (b) (6)
- 3) Hyd/Prop/EE/Avi/Com- Tsgt (b) (6) , Tsgt (b) (6) , Tsgt (b) (6) , Tsgt (b) (6) (b) (6) Tsgt (b) (6)
- c. Entomologists: LtCol (b) (6) (14-18 Sep), Maj (b) (6) (14-18 Sep), Maj (b) (6) (17-24 Sep)

#### 2. SCHEDULE: (Local times; total of 13 lifts required, 1-3 lifts per day)

##### 13 SEP (Monday):

0900: Show KYNG

**QZNRK9901256**

**PPR #245812**

1100: Depart KYNG

1430: Land KMUO (Local)

**\*\* ASAP After landing** Safety Briefing, MX configures aircraft; plan next day's mission

1530: Installation Briefing

##### **Support Aircraft**

**QDNRK9901256**

**PPR#245817**

0900 Crew show

1105 Depart YNG

1435 Land MUO

\*All extra crew and maintenance ride on support aircraft

##### 14 SEP (Tuesday): Range Time 0700-1000, (1-3 sorties if possible)

0530: Crew Show time/Load water and chemical

**0700:** Take Off KMUO (As determined by Mission Cmdr)

0723: Sunrise

##### 15 SEP (Wednesday): Range Time: 0700-1000, (1-3 sorties if possible)

0530: Show time/Load water and Chemical

**0700:** Take Off KMUO

0724: Sunrise

##### 16 SEP (Thursday): Range Time: 0700-1000 (1-3 sorties if possible)

0530: Show time

**0700:** Take Off KMUO

0725: Sunrise

##### 17 SEP (Friday): Range Time 0700-1000, (1-3 sorties )

0530: Crew Show time/Load water and chemical (FOD WALK @MUO)

**0700:** Take Off KMUO (As determined by Mission Cmdr)

0726: Sunrise

**17 Sept \*\*SWAPOUT AIRCRAFT YNG QDNRK9901260 PPR#245824**

0800: Show KYNG

1000: Depart KYNG

1330: Land KMUO

18 Sept:

0700 Show KMUO

0900 Depart KMUO

1600 Land KYNG

**20 SEP (Monday): Range Time 0700-1000, (1-3 sorties if possible)**

0530: Crew Show time/Load water and chemical

**0700:** Take Off KMUO (As determined by Mission Cmdr)

0730: Sunrise

**21 SEP (Tuesday): Range Time 0700-1000, (1-3 sorties if possible)**

0530: Crew Show time/Load water and chemical

**0700:** Take Off KMUO (As determined by Mission Cmdr)

0730: Sunrise

**22 SEP (Wednesday):**

0530: Crew Show time/Load water and chemical

**0700:** Take Off KMUO (As determined by Mission Cmdr)

0730: Sunrise

**23 Sep (Thursday)**

0530: Crew Show time/Load water and chemical

**0700:** Take Off KMUO (As determined by Mission Cmdr)

0730: Sunrise

**Support Aircraft QDNRK9901266 PPR# 245826**

0900 Show YNG

1100 Depart YNG

1430 Arrive KMUO

**24 Sep (Friday)**

0700: Crew Show time

**0900:** Take Off KMUO (As determined by Mission Cmdr)

1630: Land KYNG

**\*\* If no delays are encountered, the mission will return to YNG after completion of last flush sortie and cleaning of system.**

### **3. ITEMS TO TAKE:**

- a. Mission Commander:** 1 Cellular Phone
- b. Entomologist:** UHF Radio, Cardholders, Water Sensitive Cards, Tool Kit, VHF Radio, Cell Phone, Laptop Computer
- c. Navigator:** Maps/Map Bag, Validation Map,
- d. Spray Operator:** Safety Gear, computer
- e. Spray Maintenance:** Mobility Kit, MASS Spares, Spill Kit, Pesticide Safety Binder, Safety Equipment and Tool and other equipment

### **4. NOTIFICATION NECESSARY FOR THIS MISSION: N/A**

**5. PARKING PLAN:** Transient Ramp in front of Base Operations

**6. RADIO FREQUENCIES:**

- a. **Air To Ground:** Entomologists: 123.45 VHF; 292.2 (range); Maintenance 384.7
- b. **Mt Home:** PTD: 372.2/138.9, ACC CP (Raymond 27): 381.3, ATIS: 273.5, TWR: 133.85 / 253.5, GND: 120.5 / 275.8, RAPCON: 259.1, Salt Lake Center: 387.15/363.0
- c. **Range:** Saylor Creek Range (Cowboy Control): 236.05pri/381.3sec/134.1tertiary  
If Cowboy Control isn't up, contact MUO APP on 371.2  
Sagebrush Control: 251.2, Paradise MOA: 272.7/236.05/225.55  
Owyhee MOA: 392.2/266.35, Bruneau/Sheep Creek MOA: 251.875

**7. IN-BRIEFING:** 1630 Airfield Management Office

**8. Billeting:**

On Base in Billeting

**9. Vehicles:** Mountain Home is providing vehicles.

1 - 6 PAX truck

3 - 15 Pax Van

1 - Staff Car

\*\*Vehicles must be washed and cleaned out prior to return

**10. SPRAY CONFIGURATION:**

- a. **System:** SP-3G
- b. **Nozzle Tips/Orientation:** Raindrop/Straight Back
- c. **Number:** Fuselage – 17 nozzles (8 left side: 9 right side)
- d. **Booms:** Fuselage
- e. **Aircraft:** 90-9108
- f. **Profile:** Planned HV Profile

**11. SPRAY PARAMETERS:**

- a. **Altitude:** 100' AGL (we are treating at 46.5 acres/minute)
- b. **Swath Width.** 100 feet
- c. **Flow Rate.** 326 gal/min
- d. **Application Rate.** 7 gal/acre; approximately 3,200 acres to be treated for cheatgrass
- e. **Ground Speed:** 200 Knots

**12. SPRAY MIXING AND LOADING:**

**a. Composition of Each Gallon:**

- (1) 0.57 ounces of Plateau® (we want 4oz in 7 gallons per acre)
- (2) 1 ounce of Sta-put® Drift Retardant
- (3) 126.4 ounces of water

**b. First Load (4 Tanks of 450 gallons each + sump of 75 gallons)**

(1) Fill to 450 gal water/tank using the pump on the water tanker truck. This is done by putting the filler hose into the rear tank with all tanks open to the common sump. Total water in tanks = 1,800 gal.

(2) 75 gal/water in sump

(3) Total water added = 1,800 gallons

(4) Upload 8.03 gal (30.4L)/Plateau; add 14 gal Sta-put while agitating approximately 5-7 min  
Total quantity mix 1822 gallons

### 13. SPRAY MONITORING OR TESTING: Performed by the CPMPs

# AERIAL SPRAY OPERATIONAL SCHEDULE

## AVON PARK, FL

### 9-13 FEB 2009 Ch 1

**PURPOSE/OBJECTIVE/BENEFIT:** Flight testing of the Quantity Indicator System MASS upgrade. Aerial Spray flight training for aircrews over Avon Park Bombing range.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

1. Pilots: Capt (b) (6) (b) (6) LTC (b) (6) , Maj (b) (6) , Maj (b) (6)
2. Navigators: Maj (b) (6)
3. Flight Engineers: Msgt (b) (6)

##### b. Spray Operators: Sms (b) (6) , Msgt (b) (6) , Msgt (b) (6)

##### c. Maintenance:

1. Spray Maintenance: Smsgt (b) (6) Msgt (b) (6) , Msgt (b) (6)
2. Avionics: Ssgt (b) (6) , Ssgt (b) (6)
3. Crew Chiefs: Tsg (b) (6) , SRA (b) (6)
4. Engine Shop: Tsg (b) (6)

##### d. Entomologist/Ground Support: None

#### 2. SCHEDULE: (All time Local) All times and sequence of events are subject to change depending upon the needs of the training and range.

9 FEB (MON)

1400: Show Time KYNG  
1600: Depart KYNG  
1930 Land KMCf

10 FEB (TUE): Range scheduled: 1200-1500

Ground testing of QIS: Complete remaining ground testing items as required. Upon completion of ground items, flight testing of the EMI will be conducted at MCF. Upon completion of testing, the crew will depart out to KAGR

0800 or TBA Show Time  
1200 or TBA Take Off  
1500 Land Time

\*\*Schedule for remainder of week will be flexible depending upon the QIS testing.

11 FEB (WED): Range scheduled: 1200-1500

1000 Show at aircraft  
1200 T/O MCF  
\*\* Training at Avon Park Range or overwater  
1500 Land MCF

12 FEB (THUR): Range Times 1200-1500

1000 Show at aircraft  
1200 T/O MCF  
1500 Land MCF

13 FEB (FRI)

0900: Show Time  
1100: Depart KMCf  
1430: Land KYNG

#### 3. ITEMS TO TAKE:

- ##### a. Navigator:
- Maps with "No-Spray" Areas Marked  
Mission computer

#### 4. AIR TO GROUND FREQUENCIES:

- ##### a. Spray: Primary 392.2; Secondary 340.8

# SPRAY OPERATIONAL SCHEDULE

## UTAH TEST AND TRAINING RANGE MISSION

### 16-26 MARCH 2010 **Ch 1**

**PURPOSE/BENEFIT/OBJECTIVE:** Aerial spray herbicide mission controlling Halogeton on Targets 21, 24, and Wildcat at the Utah Test and Training Range (UTTR) aiding vegetation control for bombing mission test evaluations and unexploded ordnance recovery.

#### 1. **AIRCREW1: AC 108-CALL SIGN: SPRAY 08**

- a. **Pilots:** MAJ (b) (6) (b) (6) , Maj (b) (6) \*, Maj (b) (6) \*, Capt (b) (6) \*
- b. **Navigators:** LTC (b) (6)
- c. **Flight Engineers:** Msg (b) (6)
- d. **Spray Operators:** Msg (b) (6) , Msg (b) (6)
- e. **Crew Chiefs:** Msg (b) (6) , Sra (b) (6)

#### **AIRCREW 2: AC 105- CALL SIGN: SPRAY 05**

- f. **Pilots:** MAJ (b) (6) , Capt (b) (6) , Maj (b) (6) \*
- g. **Navigators:** LtCol (b) (6)
- h. **Flight Engineers:** Msgt (b) (6) , Tsgt (b) (6) (b) (6)
- i. **Spray Operators:** Msgt (b) (6) , Tsgt (b) (6)
- j. **Crew Chiefs:** Msgt (b) (6) , Sra (b) (6)

#### 2. **MISSION SUPPORT:**

- a. **Mission Commander:** Maj (b) (6) (b) (6)
  - 1. Makes final decision on all changes to the schedule
  - 2. Confirm all hotel information is correct upon check in
  - 3. Report flight data to AFRC daily (See contact info on reporting sheet)
- b. **Entomologists:** Maj (b) (6) (in place) , Lt Col (b) (6) (In place 17 Mar comm. air)
- c. **ARMS:** None

#### 3. **UTTR GROUND PARTY:**

- a. **Entomologist/Pest Management Professional(s):** Lt Col (b) (6) will direct ground sprays as certified applicator
- Additional Range support personnel:  
17-19 March – (b) (6)  
21-24 March – (b) (6)

#### 4. **MAINTENANCE:**

- a. **910 MX Supervisor:** Msgt (b) (6)
- b. **910 Spray MX:** Tsgt (b) (6) , Tsgt (b) (6) , Tsgt (b) (6) , Tsgt (b) (6) (b) (6)  
Tsgt (b) (6) , Tsgt (b) (6)
- c. **Instruments/Avionics:** Tsgt (b) (6) (b) (6) Tsgt (b) (6)
- d. **Hydraulics/Electrician:** Ssgt (b) (6) , Ssgt (b) (6)
- e. **Engine:** Tsgt (b) (6)

#### 5. **COMM:** None

#### 6. **IN-BRIEFING:** (UTTR Staff)

- a. **When/Time:** 1400 or upon arrival whichever is earlier
- b. **Where:** Forestry ramp and Base Operations
- c. **Who:** **EVERYONE!! Do Not leave area until cleared out by the MC.**
- d. **Briefing Plan**
  - a. Vehicles- See item **16.h** below
  - b. FLT Line Driving
  - c. Schedule of events
  - d. Billeting- See item **16.g** below

- e. Weather call
- f. Cellular Phone numbers for all personnel (Provide info to MC)

**7. PLANNED SEQUENCE OF EVENTS: Hill AFB Tower Control and Runway Hours 24/7**

**NOTES:**

- 1. Scheduling reflects no weather or maintenance delays. In the event of weather or maintenance delays, the missions will be adjusted as required. **ALL TIMES SUBJECT TO ADJUSTMENT BY MISSION COMMANDER**
- 2. **DUTY DAY FOR CIVILIANS WILL BE AS REQUIRED WITHIN CREW REST CONSTRAINTS.**
- 3. Tower Control, Runway & Airfield hours 24/7
- 4. **UTTR RANGE TIMES: 1400-1900Z**
- 5. **ALL MX & A/C PERSONNEL WILL REMAIN ON DUTY UNTIL AIRCRAFT IS PRE-FLIGHT COMPLETE AND RELEASED BY THE MISSION COMMANDER.**

**a. 16 March (Tuesday)**

**Vader02                      MI: QDNRKA579075      PPR: LJ 16-01**

0800 Show KYNG

1000 Depart KYNG with extra crew, maintenance, and support equipment

1330 Land KHIF drop off extra crew, maintenance, and support equipment

Time TBD: MC, Maint, and extra crew members work out logistics of buildings, access cards, vehicles, and obtain billeting information prior to crews arriving on 17 March.

**b. 17 March (Wednesday)**

**Spray08                      MI: QZNRKA580076      PPR: LJ17-01**

0800 Show KYNG load spray module

1000 Spray 08 Depart KYNG

1330 Spray 08 Arrive KHIF

**c. 18 March (Thursday)**

**Spray 05                      MI: QZNRKA581077      PPR: LJ18-01**

0800 Show KYNG

1000 Spray 05 Depart KYNG

1330 Spray 05 Land KHIF

**18-19 March (Thursday-Friday) 2 sorties as wx permits each day.**

0500 Show KHIF Spray 08 crew 1; 0545 Spray 05 Crew 2 (Alternating daily)

0530 Weather call and mixing begin

0730 Depart KHIF

1300 Land KHIF

**\*\*Weekend flying is currently unavailable due to range funding. If wx delayed, then weekend operations will be considered as a last resort per Hill AFB.**

**d. 22-25 March (Monday-Thursday) 2 sorties as wx permits each day.**

0500 Show KHIF

0530 Weather call and mixing begin

0730 Depart KHIF

1300 Land KHIF

**25 March Support Aircraft**

**VaderXX                      MI: QDNRKA578084      PPR: LJ25-01**

0800 Show KYNG

1000 Depart KYNG

1400 Arrive KHIF

**e. 26 March (Friday) All personnel**

0730 Checked out of billeting

0800 Return Rental vehicles

1000/1005/1010 Depart KHIF

1600/1605/1610 Land KYNG

\*\*If completed early, the aircrews and airframes may return early. TBD by the mission commander.

**8. ITEMS TO TAKE:**

**a. PMP:**

(1) Project Notebook with Recording Sheets and Maps

(2) Laptop Computer and Batteries

(3) 2 Compasses and Stop Watch

(4) 2 Signal Mirrors and 2 Spot Lights

(5) Measuring Wheels and Tape

(6) Entomologists' Tool Kit

(7) UHF/VHF Radios and VHF Radios

(8) Cellular Phone

**b. Mission Commander:** Mission Folder, Cellular Phone

**c. Navigator:** Maps

**d. Spray Maintenance:**

(1) MASS Spares and Spill Kit

(2) Tools and Other Equipment

(3) Herbicide Safety Binder

(4) Safety Equipment

**e. Maintenance:** Applicable Equipment

**9. SPRAY CONFIGURATION: SP3G**

**a.** Two Aircraft and Systems

**b.** MASS Modules 1, 2 and 3

**c.** UHV Fuselage booms oriented straight back

**10. PPR REQUIREMENTS:** All required, see Form 33 setup sheets for aircraft

**11. PARKING PLAN:** Forestry Ramp and Building requested

**12. RADIO FREQUENCIES:**

- **Clover Range Control:** UHF 285.65, 275.9, 361.4 (p)

- **Eagle Tower:** UHF 351.0; Mawk 4 **((b) (6))**

- **Diddle Knoll & Spray Ops Freq:** UHF 398.1 (Primary), 383.2 (Back-up); VHF 134.1, 118.45

- **Spray Inter plane:** UHF 237.05 / VHF 138.375

- **Spray Ground to Spray Maintenance:** See **Iridium Phones**

- **Base OPS:** 139.3

- **HF Operations:** Designated by Comm. See attached list.

- **Communications Ground Freq:** LMR nets are trunked at Hill.

- **IRIDIUM PHONES** - Numbers TBD Upon issue

**13. SPRAY PARAMETERS:**

**a. Herbicide:** Krovar 1DF®

**b. Application Rate:** 22.5 gal/acre (10 lbs of Krovar in 22.4 gal of water)

**c. Acreage:** 1,283 Acres (Targets 21, 24 and a couple passes on Nord LZ)

**d. Ground Speed:** 200 Knots (337.55 ft/sec)

- e. **Spray Altitude:** 100 Feet AGL
- f. **Swath Width:** 35 Feet
- g. **Flow Rate:** 366.1 Gallons/Minute

**14. HERBICIDE LOADING: (For Partial Loads Use Table on Last Page)**

**a. Sequence for Loading 1,000 Gallon Mixing Tank:**

- (1) Fill with water up to 750 Gallon Mark, then add:
  - (a) 450 Pounds of Krovar 1DF® (9 bags, 50 # each)
  - (b) 4.0 Gallons (15,140 ml) of StaPut®
  - (c) 64 Ounces (1,892 ml) of Foam Fighter F®
  - (d) 200 Ounces (5,913 ml) Hi-Light® Dye
  - (e) Add Water to 1,000 Gallon Mark and Agitate for 30 Minutes

- b. When:** Start at 0500 Hours on first full day of spraying and adjust as necessary through end of the daily mission as called by Mission Commander.

**c. Items to be furnished by installation:**

- (1) Krovar 1 DF® (12,660 pounds)
- (2) Foam Fighter F® (15 gallons)
- (3) StaPut® Additive (114 gallons)
- (4) Hi-Light® Dye (45 gallons)
- (5) Remove Nutra-Sol Tank Cleaner
- (6) Loading Personnel and All Loading Equipment
- (7) All Necessary Cleanup and Hazardous Waste Disposal
- (8) Aircraft Support Equipment and TA Support
- (9) Wash Rack and Fuel Priority

**15. SPRAY MONITORING AND TESTING.** By CPMP & ground support personnel

**16. CONTACTS:** Commercial prefix (801) 777-XXXX; DSN 777-xxxx

**17. SEQUENCING:**

- a. Target sequencing is determined by UTTR personnel based upon EOD clearance schedule and airspace scheduling.
- b. Spray ops aircraft must stay south of Base Leg Knoll during turns on north run on Target 21. Coordination with range control is essential to assure that this portion of the range is released for air operations.
- c. When winds blow directly from one side of the target to the middle of the target or during early morning when wind speed is low, ground monitors will direct the "dress up" of the target edges.
- d. **Spraying Priorities:**
  - (1) Target 21
  - (2) Target 24
  - (3) Wildcat (Rinse/excess material)
- k. **Multiple-Target Alignments for Possible Future Operations.**  
Whenever possible, multiple in line targets will be treated on the same pass to facilitate aircraft line-up and turning efficiency (in which case two separate ground-monitoring and marking parties will be required).
  - (1) The west edges of Targets 21 & 24 are contiguous and can be treated on the same pass with a spray-off gap between targets.

**18. GENERAL TARGET INFORMATION:**

- a. **Target 21:**
  - (1) Dimensions: 4,980' X 7,770'
  - (2) Acreage: 888
  - (3) Acres Sprayed in 2004: 888
  - (4) Aircraft Loads: 18,869 Gal
  - (5) Sorties: 17
  - (6) Passes (35' Swath): 157
  - (7) Spray-On Time/Pass: 23 Seconds
  - (8) Spray Heading: 00/180
- b. **Target 24:**
  - (1) Dimensions: 1,600' X 6,080'
  - (2) Acreage: 223
  - (3) Acres Sprayed in 2004: 223
  - (4) Aircraft Loads: 5,263 Gal
  - (5) Sorties: 7
  - (6) Passes (35' Swath): 47
  - (7) Spray-On Time/Pass: 18 Seconds
  - (8) Spray Heading: 00/180
- c. WildCat  
Box coordinates:

**UTTR GEOGRAPHIC LOCATION**

Target areas on UTTR are geographically located in northwestern Utah, directly west of the Great Salt Lake and Hill Air Force Base. The complex is positioned between 40 and 41 degrees north latitude and close to 113 degrees ten minutes west longitude. The targets are within range 12 west and Township two and three north, Salt Lake Baseline Meridian.

**AIR FORCE RESERVE COMMAND (AFRC)**

8 Mar 10

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Hill AFB/UTTR UT

1. Aerial Spray flight proficiency training will be accomplished on targets 21, 24, and Wildcat at the Utah Test and Training Range(UTTR) applying Krovar controlling vegetation (i.e Halogenton) growth aiding bombing mission test evaluations and unexploded ordinance recovery. Two Spray configured C-130's will be available 17-26 March 10 for the requested spray mission. One Support C-130 will be used for position and deposition of spray ground personnel and maintenance equipment.

2. Concept of Operations:

- a. 16 March (Tuesday)  
0800 Show KYNG  
1000 Depart KYNG with extra crew, maintenance, and support equipment  
1330 Land KHIF drop off extra crew, maintenance, and support equipment
- b. 17 March (Wednesday)  
0800 Show KYNG load spray module  
1000 1<sup>st</sup> Spray aircraft depart KYNG  
1330 1<sup>st</sup> Spray aircraft Land KHIF
- c. 18 March (Thursday)  
1000 2<sup>nd</sup> Spray aircraft depart KYNG  
1330 2<sup>nd</sup> Spray aircraft Land KHIF
- d. 18-19 March (Thursday-Friday)  
0500 Show KHIF  
0745 Depart KHIF  
1300 Land KHIF  
\*\* 2 spray sorties planned each day per aircraft
- e. 22-25 March (Monday-Thursday)  
0500 Show KHIF

0745 Depart KHIF

1300 Land KHIF

\*\* 2 sorties planned each day per aircraft

f. 26 March (Friday)

0800 Show KHIF

1000 1<sup>st</sup> Spray aircraft depart KHIF

1005 2<sup>nd</sup> Spray aircraft depart KHIF

1600 1<sup>st</sup> Spray aircraft land KYNG

1605 2<sup>nd</sup> Spray aircraft land KYNG

3. Maj (b) (6) (b) (6) will act as Mission Commander.
4. Maj (b) (6) and Maj (b) (6) (b) (6) will act as Aircraft Commanders
5. Support required at Hill AFB and the UTTR has been completed.

**910 AW AERIAL SPRAY UNIT -- POST-MISSION REPORT  
MINOT AFB ADULT MOSQUITO CONTROL & ARMY CORPS  
OF ENGINEERS PROPERTY NEAR WILLISTON 19-23 JUL 2010**

**1. MISSION BASICS:**

- a. Installation Sprayed: Minot AFB, North Dakota and Army Corps of Engineers Property near Williston, ND.
- b. Mission Duration: 19-23 July 2010
- c. Purpose of Application: Adult Mosquito Control
- d. Application Date/s: 20-22 July 2010
- e. Time/s of Application (Local): 2030-2139 (20 Jul), 2030-2233 (21 Jul), 2000-2215 (22 Jul)
- f. Acres Treated: 5,301 (20 Jul), 13,764 (21 Jul), 26,505 (22 Jul) = 45,570 acres
- g. Project Coordinator/s (Name/Rank, Title, Phone #): (b) (6), Pest control supervisor/spray coordinator, DSN (b) (6), Land Manager, Army Corps of Engineers (b) (6)
- h. Date Spray Map Last Approved: 19 July 2010
- i. Date of Waste Generation Letter: 17 July 2006
- j. Installation In-Briefing: (When/Where/Briefer/s): 19 Jul; 5 CES Conference Room; Maj (b) (6) (Mission Commander)

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6)
- b. Entomologists (Category 11): LtCol (b) (6), Maj (b) (6) (safety briefer)
- c. Aircrew:
  - Pilots: LtCol (b) (6), LtCol (b) (6), Maj (b) (6)
  - Navigators: LtCol (b) (6), Capt (b) (6)
  - Flight Engineers: SSgt (b) (6), (b) (6)
  - Spray Operators: MSgt (b) (6), MSgt (b) (6), TSgt (b) (6), (b) (6), SSgt (b) (6)
- d. Maintenance:
  - Spray Maintenance: TSgt (b) (6), TSgt (b) (6), SrA (b) (6), (b) (6)
  - Crew Chief(s): MSgt (b) (6), SrA (b) (6)
  - Avionics: TSgt (b) (6)

**Flying Data:**

- (1) Spray Sorties/Hours: 3 sorties (1.2 + 2.2 + 2.3) = 5.7
- (2) Ferry Sorties/Hours: 2 sorties (4.0 + 3.5) = 7.5

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet<sup>®</sup> EC Concentrate (78% naled); Zenivex (20% etofenprox)
- b. EPA Registration Number: 59639-90-5481 Trumpet; 2724-791 Zenivex
- c. Formulation Sprayed: Emulsified Concentrate; E20
- d. Gallons Pesticide Loaded: 135 gal Trumpet (21 Jul) 60 gal Zenivex (20 Jul)
- e. Gallons Pesticide Applied: 37 gal (20 Jul); 97 gal (21 Jul) 60 gal (22 Jul)
- f. Gallons and Name Diluent Used: 60 gal BVA-13 (with Zenivex)
- g. Gallons and Name of Flush Used: 15 gal – water (Trumpet); 15 gal – BVA oil (Zenivex)
- h. Other Additives Used: None
- i. Application Rate: 0.90 oz/acre (20-21 Jul); 0.32 oz/acre (22 Jul)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet<sup>®</sup> 8005 Flat Fan
- e. Nozzle Orientation & Number Used: 20-8005's (21-22 Jul); 10-8005s (22 Jul); oriented straight down
- f. Pressure: 37-42 psi
- g. Flow Rate: 6.5 gallons per minute (20-21 Jul); 4.4 gallons per minute (22 Jul)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray offset: 2000' (20-22 Jul)
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 2-5 knots @ 030° (20 Jul); 5 knots @ 090 (21 Jul); 8 @ 090° (22 Jul)
  - (2) Release Altitude: 5-8 knots @ 030° (20 Jul); 7 knots @ 100° (21 Jul); 10 @ 070° (22 Jul)
- b. Temperature (Degrees Fahrenheit): 71-64° (20 Jul); 79-77° (21 Jul); 72° (22 Jul)
- c. Relative humidity: 54-73% (20 Jul); 68-79% (21 Jul); 48-70% (22 Jul)
- d. Cloud Cover: Scattered clouds
- e. Source: Ground observations and aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Monitoring in Williston was done with New Jersey light traps results were favorable.
- b. Minot AFB Public Health collects mosquitoes and send them for identification to Brooks AFB. No data was reported from the city of Minot, but judging the excellent environmental conditions and results at the AFB, we expect significant reduction in mosquito activity.

**8. REMARKS:** This is a relatively complex spray mission which involves two different pesticides and sprays at two separate locations (Minot and Williston). Much of the background work coordinating these activities was carried out by the Pest Control Supervisor (5<sup>th</sup> CES), Minot AFB, Ms. Vicki Johnson, and her staff. This shop's planning was, once again, a critical contributing factor to mission success. Minot AFB and the city of Minot were sprayed to control adult mosquitoes. The community of Burlington, northeast of Minot (approximately 1,034 acres), was added this year. Areas treated are shown in

Attachment 1. Results of the sprays were reported to be favorable but actual species identifications and numbers are pending analysis at Brooks AFB. All spraying was optimized by beginning sprays no earlier in the day than two hours prior to sunset in order to maximize control the target mosquito species, *Aedes vexans* and *Culex tarsalis* within our operational parameters.

This is the second year for a Zenivex (etofenprox) application at Williston and Watford City. Areas treated are shown in Attachment 2. Trapping within the treatment area indicated a significant drop in mosquito numbers the day after the spray when compared to pre-spray numbers (i.e., 188 [pre] to 36 [post]). It is likely that a longer period of mosquito relief could be made possible by increasing the size of the spray block, but there are also significant economic considerations in doing so.

Upgrade training was accomplished on all sorties for the navigator, spray operators, and spray maintenance sections.

//signed//

(b) (6) MAJ, USAFR  
Entomologist and DoD Certified Applicator

Attachment 1. Shows the Minot AFB area spray blocks and track of the aircraft. The black outlines represent the proposed treatment area. The green lines are the track of the aircraft while the red lines inside the spray blocks represent when the aircraft was spraying.

Attachment 2. Shows the Williston area spray block and track of the aircraft. The black outlines represent the proposed treatment area. The green lines are the track of the aircraft while the red lines inside the spray blocks represent when the aircraft was spraying.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## Minot AFB, ND and Williston ACE, ND

### 19-23 July 2010

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes in order to improve working conditions for members operating at Minot AFB, ND and the developed areas surrounding the Army Corp of Engineers property near Williston, ND.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: LTC (b) (6), LTC (b) (6), Maj (b) (6)
- (2) Navigators: LTC (b) (6), Capt (b) (6)
- (3) Flight Engineers: SSgt (b) (6) (b) (6)
- (4) Spray Operators: MSgt (b) (6), MSgt (b) (6), TSgt (b) (6), SSgt (b) (6)

##### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6), TSgt (b) (6), SRA (b) (6)
- (2) Crew Chief(s): MSgt (b) (6), SRA (b) (6)
- (3) Avionics: TSgt (b) (6)

##### c. Entomologists: Maj (b) (6) (MC;), LTC (b) (6) (TR arriving at MOT @ 1300 hrs, 18 Jul)

#### 2. SCHEDULE: (All Local Times)

- a. 19 Jul (Monday)
  - 0800L Show KYNG
  - 1000L Depart KYNG
  - 1235L Land KMIB
  - 1400L Installation in-brief, CE conference room
- b. 20 Jul (Tuesday) Spray Minot AFB
  - 1730L Show KMIB
  - 1930L Depart KMIB
  - 2130L Land KMIB
- c. 21 Jul (Wednesday) Spray Minot
  - 1730L Show KMIB
  - 1930L Depart KMIB
  - 2130L Land KMIB
- d. 22 Jul (Thursday) Spray Williston
  - 1730L Show KMIB
  - 1930L Depart KMIB
  - 2130L Land KMIB
- e. 23 Jul (Friday)
  - 1130L Show KMIB
  - 1330L Depart KMIB
  - 1805L Land KYNG

#### 3. ITEMS TO TAKE

- a. **Mission Commander:** Cellular Phone, Mission Folder, FFT
- b. **Entomologist:** Cell Phone, Wind Gauge, Compass, Pest Safety Binder, 1 UHF Radio, 1 VHF radio Project Notebook
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables
- e. **Spray Maintenance:** Deployment Kit, Support Equipment

#### 4. PPR: 19 01 DL

#### 5. RADIO FREQUENCIES: Air To Ground Primary VHF 123.45

Minot AFB Tower 120.65 V, 236.6, 253.5; Minot International 118.2 V or Unicom 122.95

#### 6. CONFIGURATION: SP2G

- a. **System:** 2-Module System/Stainless Steel ULV Fuselage Booms
- b. **Nozzle Tips/Orientation:** ULV (adulticide): 8005 Tee Jet oriented straight down

c. **Number:** ULV: 10 8005s total (5 each side) for 1000' swaths and 20 8005's (10 each side) for 2000' swaths at Williston 8 8003s (4 each side)

d. **Aircraft:** 89-9106

e. **Mission Identifier:** QZNRK9901200

## 7. SPRAY PARAMETERS:

### a. Adulticide (Minot AFB- Trumpet)

- (1) **Area to be treated:** 26,800 acres
- (2) **Altitude:** 150' for Adulticide application
- (3) **Swath Width.** 1000 feet for AFB; 2000' City of Minot or as determined by the PMP
- (4) **Flow Rate.** 3.6 gallons/minute for 1000' swaths; 7.2 gal/min for 2000' swaths
- (5) **Application Rate.** 1.0 oz/acre Trumpet, ULV
- (6) **Ground Speed:** 200 Knots (338 Feet/Second)
- (7) **Flush:** With water, triple rinse, then air purge

### b. Adulticide (Williston ACE - Zenivex)

- (1) **Area to be treated:** ~6,500 acres
- (2) **Altitude:** 150' for Adulticide application
- (3) **Swath Width.** 2000' City of Williston or as determined by the PMP
- (4) **Flow Rate.** 2.2 gal/minute
- (5) **Application Rate.** 0.035 lbs/acre A.I. Zenivex, ULV (0.30 oz/acre)
- (6) **Ground Speed:** 200 Knots (338 Feet/Second)
- (7) **Flush:** With BVA, triple rinse, then air purge

8. **SPRAY MIXING AND LOADING:** See Ento; A good flush with water after Trumpet sprays; flush with BVA after Zenivex spray

9. **TRANSPORTATION:** 2 Vans, 1 6 PAX, 1 car (Rental-(b) (6)) will be available at MIB.

10. **LODGING:** Holiday Inn Express. 300 37<sup>th</sup> Ave SW Minot. (701) 837-3140  
Best Western Kelly Inn 1510 26th Avenue SW • Minot 58701 (710) 852-4300  
Billing POC: (b) (6) DSN 453-6161  
MC will provide Non-A's

## 11. CONTACTS:

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND (AFRC)**

22 Jan 2010

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for LAIRCM Spray Test Flight

1. One Aerial Spray equipped C-130 will be available 22-26 Feb 2010 to observe the effects of the LAIRCM "A" package on the spray dispersal pattern using BVA oil with dye. Oil sensitive cards will be placed on the ground in a linear arrangement to verify effective swath width. Cards will also be placed on and near the LAIRCM "A" package to sample for BVA oil deposition. Continuation and upgrade training will be conducted after testing is complete.

2. Concept of Operations:

- a. 22 Feb (Monday)  
1100 Show KYNG  
1300 Depart KYNG  
1600 Land KMCF
- b. 23-25 Feb (Tuesday-Thursday)  
0845 Depart KMCF  
0900-1300 Avon Park Range Time  
1315 Land KMCF
- c. 26 Feb (Friday)  
0800 Show KMCF  
1000 Depart KMCF  
1300 Land KYNG

3. Plan subject to change based on test results.

4. Aircraft will be SP2G configured with ULV booms.
5. Maj (b) (6) (b) (6) will act as Aircraft Commander.
6. Support required at MacDill AFB and Avon Park, FL has been arranged.

(b) (6) , Capt, USAFR

5 March 2010

MEMORANDUM FOR 757 AS/DO

FROM: 757 AS/DOS

SUBJECT: LAIRCM EFFECTS ON AERIAL SPRAY

**1. Purpose:** Observe the effects of the LAIRCM "A" package to determine if the spray pattern is adversely affected and to determine if the LAIRCM package would disrupt airflow and create a situation where the spray might contaminate the airframe.

**2. Participants:**

**Mission Commander:** Maj (b) (6)

**Aircrew:**

1. Pilots: LTC (b) (6), MAJ (b) (6), CAPT (b) (6)
2. Navigators: LTC (b) (6)
3. Flight Engineers: MSGT (b) (6)
4. Spray Operators: SMSgt (b) (6), MSGT (b) (6)

**Maintenance:**

1. Spray Maintenance: TSgt (b) (6), SSG (b) (6), TSgt (b) (6)
2. Avionics: TSgt (b) (6)
3. Crew Chiefs: MSGT (b) (6), SRA (b) (6)

**Entomologists:**

1. MAJ (b) (6)

**3. Spray Configuration:**

Mass-SP2G  
Aircraft Number: 99104  
Mission Identifier: QZNRKA561053

**4. Spray Parameters:**

Booms: Fuselage only.  
Nozzles: 8005 TeeJet.  
Number of Nozzles: 9 total (8005)  
Application rate: 3.6 Gallons/minute  
Airspeed: 200 knots ground speed.  
Altitude: 150' AGL.  
Wind: Into the wind application

**5. Aerial Spray Flight Data:**

- |                              |                      |                   |
|------------------------------|----------------------|-------------------|
| a. 22 Feb 10: Ferry          | KYNG-KMCF 1750-2012Z | Flight Hours: 3.9 |
| b. 23 Feb 10: Testing Sortie | KMCF-KMCF 1625-1735Z | Flight Hours: 1.3 |

- |                              |                      |                   |
|------------------------------|----------------------|-------------------|
| c. 24 Feb 10: Testing Sortie | KMCF-KMCF 1615-1900Z | Flight Hours: 2.7 |
| d. 25 Feb 10: Ferry          | KMCF-KYNG 1730-2125Z | Flight Hours: 3.9 |

## **5. Methods & Materials:**

### **Airframe Contamination**

Twenty-two oil sensitive cards (Ciba-Geigy Corp.) were affixed to the airframe with duct tape around the LAIRCM pods, running up lateral-ventral sides of the fuselage aft of the spray booms, on the ventral side of the horizontal stabilizer, and on the fuselage “beavertail” (ventral side) (Fig 1.). Nozzles were 9 nozzles (5 port, 4 starboard) were opened up inboard with respect to the aircraft center-line. The aircraft took off, flew to Avon Park Range, and sprayed BVA oil dyed with a fluorescent optical brightener (Uvitex, Ciba-Geigy Corp.) for a total of one minute. The aircraft then returned to MacDill AFB, and the oil-sensitive cards were inspected for contamination. After initial inspection, cards were removed and illuminated under a UV source to further verify lack of contamination.

### **Aerosol Cloud Distribution**

Nine collection stations were outfitted with spinning impingers (glass microscope slides) and were placed at 200 foot intervals along Kissimmee Road where it intersects Tank trail (Fig. 2). This location was chosen to allow for the aircraft to make an into-the-wind application while flying over the center of the line of aerosol collectors. Nine 8005 flat fan nozzles (4 and 5 per side, respectively) on fuselage booms were used to produce a flow rate of approximately 3.6 gallons per minute at 40 psi (equivalent to 0.5 oz/acre). Aircraft passes were made on a course perpendicular to the collection stations, with each pass totaling 60 seconds of spray-on time (30 seconds prior and 30 seconds post collector line). Two passes were conducted for each test, with a total of 2 tests completed. After the last pass was completed and the spray cloud to settle, the spinning slides were collected and viewed under a fluorescent compound microscope. 100 drops (if available) were counted for each sampling station. Drops were measured and graphed by station for volume mean diameter (VMD), numerical median diameter (NMD), and drop density (number of drops per cm<sup>2</sup>) for each station. This data was compared to baseline data collected in 2004 using similar methods.

## **Results:**

### **Aircraft Contamination**

Table 1 shows drops collected on the oil-sensitive cards placed on the aircraft. The only card that displayed any contamination was card number 22, which was placed on the anterior section of the LAIRCM blister. Card 22 showed 15 discrete drops per square centimeter. However, it should be noted that contamination of this card was likely caused by fuel overflow from the starboard inboard engine nacelle upon engine shutdown. Not only was this observed by ground personnel at engine shutdown, but the drops on the card were far too large as to have been caused by spray contamination. Subsequent inspection of the contaminated card under a UV light indicated no fluorescence, thereby discounting the possibility that the card was contaminated by any material coming out of the spray system.

### **Aerosol Collection**

Table 2 shows both the droplet density and the VMD, or volume mean diameter of the droplets dispensed from the aircraft. VMD is a convenient and well-accepted expression of droplet size. Droplet density for the 2010 test ranged from 2.2 to 118.6 drops per centimeter squared. As expected, droplet density was greatest on the collectors (numbers 4 and 5) directly below the aircraft flight path. The same pattern can be seen from the 2004 baseline data. Interestingly, however, the densities were significantly less than observed in the latest test. This is not a negative finding. Generally speaking, increased droplet densities are desirable. The discrepancies are probably a result of different atmospherics in each situation. VMD of droplets collected in 2004 were approximately 58.0 microns. All droplets collected from each location in the recent test were all below 56.0 microns. Most VMD's ranged in the mid to high 40's. The VMD's of the 2004 and 2010 test appear to be entirely consistent.

### **Conclusion:**

There is no indication that the LAIRCM modification causes airframe contamination or adversely affects the pattern and distribution of the spray coming from the aircraft. While we hesitate to say that the LAIRCM package actually "enhances" the spray, data from the most recent trial is actually more favorable than the 2004 trial in terms of the spray characteristics deemed to be desirable.

# **AERIAL SPRAY OPERATIONAL SCHEDULE**

## **AVON PARK, FL**

### **22-26 FEB 2010**

**PURPOSE/OBJECTIVE/BENEFIT:** Observe the effects of the LAIRCM “A” package on the spray dispersal pattern using BVA oil with dye. Aerosol collectors will be placed on the ground in a linear arrangement to verify effective swath width. Cards will also be placed on and near the LAIRCM “A” package to sample for BVA oil deposition. Continuation of training will take place after the testing is complete.

- a. **Navigator:** Maps with “No-Spray” Areas Marked  
Mission computer

**4. AIR TO GROUND FREQUENCIES:**

- a. **Spray: Primary 123.45**
- b. Patrick: TWR-133.75; GND-124.35; CMD POST-383.0; PTD-372.2
- c. **Avon Park: TWR-292.2 (p), 126.15, 276.6 (s) Hrs 0700-2300 M-F, S-S per flying schedule DSN 968-7138**
- d. MacDill: TWR-123.7; GND-118.575; ATIS-133.825; CMD POST-311.0; PTD-372.2

**5. SPRAY CONFIGURATION:**

- a. MASS – SP2G
- b. Aircraft Number: 89-9104
- c. Nozzle Tips/Orientation: ULV booms with 8005 nozzles
- d. Mission Identifier: QZNRKA561053

**6. MISSION PROTOCOLS:**

- a. **Altitude:** 150 AGL for testing, as needed for training
- b. **Ground Speed:** 200 KNOTS
- c. **Chemical:** BVA oil
- d. **Application Rate:** .50 oz/acre
- e. **Flow Rate:** 3.6 gal/min

**A. ULV oil test for aircraft contamination (Tuesday)**

20 oil sensitive cards will be taped to rear fuselage and tail section of the aircraft (empennage). Spray aircraft will enter spray area on Avon range and go to “spray-on” for one minute with soybean oil at 150’ AGL. After landing, the cards will be inspected for presence of oil spotting. Test can be repeated if it is deemed appropriate and/or there is enough range time left.

**B. ULV droplet characterization test using fuselage spray configuration and into the wind (Wednesday)**

Glass droplet collectors will be deployed over a 2000 ft transect at 200 ft intervals. Aircraft will fly with either tailwind or headwind over center collector, which will be indicated by a vehicle, lamp, or mirror flash (coordinated prior to takeoff). Spray will be turned on for 45 seconds prior to and 45 after the collecting point (assuming headwind) maintaining 150’ AGL. Glass droplet collectors will be collected after waiting 15 minutes for droplets to settle; droplets will be counted and measured.

**910 AW AERIAL SPRAY UNIT -- POST-MISSION REPORT  
ADULT MOSQUITO CONTROL AT WILLISTON, ND AND  
ARMY CORPS OF ENGINEERS PROPERTY 23-26 AUGUST 2010**

**1. MISSION BASICS:**

- a. Installation Sprayed: Williston, North Dakota and Army Corps of Engineers Property near Williston, ND.
- b. Mission Duration: 23-26 August 2010
- c. Purpose of Application: Adult Mosquito Control
- d. Application Date/s: 25 August 2010
- e. Time/s of Application (Local): 1845-2137 (25 Aug)
- f. Acres Treated: 26,005 (25 Aug)
- g. Project Coordinator/s (Name/Rank, Title, Phone #): (b) (6), Pest control supervisor/spray coordinator, DSN (b) (6), Land Manager, (b) (6), Williston Vector Control, (b) (6)
- h. Date Spray Map Last Approved: 23 Aug 2010
- i. Date of Waste Generation Letter: 17 July 2006
- j. Installation In-Briefing: (When/Where/Briefer/s): Teleconference inbrief; Maj (b) (6) (Mission Commander) and (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6)
- b. Certified PMP/Entomologists (Category 11): Maj (b) (6) (safety briefer), Maj (b) (6)
- c. Aircrew:
  - Pilots: LtCol (b) (6), Maj (b) (6)
  - Navigators: LtCol (b) (6), LtCol (b) (6)
  - Flight Engineers: MSgt (b) (6)
  - Spray Operators: MSgt (b) (6), TSgt (b) (6), MSgt (b) (6)
- d. Maintenance:
  - Spray Maintenance: TSgt (b) (6), TSgt (b) (6), SrA (b) (6)
  - Crew Chief(s): SSgt (b) (6), SrA (b) (6)
  - Avionics: SSgt (b) (6)

**Flying Data:**

- (1) Spray Sorties/Hours: 2 sorties (1.8 + 2.9) = 4.7
- (2) Ferry Sorties/Hours: 2 sorties (3.9 + 3.4) = 7.3

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Zenivex (20% etofenprox)
- b. EPA Registration Number: 2724-791 Zenivex
- c. Formulation Sprayed: E20
- d. Gallons Pesticide Loaded: 60 gal Zenivex
- e. Gallons Pesticide Applied: 60 gal
- f. Gallons and Name Diluent Used: 60 gal BVA-13
- g. Gallons and Name of Flush Used: 15 gal; BVA-13
- h. Other Additives Used: None
- i. Application Rate: 0.32 oz/acre (0.035 lbs/acre)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet® 8005 Flat Fan
- e. Nozzle Orientation & Number Used: 10-8005s total
- f. Pressure: 43-50 psi
- g. Flow Rate: 4.3 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray offset: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 4-5 knots @ 070-100°
  - (2) Release Altitude: 7 knots @ 140°
- b. Temperature (Degrees Fahrenheit): 75°
- c. Relative humidity: 39-58% (16 Jul) & 53% (17 Jul)
- d. Cloud Cover: Scattered clouds
- e. Source: Ground observations and aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Pre and Post-treatment monitoring in Williston was done with New Jersey light traps.
- b. Pre-monitoring average trap counts of 130 mosquitos/trap prior to spray (Monday trap counts); Post-spray trap counts averaged 4.5 mosquitos/trap on the evening of the spray and 10 mosquitos/trap/day on the following weekend.

**8. REMARKS:** This was the 2nd year of spray operations conducted for the Army Corps of Engineers and surrounding areas. A large larviciding project was completed earlier in the year and there was indication of significant population reduction. However, large numbers of adult mosquitoes were present in Williston just before the spray. This area was treated with Zenivex, a newly EPA registered mosquito adulticide with low mammalian toxicity. As in previous years, the spray was extremely effective following the spray, but increased slightly the following evening, presumably because of mosquito immigration into the treatment areas. Attachment 1 shows the area treated around Williston on 25 August. Attachment 2 shows treated area around Watford City, a community located approximately This was the last application for the Williston area this year. Pending funding of the project next year, we again hope to apply larvicides and adulticides with the cooperation of the Army Corps of Engineers and the City of Williston.

Once again the 5<sup>th</sup> CES at Minot AFB provided outstanding support for our operation; Special thanks go out to Ms. (b) (6) for making this mission proceed smoothly.

## Aerial Spray Mission Set up Check list

### Pre Planning:

#### 2 Months out:

1. Confirm Dates with Entos
2. Request Range Times

#### 1-2 Months out:

3. Arrange Cars/Hotels

1. Concept Message sent to AFRC DOOM, Aerial Spray SITREP and 22AF CP
2. Set up flights
  - a. Flying Planner
  - b. Aircraft Scheduled – Ext 1672
  - c. Input Flights into SMS
  - d. Add Mission ID's to Local Flying Schedule- Send to Current Ops
  - e. Email to : (b) (6) (757 orderly room), (b) (6) (TMO), (b) (6) , (b) (6) , (b) (6) (b) (6) , Plans Contact list.: MSN ID, Rental Car Info
3. Build Mission Plan:
  - a. Contact Spray/Maintenance: (b) (6) (spray), (b) (6) (Maint/crew chiefs), (b) (6) (avionics)
  - b. Arrange PPR
  - c. Arrange Billeting, 17 rooms blocked-send names
  - d. Arrange Vehicles/transportation
  - e. Arrange for Ravens when needed ((b) (6) )
4. Contact Plans and set up a concept briefing:
  - a. Send copy of Mission Plan to the Plans office
  - b. Plans will coordinate with Maint, SF, etc. to be at meeting
5. Build Folders:
  - a. Setup sheet/Form 33
  - b. Suitability reports
  - c. Billeting Letters
  - d. mission notes
  - e. Sunrise/Sunset tables

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND (AFRC)**

22 Dec 09

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray Training Avon Park, FL

1. One C-130 aerial spray equipped aircraft will be available 4-8 Jan 10 to proceed from Youngstown ARS, OH and stage at MacDill AFB, FL. The mission purpose is to conduct winter aerial spray semi-annual currency and proficiency training over Avon Park Bombing Range, FL and coastal waters.

2. Concept of Operations:

- a. 4 January (Monday)  
1100 Show KYNG  
1300 Depart KYNG  
1600 Land KMCF
- b. 5-7 January (Tuesday-Thursday) Range: 1130-1330  
0900 Show KMCF  
1100 Depart KMCF  
1400 Land KMCF
- c. 8 January (Friday) Range: 1130-1330  
0900 Show KMCF  
1100 Depart KMCF  
1300 Land KMCF  
1400 Depart KMCF  
1700 Land KYNG

3. Spray Configuration:

- a. MASS – SP2G
- b. MI: QZNRKA468004
- c. Parameters – 150' and 100' AGL
- d. Chemical – Water for training only

4. Maj (b) (6) will serve as Mission Commander and Aircraft Commander.
5. Support required at MacDill AFB has been arranged.

(b) (6) (b) (6) Maj, USAFR  
Assistant Chief of Aerial Spray

- b. Certified PMP/s (Category 11): MAJ (b) (6)
- c. Aircrew:
  - 1) Pilots: LTC (b) (6), LTC (b) (6)
  - 2) Navigators: LTC (b) (6)
  - 3) Flight Engineers: SMS (b) (6)
  - 4) Spray Operators: MSGT (b) (6), MSGT (b) (6)
- d. Safety Briefer: MAJ (b) (6)
- e. Spray Maintenance: TSGT (b) (6), TSGT (b) (6), SRA (b) (6)
- f. Spray Ground Monitors: LTC (b) (6)
- g. Crew Chief: TSGT (b) (6), SRA (b) (6)
- h. Avionics: TSGT (b) (6)
- i. Flying Data:
  - (1) Spray Sorties/Hours: 1/1.6
  - (2) Ferry Sorties/Hours: 2/6.4

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 120 gal Trumpet® (29 June)
- d. Gallons Pesticide Applied: 95 gal Trumpet® (29 June)
- e. Gallons and Name of Flush Used: 50 gal/water
- f. Other Additives Used: none
- g. Application Rate: 1.0 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99107
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8005 Flat Fan
- e. Nozzle Orientation & Number Used: 20 straight down
- f. Pressure (PSI): 38 PSI
- g. Flow Rate: 7.26 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 130° @ 10 knots (aerial observation) (29 June)
- b. Temperature (Degrees Fahrenheit): 74 °F (29 June)
- c. Relative Humidity: 47%
- d. Cloud Cover: Clear
- e. Source: Ground observations and National Weather Service

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

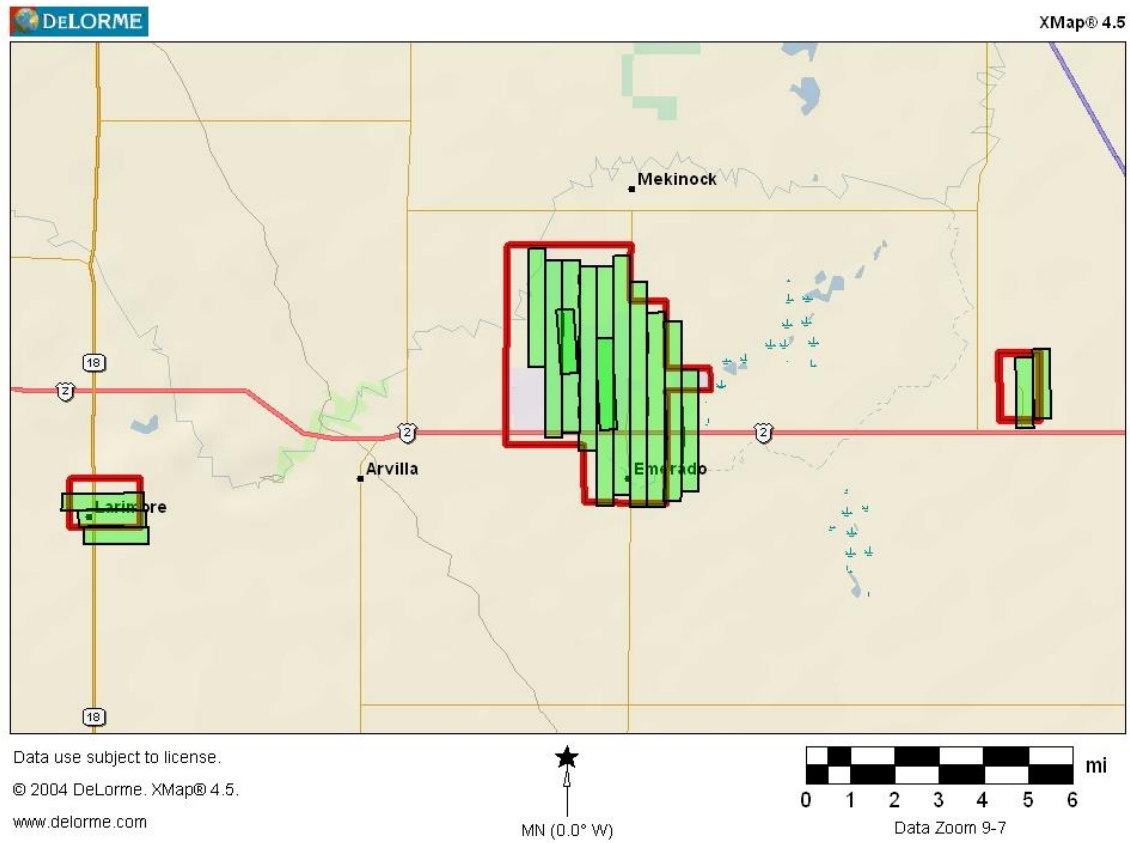

- a. The 319 MDG/ADS conducts adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito traps
  - (2) Results: Trap data pending from 319 MDG/ADS

**8. REMARKS:** Mosquito counts prior to this spray were approximately 120/trap. The threat of West Nile Virus prompted AF public health to make the decision to spray the base with Trumpet EC. The applications were made during the last 1.5 hrs of daylight to maximize the correlation between the spray period and mosquito activity. Meteorological conditions were good during the AFB application, with a moderate unidirectional wind assuring good coverage. Preliminary post-spray observations indicate excellent control of mosquitoes. Pending trap count data will undoubtedly confirm this. The city of Larimore, ND was also included in this adulticide application. Many thanks to TSGT Nicholas and the staff of the GFAFB pest control shop.

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Minot and Williston, ND.

1. One C-130 will be available 19-23 July for the requested adulticide spray mission. Aerial Spray flight proficiency training will be accomplished in addition to providing a beneficial reduction in mosquito populations effecting the health and welfare of the personnel stationed at Minot AFB and Williston, ND.

2. Concept of Operations:

- a. 19 Jul (Monday)  
0800L Show KYNG  
1000L Depart KYNG  
1235L Land KMIB
- b. 20 Jul (Tuesday) Spray Minot AFB  
1730L Show KMIB  
1930L Depart KMIB  
2130L Land KMIB
- c. 21 Jul (Wednesday) Spray Minot  
1730L Show KMIB  
1930L Depart KMIB  
2130L Land KMIB
- d. 22 Jul (Thursday) Spray Williston  
1730L Show KMIB  
1930L Depart KMIB  
2130L Land KMIB

- e. 23 Jul (Friday)  
1130L Show KMIB  
1330L Depart KMIB  
1805L Land KYNG

3. Aerial Spray Operation:

- a. Chemical: Trumpet (Minot) & Zenivex (Williston)
- b. Altitude: 150 AGL
- c. Application rates: 7.4 gal/min (.6 - .75 oz/acre)
- d. Area: Approximately 14,000 acres (Minot) & 8,000 acres (Williston)

4. Maj (b) (6) will act as Mission Commander.

5. Lt Col (b) (6) will act as Aircraft Commander.

6. Support required at Minot AFB, ND has been completed.

(b) (6), Capt, USAFR  
Aerial Spray Coordinator

# AERIAL SPRAY OPERATIONAL SCHEDULE

## TYNDALL AFB, FL

### 3-4 March 10

**OBJECTIVE/PURPOSE AND BENEFIT:** Mission is in support of visit with 1<sup>st</sup> AF to include brief, static display and spray sortie.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: Col (b) (6) Col (b) (6) LTC (b) (6) Maj (b) (6) Maj (b) (6) Capt (b) (6)
- (2) Navigators: LTC (b) (6)
- (3) Flight Engineers: MSgt (b) (6)
- (4) Spray Operators: MSgt (b) (6) MSgt (b) (6)

##### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6) TSgt (b) (6)
- (2) Crew Chiefs: MSgt (b) (6) SSgt (b) (6)
- (3) Avionics: MSgt (b) (6)

##### c. Entomologist: Maj (b) (6) LTC (b) (6)

#### 2. PPR REQUIREMENTS: PAM 030301

#### 3. PLANNED SEQUENCE OF EVENTS: All times are local

##### 3 Mar (Wednesday)

- 1100 Show
- 1300 Depart KYNG
- 1440 Land KPAM

##### 4 Mar (Thursday)

- 0745-0800 Refreshments in room 102 (A2 conf room), AFNORTH bldg 1212
- 0800-0830 910AW, MASS Briefing – Maj (b) (6)
- 0830-0930 1st AF Briefing – Mr. (b) (6) CoS
- 0930-0945 Travel to the AOC Entry Control Point
- 0945-1100 AOC Tour for the MASS Entourage
- 1100-1200 Lunch (Club or Marina)
- 1200-1300 Static Display – Flight line
- 1300-1600 Spray Flight(s), NOTE: Duration of flight(s) will be approximately 45-60 minutes - Please make sure names are on PAX Manifest (1 - 3 demo flights) Tyndall D MOA 1300-1600L
- 1700 Depart KPAM
- 2040 Land KYNG

- All Briefings will be conducted at the 601<sup>st</sup>.
- PA/Media may be present for Static Display and Flight

#### 4. SPRAY CONFIGURATION: SP2G, Fire Dept (ext 4777) supplying water POC Mr (b) (6)

- a. **Mass:** 2-Module System with rain drop nozzles
- b. **Differential GPS:** Wingman Installed
- c. **Aircraft:** 90-9108
- d. **Mission Identifier:** QINRKA694062

#### 5. SPRAY PARAMETERS: AS NEEDED

#### 6. AIR TO GROUND RADIO FREQUENCIES:

- Tyndall TWR: 133.95/384.4 Tyndall APP: N119.1/379.3
- Tyndall GND: 121.9/259.3 S136.4/338.35

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
UTAH TEST AND TRAINING RANGE, 16-26 MARCH 2010**

**1. MISSION BASICS:**

- a. Installation Sprayed: Utah Test and Training Range (UTTR)
- b. Mission Duration: 16-26 MAR 2010
- c. Purpose of Application: Weed control on UTTR Targets 21 and 24, to facilitate UXO recovery
- d. Application Dates: 18,19,22-23 March 2010
- e. Times of Application (Local): 18 Mar 1150-1311; 19 Mar 0740-1245; 22 Mar 0720-1245; 23 Mar 0835-1259
- f. Acres Treated: 1,168
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) Range Specialist/DSN (b) (6) Pest Shop Coordinator/Supervisor, (b) (6) DSN (b) (6)
- h. Date Spray Map Last Approved: 17 MAR 10
- j. Installation In-Briefing: (When/Where/Briefer/s): Maj (b) (6) Maj (b) (6) at Building 1274 with (b) (6)

**2. OPERATIONAL:**

**Mission Commander:** Maj (b) (6) (b) (6)

**AIRCREW 1: AC 105- CALL SIGN: SPRAY 05**

- a. Pilots: Maj Pat Fassnacht, Capt (b) (6), Maj (b) (6)
- b. Navigators: LtCol (b) (6)
- c. Flight Engineers: MSgt (b) (6), TSgt (b) (6) (b) (6)
- d. Spray Operators: MSgt (b) (6), TSgt (b) (6)
- e. Crew Chiefs: MSgt (b) (6), Sra (b) (6)

**AIRCREW 2: AC 106- CALL SIGN: SPRAY 06**

- f. Pilots: Maj (b) (6) (b) (6), Maj (b) (6), Maj (b) (6), Capt (b) (6)
- g. Navigators: LtCol (b) (6)
- h. Flight Engineers: MSgt (b) (6)
- i. Spray Operators: MSgt (b) (6), MSgt (b) (6)
- j. Crew Chiefs: MSgt (b) (6), Sra (b) (6)

- k. Entomologists: LtCol (b) (6) application supervision, Cat 11 (UTTR), Maj (b) (6) pesticide mixing and loading Cat 11, safety briefer (Hill AFB)

**MAINTENANCE:**

- l. 910 MX Supervisor: MSgt (b) (6)
- m. 910 Spray MX: TSgt (b) (6), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
- n. Instruments/Avionics: TSgt (b) (6), TSgt (b) (6)
- o. Hydraulics/Electrician: SSgt (b) (6), SSgt (b) (6)
- p. Engine: TSgt (b) (6)

**m. Flying Data:**

- (1) 1 Spray Sortie on 18 Mar - 106
- (2) 4 Spray Sorties on 19 Mar - 2 105; 2 106
- (3) 5 Spray Sorties on 22 Mar - 2 105; 3 106
- (4) 4 Spray Sorties on 23 Mar - 2 105; 2 106
- (5) 4 Spray Sorties (flush) on 24 Mar - 2 105; 2 106
- (6) Ferry Sorties/hours: 4/19.8
- (7) Spray sorties/hours (including flush): 16/24.3

**3. PESTICIDE:**

- a. Trade Name: Krovar<sup>®</sup> IDF
- b. EPA Registration Number: 352-505
- c. Formulation Sprayed: 10 lbs Krovar<sup>®</sup> per 22.5 gallons formulation.
- d. Gallons Pesticide Mix Loaded: 25,366
- e. Gallons Pesticide Mix Applied: 25,366
- f. Formulation Used (per load): 450 lbs Krovar<sup>®</sup>, 4.0 gal StaPut<sup>®</sup>, ½ gal No-Foam<sup>®</sup>, 200 ounces Hi-Light<sup>®</sup> Dye, remainder water per 1000 gal of spray mix. Total of 12,175 lbs applied
- g. Gallons and Name of Flush Used: 900 gal water
- h. Other Additives Used: 100 gal StaPut<sup>®</sup>; 40 gal Hi-Light<sup>®</sup> dye; 12.5 gal No-foam
- i. Application Rate: 22.5 gal/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99106, 99105
- b. Spray System (Modules Used) and System ID #: 3 and 5.
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 2 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 366 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 35ft
- b. Spray Off-set: Given by spray ground
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) 18 Mar – 025° @ 22 knots
  - (2) 19 Mar – 010-015° beginning at 18 knots 15 knots
  - (3) 22 Mar – 010-020° beginning 6 knots ending at 12 knots
  - (4) 23 Mar – 005-320° beginning 7 knots ending at 3 knots
- b. Source: Ground observations at UTTR Target 21.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: blue dye to as a deposition indicator on targets and observations from ground markers.
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring.
  - (2) Results: will be determined this spring by range personnel.

**8. REMARKS:**

- a. This year, the Aerial Spray Team operated from the US Forest Service facility and we extend our thanks for the use of their building as a Command Post. This mission featured the use of new mixing trailers that can be ferried on C-130s and feature improved ergonomics and efficient mixing of herbicide. These new trailers contributed to a successful mission by reducing the labor and shortening the time associated with herbicide mixing. We thank MSgt (b) (6) (514 FLTS/DOC) for serving as our base sponsor. Effectiveness of the application will be evaluated during the growing season but based on the outstanding environmental conditions encountered this year, we expect excellent results from this application. A prevailing northerly wind component and mild temperatures allowed for a consistent and even deposition of Krovar on targets 21 and 24. Individual sortie data are shown in Attachment 1.

//signed//

(b) (6)

24	Flush	105	Flush/Rinse x2	21	Flush	n/a	n/a	1.9
24	Flush	106	Flush/Rinse x2	21	Flush	n/a	n/a	1.9
		Totals	71.2		163	1,168	25,366	24.3

Totals for April 2009-present:

8 States involved /sprayed: GA, ND, VA, ID, UT, SC, LA, FL

Total for missions:

Mosquitoes      363,229 Acres treated; 1934 Gallons of Dibrom, Zenivex, Trumpet, and Duet combined, 26 Sorties with 48.2 flying hours

First time the mission has been used to spray an AFRC base (Homestead ARS, FL). This was the first ever AFRC-AFRC aerial spray mission. All other missions have involved Active duty locations.

Larvacide      22,290 Acres treated; 85580 gallons of Vectobac and Altosid; 55 Sorties with 76.2 flying hours

Herbicides      9,281 Acres Treated; 94243 Gallons of Krovar and Plateau; 59 Sorties with 66.5 hours of flying

Oil Spill      30,094 Acres treated, 148,956 gallons, 92 Sorties with 150.9 hours of flying

First time the aerial spray unit was used for an oil dispersion mission was in the Gulf of Mexico. Training missions have been conducted for the past 15 years, but this was the only time a spill was of sufficient size to warrant USAF participation. Unit was mobilized and on scene within 24 hours of notification and was spraying within 24 hours of spray authorization. Very remarkable for the first use ever.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## WILLISTON ARMY CORPS OF ENGINEERS, WILLISTON, ND

### 7-17 Jun 2010

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes, with larvicide, in order to improve working conditions and lower risk of vector-borne illness to individuals working and living in and around the City of Williston.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew Spray 08: MI: QZNRK9902158

- (1) Pilots: LtCol Tim Austin (MC) Maj (b) (6) (b) (6) Capt (b) (6) (7-11)
- (2) Navigators: Lt Col (b) (6) (7-11); Lt Col (b) (6) (13-17)
- (3) Flight Engineers: Msgt (b) (6) (7-11); Tsgt (b) (6) (13-17)
- (4) Spray Operators: MSgt (b) (6) , MSgt (b) (6) (7-11); Msgt (b) (6) (13-17)

##### Aircrew Spray 04: MI: QZNRK9901158

- (1) Pilots: Capt (b) (6) (7-11) , Lt Col (b) (6) (7-11), Pilot TBD (13-17) Pilot TBD (13-17)
- (2) Navigators: Lt Col (b) (6) (7-11); Lt Col (b) (6) (b) (6) (13-17)
- (3) Flight Engineers: Msgt (b) (6) (7-11); Msgt (b) (6) (13-17)
- (4) Spray Operators: Msgt (b) (6) , Msgt (b) (6)

##### Vader 24: MI: QDNRK9901158

##### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6) , TSgt (b) (6) , Tsgt (b) (6) , SSgt (b) (6) , Tsgt (b) (6) , Ssgt (b) (6)
- (2) Crew Chief(s): (b) (6) (b) (6) (b) (6) (b) (6)
- (3) Avionics: (b) (6)
- (4) Engines: (b) (6)

##### c. Entomologist: Maj (b) (6) (Will be at Williston); Maj (b) (6) (13-17)

#### 2. SCHEDULE: (All Local Times)

##### 7 Jun (Mon):

0800 Show time  
1000 Spray 04 depart KYNG **PPR 0702KC**  
1005 Spray 08 depart KYNG **PPR 0703KC**  
1010 Support Aircraft depart KYNG **PPR 0704KC**  
1245 Land KMIB  
1300 Safety brief, and mission plan coordination briefings. Depart to get vehicles, hotels, etc  
1800 Installation in-Brief via teleconference

##### 8-11 Jun (Tue-Fri): \*As many sorties as wx permits each day

0400 Show time/WX Decision  
0430 Load water & Vectobac  
0545 04Takeoff KMIB (larvicide Spray Sortie) at Williston ACE property (near KISN).  
0630 08 Takeoff KMIB  
0555 Sunrise

##### 11 Jun (Fri): Swap out return

1300 Spray04 Depart KMIB  
1730 Land KYNG

##### 13 Jun (Sun) PPR 1301KP

1100 Show KYNG  
1300 Depart KYNG  
1545 Land KMIB

##### 14-16 (Mon-Wed) : As many sorties as wx permits each day

0400 Show time/WX Decision  
0430 Load water & Vectobac  
0545 05Takeoff KMIB (larvicide Spray Sortie) at Williston ACE property (near KISN).  
0630 08 Takeoff KMIB  
0555 Sunrise

##### 16 Jun (Wed) PPR 1601KC

0800 Show KYNG  
1000 Depart KYNG  
1300 Arrive KMIB

**17 Jun (Thur)**

0800 Show KMIB  
1000 Spray 05 depart KMIB  
1005 Spray 08 depart KMIB  
1010 Support aircraft depart KMIB  
1430 Land KYNG

**3. ITEMS TO TAKE**

- a. **Mission Commander:** Cellular Phone, Mission Folder
- b. **Entomologist:** Cell Phone, Wind Gauge, Compass, Pest Safety Binder,  
1 VHF radio Project Notebook
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables
- e. **Spray Maintenance:** Deployment Kit, Support Equipment

**4. KMIB PPR: See in itinerary**

**5. RADIO FREQUENCIES: Air To Ground Primary UHF 392.2; VHF 123.45**

Minot AFB Tower 120.65 V, 236.6, 253.5; Minot International 118.2 V, 393.1 or Unicom 122.95

**6. CONFIGURATION: SP3G**

- a. **System:** 3-Module System/Fuselage Booms
- b. **Nozzle Tips/Orientation:**  
Larvicide: Raindrop nozzles straight back
- c. **Number:**  
Larvicide: fuselage only, 24 total (12 each side) straight back
- d. **Booms:** Fuselage
- e. **Aircraft:** 909108, 899104
- f. **Mission Identifier:** See in itinerary

**7. SPRAY PARAMETERS:**

- a. **Larvicide**
  - (1) **Area to be treated:** approx. 24,000 acres (plan on 52 sorties as able)
  - (2) **Altitude:** 100' for Larvicide application
  - (3) **Swath Width.** 200 feet
  - (4) **Flow Rate.** 372 gallons/minute \*\*Please spray out entire volume on each sortie!
- b. **Application Rate.** 4 gallons/acre (water with 1.5 pints of Vectobac®)
- c. **Ground Speed:** 200 Knots

**8. SPRAY MIXING AND LOADING:** Plan to load 1800 gallons of water per lift.

Full load will consist of 1800 gallons of water + 85 gallons of Vectobac AS + 4 gallons of Staput

Subsequent loads can be calculated by the following formulas:

Determine the volume remaining in MASS. Add water to give 1800 gallons total. Then add Vectobac at 0.05 gallons per gallon of water added; Staput is added at 0.00023 gallons per gallon of water added.

**9. TRANSPORTATION:**

Enterprise Rent a Car  
1825 S Broadway  
Minot ND 58701  
(701)838-3800 Office  
(701)838-4255 Fax

(b) (6) (b) (6) (b) (6) (b) (6) , (b) (6) Spray Mx (x2), (b) (6) (b) (6) – FS Car  
CC's - Minivan

**10. LODGING:**

Grand International  
1505 North Broadway

## 11. CONTACTS:

### a. Minot AFB ND: DSN prefix: 453- Commercial area code and prefix (701) 723 -

1. Base Operations: x2347 (SSgt (b) (6) Airfield Manager: TSgt (b) (6) /TSgt (b) (6) FAX: 3637
2. Environmental Officer: (b) (6)

**DEPARTMENT OF THE AIR FORCE  
AIR FORCE AERIAL SPRAY UNIT  
YOUNGSTOWN AIR RESERVE STATION  
VIENNA OH 44473-5924**

1 November 2010

MEMORANDUM FOR AFRC/A3OO

FROM: 757 AS/DOS

SUBJECT: FY 10 Aerial Spray Annual Report (1 Oct 09 – 30 Sep 10)

1. INTRODUCTION. FY 10 was the 38<sup>th</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.7, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. Completed emergency response to apply oil dispersants as part of the Unified Emergency Response to the sinking of the Deepwater Horizon platform and the massive oil leak in Mississippi Canyon 238; 148,956 gallons of dispersant were sprayed to disperse oil slicks and ultimately protect the Louisiana coast line.
  - b. Implemented a field test to determine if aerial spray is compatible with LAIRCM equipment. There is no indication that the LAIRCM modification causes airframe contamination or adversely affects the pattern and distribution of the spray coming from the aircraft.
  - c. The Aerial Application of Pesticides course was not taught in FY10 as the Spray Unit was deployed in support of the emergency response to Deepwater Horizon disaster in the Gulf of Mexico. The course was rescheduled and consequently taught in October 2010. Results will be recorded in the FY11 annual report.
  - d. Two aircraft were sent to make larvicide applications for the Army Corps of Engineers at Williston, ND. The nearly 14,000 acres treated was the largest mosquito larvicide mission completed to date.
  - e. Conducted a static display and familiarization flight for key members of the AFNORTH staff familiarizing them with aerial spray mission capabilities of the 757AS.

Reports of individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) ; Commercial (b) (6) .

2. MISSION ACCOMPLISHMENTS:

- a. A list of all missions accomplished in FY10 and their associated data is found in attachment 1. A list of all aerial spray tests, demonstrations, exercise missions, and locally generated spray training completed in FY10 is found in attachment 2.
- b. Static displays were given on 3 occasions in conjunction with operational spray missions for: Armed Forces Pest Management Board, NAS Jacksonville, FL, Louisiana/Texas Mosquito Control Association, Lake Charles, LA, and 1stAF/CC and staff, Tyndall AFB, FL.

3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. Four C-130H aircraft are modified to perform the aerial spray missions. Two additional aircraft are modified to accept the MASS (Tail Numbers 89-9103 & 89-9104 were modified in FY09).
- b. Spray Systems. Six Modular Aerial Spray Systems were available.
- c. Global Positioning Systems (GPS). 11 Wingman GX Global Positioning Systems were available.
- d. Quantity Indicating System upgrade on MASS is in-progress with 90% of the systems completed.

4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY10:

- a. Major (b) (6) is now Chief of Aerial Spray. MSgt(b) (6) is now Chief of the Aerial Spray Maintenance Flight.
- b. 910 AW personnel from the Maintenance Group, Public Affairs, and Communications Flight deployed to support the aerial spray mission and accomplish training in FY10.

5. APPROVED AERIAL SPRAY PROJECTS (project location/pest):

- a. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes
- b. Grand Forks Air Force Base, ND. Mosquitoes
- c. Minot Air Force Base, ND. Mosquitoes
- d. Langley Air Force Base, VA. Mosquitoes

- e. Craney Island, VA. Mosquitoes
- f. Ft. Eustis, VA. Mosquitoes
- g. Ft. Monroe, VA. Mosquitoes
- h. Eglin Air Force Base, FL. Mosquitoes
- i. Homestead Air Reserve Base, FL. Mosquitoes
- j. Parris Island MCRD, SC. Biting Midges and Mosquitoes
- k. Utah Test and Training Range, Hill AFB UT. Halogeton
- l. Army Corps of Engineers, Williston, ND. Mosquitoes
- m. Saylor Creek Range, Idaho. Cheatgrass
- n. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies

1 November 2011

MEMORANDUM FOR AFRC/A3OO

FROM: 757 AS/DOS

SUBJECT: FY 11 Aerial Spray Annual Report (1 Oct 10 – 30 Sep 11)

1. INTRODUCTION. FY 11 was the 39<sup>th</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.7, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. Received notification that funding for developing a new modular aerial spray system (MASS) has been identified. Projecting an industry day in early FY12 for contractors to develop bids to construct a beta module based on supplied application criteria. The current MASS is now over 25 years old.
  - b. Began collaboration with USDA scientists and Navy entomologists to investigate the movement and behavior of insecticide movement and droplet fate under different environmental conditions and release altitudes. Work was done at Army National Guard's Camp Blanding and the sorties were flown from Jacksonville Naval Air Station in Florida.
  - c. Consultation on aerial spray project for 156 AW, Muñoz Air Base, Puerto Rico. Presented capability to Wing Commander, Puerto Rico Public Health Department, and Centers for Disease Control Dengue Lab. A statement of need was prepared by Mr. (b) (6), National Guard Bureau. A private contractor will most likely be hired to spray the Air Base.
2. MISSION ACCOMPLISHMENTS:
  - a. A list of all missions accomplished in FY11 and their associated data is found in attachment 1. A list of all aerial spray tests, demonstrations, exercise missions, and locally generated spray training completed in FY11 is found in attachment 2.
  - b. The Aerial Application of Pesticides Course was taught in October and again in May at Youngstown ARS. The course was taught twice in FY11 as the Spray Unit was

deployed in support of the emergency response to Deepwater Horizon disaster in the Gulf of Mexico during the scheduled period in FY10. The course was rescheduled and consequently taught in October 2010. This course provided certification training in Aerial Application Pest Control (Category 11) as required by the Environmental Protection Agency. Course Director, Maj (b) (6) reported 18 students attended and completed the course. Nine attended for initial certification, and 9 for recertification during October. In May, Maj (b) (6) reported 13 students attended and completed the course. Six attended for initial certification, 6 for re-certification, and 1 for informational purposes.

Reports of individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) ; Commercial (b) (6) .

### 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. Four C-130H aircraft are modified to perform the aerial spray missions. Two additional aircraft are modified to accept the MASS (Tail Numbers 89-9103 & 89-9104 were modified in FY09).
- b. Spray Systems. Six Modular Aerial Spray Systems were available.
- c. Global Positioning Systems (GPS). 11 Wingman GX Global Positioning Systems were available.

### 4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY11:

- a. Changes to staffing include MSgt (b) (6) , as the Chief of the Aerial Spray Maintenance Flight; TSgt (b) (6) began as MASS specialist in the Maintenance Flight. MSgt (b) (6) is now the Spray Operator working in the Operations Spray Shop. Finally, Maj (b) (6) and Capt (b) (6) are traditional reserve medical entomologists new in FY11.
- b. 910 AW personnel from the Maintenance Group, and Public Affairs deployed to support the aerial spray mission and accomplish training in FY11.

### 5. APPROVED AERIAL SPRAY PROJECTS (project location/pest):

- a. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes
- b. Grand Forks Air Force Base, ND. Mosquitoes
- c. Minot Air Force Base, ND. Mosquitoes
- d. Langley Air Force Base, VA. Mosquitoes

- e. Craney Island, VA. Mosquitoes
- f. Ft. Eustis, VA. Mosquitoes
- g. Ft. Monroe, VA. Mosquitoes
- h. Eglin Air Force Base, FL. Mosquitoes
- i. Homestead Air Reserve Base, FL. Mosquitoes
- j. Parris Island MCRD, SC. Biting Midges and Mosquitoes
- k. Utah Test and Training Range, Hill AFB UT. Halogeton
- l. Army Corps of Engineers, Williston, ND. Mosquitoes
- m. Saylor Creek Range, Idaho. Cheatgrass
- n. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies

MEMORANDUM FOR AFRC/A3OO

FROM: 757 AS/DOS

SUBJECT: FY 12 Aerial Spray Annual Report (1 Oct 11 – 30 Sep 12)

1. INTRODUCTION. Fiscal year 2012 was the 40<sup>th</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. Received verbal order from AFRC/A3 to terminate "off federal-property sprays" pending a program review recommended by the AFRC Comptroller and AFRC/JAZ who questioned the legality of these types of sprays, a practice which has been in place since 1959. The order came as a crew was poised to spray the city of Williston to control pest mosquitoes and the story was covered the following day in the Williston Herald. The suspension did not include pesticide applications on military properties. Preliminary Review Officer, Col (b) (6) visited the unit in August for interviews and fact finding. At this writing the Spray Unit has not received word on the conclusions of the investigation.
  - b. AFRC/A3 identified a remedy for the Aerial Spray training program which normally includes pesticide applications over non-federal property. An Innovative Ready Training (IRT) project is approved through the OASD/RA and MAJCOM and will provide the opportunity to satisfy valid unit training requirements while providing a direct benefit to a community. In short, the IRT is a more formalized version of what was already in place (with the addition of an approval process above the MAJCOM level). It is expected that most communities previously benefiting from military sprays will complete the IRT application packages. It is worth noting that the IRT spray missions do not have to be hosted by military installations, which creates potential new training opportunities in communities with serious vector borne problems but without a host military installation. At this time, several communities are in various stages of the IRT approval process.
  - c. The Spray Unit responded to an emergency request for mosquito control at Joint Base Charleston. Excellent results from this spray (97% reduction in mosquito numbers),

prompted a letter from the Wing Commander and consequently, JB Charleston has initiated an environmental assessment to determine if this installation can received routine aerial sprays.

- d. Further collaboration with the USDA/ARS Center for Medical and Veterinary Entomology in support of the Deployed Warfighter Protection Program was accomplished at the Naval Air Facility, El Centro. The project aims to determine the effects of hot and dry environmental conditions on aerially applied pesticides, relative to pest control in desert areas. Results will be published in the scientific literature and findings implemented in pest control strategies to protect troop health.
- e. Rotary nozzle evaluations and droplet analysis at high speeds (200 kts) were made at the USDA-ARS-Areawide Pest Management Research Unit, Texas A&M University, College Station, TX. Rotary nozzles produce a more effective pesticide droplet spectrum and will likely be used with the new modular aerial spray system (MASS) as part of the technology upgrade.
- f. Development of the new MASS continues. An industry day was accomplished with AFRC contracting and SPO. A statement of work has been completed. It is anticipated that the contract will go out to bid shortly.
- g. West Nile virus was more active nationwide in 2012 than in any previous year since 2003 (3,545 cases by end of FY12). About 38 percent of the cases were reported from Texas and prompted health officials in Dallas to begin aerial spraying. Because of the limited scope of the emergency spray, a contractor was selected to do the application. The Spray Unit provided the Centers for Disease Control and the TX EPA with guidance on efficacy of sprays and setting up contracts.
- h. The Aerial Application of Pesticides Course taught in May 2012. This course provided certification training in Aerial Application Pest Control (Category 11) as required by DoDI 4150.07 and is certified by the Environmental Protection Agency. Course Director, Lt Col (b) (6) reported 9 students attended and completed the course. Five attended for initial certification, and 4 for re-certification.
- i. Two new aerial spray projects were approved this year. Luke AFB completed documentation for a spray project to control Sahara mustard on the Barry M. Goldwater Range. The first application is anticipated in early 2013.

Reports of individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6)(b) (6) Commercial (b) (6) .

## 2. MISSION ACCOMPLISHMENTS:

- a. A list of all missions accomplished in FY12 and their associated data is found in attachment 1. A list of all aerial spray tests, demonstrations, exercise missions, and locally generated spray training completed in FY12 is found in attachment 2.

### 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. Four C-130H aircraft are modified to perform the aerial spray missions. Two additional aircraft are modified to accept the MASS but are not plumbed for wing booms, only fuselage booms.
- b. Spray Systems. Six Modular Aerial Spray Systems (MASS) were available.
- c. Global Positioning Systems (GPS). 11 Wingman GX Global Positioning Systems were available.

### 4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY12:

- a. Lt Col (b) (6), a navigator and TSgt (b) (6), a flight engineer, were assigned to the Aerial Spray Office.
- b. 910 AW personnel from the Maintenance Group deployed to support the aerial spray mission and accomplish training in FY12.

### 5. APPROVED AERIAL SPRAY PROJECTS (project location/pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barry M. Goldwater Range, AZ. Sahara mustard
- d. Eglin Air Force Base, FL. Mosquitoes
- e. Ft. Eustis, VA. Mosquitoes
- f. Ft. Monroe, VA. Mosquitoes
- g. Grand Forks Air Force Base, ND. Mosquitoes
- h. Homestead Air Reserve Base, FL. Mosquitoes
- i. Langley Air Force Base, VA. Mosquitoes
- j. Minot Air Force Base, ND. Mosquitoes
- k. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes
- l. Parris Island MCRD, SC. Biting Midges and mosquitoes
- m. Saylor Creek Range, ID. Cheatgrass
- n. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle

- o. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies
- p. Utah Test and Training Range, Hill AFB UT. Halogeton
- q. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes

1 November 2013

MEMORANDUM FOR AFRC/A3OO

FROM: 757 AS/DOS

SUBJECT: FY 13 Aerial Spray Annual Report (1 Oct 12 – 30 Sep 13)

1. INTRODUCTION. Fiscal year 2013 was the 41<sup>st</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. Late in FY12, AFRC/A3 identified a remedy for the Aerial Spray Training Program shutdown, which normally included pesticide applications over non-federal property. An Innovative Ready Training (IRT) project approved through the OASD/RA and MAJCOM was found to meet unit training requirements while providing a direct benefit to a community while following a clear legal justification. A total of 5 IRT projects dealing with 6 entities were approved in FY13. Aerial spray operations occurred at all of these, except the Grand Forks location in FY13 (see attachment 1).
  - b. The Spray Unit was directed in September 2013 by AFRC/A3 to develop a night time aerial spray program that targets late flying disease vectors. The Aerial Spray Operations shop is currently developing proposals for the safe execution of this developing mission. Night time aerial spray operations are commonplace in the civilian sector and supported for military operations by the Armed Forces Pest Management Board, Air Force Surgeon General, and Centers for Disease Control.
  - c. Further collaboration with the USDA/ARS Center for Medical and Veterinary Entomology in support of the Deployed Warfighter Protection Program with a second spray evaluation at the Naval Air Facility, El Centro in late July. The project aims to determine the effects of hot and dry environmental conditions on aerially applied pesticides, relative to pest control in desert areas. This round of trials used Dibrom, a commonly used mosquito adulticide. Results will be published in the scientific literature and findings implemented in pest control strategies to protect troop health.
  - d. A newly approved spray project at the Barry M. Goldwater Range had the first Air Force aerial application of glyphosate for control of invasive plant species. This project

treated roadways infested with Sahara mustard and was shown to be moderately effective in controlling plant growth. The rapid coverage of the area makes the C-130 platform an excellent choice while the application timing which must follow quickly after rain is critical for control but logistically difficult to plan for.

- e. Development of the new MASS continues. The acquisition process is underway. Review and selection of submitted bids is scheduled to occur February/March 2014.
- f. The Aerial Application of Pesticides Course taught in January in conjunction with the Florida Mosquito Control Associations' (FMCA) annual fly-in and was held in Ft Meyers, FL. This course provided certification training in Aerial Application Pest Control (Category 11) as required by DoDI 4150.07 and is certified by the Environmental Protection Agency. Course Director, Lt Col (b) (6) reported 160 people attended the course and fly-in. Eight attended for initial certification, and 6 for re-certification.
- g. Budgetary constraints cancelled the planned first ever aerial spray refresher which was to be held in conjunction with the FMCA event in FL (see 1.f.). In its place, 37 spray operations personnel in all crew positions completed a modified 3 day ground and flight training syllabus at home station. Flight training consisted of both HV and an overwater oil spill sorties.
- h. One new aerial spray project was approved this year. Barksdale AFB completed documentation for mosquito control.

Reports of individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) ; Commercial (b) (6) .

## 2. MISSION ACCOMPLISHMENTS:

- a. A list of all missions accomplished in FY13 and their associated data is found in attachment 1. A list of all aerial spray tests, demonstrations, exercise missions, and locally generated spray training completed in FY13 is found in attachment 2.

## 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. Four C-130H aircraft are modified to perform the aerial spray missions. Two additional aircraft are modified to accept the MASS but are not plumbed for wing booms, only fuselage booms.
- b. Spray Systems. Six Modular Aerial Spray Systems (MASS) were available.
- c. Global Positioning Systems (GPS). 11 Wingman GX Global Positioning Systems were available.

4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY13:

- a. Capt (b) (6), a pilot, was assigned to the Aerial Spray Office.
- b. 910 AW personnel from the Maintenance Group deployed to support the aerial spray mission and accomplish training in FY13.

5. APPROVED AERIAL SPRAY PROJECTS (project location/pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes
- d. Barry M. Goldwater Range, AZ. Sahara mustard
- e. Eglin Air Force Base, FL. Mosquitoes
- f. Ft. Eustis, VA. Mosquitoes
- g. Grand Forks Air Force Base, ND. Mosquitoes
- h. Homestead Air Reserve Base, FL. Mosquitoes
- i. Langley Air Force Base, VA. Mosquitoes
- j. Minot Air Force Base, ND. Mosquitoes
- k. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes
- l. Parris Island MCRD, SC. Biting Midges and mosquitoes
- m. Saylor Creek Range, ID. Cheatgrass
- n. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle
- o. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies
- p. Utah Test and Training Range, Hill AFB UT. Halogeton
- q. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes

6. INNOVATIVE READINESS TRAINING - APPROVED MISSIONS (location/pest)

- a. Grand Forks, ND. Mosquitoes.
- b. Miami-Dade County, FL. Mosquitoes.

- c. Hampton Roads, VA. including Poquoson and York County. Mosquitoes.
- d. Minot, ND. Mosquitoes.
- b. Williston, ND. Mosquitoes.

DEPARTMENT OF THE AIR FORCE  
AIR FORCE AERIAL SPRAY UNIT  
YOUNGSTOWN AIR RESERVE STATION

1 November 2014

MEMORANDUM FOR AFRC/A3OO

FROM: 757 AS/DOS

SUBJECT: FY 14 Aerial Spray Annual Report (1 Oct 13 – 30 Sep 14)

1. INTRODUCTION. Fiscal year 2014 was the 42<sup>st</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. Two aircraft and 3 crews were deployed in support of our AEF commitment in Southeast Asia during FY14 for approximately 120 days. This impacted aerial spray training and readiness by limiting the number of airframes and qualified members available to perform spray missions. Through volunteers, the unit was able to cover domestic spraying with training partners completing Innovative Readiness Training (IRT), invasive species mitigation, and vector control in operations occurred at all of these, except the Grand Forks location in FY14 (see attachment 1).
  - b. The Spray Unit was directed in September 2013 by AFRC to develop a night time aerial spray program to target late flying disease vectors (i.e., vectors of West Nile virus and malaria). Subsequently, the NVG spray training syllabus was completed and approved by AFRC/A3. The initial NVG spray trainer occurred on 8 Jul 2014. Actual pesticide applications are anticipated to begin in April, following winter training.
  - c. Further collaboration in FY14 with the USDA/ARS Center for Medical and Veterinary Entomology (CMAVE) looked at the use of military aerial assets to control *Aedes aegypti* resting in houses. Methods included caged mosquitoes inside structures that are part of an urban warfare training center at Camp Blanding Army National Guard, Florida. Current dogma contends aerial sprays are unable to reach mosquitoes indoors and the trials use new technologies such as the use of dispersion modeling to offset sprays to drift indoors. Initial results were promising and additional trials are scheduled for FY15. An evaluation of the performance of naled under adverse environmental conditions was cancelled by the host facility (Naval Air Facility, El Centro, CA) in late July because of other "high value" users on the range. Results will

be published in the scientific literature and findings implemented in pest control strategies to protect troop health.

- d. The 910<sup>th</sup> conducted its second annual aerial spray refresher from 24-28 February at MacDill AFB. Training consisted of both ground and flight training for over 65 aircrew, entomologists, and spray maintenance personnel. Seven practice sorties were flown; training in all aerial spray mission sets: vector control, herbicide, and oil spill response.
- e. Development of the new MASS continues. Source selection is anticipated by end of CY2014. Following the selection, the contractor will begin development on the first unit. Flight testing is anticipated during 2016.
- f. The Aerial Application of Pesticides Course taught in May at Youngstown Air Reserve Station Ohio. This course provided certification training in Aerial Application Pest Control (Category 11) as required by DoDI 4150.07 and is certified by the Environmental Protection Agency. Course Director, Lt Col (b) (6) reported 16 people attended the course. Nine attended for initial certification, and 7 for re-certification.
- g. The flying portion of a planned full-scale Pacific exercise with the US Coast Guard was cancelled in May when the C-130 fleet was grounded for bleed air problems. Spray expertise was still given to this exercise with 2 members working in the Incident Command Center (ICC) to handle simulated air operations. Consequently, this portion of the exercise dispersed oil in their sector in record time.
- h. Members from the Spray Unit answered solicitations consultations from (i) Bureau of Land Management, regarding the potential of controlling the fire hazard from medusa head rye in eastern Oregon; (ii) Department of Health, American Samoa regarding aerial adulticiding to control the dengue outbreak; (iii) Lawrence Livermore National Laboratories, regarding the development of a disaster scenario involving aerial sprays; (iv) 61st Preventive Medicine Detachment regarding military sprays to control mosquitoes and flies in Liberia; (v) East Baton Rouge Mosquito and Rodent Control and Salt Lake City Mosquito Control District regarding military sprays under the IRT program; (vi) provided support to the AFPMB with one member serving as Chair, Contingency Advisory Committee.
- i. During the summer the Aerial Spray Unit was visited by 2 high ranking officers who received briefings and familiarization flights. The AFRC/CC, Lt Gen (b) (6) visited in June while Maj Gen Hanson, AMC/DO, arrived in August.

Reports of individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) ; Commercial (b) (6) .

## 2. MISSION ACCOMPLISHMENTS:

- a. A list of all missions accomplished in FY14 and their associated data is found in attachment 1. A list of all aerial spray tests, demonstrations, exercise missions, and locally generated spray training completed in FY14 is found in attachment 2.

## 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. Four C-130H aircraft are modified to perform the aerial spray missions. Two additional aircraft are modified to accept the MASS but are not plumbed for wing booms, only fuselage booms.
- b. Spray Systems. Six Modular Aerial Spray Systems (MASS) were available.
- c. Global Positioning Systems (GPS). 11 Wingman GX Global Positioning Systems were available.

## 4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY14:

- a. Lt Col (b) (6) navigator, became Chief of the Aerial Spray Office.
- b. 910 AW personnel from the Maintenance Group deployed to support the aerial spray mission and accomplish training in FY14.

## 5. APPROVED AERIAL SPRAY PROJECTS (project location/pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes
- d. Barry M. Goldwater Range, AZ. Sahara mustard
- e. Eglin Air Force Base, FL. Mosquitoes
- f. Ft. Eustis, VA. Mosquitoes
- g. Grand Forks Air Force Base, ND. Mosquitoes
- h. Homestead Air Reserve Base, FL. Mosquitoes
- i. Langley Air Force Base, VA. Mosquitoes
- j. Minot Air Force Base, ND. Mosquitoes
- k. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes

AIR FORCE AERIAL SPRAY UNIT  
YOUNGSTOWN AIR RESERVE STATION**

1 November 2015

MEMORANDUM FOR AFRC/A300

FROM: 757 AS/DOS

SUBJECT: FY 15 Aerial Spray Annual Report (1 Oct 14 – 30 Sep 15)

1. INTRODUCTION. Fiscal year 2015 was the 42<sup>st</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. The Spray Unit was directed in September 2014 by AFRC to develop a night time aerial spray program that targets late flying disease vectors (i.e., West Nile virus and malaria). Following the development and approval of a Night Vision Goggle (NVG) spray training syllabus and initial training flights, the first actual NVG night application occurred on 8 April 2015. Since this first application, 5 additional treatments at two other military installations have occurred. Better than average control was recorded with some locations reporting some of the best control ever recorded. It is anticipated that nearly all adult mosquito control will be conducted at night as this new capability is developed over the next couple of years.
  - b. Development of the new Modular Aerial Spray System continues: An \$11.5 million contract for the development and delivery of a new MASS was signed in February by Battelle Memorial Institute in Columbus, OH. The company moved quickly with preliminary designs and forecasts for delivery as early as June 2016. However, as of the end of FY15, delays had occurred. Pending resolution of the issues by early in January 2016, the delivery and flight testing is anticipated during summer 2017.
  - c. Further collaboration in FY15 with the USDA/ARS Center for Medical and Veterinary Entomology (CMAVE) looked at the use of military aerial assets to control *Aedes aegypti* resting in houses. The domiciles are simulated by placing caged mosquitoes both inside and outside of structures at the Florida Army National Guard Urban Warfare Training Center at Camp Blanding. The objectives of this test were to determine the efficacy of aerially applied etofenprox (a synthetic pyrethroid) in such systems. After cancellation of an evaluation in FY14 at the Naval Air Facility, El

Centro, CA, the Spray Unit returned in late July 2015 to continue our efficacy evaluations in partnership with the USDA-CMAVE. This year Duet and Zenivex E20, which are commonly used pyrethroid-class pesticides in vector control operations, were evaluated. Applications were carried out over a 3 day period when ambient temperatures were between 88-106 °F. A series of tests were designed to evaluate the behavior of these pesticides when applied because of other “high value” users on the range. Results will be presented at professional meetings and published in peer reviewed scientific journals, while the findings will be implemented in pest control strategies to protect troop health.

- d. The 910th conducted its 3rd annual aerial spray refresher from 11-17 January at MacDill AFB. Training consisted of both ground and flight training for over 89 aircrew, entomologists, and spray maintenance personnel. Eleven training sorties were flown at the Avon Park AFR; training in all aerial spray mission sets: vector control, herbicide, and oil spill response. In addition, some night sorties using NVGs were also flown, although only water was sprayed.
- e. The Aerial Application of Pesticides Course taught in 4-8 May at Youngstown Air Reserve Station Ohio. This course provided certification training in Aerial Application Pest Control (Category 11) as required by DoDI 4150.07 and is certified by the Environmental Protection Agency. Course Director, Lt Col (b) (6) reported 13 people attended the course. Eleven attended for initial certification, and 2 for re-certification.
- f. The Spray Panel, initiated in Oct 2014 FY14 continued which is a multi-faceted group reviewing and making suggestions Aerial Spray Panel (ASP) is to enhance communication, coordination, and planning with respect to the aerial spray mission. One notable success of the ASP was to develop a procedure to effectively calibrate the current MASS. Since the adoption of these procedures, MASS calibration has been 100% successful.
- g. Members from the Spray Unit answered solicitations consultations from (i) Hill AFB office of Natural Resources regarding plans for cheatgrass sprays on the Utah Test and Training Range; subsequently, these new areas will likely be sprayed in the Fall of FY2016; (ii) Joint Base Elmendorf, AK requested input in developing an Environmental Assessment for mosquitoes, this could ultimately result in larvicide applications by the Spray Unit at a future date, depending on the success of the Base to convince outside parties that environmental concerns are minimal; (iii) Members consulted with personnel from the Airborne Icing Tanker Project from Edwards AFB, with the potential to use spray aircraft to generate ice plumes. After 6 months of discussions the project engineers determined that the MASS would not produce the proper cloud from the C-130 platform; (iv) Lt Col (b) (6) deployed with SOUTHCOM to support New Horizons Honduras in June 2015; (v) provided support to the American Mosquito Control Association with one member serving as Chair, Science & Technology Committee; (vi) provided support to the AFPMB with one member serving as Chair, Contingency Advisory Committee.

- h. The Aerial Spray Unit was visited by 2 DV general officers who received briefings and/or familiarization flights: the AMC/CC, Gen. McDew, and Maj Gen Harris, 22AF/CC, visited in 2015.
- i. Lt Col (b) (6) published a paper titled "Development of Air Force Aerial Spray Night Operations: High Altitude Swath Characterization" in the Army Medical Department Journal (July-Sept 2015). Other authors were Lt Col (b) (6), Dr. (b) (6), Dr. (b) (6), and Dr. (b) (6).

Reports of individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) Commercial (b) (6).

## 2. MISSION ACCOMPLISHMENTS:

- a. A list of all missions accomplished in FY15 and their associated data is found in attachment 1. A list of all aerial spray tests, demonstrations, exercise missions, and locally generated spray training completed in FY15 is found in attachment 2.

## 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. Four C-130H aircraft are modified to perform the aerial spray missions. Two additional aircraft are modified to accept the MASS but are not plumbed for wing booms, only fuselage booms.
- b. Spray Systems. Six Modular Aerial Spray Systems (MASS) were available.
- c. Global Positioning Systems (GPS). 11 Wingman GX Global Positioning Systems were available.

## 4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY15:

- a. Lt Col (b) (6), navigator, became Chief of the Aerial Spray Office. MSgt (b) (6) joined the Aerial Spray Office, as Load Master.
- b. 910 AW personnel from the Maintenance Group deployed to support the aerial spray mission and accomplish training in FY15.

## 5. APPROVED AERIAL SPRAY PROJECTS (project, location, pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes
- d. Barry M. Goldwater Range, AZ. Sahara mustard
- e. Eglin Air Force Base, FL. Mosquitoes

- f. Ft. Eustis, VA. Mosquitoes
  - g. Grand Forks Air Force Base, ND. Mosquitoes
  - h. Homestead Air Reserve Base, FL. Mosquitoes
  - i. Langley Air Force Base, VA. Mosquitoes
  - j. Minot Air Force Base, ND. Mosquitoes
  - k. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes
  - l. Parris Island MCRD, SC. Biting Midges and mosquitoes
  - m. Saylor Creek Range, ID. Cheatgrass
  - n. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle
  - o. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies
  - p. Utah Test and Training Range, Hill AFB UT. Halogeton
  - q. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes
6. INNOVATIVE READINESS TRAINING - APPROVED MISSIONS (location/pest)
- a. Grand Forks, ND. Mosquitoes.
  - b. Miami-Dade County, FL. Mosquitoes.
  - c. Poquoson, VA. Mosquitoes.
  - d. York County, VA. Mosquitoes.
  - e. Minot, ND. Mosquitoes.
  - f. Williston, ND. Including Watford City and Trenton. Mosquitoes.

YOUNGSTOWN AIR RESERVE STATION**

1 November 2017

MEMORANDUM FOR AFRC/A3OO

FROM: 757 AS/DOS

SUBJECT: FY 17 Aerial Spray Annual Report (1 Oct 16 – 30 Sep 17)

1. INTRODUCTION. Fiscal year 2017 was the 44<sup>th</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. On 8 September 2017, the 910th AW, the United States Air Force's (USAF) Aerial Spray Unit arrived in San Antonio, Texas to conduct large-area aerial spray operations for mosquito control in support of the Federal Emergency Management Agency (FEMA) and Texas Department of State Health Services (DSHS) Hurricane Harvey relief effort. Two C-130 aircraft equipped with Modified Aerial Spray Systems (MASS) and three crews were placed at Joint Base Kelly, Kelly Annex, Texas and flew the first mosquito control aerial spray sortie on the night of 9 September. On 12 September, an additional spray aircraft arrived with a fourth spray aircrew and beginning 13 September, three aircraft were available for aerial sprays. A total of 92 personnel from the 910th Airlift Wing were involved with the flying, entomology, maintenance, administrative support, communication support, and life support for this mission. The mission was complete on 21 September 2017 and the Spray Unit was released by FEMA and returned to Youngstown ARS, Ohio on 23 September after treating a total of 2.7 million acres. This was a Unit record for maximum acres sprayed in shortest period of time and was a result of the development of the night operations capability and excellent aircraft performance (minimal maintenance issues).
  - b. Development of the new Modular Aerial Spray System continues: An \$11.5 million contract for the development and delivery of a new MASS was signed in February 2016 by Battelle Memorial Institute in Columbus, OH. Battelle has since renegotiated on some costs and deliverables. The "critical design review" (CDR) has been partially met and the test plan is in good shape having been discussed at a face to face meeting at Robins AFB in July and at length on various teleconferences since. The current optimistic forecast for the new MASS delivery is December 2018.

- c. The 910th conducted the 5th Annual Aerial Spray Refresher from 6-17 March at Hill AFB and was carried out in tandem with the actual invasive weed control mission on the Utah Test and Training Range (UTTR). Training consisted of both ground and flight training for over 70 aircrew, entomologists, and spray maintenance personnel. Training sorties using water were flown at UTTR over several days. In addition, ground training was accomplished in the classroom, on the ramp, and also on the UTTR. In addition visitors from AMC and 22<sup>nd</sup> AF received familiarization with the spray mission, flew sorties, and provided constructive feedback during this timeframe.
- d. The Aerial Application of Pesticides Course was taught 8-12 May at Youngstown Air Reserve Station OH. This course provided certification training in Aerial Application Pest Control (Category 11) as required by DoDI 4150.07 and is certified by the Environmental Protection Agency. Course Director, Lt Col (b) (6) reported 17 members attended the course from the Air Force, Army and Navy. Nine for initial certification and 8 for re-certification. The 910<sup>th</sup> supported the course with 18 staff members for teaching and flying purposes.
- e. Members from the Spray Unit answered consultations from various local, State, and federal agencies regarding vector ecology and aerial spraying. Lt Col (b) (6) and Maj (b) (6) participated in a Subject Matter Expert Exchange with the Peruvian Air Force Surgeon General Section in Lima Peru, sponsored by the 12AF/SG, speaking on the Air Force Aerial Spray capability. The Peruvians were interested and have started a dialogue with their state partners the West Virginia National Guard about developing this capability.

Reports of individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) ; Commercial (b) (6) .

## 2. MISSION ACCOMPLISHMENTS:

- a. A list of all missions accomplished in FY17 and their associated data is found in attachment 1. A list of all aerial spray tests, demonstrations, exercise missions, and locally generated spray training completed in FY17 is found in attachment 2. Attachment 3 shows the flights used to support aerial spray operations.

## 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. Four C-130H aircraft are modified to perform the aerial spray missions. Two additional aircraft are modified to accept the MASS but are not plumbed for wing booms, only fuselage booms.
- b. Spray Systems. Six Modular Aerial Spray Systems (MASS) were available.
- c. Global Positioning Systems (GPS). 10 Wingman GX Global Positioning Systems were available.

4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY17:

- a. Capt (b) (6) and MSgt (b) (6) joined the Aerial Spray Office as Spray Pilot and Spray Operator (Loadmaster), respectively. The Aerial Spray Maintenance Flight added TSgt (b) (6), TSgt (b) (6), and TSgt (b) (6) as MASS specialists.
- b. 910 AW personnel from Operations Group, Maintenance Group, Public Affairs, Communications, and Installation Personnel Readiness deployed to support the aerial spray mission and accomplish training in FY17.

5. APPROVED AERIAL SPRAY PROJECTS (project, location, pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes
- d. Barry M. Goldwater Range, AZ. Sahara mustard
- e. Eglin Air Force Base, FL. Mosquitoes
- f. Ft. Eustis, VA. Mosquitoes
- g. Grand Forks Air Force Base, ND. Mosquitoes
- h. Homestead Air Reserve Base, FL. Mosquitoes
- i. Langley Air Force Base, VA. Mosquitoes
- j. Minot Air Force Base, ND. Mosquitoes
- k. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes
- l. MCRD Parris Island, SC. Biting Midges and mosquitoes
- m. Saylor Creek Range, ID. Cheat grass
- n. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle
- o. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies
- p. Utah Test and Training Range, Hill AFB UT. Halogeton
- q. Utah Test and Training Range, Hill AFB UT. Cheat grass control/fire breaks
- r. Naval Weapons Station Yorktown, Cheatham Annex, and Camp Peary, VA. Mosquitoes

6. INNOVATIVE READINESS TRAINING - APPROVED MISSIONS (location/pest)

- a. Grand Forks, ND. Mosquitoes.
- b. Minot, ND. Mosquitoes.
- c. Williston, ND. Including Watford City and Trenton. Mosquitoes.

MEMORANDUM FOR AFRC/A300

FROM: 757 AS/DOS  
3976 King Graves Road Unit 24  
Vienna OH 44473-5924

SUBJECT: FY20 Aerial Spray Annual Report (1 Oct 19 – 30 Sep 20)

1. INTRODUCTION. Fiscal year 2020 was the 47<sup>th</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. COVID-19 and subsequent restrictions severely impacted the ability of the squadron to meet routine aerial spray missions. Five missions scheduled from mid-March to mid-June were effectively cancelled. The 9-20 March Hill/UTTR mission was cancelled by the user (Hill AFB). The remainder cancelled for Covid-19 were cancelled by local direction. (Attachment 1). This halved our effective spray season. Training was significantly impacted with respect to aircrew currency for the remaining missions in FY20.
  - b. The 910 OG/CC Aerial Spray Panel meeting occurred only in November and March FY20 (Normally meets quarterly).
  - c. The new Modular Aerial Spray System (MASS) was completed and delivered on-site late September 2020. Initial sign-off test appeared to be favorable. However, the Technical Orders (T.O.s) delivered by Battelle regarding the system were 80% unacceptable per the contracting office. Thus, no further movement has transpired on adopting the new MASS system for operational use. Currently, there are negotiations in progress regarding the acceptance of aforementioned T.O.s between the contracting office and the manufacturer (Battelle). Our expectation is to get the new MASS in operation sometime in FY21, but that remains to be seen.
  - d. The Spray Unit is still awaiting some resolution on a contract for a new off-the-shelf Differential GPS suitable for supporting aerial spray applications and submitted findings and recommendation of a specific GPS system to the AFRC C130 System Program Office (SPO) during the final quarter of FY18. Statement of work was submitted, but for some reason the contracting office felt it was unacceptable. Work had resumed to draft a new statement of work and contract, but the COVID situation essentially relegated that concept too far down the list of priorities. Meanwhile, the aerial spray unit continues to use the antiquated and unsupportable current GPS system. Emergency hurricane response in early FY21 demonstrated that the status of the current system is at the end of its service life, and the current GPS resources are stretched thin, almost to being a severe limiting factor on mission capability.

- e. The Spray Unit began a cheat grass control/fire break project on the Utah Test and Training Range (UTTR), UT in October 2017. The success of aerial application methods in controlling the exotic invasive weed, cheat grass, and the subsequent recovery of native vegetation, continues to be a prospect for additional training opportunities. The value of fire prevention on the ranges is proving to be invaluable. The Spray Unit expanded UTTR cheatgrass program to include U.S. Army's Dugway Proving Grounds on an experimental basis in FY20. Based on reported success in achieving goals of fire suppression and habitat restoration, the Dugway project expanded greatly in FY21. Reports from Hill AFB in spring of 2019 indicated excellent control and all parties are in favor of extending the project beyond the original 3-year period, if funding can be obtained.
- f. The Aerial Application of Pesticides Course was cancelled this year in light of DoD-wide general restriction of movement due to COVID-19. This is the first time in over 20 years that Cat 11 certification was not conducted on an annual basis.

All students who had signed up for the proposed 4-6 May 2020 course were granted 1-2 year extensions by their respective certifying officials on their Category 11 certification renewal. The next Aerial Application of Pesticides Course is scheduled for 3-6 May 2021.

- g. Members from the Spray Unit answered consultations from various local, state, and federal agencies regarding vector ecology and aerial spraying. Lt Col (b) (6) and Lt Col (b) (6) have worked to develop a community based Innovative Readiness Program in conjunction with Salt Lake City mosquito abatement department to develop (and test) aerial applications of pesticide in the greater SLC area. As of this writing, SLC has drafted one of the principle legal documents necessary to make this happen. Lt Col (b) (6) is continuing to work with SLC mosquito abatement to potential make application possible in FY21.
- h. One area of interest that the Spray Unit continues to focus on will be the further development of the technique for ultra-low volume sprays of mosquito larvicides to control container breeding mosquitoes, and in particular, *Aedes aegypti*, the vector of Zika virus, Dengue virus, Yellow fever virus, and the like. This developing technique, which targets the immature stage of the mosquito, uses the MASS wing booms configuration or rotary atomizers (new MASS capability) and flow rates which have not been part of traditional mosquito control. The method was part of the response recommended by the CDC and the Air Force during Zika virus outbreaks in Miami, FL in 2016 and has been a focus of develop for several years before that. The Spray Unit is still refining the technique by conducting configuration tests with water and with larvicide on federal property before moving to the next step of integrating the method with an innovative readiness training project or a DoD project. The next test will be conducted in February 2021. Unfortunately, as mentioned previously, the new MASS with rotary atomizer capability will not be available at this time.

## 2. MISSION ACCOMPLISHMENTS:

A list of all missions accomplished in FY20 (training, actuals, and aerial spray research/assessments if appropriate) and their associated data is found in attachment 1. Reports detailing these individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) ; Commercial (b) (6) .

### 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft: All eight C-130H aircraft assigned to the 910<sup>th</sup> are now modified to perform the aerial spray mission. Seven aircraft are capable of spraying from fuselage booms only. One aircraft is configured to utilize both wing and fuselage spray booms
- b. Spray Systems: Six Modular Aerial Spray Systems (MASS) were available.
- c. Global Positioning Systems (GPS): Eight Wingman GX Global Positioning Systems were available.

### 4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY19:

- a. Maj (b) (6) was designated as acting Chief of Spray, replacing Maj (b) (6).  
SMSgt (b) (6) as Spray Maintenance Superintendent, replacing SMSgt (b) (6).  
Lt Col (b) (6) replaced Lt Col (b) (6) as Aerial Spray Lead Entomologist.
- b. 910 AW personnel from Operations Group, Maintenance Group, Public Affairs, Communications, and Installation Personnel Readiness deployed to support the aerial spray mission and accomplish training in FY20.

### 5. APPROVED AERIAL SPRAY PROJECTS (project, location, pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes (never utilized)
- d. Barry M. Goldwater Range, AZ. Sahara mustard (last application FY15)
- e. Dugway Army Proving Grounds, UT. Cheat grass control/fire breaks
- f. Eglin Air Force Base, FL. Mosquitoes (not regularly utilized)
- g. Ft. Eustis, VA. Mosquitoes (not regularly utilized, currently in NEPA re-write)
- h. Grand Forks Air Force Base, ND. Mosquitoes
- i. Homestead Air Reserve Base, FL. Mosquitoes
- j. Joint Base Charleston, SC. Mosquitoes
- k. Langley Air Force Base, VA. Mosquitoes
- l. Minot Air Force Base, ND. Mosquitoes
- m. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes
- n. Parris Island MCRD, SC. Biting Midges and mosquitoes
- o. Saylor Creek Range, ID. Cheat grass
- p. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle
- q. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies

- r. Utah Test and Training Range, Hill AFB UT. Halogeton
  - s. Utah Test and Training Range, Hill AFB UT. Cheat grass control/fire breaks
  - t. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes (not regularly utilized)
6. INNOVATIVE READINESS TRAINING - APPROVED MISSIONS (location/pest)
- a. Grand Forks, ND. Mosquitoes. (not used in FY20)
  - b. Miami-Dade County, FL. Mosquitoes. (not used in FY20)
  - c. Minot, ND. Mosquitoes.
  - d. Williston, ND. Including Watford City and Trenton. Mosquitoes.

# FY 20 AERIAL SPRAY MISSIONS (1 OCT 19 – 30 SEP 20)

[illegible]

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND**

4 December 2021

MEMORANDUM FOR AFRC/A3OO

FROM: 757 AS/DOS  
3976 King Graves Road Unit 24  
Vienna OH 44473-5924

SUBJECT: FY21Aerial Spray Annual Report (1 Oct 20 – 30 Sep 21)

1. INTRODUCTION. Fiscal year 2021 was the 47<sup>th</sup> year of aerial spray operations as a Department of Defense (DoD) resource currently assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. FY 2021 aerial spray missions had more latitude and completion records than FY 2020. One of the biggest hindrances to scheduled aerial spray missions was lack of appropriate funding due to budgetary shortfalls which were essentially a result of COVID crisis stemming from FY 2020. In short, 910 AW completed 13 of 17 scheduled aerial spray missions for effect and training in FY 2021. This of course was a remarkable increase from FY 2020, and should be applauded, although a significant (metric) amount overall was contributed by deployment for Hurricane Delta relief. Four missions scheduled from mid-June to mid-September were cancelled, mostly at the behest of the customer, due to lack of pest populations to justify the cost of the event(s). Overall, the general success ratio was quite positive. FY 2021 by all accounts was a good year with respect to accomplishment and local training. Overall 1,050,272 acres were effectively treated, using 34,806 gallons of material and 278.8 flying hours including actual spray and ferry sorties. Attachment 1 contains the specifics of individual mission accomplishments.
  - b. Hurricane Delta: Hurricane Delta was a culmination of 3 significant weather events enveloping the Louisiana area. The 910 AW was alerted late September with respect to potential for local needs. LA State entomologist indicated that local resources were stretched thin based on multiple weather strikes on SW and Central LA, and the need for mosquito/vector control. Subsequently, the state of LA declared an emergency and involved FEMA and local DSCA representatives. Subsequent activity from 910 AW spray unit was deployment of 2 spray aircraft and a spare aircraft to Barksdale AFB to support mosquito control efforts not available to local parishes (jurisdictions). Ultimate outcome was pest control application to 906+ thousand acres in Southern and central Louisiana at behest of LA governor's office and FEMA/DSCA authorities.
  - c. The new Modular Aerial Spray System (MASS) developed and delivered remains a functional "hangar queen/paper-weight" due to ongoing contract difficulties between SPO/contracting and manufacturer (Battelle). Our current expectation is to get the new MASS in operation and tested sometime in FY 2022, but that remains to be seen. This circumstance is from our (910 AW) perspective unacceptable, but unfortunately we are bound by contractual limitations, most of which are not in the AF favor.

- d. The Spray Unit is **STILL** awaiting some resolution on a functional Statement of Work and subsequent contract for a new off-the-shelf Differential GPS. Appropriate system was fully identified in FY 2018 with reasonable expectations that the issue would be resolved in an equally reasonable timeframe. Iterations of requirements from SPO/Contracting office stymied every suitable avenue for acceptable contract or resolution. Naturally, the COVID crisis was a reasonable short-term factor (excuse) for doing nothing. In theory, work has resumed to draft a new statement of work and contract. We do not hold our collective breath(s). Meanwhile, the aerial spray unit continues to use the antiquated and largely unsupportable current GPS system. Emergency hurricane response in early FY 2021 demonstrated that the status of the current system is at the end of its service life, and current GPS resources are stretched thin, almost to being a severe limiting factor on mission capability.
- e. The Spray Unit began a cheat grass control/fire break project on the Utah Test and Training Range (UTTR), UT in October 2017. The success of aerial application methods in controlling the exotic invasive weed, cheat grass, and the subsequent recovery of native vegetation, continues to be a prospect for additional training opportunities. The value of fire prevention on the ranges is proving to be invaluable. The Spray Unit expanded UTTR cheatgrass program to include U.S. Army's Dugway Proving Grounds on an experimental basis in FY 2020. Based on reported success in achieving goals of fire suppression and habitat restoration, the Dugway project expanded in FY 2021. Reports from Hill AFB/Dugway PG in spring of 2020 indicated excellent control and all parties are in favor of extending the project well beyond the original 3-year period, if appropriate funding can be obtained/maintained.
- f. The Aerial Application of Pesticides Course was successfully completed 3-6 May 2021. This initiative was in response to FY 2020 cancellation due to COVID restrictions and lack of necessary training for DoD/EPA Category 11 (aerial spray) for DoD personnel as a result. Although authorization for activities and subsequent details were somewhat torturous (COVID restrictions), local command stepped and approved this training to proceed. In addition, the Civilian component of the 910 AW (CAC, Lodging, COM, and PAX) provided outstanding support. In addition to didactic activities, a "real world" field test was conducted, as well as a realistic local orientation flight for participants. Nineteen DoD personnel attended for certification; 9 were for initial certification, and 10 were for recertification. Next scheduled Cat 11 (aerial spray) training activity is scheduled for 9-14 January 2022 in St. Augustine FL, in conjunction with the annual Florida Mosquito Control Association (FMCA) annual Fly-In.
- g. Members from the Spray Unit answered consultations from various local, state, and federal agencies regarding vector ecology and aerial spraying. Lt Col (b) (6) and Lt Col (b) (6) have worked have worked to develop a community based Innovative Readiness Program in conjunction with Salt Lake City (SLC) mosquito abatement department to develop (and test) aerial applications of pesticide in the greater SLC area. As of this writing, SLC had drafted one of the principle legal documents necessary to make this happen. However, a significant public backlash based on a private individual and his/hers adamant refusal of the concept in local media made the 2021 IRT concept unpalatable to SLC mosquito control authorities. SLC will readdress these issues if future, with general expectation that this project may be incorporated into IRT framework. In interim, 910 AW has been approached by pest management professional at Selfridge ANG with concept of spraying airfield for control of vegetation and related pests that are of significant importance to BASH at same airfield. We (910 AW) remain open to the initiative provided all regulatory requirements are fulfilled.

- h. One area of interest that the Spray Unit continues to focus on will be the further development of the technique for ultra-low volume sprays of mosquito larvicides to control container breeding mosquitoes, and in particular, *Aedes aegypti*, the vector of Zika virus, Dengue virus, Yellow fever virus, and the like. This developing technique, which targets the immature stage of the mosquito, uses the MASS wing booms configuration or rotary atomizers (new MASS capability) and flow rates which have not been part of traditional mosquito control. The method was part of the response recommended by the CDC and the Air Force during Zika virus outbreaks in Miami, FL in 2016 and had been a focus of development for several years before that. The Spray Unit is still refining the technique by conducting configuration tests with water and with larvicide on federal property before moving to the next step of integrating the method with an innovative readiness training project or a DoD project. In conjunction, a DWFP grant has been applied for from private contractor with tacit approval of AFPMB and subsidiary organizations. Current status is that 910 AW will provide potential assistance with understanding that all testing activities will be conducted within our standard testing/training parameters.

## 2. MISSION ACCOMPLISHMENTS:

A list of all missions accomplished in FY 2021 (training, actuals, and aerial spray research/assessments if appropriate) and their associated data is found in attachments 1. Reports detailing these individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6)(b) (6) Commercial (b) (6)

## 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft: All eight C-130H aircraft assigned to the 910<sup>th</sup> are modified to perform the aerial spray mission. Seven aircraft are capable of spraying from fuselage booms only.
- b. Spray Systems: Six Modular Aerial Spray Systems (MASS) were available. Updated spray system unavailable due to contractual/TO obligations.
- c. Global Positioning Systems (GPS): Seven Wingman GX Global Positioning Systems were available.

## 4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY21:

- a. No significant changes from FY 2020, save for (b) (6) (Aerial Spray MXS), will eventually be replaced by SMSgt (b) (6) (b) (6) pending hiring unfreeze. Lt Col (b) (6) is Chief of Aerial Spray. Lt Col (b) (6) remains Aerial Spray Lead Entomologist. All initial queries regarding aerial spray can be accomplished with contact with aforementioned individuals.

## 5. APPROVED AERIAL SPRAY PROJECTS (project, location, pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes (never utilized)
- d. Barry M. Goldwater Range, AZ. Sahara mustard (last application FY15)

- e. Dugway Army Proving Grounds, UT. Cheat grass control/fire breaks
  - f. Eglin Air Force Base, FL. Mosquitoes (not regularly utilized)
  - g. Ft. Eustis, VA. Mosquitoes (not regularly utilized, currently in NEPA re-write)
  - h. Grand Forks Air Force Base, ND. Mosquitoes
  - i. Homestead Air Reserve Base, FL. Mosquitoes
  - j. Joint Base Charleston, SC. Mosquitoes
  - k. Langley Air Force Base, VA. Mosquitoes
  - l. Minot Air Force Base, ND. Mosquitoes
  - m. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes
  - n. Parris Island MCRD, SC. Biting Midges and mosquitoes
  - o. Saylor Creek Range, ID. Cheat grass
  - p. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle
  - q. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies
  - r. Utah Test and Training Range, Hill AFB UT. Halogeton
  - s. Utah Test and Training Range, Hill AFB UT. Cheat grass control/fire breaks
  - t. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes (not regularly utilized)
6. INNOVATIVE READINESS TRAINING - APPROVED MISSIONS (location/pest)
- a. Grand Forks, ND. Mosquitoes. (not used in FY21)
  - b. Miami-Dade County, FL. Mosquitoes. (not used in FY21)
  - c. Minot, ND. Mosquitoes.
  - d. Williston, ND. Including Watford City and Trenton. Mosquitoes.

3976 King Graves Road Unit 24  
Vienna OH 44473-5924

SUBJECT: FY22Aerial Spray Annual Report (1 Oct 21 – 30 Sep 22)

1. INTRODUCTION. Fiscal year 2022 was the 48<sup>th</sup> year of aerial spray operations as a Department of Defense (DoD) resource currently assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide, and CONUS civilian organizations through DSCA and training initiatives as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. FY 2022 aerial spray missions: One of the biggest hindrances to scheduled aerial spray missions was lack of appropriate funding due to budgetary shortfalls, lack of proper NEPA documentation, as well as functional incapability (MXS) at end of FY22. In short, 910 AW completed 12 of 16 scheduled aerial spray missions for effect and training in FY 2022 (Attachment 1). An additional factor at tail end of FY 2022 was a significant safety of flight issue with MXS issues regarding propellor hub depot maintenance, which overall shut down C-130 H2 model operations, resulting in incompleteness of Sept 22 Mt Home spray mission. One spray aircraft is still parked on ramp at MHAFB based on safety grounding. Despite MXS/OPS standdown, the general success ratio was quite positive. FY 2022 by all accounts was reasonable with respect to accomplishment and local training. Overall 165,018 acres were effectively treated, using 51,939 gallons of material (neat and diluted). Total amount of concentrated Active ingredient (manufacturer formulations) was 1475 gallons. Overall, a total of 241.3 flying hours for FY 22 spray mission, with components 69.6 spray hours, 90.8 ferry hours, and 80.9 support hours. Required training was achieved, despite cancellations and safety standdown. Attachment 1 contains the specifics of individual mission accomplishments.
  - b. **Cancellations:** As depicted in Attachment 1, there were spray cancellations in FY 22 schedule. Cancellation for JB Charleston (9-11 May) was at users behest, as there were no significant populations of target pests available to treat. Larvicide application cancellation at Williston ACE/Grand Forks were multifactorial. As mentioned previously, NEPA documentation was found to be lacking in certification, and drought conditions in ND area precluded need to apply larvicide based on user larval mosquito population sampling and predictions. NEPA and IRT requirements have been rectified with respect to legal requirements to spray at those locales, but drought conditions and subsequent mosquito populations are well beyond the purview of this office, and we concurred with local Pest Management Professional recommendation regarding need. 910AW concurred with those recommendations. An additional cancellation was incurred on 8-12 Minot mission. Original concept was to include City of Williston ND (IRT approved) for a mosquito adulticide application as adjunct to Minot AFB/City of Minot application. However, a bird strike and subsequent MXS issues precluded completion of

application. Mission cancellations at Camp Blanding in Jan and Feb 2022 occurred because there was an expectation of new EMASS being on-line at that time for testing, which obviously was not manifested considering the current sign-off scenario explained in following point.

- c. The new Modular Aerial Spray System (EMASS) developed and delivered currently remains flight incapable due to pending sign-off by SPO and Warrner-Robins test center. Expectation for flight sign-off anticipated mid-December 2022. On a positive note, 910AW is capable to conducting ground (static) tests with various configurations. 910 AW personnel are using latent time to investigate output and stability of the system to anticipate application of new EMASS system in 2023.
- d. The Aerial Spray Unit has achieved some resolution on a functional Statement of Work and subsequent contract for a new off-the-shelf Differential GPS to replace rapidly obsolete previous GPS system. Appropriate system (Ag-Nav) was fully identified in FY 2018 with reasonable expectations that the issue would be resolved in an equally reasonable timeframe. Naturally, that did not happen. According to SPO/Civ contractor representatives (as of Sep 2022), the SOW has been approved, and the contractors and vendors involved have been identified. The status of the current system is at the end of its service life, and current GPS resources are stretched thin, almost to being a severe limiting factor on mission capability. I will comment that current status of C-130 H2 fleet (grounding until repair), will probably have a negative effect on AG-GPS upgrades in the short-term scenarios.
- e. The DoD Aerial Application of Pesticides Course (Cat 11) was successfully completed 9-14 January 2022 at Anastasia County Mosquito Control District, and NE Regional Airport, FL. DoD training activities were held in conjunction with the Florida Mosquito Control Association's annual "Fly-in" event, whereby mosquito control aerial applicators gather in forum to discuss relevant topics relating to aerial spray activities. This event was an excellent opportunity for DoD personnel to get a civilian perspective into aerial spray operations. In addition to didactic activities, a field test was conducted, utilizing one runway at NE Regional Airport to characterize effective swath width from C-130 H2 aircraft. Naturally, the entire concept of doing this was a logistic nightmare, but Civilian staff from Anastasia MCD and airport manager and staff at NE Regional coordinated with DoD requirements to make the event remarkably smooth and pleasant. Eight DoD personnel attended for certification; 4 were for initial certification, and 4 were for recertification. Breakdown of component groups was 3 AF, 2 Army, 3 Navy/Marines. Next scheduled Cat 11 (aerial spray) training activity is scheduled for 8-12 May January 2023 at Youngstown Air Reserve Station.
- f. Members from the Spray Unit answered consultations from various local, state, and federal agencies regarding vector ecology and aerial spraying. Lt Col (b) (6) and spray office personnel have worked to sustain a community based Innovative Readiness Program in conjunction with current users (specifically City of Minot, and City of Williston, ND). IRT POC (Chief (b) (6) ) has indicated all FY 23 applications have been properly addressed and approved. We (910 AW) remain open to additional IRT applications provided all regulatory requirements are fulfilled, and the 757 AS are adequately trained with functional assets to respond. Hurricane Ian potential response at end of Sept 2022 with DSCA/FEMA/CDC was definitely an issue, but as C-130 H2 spray model availability was limited, we (910 AW) essentially got "lucky" in that it was late in the spray season, However, there was excellent organization of Florida spray applicators and contractors, and they were apparently able to effectively respond to FEMA/CDC requests for intervention.
- g. One area of interest that the Spray Unit continues to focus on will be the further development

of the technique for ultra-low volume sprays of mosquito larvicides to control container breeding mosquitoes, and in particular, *Aedes aegypti*, the primary vector of Zika virus, Dengue virus, yellow fever virus, and the like. Aerial spray group was anticipating use of new EMASS rotary nozzles for field testing, but that initiative has been stymied by functional sign-off of new EMASS. We are expecting better atomization of material and increased efficiency (Swath Width). However, we cannot confirm at this time. Naturally, we will pursue this initiative when we can actually fly (no prop issues) and spray again (EMASS signoff) in future.

## 2. MISSION ACCOMPLISHMENTS:

A list of all missions accomplished in FY 2022 (training, actuals, and aerial spray research/ assessments if appropriate) and their associated data is found in attachments 1. Reports detailing these individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) Commercial (b) (6) Mobile (b) (6)

## 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft: Eight C-130H aircraft assigned to the 910<sup>th</sup> are modified to perform aerial spray mission. All aircraft are capable of spraying from fuselage booms only based on new system configuration.
- b. Spray Systems: Six Modular Aerial Spray Systems (MASS) were available. Updated spray system unavailable due to contractual/TO obligations.
- c. Global Positioning Systems (GPS): Seven Wingman GX Global Positioning Systems were available.

## 4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY21:

- a. No significant changes from FY 2021, except that Col (b) (6) has been released from 757 AS as of Oct 22 due to his promotion status. Lt Col (b) (6) is Chief of Aerial Spray. Lt Col (b) (6) is Aerial Spray Lead Entomologist. Lt Col (b) (6) is planning on assuming AFRC Pest Management Command Entomologist duties from Col (b) (6) following informational back-brief and receipt of database. All initial queries regarding aerial spray can be accomplished with contact with aforementioned individuals.

## 5. APPROVED AERIAL SPRAY PROJECTS (project, location, pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes (never utilized)
- d. Barry M. Goldwater Range, AZ. Sahara mustard (last application FY15)
- e. Dugway Army Proving Grounds, UT. Cheat grass control/fire breaks
- f. Eglin Air Force Base, FL. Mosquitoes (not regularly utilized)

- g. Ft. Eustis, VA. Mosquitoes (not regularly utilized, currently in NEPA commentary for EA re-write)
  - h. Grand Forks Air Force Base, ND. Mosquitoes
  - i. Homestead Air Reserve Base, FL. Mosquitoes
  - j. Joint Base Charleston, SC. Mosquitoes
  - k. Langley Air Force Base, VA. Mosquitoes
  - l. Minot Air Force Base, ND. Mosquitoes
  - m. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes (not utilized currently)
  - n. Parris Island MCRD, SC. Biting Midges and mosquitoes
  - o. Saylor Creek Range, ID (Mt Home AFB). Cheat grass and invasive weeds
  - p. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle (not utilized currently)
  - q. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies
  - r. Utah Test and Training Range, Hill AFB UT. Halogeton and invasive herb species.
  - s. Utah Test and Training Range, Hill AFB UT. Cheat grass control/fire breaks
  - t. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes (not regularly utilized)
6. INNOVATIVE READINESS TRAINING - APPROVED MISSIONS (location/pest)
- a. Minot, ND. Including city of Burlington (adjacent to City of Minot). Mosquitoes. (current)
  - b. Williston, ND. Including Watford City. Mosquitoes. (current, not used in FY 22)

1 November 2016

MEMORANDUM FOR AFRC/A3OO

FROM: 757 AS/DOS

SUBJECT: FY 16 Aerial Spray Annual Report (1 Oct 15 – 30 Sep 16)

1. INTRODUCTION. Fiscal year 2016 was the 43<sup>rd</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. Development of the new Modular Aerial Spray System continues: An \$11.5 million contract for the development and delivery of a new MASS was signed in February 2016 by Battelle Memorial Institute in Columbus, OH. Battelle has since renegotiated on some costs and deliverables. These discussions slowed the development process down, with AFRC ultimately capitulating to the developer's requests. Evaluation of the new rotary nozzle system is complete. The next important phase, the "critical design review" (CDR) which is scheduled for December. The current optimistic forecast for delivery is June 2017.
  - b. The Spray Unit began a collaboration with entomologists from the U.S. Air Force's School of Aerospace Medicine (USAFSAM) aimed at measuring the efficacy of night sprays on mosquitoes, biting midges, and ticks. Further collaboration in FY17 is anticipated with entomologists from USAFSAM making these analyses at Parris Island Marine Corps Recruit Depot, SC or at Joint Base Charleston, SC.
  - c. The 910th conducted the 4th Annual Aerial Spray Refresher from 7-18 March at Hill AFB and was carried out in tandem with the actual invasive weed control mission on the Utah Test and Training Range. Training consisted of both ground and flight training for over 70 aircrew, entomologists, and spray maintenance personnel. Training sorties using water were flown at UTTR over several days. In addition, ground training was accomplished in the classroom, on the ramp, and also on the UTTR.
  - d. The Aerial Application of Pesticides Course taught in 10-14 January at Lee County Mosquito Control District in Ft. Myers, Florida. This course provided certification

training in Aerial Application Pest Control (Category 11) as required by DoDI 4150.07 and is certified by the Environmental Protection Agency. Course Director, Lt Col (b) (6) reported 9 members attended the course from the Air Force, Army and Navy. Two attended for initial certification, and 7 for re-certification. The 910<sup>th</sup> supported the course with 18 staff members for teaching and flying purposes.

- e. Members from the Spray Unit answered consultations from various local, State, and federal agency regarding vector ecology and aerial spraying (i) Lt Col (b) (6) was invited to visit the Navy Medical Research Unit 6, Peru, where he participated in spatial repellent studies in February.; (ii) Lt Col (b) (6) deployed with SOUTHCOM to support New Horizons Dominican Republic May 2016; (iii) Drs. (b) (6) and (b) (6) worked with the Centers for Disease Control to answer questions regarding medical entomology issues related to the spread of Zika virus in the U.S. In particular, they developed an aerial spray plan for Puerto Rico, which was ultimately dismissed by the Puerto Rican Governor. However, the plan was later implemented in South Florida and the method endorsed by the CDC Director, who stated Zika virus transmission had been interrupted in Miami's Wynwood neighborhood where aerially spraying took place.

Reports of individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) Commercial (b) (6)

## 2. MISSION ACCOMPLISHMENTS:

- a. A list of all missions accomplished in FY16 and their associated data is found in attachment 1. A list of all aerial spray tests, demonstrations, exercise missions, and locally generated spray training completed in FY16 is found in attachment 2. Attachment 3 shows the flights used to support aerial spray operations.

## 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. Four C-130H aircraft are modified to perform the aerial spray missions. Two additional aircraft are modified to accept the MASS but are not plumbed for wing booms, only fuselage booms.
- b. Spray Systems. Six Modular Aerial Spray Systems (MASS) were available.
- c. Global Positioning Systems (GPS). 11 Wingman GX Global Positioning Systems were available.

## 4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY16:

- a. Maj (b) (6), pilot, became Chief of Aerial Spray. Lt Col (b) (6) acted as Chief of Aerial Spray while the 757AS was deployed. Maj (b) (6) joined the Aerial Spray Office, as Spray Navigator.
- b. 910 AW personnel from the Maintenance Group deployed to support the aerial spray mission and accomplish training in FY16.

5. APPROVED AERIAL SPRAY PROJECTS (project, location, pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes
- d. Barry M. Goldwater Range, AZ. Sahara mustard
- e. Eglin Air Force Base, FL. Mosquitoes
- f. Ft. Eustis, VA. Mosquitoes
- g. Grand Forks Air Force Base, ND. Mosquitoes
- h. Homestead Air Reserve Base, FL. Mosquitoes
- i. Langley Air Force Base, VA. Mosquitoes
- j. Minot Air Force Base, ND. Mosquitoes
- k. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes
- l. Parris Island MCRD, SC. Biting Midges and mosquitoes
- m. Saylor Creek Range, ID. Cheat grass
- n. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle
- o. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies
- p. Utah Test and Training Range, Hill AFB UT. Halogeton
- q. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes

6. INNOVATIVE READINESS TRAINING - APPROVED MISSIONS (location/pest)

- a. Grand Forks, ND. Mosquitoes.
- b. Miami-Dade County, FL. Mosquitoes.
- c. Poquoson, VA. Mosquitoes.
- d. York County, VA. Mosquitoes.
- e. Minot, ND. Mosquitoes.
- f. Williston, ND. Including Watford City and Trenton. Mosquitoes.

1 November 2018

MEMORANDUM FOR AFRC/A300

FROM: 757 AS/DOS  
3976 King Graves Road Unit 24  
Vienna OH 44473-5924

SUBJECT: FY18 Aerial Spray Annual Report (1 Oct 17 – 30 Sep 18)

1. INTRODUCTION. Fiscal year 2018 was the 45<sup>th</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. Development of the new Modular Aerial Spray System (MASS) continues: Conversations and physical meetings with staff at AFRC and engineers from Battelle Memorial Institute in Columbus, OH continue. Battelle has since renegotiated on some costs and deliverables. In addition, it appears that at least one of the subcontractors have not been able to immediately meet design specifications and, consequently, the new MASS delivery has been delayed. The current expected delivery date for setup and initial training at Youngstown ARS is 1 February 2019. Following the in-house training, the new MASS will be flown and tested locally, and later in the year, during routine spray operation projects.
  - b. The Spray Unit finished reviewing available off-the-shelf Agricultural GPS units in order to replace the aging Wingman system currently used when conducting aerial spray operations. The final recommendations, based on a rubric of requirements, has been submitted to AFRC. The new system should be purchased and installed in FY19.
  - c. The Spray Unit began a cheat grass control/fire break project on the Utah Test and Training Range (UTTR), UT in October 2017. The mission is flown from Hill AFB, UT and is sponsored by the 75CES Natural Resources and UTTR/HQ. Reports from Hill AFB in spring of 2018 indicated excellent control and the project has been deemed a smashing success. It is understood that the project has received funding for an additional 4 years.
  - d. The 910th conducted the 5th Annual Aerial Spray Refresher from 5-16 March at Hill AFB and was carried out in tandem with the actual invasive weed control mission on the UTTR. Training consisted of both ground and flight training for over 70 aircrew, entomologists, and spray maintenance personnel. A total of 24 training sorties took place over the two week period. The Refresher provides an excellent opportunity to review procedures, upgrade members, and receive new regulatory guidance. The training was accomplished in the classroom, on the ramp, and also on the UTTR.
  - e. The Aerial Application of Pesticides Course taught in 7-11 May at Youngstown Air Reserve Station, OH. This course provided certification training in Aerial Application Pest Control (Category 11) as required by DoDI 4150.07 and is certified by the Environmental Protection Agency. Course Director, Lt Col (b) (6) reported 26 DoD members attended the course from the Air Force, Army, and Navy. Twenty attended for initial certification and 6 for re-certification. The 910<sup>th</sup> supported the course with 18 staff members for teaching and flying purposes.

- f. The 910<sup>th</sup> AW was asked by the Virginia National Guard (Army), via a letter from MG Hoyer to MG La Fave (22AF/CC), to support their State Partnership Program with Peru by teaching the Spray Course to members of the Peruvian Air Force in Peru. The Peruvians are looking for ways to combat the rising insect vector threat in Peru. At this writing, the final approval for this action is pending at the U.S. embassy in Lima, Peru.
- g. During 13-17 August, the Spray Unit continued scientific investigations into the movement of pesticide droplets into buildings for adult mosquito control (specifically *Aedes aegypti* control as this is the vector of Zika virus, dengue, and yellow fever). These trials were conducted at the Florida National Guard Joint Training Center, Camp Blanding, Florida with collaborators participating from U.S. Department of Agriculture's Center for Medical and Veterinary Entomology, Navy's Entomology Center of Excellence, Manatee County Mosquito Control District, and AMVAC. Results were encouraging and final conclusions will be published in a scientific journal.
- h. Members from the Spray Unit answered consultations from various local, state, and federal agencies regarding vector ecology and aerial spraying (i) Hurricane Florence, made news in September when it caused major damage in Carolinas. The Aerial Spray Unit received "prepare to deploy" orders but both North and South Carolina state officials ultimately decided to deal with storm related mosquito issues at the county level. It appears that these decisions were made at relatively high levels as Lt Col (b) (6) had several lengthy discussions with the State Entomologists from both states who had detailed questions on how to request military aerial sprays. In the end, neither Hurricane Florence nor Michael created an environment that local officials felt required military aerial mosquito control. (ii) Lt Col (b) (6) was invited by SOUTHCOM to support New Horizons Panama (June 2018) and participated as the medical entomologist for the mission team which included subject matter exchanges with Panamanian scientists and physicians at the Gorgas Institute. This exercise also involved field surveillance for yellow fever along the Darien Gap in Southern Panama.

## 2. MISSION ACCOMPLISHMENTS:

A list of all missions accomplished in FY18 (training, actuals, and aerial spray research/assessments) and their associated data is found in attachment 1. Reports detailing these individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN(b) (6) ; Commercial (b) (6) .

## 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. Four C-130H aircraft are modified to perform the aerial spray missions. Two additional aircraft are modified to accept the MASS but are not plumbed for wing booms, only fuselage booms. The AF Form 1067 has been signed authorizing aircraft 923021, 923022, 923023, and 923024 to be modified for Aerial Spray operations. Completion date for modification is expected to be complete by March of 2019. Aircraft 899104 remains assigned to Maxwell AFB and is available for an emergency spray response if necessary.
- b. Spray Systems. Six Modular Aerial Spray Systems (MASS) were available.

- c. Global Positioning Systems (GPS). 11 Wingman GX Global Positioning Systems were available.

4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY18:

- a. Maj (b) (6) continues as Chief of Spray. MSgt (b) (6) left the Aerial Spray Office, a new spray operator has not yet been nominated as her replacement.
- b. 910 AW personnel from Operations Group, Maintenance Group, Public Affairs, and Communications deployed to support the aerial spray mission and accomplish training in FY18.

5. APPROVED AERIAL SPRAY PROJECTS (project, location, pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes (never utilized)
- d. Barry M. Goldwater Range, AZ. Sahara mustard (last application FY15)
- e. Eglin Air Force Base, FL. Mosquitoes (not regularly utilized)
- f. Ft. Eustis, VA. Mosquitoes (not regularly utilized)
- g. Grand Forks Air Force Base, ND. Mosquitoes
- h. Homestead Air Reserve Base, FL. Mosquitoes
- i. Joint Base Charleston, SC. Mosquitoes
- j. Langley Air Force Base, VA. Mosquitoes
- k. Minot Air Force Base, ND. Mosquitoes
- l. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes
- m. Parris Island MCRD, SC. Biting Midges and mosquitoes
- n. Saylor Creek Range, ID. Cheat grass
- o. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle
- p. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies (never utilized)
- q. Utah Test and Training Range, Hill AFB UT. Halogeton
- r. Utah Test and Training Range, Hill AFB UT. Cheat grass control/fire breaks
- s. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes (not regularly utilized)

6. INNOVATIVE READINESS TRAINING - APPROVED MISSIONS (location/pest)
- a. Grand Forks, ND. Mosquitoes. (not used in FY18)
  - b. Minot, ND. Mosquitoes.
  - c. Williston, ND. Including Watford City and Trenton. Mosquitoes.

MEMORANDUM FOR AFRC/A300

FROM: 757 AS/DOS  
3976 King Graves Road Unit 24  
Vienna OH 44473-5924

SUBJECT: FY19 Aerial Spray Annual Report (1 Oct 18 – 30 Sep 19)

1. INTRODUCTION. Fiscal year 2019 was the 46<sup>th</sup> year of aerial spray operations as a Department of Defense (DoD) resource assigned to the US Air Force Reserve. The purpose of this mission is to provide aerial spray support to U.S. military forces worldwide as prescribed in DoD Instruction 4150.07, DoD Pest Management Program. Highlights of this year's aerial spray activities include:
  - a. The 757<sup>th</sup> Airlift Squadron was deployed in support of the squadron's Air and Space Expeditionary Force operations which included 4 aircraft and 6 crews (plus overhead) from 10 May – 18 September 2019. This deployment, along with the associated requirements for pre-deployment flight training, impacted the ability of the squadron to meet routine aerial spray missions, relative to a non-deployment year. For example, of the 9 spray mission cancellations in FY19, 7 were initiated by the 910<sup>th</sup> Operations Group, in order to support pre-deployment training, because resources were deployed, or because of the process of reconstituting resources (Attachment 1).
  - b. The 910 OG/CC reduced the Aerial Spray Panel meeting frequency from monthly to quarterly.
  - c. Development of the new Modular Aerial Spray System (MASS) continues: Conversations and physical meetings with staff at AFRC and engineers from Battelle Memorial Institute in Columbus, OH continue. On 26 September, a limited attendance meeting took place between senior staff members of Battelle and AFRC. Following this meeting, Battelle confirmed they will deliver the new MASS for training at Youngstown in the Fall of 2020. Following in-house training, the new MASS will be flown and tested locally followed by additional confirmation of the range of MASS function during routine operational spray projects.
  - d. The Spray Unit reviewed available off-the-shelf Differential GPS products suitable for supporting aerial spray applications and submitted findings to the AFRC C130 System Program Office (SPO) during the final quarter of FY18. Recent communication with the SPO indicated that the SPO intends to invite bids for the installation and testing contract for the replacement system in February or March 2020. Hopefully, the selected company can move quickly to have the new system selected and installed in FY20.
  - e. The Spray Unit responded to a request from the Tyndall AFB Wing Commander for an "emergency" spray application. The application was made to reduce the potential of vector-borne disease following a massive surge of mosquitoes related to the increased habitat created

by the destructive force of Hurricane Michael. The process to make such a spray was simplified because Tyndall AFB had previously submitted all the environmental paperwork to be considered an “approved spray project” (see section 5.p.).

- f. The Spray Unit began a cheat grass control/fire break project on the Utah Test and Training Range (UTTR), UT in October 2017. The success of aerial application methods in controlling the exotic invasive weed, cheat grass, and the subsequent recovery of native vegetation, continues to be a prospect for additional training opportunities. The Spray Unit continued work on the UTTR in FY2019 working from Hill AFB, UT where the project is sponsored by the 75CES Natural Resources via an invitation letter from the Base Commander and UTTR/HQ. Additionally, the U.S. Army’s Dugway Proving Grounds has completed all environmental paperwork to begin cheat grass control on their property. It is expected that the Spray Unit will begin including applications for fire breaks on the Army property in October 2019 (FY2020). Reports from Hill AFB in spring of 2019 indicated excellent control and all parties are in favor of extending the project beyond the original 3-year period, if funding can be obtained.
- g. The Aerial Application of Pesticides Course was taught in conjunction with the Florida Mosquito Control Association’s “Aerial Spray Short Course” 7-11 January at the Lee County Mosquito Control District, Fort Myers, FL. This course provided certification training in Aerial Application Pest Control (Category 11) as required by DoDI 4150.07 and is certified by the Environmental Protection Agency. Course Director, Lt Col (b) (6) reported 14 DoD members attended the course from the Air Force, Army and Navy. Three attended for initial certification, and 11 for re-certification. The 910<sup>th</sup> supported the course with 17 staff members for teaching and flying purposes. In Addition to the military members, over 200 additional public health workers from county, state, and federal positions from across the U.S., attended the combined course, which included presentations and workshop discussions on innovations in the aerial application of pesticides to control mosquitoes. The 910<sup>th</sup> staff also, performed a static display of the MASS at Page Field and conducted a field exercise with the students, spraying water to demonstrate characterization of spray parameters for mosquito larviciding.
- h. The 910<sup>th</sup> AW was asked by the Virginia National Guard (Army) to support their State Partnership Program with Peru by hosting on 17 June in Youngstown, OH, Maj Gen Carlos Elera, from the Air Attaché of the Peruvian Embassy. The Peruvians continue to face vector control challenges impacting both their military operations and civilian population. General Elera visited to receive an overview on the capability of the MASS mission. General Elera met with the 910<sup>th</sup> Wing Commander, Col (b) (6), and senior staff for discussions, attended a briefing in Spanish on the MASS mission by international health specialist Lt Col (b) (6) and toured the Aerial Spray Maintenance Facility. A local aerial spray flight was planned but could be not accomplished because of poor weather. The next step in continuing to build this partnership will be decided between the U.S. State Department and the Peruvian Air Force. It has been proposed that the 910<sup>th</sup> teach the aerial spray course in Peru as an introduction to the Peruvian military, who can then determine if they wish to develop such a capability for themselves. This event was covered by the 910<sup>th</sup> Public Affairs Office and subsequently published here: <https://www.youngstown.afrc.af.mil/News/Article-Display/Article/1942318/peruvian-air-force-seeks-aerial-spray-familiarization-at-youngstown-air-reserve/>

- i. Members from the Spray Unit answered consultations from various local, state, and federal agencies regarding vector ecology and aerial spraying (i) Lt Col (b) (6) Maj (b) (6) and Capt. (b) (6) visited Little Rock AFB and briefed the Little Rock AFB Community Council on the Air Force Aerial Spray Program including how to develop a community based Innovative Readiness Program. The mayor of the local community of Lonoke is organizing this project. On 18 September, the Aerial Spray office was inspected by Lt Col (b) (6) as part of the 910AW's Unit Effectiveness Inspection (UEI). (ii) Lt Col (b) (6) attended the Armed Forces Pest Management Board meeting and the American Mosquito Control Association meeting.
- j. One area of interest that the Spray Unit continues to focus on will be the further development of the technique for ultra-low volume sprays of mosquito larvicides to control container breeding mosquitoes, and in particular, *Aedes aegypti*, the vector of Zika virus. This developing technique, which targets the immature stage of the mosquito, uses the MASS wing booms configuration and flow rates which have not been part of traditional mosquito control. However, the method was part of the response recommended by the CDC and the Air Force during Zika virus outbreaks in Miami, FL in 2016 and has been a focus of develop for several years before that. The Spray Unit is still refining the technique by conducting configuration tests with water and with larvicide on federal property before moving to the next step of integrating the method with an innovative readiness training project, perhaps with the Miami Dade County project in mosquito infested areas near Homestead ARS, FL.

## 2. MISSION ACCOMPLISHMENTS:

A list of all missions accomplished in FY19 (training, actuals, and aerial spray research/ assessments) and their associated data is found in attachment 1. Reports detailing these individual missions may be obtained by contacting Lt Col (b) (6) at 757 AS/DOS, Youngstown Air Reserve Station, 3976 King Graves Road, Vienna OH 44473-5926; DSN (b) (6) Commercial (b) (6)

## 3. CAPABILITIES OF THE AERIAL SPRAY MISSION:

- a. Aircraft. All eight C-130H aircraft assigned to the 910<sup>th</sup> are now modified to perform the aerial spray mission. Four aircraft are capable of spraying from fuselage booms only. Another four are fully modified for wing boom sprays but some of these are undergoing repairs.
- b. Spray Systems. Six Modular Aerial Spray Systems (MASS) were available.
- c. Global Positioning Systems (GPS). Eleven Wingman GX Global Positioning Systems were available.

## 4. PERSONNEL INVOLVED WITH AERIAL SPRAY DURING FY19:

- a. Maj (b) (6) continued as Chief of Spray. SMSgt (b) (6), Spray Maintenance Superintendent, departed the 910<sup>th</sup> for a position with the National Guard. This position was still open as of 31 October. MSgt (b) (6), who re-joined Spray Maintenance in FY19 was acting Superintendent. TSgt (b) (6) also departed Spray Maintenance.

- b. 910 AW personnel from Operations Group, Maintenance Group, Public Affairs, Communications, and Installation Personnel Readiness deployed to support the aerial spray mission and accomplish training in FY19.

5. APPROVED AERIAL SPRAY PROJECTS (project, location, pest):

- a. Army Corps of Engineers, Craney Island, VA. Mosquitoes
- b. Army Corps of Engineers, Williston, ND. Mosquitoes
- c. Barksdale AFB, LA. Mosquitoes (never utilized)
- d. Barry M. Goldwater Range, AZ. Sahara mustard (last application FY15)
- e. Dugway Army Proving Grounds, UT. Cheat grass control/fire breaks
- f. Eglin Air Force Base, FL. Mosquitoes (not regularly utilized)
- g. Ft. Eustis, VA. Mosquitoes (not regularly utilized)
- h. Grand Forks Air Force Base, ND. Mosquitoes
- i. Homestead Air Reserve Base, FL. Mosquitoes
- j. Joint Base Charleston, SC. Mosquitoes
- k. Langley Air Force Base, VA. Mosquitoes
- l. Minot Air Force Base, ND. Mosquitoes
- m. Naval Submarine Base, Kings Bay, GA. Biting midges and mosquitoes
- n. Parris Island MCRD, SC. Biting Midges and mosquitoes
- o. Saylor Creek Range, ID. Cheat grass
- p. Smoky Hill Air National Guard Range, Salina, KS. Musk thistle
- q. Tyndall AFB, FL. Mosquitoes, biting midges, and dog flies (utilized this year)
- r. Utah Test and Training Range, Hill AFB UT. Halogeton
- s. Utah Test and Training Range, Hill AFB UT. Cheat grass control/fire breaks
- t. Yorktown Naval Weapons Station, Cheatham Annex, and Camp Peary, VA. Mosquitoes (not regularly utilized)

6. INNOVATIVE READINESS TRAINING - APPROVED MISSIONS (location/pest)

- a. Grand Forks, ND. Mosquitoes. (not used in FY19)
- b. Miami-Dade County, FL. Mosquitoes. (not used in FY19)

- c. Minot, ND. Mosquitoes.
- d. Williston, ND. Including Watford City and Trenton. Mosquitoes.

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Parris Island MCRD, SC

1. Aerial spray mission controlling biting midges and mosquitoes with insecticide to reduce the negative impact on outdoor training at Parris Island MCRD, SC.

2. Concept of Operations:

- a. 2 May (Monday)  
1700 Depart KYNG  
1900 Land KNBC
- b. 23 May (Tuesday)  
1400 Installation Brief  
1800 Depart KNBC  
2000 Land KNBC
- c. 4 May (Wednesday)  
1800 Depart KNBC (Training Sortie)  
2000 Land KNBC
- d. 5 May (Thursday)  
1000 Depart KNBC  
1200 Land KYNG

3. Lt Col (b) (6) will act as Mission Commander. Maj (b) (6) (b) (6) will be the Aircraft Commander. Support at Parris Island MCRD and Beaufort MCAS has been completed.

(b) (6) (b) (6) Major, USAFR  
757AS Chief of Aerial Spray

# AERIAL SPRAY OPERATIONAL SCHEDULE

## MCRD, PARRIS ISLAND, SC

### 2-5 May 2011

**OBJECTIVE/PURPOSE AND BENEFIT:** Control nuisance biting midges and mosquitoes with aerial spray insecticide applications to reduce negative impact of insect bites on outdoor training at Parris Island MCRD SC.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: Maj (b) (6) (b) (6) Lt Col (b) (6) , Lt Col (b) (6)
- (2) Navigators: Lt Col (b) (6)
- (3) Flight Engineers: TSgt (b) (6)
- (4) Spray Operators: MSgt (b) (6) , TSgt (b) (6)

##### b. Maintenance:

- (1) Spray Maintenance: SSgt (b) (6) (Lead), TSgt (b) (6) , SSgt (b) (6)
- (2) Crew Chiefs: SSgt (b) (6) , SSgt (b) (6)
- (3) Avionics: MSgt (b) (6)

##### c. Entomologist: Lt Col (b) (6) (b) (6) (MC)

#### 2. PPR REQUIREMENTS: 122-01

#### 3. PLANNED SEQUENCE OF EVENTS: (All times local) Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated through the mission commander.

##### 2 May (Monday)

1500: Show  
1700: Depart KYNG  
1900: Land KNBC  
1930: Safety Brief

##### 3 May (Tuesday) Fly training sortie prior to actual application; Start application at calculated time based on sunset.

TBD Installation Brief  
1600: Show  
1630: WX Decision and Load Chemical  
1800: Depart KNBC  
2000: Land KNBC  
Sunset: 2005

##### 4 May (Wednesday) WX Backup or Training

1600: Show (Earlier if Training)  
1630: WX Decision and Load Chemical  
1800: Depart KNBC  
2000: Land KNBC  
Sunset: 2006

##### 5 May (Thursday) \*\*Departure time may slip depending upon Wednesday evening completion time.

1000: Show  
1200: Depart KNBC  
1400: Land KYNG

#### 4. ITEMS TO TAKE/NOTES:

##### a. Mission Commander:

- (1) Mission Commander Cell Phone

- (2) **Friendly Force Tracker**
- b. **Entomologist:**
  - (1) Wind Gauge & Compass
  - (2) VHF Radios and Cellular Phone
  - (3) Pesticide Safety Binder
- c. **Navigators:**
  - (1) Maps
  - (2) Templates
- d. **Spray Maintenance:**
  - (1) Spill Kit
  - (2) Safety Equipment
  - (3) Loading and Clean-up Equipment and Supplies

## 5. **SPRAY CONFIGURATION: SP-2G**

- a. **Mass:** 2-Module System
- b. **Booms:** Stainless Steel ULV Fuselage Booms
- c. **Nozzles:** size = 8003; 14 open If rate goes to 1 oz/acre then we would need 18 sites open
- d. **Differential GPS:** Wingman Installed
- e. **Aircraft:** 89-9105
- f. **Mission Identifier:** QZNRK9901122

## 6. **SPRAY PARAMETERS: (PARRIS ISLAND MCRD SC)**

- a. **Pesticide:**
  - Dibrom® Concentrate (naled)
  - Organophosphate Insecticide
  - Signal Word: Danger
  - Antidote: Atropine, 2-PAM
  - Flushing Agent: BVA
- b. **Application:** 0.75 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 1,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** 7,500 Acres
- g. **Spray-On Time:** 15:45 Minutes
- h. **Flow Rate:** 2.7 gallons/Minute

## 9. **PARKING PLAN:** NAS Beaufort, SC. Please limit number of vehicles and trips on the flight line

## 10. **AIR TO GROUND RADIO FREQUENCIES:**

Beaufort Tower: 119.05/340.2 MCAS TWR  
 Beaufort Approach 123.7  
 Hilton Head Arpt: 118.975 Tower, 123.0 CTAF (tower open until 0100 hrs Z)  
 Beaufort Co Arpt: 122.7 UNI  
 Spray Ground: 123.4 VHF

## 11. **TRANSPORTATION:** Parris Island will provide 3 vehicles for transportation to and from quarters and for messing. Vehicles will be at Base Operations.

## 12. **SPRAY MONITORING/TESTING:** Ground monitoring by CPMP &Parris Island MCRD Project Coordinator.

## 12. **CONTACTS:**

**910 AW AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S**  
**POST-MISSION REPORT (replaces AFRC Form 55)**  
**PARRIS ISLAND MCRD, SC 2-5 May 2011**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island Marine Corps Recruit Depot, South Carolina
- b. Mission Duration: 2-5 May 2011
- c. Purpose of Application: Biting Midge (*Culicoides* spp.)/Mosquito Control
- d. Application Date/s: 3 May 2011
- e. Time/s of Application (Local): 1810-2025 hrs
- f. Acres Treated: 7,680
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) ,  
Environmental/Spray Coordinator, DSN (b) (6)
- h. Date Spray Map Last Approved: 3 May 2011
- i. Date of Waste Generation Letter: 10 April 2000
- j. Installation In-Briefing: (When/Where/Briefer/s): 3 May; Assistant Chief of Staff,  
Installations and Logistics, Col (b) (6) briefed by Lt Col (b) (6) Lt Col  
(b) (6)
- k. Mission Identifier: QZNRK9901122

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6) (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Maj (b) (6) (b) (6) Lt Col (b) (6) , Lt Col (b) (6)
  - (2) Navigators: Lt Col (b) (6)
  - (3) Flight Engineers: TSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6) TSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) , SSgt (b) (6) , , SSgt (b) (6)  
VanWinkle
  - (2) Crew Chiefs: SSgt (b) (6) , SSgt (b) (6)
  - (3) Avionics: MSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6) (b) (6)
- e. **Flying Data:**
  - (1) Spray Sorties/Hours: 1/2.4
  - (2) Ferry Sorties/Hours: 2/4.6

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 45 gal
- e. Gallons Pesticide Applied: 45 gal
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 10 gal/BVA oil
- h. Other Additives Used: None
- i. Application Rate: 0.75 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99108
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 14, oriented straight down
- f. Pressure: 42 p.s.i.
- g. Flow Rate: 2.7 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS (19 Apr):**

- a. Winds (Direction/Speed):
  - (1) Ground: 307°/5-8 Knots
  - (2) Release Altitude: 310-335° /12 Knots
- b. Temperature (Degrees Fahrenheit): 69-72° F
- c. Relative Humidity: 21-35%
- d. Cloud Cover: Partly Cloudy
- e. Source: Ground observations at the MCRD causeway/Aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: visual observation of aircraft course (GPS)
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Technique/s Used: Mosquitoes numbers were determined prior to spraying using light traps. Post-spray monitoring was carried out by Natural Resources personnel.
  - (2) Results: Good results were reported from those working outdoors.

**8. REMARKS:** This was the second application of FY2011 at Parris Island and mosquito and midges were present in moderate numbers. On 3 May, the application was cancelled due to high winds. The application went forward as planned on 4 May when conditions were acceptable for aerial spray operations (Attachment 1). The mission was carried out without incident and the Parris Island Environmental Staff reported good control the following morning. Light trap data is shown in Attachment 2. Since the application was made during the light trap collection period reported for 5 May (4-5 May), surveillance data from 6 May represents the first full collection period following the application. Only two light trap sites had collections on 6 May, and these showed an overall average mosquito reduction of 86%. The next potential application date is 17 May 2011.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## MCRD, PARRIS ISLAND, SC

### 3-6 Oct 2011

**OBJECTIVE/PURPOSE AND BENEFIT:** Control nuisance biting midges and mosquitoes with aerial spray insecticide applications to reduce negative impact of insect bites on outdoor training at Parris Island MCRD SC.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: Maj (b) (6)      Capt (b) (6)      Capt (b) (6)
- (2) Navigators: Capt (b) (6)
- (3) Flight Engineers: (b) (6)      MSgt (b) (6) (b) (6)
- (4) Spray Operators: MSgt (b) (6)      , MSgt (b) (6) (b) (6)      MSgt (b) (6) (b) (6)

##### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6)      , SrA (b) (6)      , SrA (b) (6)      , AIC (b) (6)
- (2) Crew Chiefs: MSgt (b) (6)      SSgt (b) (6)
- (3) Avionics: MSgt (b) (6)

##### c. Entomologist: Maj (b) (6) (b) (6)      (MC), Capt (b) (6)

#### 2. PPR REQUIREMENTS: 276-01

#### 3. PLANNED SEQUENCE OF EVENTS: (All times local) Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated through the mission commander.

##### 3 OCT (Monday)

1500: Show  
1700: Depart KYNG  
1900: Land KNBC  
2000: Safety Brief

##### 4 OCT (Tuesday)

TBD Installation Brief  
1400: Show  
1430: WX Decision and Load Chemical  
1600: Depart KNBC \*\*\* (1hr training flight prior to actual spray)  
1900: Land KNBC  
Sunset: 1904

##### 5 OCT (Wednesday) WX Backup or Training

1400: Show (Earlier if Training)  
1430: WX Decision and Load Chemical  
1600: Depart KNBC \*\*\* (1hr training flight prior to actual spray)  
1900: Land KNBC  
Sunset: 1903

##### 6 OCT (Thursday) \*\*Departure time may slip depending upon Wednesday evening completion time.

1000: Show  
1200: Depart KNBC  
1400: Land KYNG

#### 4. ITEMS TO TAKE/NOTES:

##### a. Mission Commander:

- (1) Mission Commander Cell Phone
- (2) Friendly Force Tracker

- b. **Entomologist:**
  - (1) Wind Gauge & Compass
  - (2) VHF Radios and Cellular Phone
  - (3) Pesticide Safety Binder
- c. **Navigators:**
  - (1) Maps
  - (2) Templates
- d. **Spray Maintenance:**
  - (1) Spill Kit
  - (2) Safety Equipment
  - (3) Loading and Clean-up Equipment and Supplies

## 5. **SPRAY CONFIGURATION: SP-2G**

- a. **Mass:** 2-Module System
- b. **Booms:** Stainless Steel ULV Fuselage Booms
- c. **Nozzles:** size = 8003: 14 open If rate goes to 1oz/acre then we will need 18 sites open
- d. **Differential GPS:** Wingman Installed
- e. **Aircraft:** 89-9106
- f. **Mission Identifier:** QZNRK9901276

## 6. **SPRAY PARAMETERS: (PARRIS ISLAND MCRD SC)**

- a. **Pesticide:**
  - Dibrom® Concentrate (naled)
  - Organophosphate Insecticide
  - Signal Word: Danger
  - Antidote: Atropine, 2-PAM
  - Flushing Agent: BVA
- b. **Application:** 0.75 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 1,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** 7,500 Acres
- g. **Spray-On Time:** 15:45 Minutes
- h. **Flow Rate:** 2.7 gallons/Minute

## 9. **PARKING PLAN:** NAS Beaufort, SC. Please limit number of vehicles and trips on the flight line

## 10. **AIR TO GROUND RADIO FREQUENCIES:**

Beaufort Tower:	119.05/340.2 MCAS TWR
Beaufort Approach	123.7
Hilton Head Arpt:	118.975 Tower, 123.0 CTAF (tower open until 0100 hrs Z)
Beaufort Co Arpt:	122.7 UNI
Spray Ground:	123.4

## 11. **TRANSPORTATION:** Parris Island will provide 3 vehicles for transportation to and from quarters and for messing. Vehicles will be at Base Operations.

## 12. **SPRAY MONITORING/TESTING:** Ground monitoring by CPMP &Parris Island MCRD Project Coordinator.

## 12. **CONTACTS:**

20 January 2010

MEMORANDUM FOR 757 AS/DO

FROM: 757 AS/DOS

**SUBJECT:** Report on testing of 300' above ground level release height for mosquito sprays and subsequent effective swath width using droplet analysis during Test and Training Mission at Avon Park AF Range, Florida 6-10 December 10.

**1. Purpose:** Determine swath characteristics (i.e. droplet drift, swath offsets, average droplet size at various distances downwind) of BVA oil ( a common pesticide carrier) dispersed at altitudes of 300' AGL by the C-130 aerial spray platform. In these tests, a fluorescent dye was added to distinguish material sprayed from the aircraft with microscopic drops naturally occurring in the environment.

**2. Participants:**

**Aircrew:**

1. Pilots: Maj (b) (6) (b) (6) Capt (b) (6) , Capt (b) (6)
2. Navigators: Maj (b) (6)
3. Flight Engineers: MSGT (b) (6)
4. Spray Operators: MSGT (b) (6) , MSGT (b) (6)
5. LZ Supervisor: LTC (b) (6)

**Maintenance:**

1. Spray Maintenance: TSgt (b) (6) , MSgt (b) (6) , SSGT (b) (6)  
(b) (6) (b) (6)
2. Avionics: SrA (b) (6)
3. Crew Chiefs: SSGT (b) (6) , SSGT (b) (6)

**Entomologists:**

1. Maj (b) (6) (b) (6) LtCol (b) (6) , Capt (b) (6) (entomology technical support)

**3. Spray Configuration:**

Mass-SP2G  
Aircraft Number: 99104  
Mission Identifier: QZNRKA9901340

**4. Spray Parameters:**

Booms—Fuselage only.  
Nozzles—8005 TeeJet.  
Number of Nozzles— 7 per side (8005)  
Airspeed—200 knots ground speed.  
Altitude—300' AGL.

Wind— looking for 90 degree crosswind component.

### 5. Aerial Spray Flight Data:

a. 6 Dec 10: Ferry	KYNG-KAGR 1820-2115Z	Flight Hours: 2.9
b. 7 Dec 10: Training Sortie	KAGR-KAGR1448-1651Z	Flight Hours: 2.1
c. 8 Dec 10: Spray Sortie	KAGR-KAGR1415-1705Z	Flight Hours: 2.8
d. 9 Dec 10: Spray Sortie	KAGR-KAGR1435-1635Z	Flight Hours: 2.0
e. 10 Dec 10: Ferry	KAGR-KYNG1335-1702Z	Flight Hours: 3.5

### 6. Methods & Results:

Ten collection stations were outfitted with spinning impingers (glass microscope slides) at 0.25 mile intervals for the first mile, followed by 0.5 mile intervals for the remaining 4.5 mile sampling line along Van Eegan Road beginning where it intersects with Kissimmee Road (see figure 1). Twenty 8005 flat fan nozzles (7 per side) on fuselage booms were used along with a flow rate of approximately 7.2 gallons per minute at 50 psi of BVA oil (equivalent to 1.0 oz/acre). Aircraft passes were made on a course perpendicular to the collection stations, with each pass totaling 60 seconds of spray-on time. Two spray passes were conducted for each test. After the last pass was completed and after giving time for the spray cloud to settle, the spinning slides were collected and viewed under a fluorescent compound microscope. One hundred drops (if available) were counted for each sampling station. Drops were measured and graphed by station for volume mean diameter (VMD), numerical median diameter (NMD), and drop density (number of drops per cm<sup>2</sup>) for each station. All aircraft traffic at application altitude was confined to Kissimmee Road. Sprays avoided the OQ range per our agreement with US Fish & Wildlife. Pilot training was accomplished on all spray flights.

7 December: No testing was carried out as winds were unacceptably high and from an adverse direction (45 degrees crosswind component).

8 December: A test was conducted along Van Eegan. Winds were ideal averaging approximately 3.9 knots (Table 1) approximately parallel to the sampling line. Figure 1 shows drop characteristics at each sampling station along Van Eegan road. Drop density was, as expected, greatest at the station approximately 0.25 miles from the release point at 20 drops/sq. centimeter and decreased to approximately 5 drops/ sq centimeter at 2.0 miles from the release point. No drops were collected at any sampling stations past this point. Droplet size (volume mean diameter) ranged from approximately 43 microns at a station 0.5 miles from the release point, decreasing to approximately 27 microns at the station located 2.0 miles from the release point. It should be noted that a majority of the droplets were in the 7-22 micron size class, however a relatively large amount of the spray volume was represented by smaller numbers of large droplets, skewing the VMD to a higher size class. Temperatures were relatively low (average 50 degrees F), so droplet evaporation was probably not a significant factor.

9 December: On this date winds were again relatively light and predominately out of the north prior and during oil application (3-5 knots @ 340°-016°). Two passes were made by the aircraft from east to west along Kissimmee Rd and the collection transect was set up as before perpendicular to the aircraft path, again along Van Eegan Rd. During the actual application, the winds were recorded on the ground at approximately 3.6 knots,

almost directly out of the north. Droplet characteristics are graphed in figure 2. The highest droplet density (approximately 29 drops/sq. centimeter) was seen at 0.5 mile from the release site (station 1). Droplet densities decreased fairly steadily to approximately 3 drops/sq. centimeter and the station 2.0 miles from the release point. As in the previous test, no droplets were recovered from any station further down range. Droplet size was similar to the first test. Volume mean diameter of slightly over 50 microns was seen at the station 0.25 miles from the release point, and decreased to approximately 27 microns at the station 2.0 miles from the release point. Again the majority of the droplets were in the 7-22 micron size class, with larger drops skewing the VMD's upward. Temperature during this test was relatively low (mid 50's), so as before droplet evaporation was probably not a factor in the data collection and analysis.

**7. Conclusions:** These tests can be considered replications as the data appear remarkably consistent for similar testing conditions at a 300 foot AGL release height. These data seem to indicate an approximately 1.75 nominal swath of recoverable droplets when wind speeds are generally less than 5.0 knots. The data also suggest an offset of approximately 0.25 miles under the aforementioned conditions. In summary, it appears the aerosol cloud is "controllable" when utilizing a release height of 300 feet. However, what is missing from this series of tests is a bioassay which might correlate mosquito kill (i.e. effectiveness) with the droplet characteristics reported here. Thus, while we might be fairly confident of the nominal swath width of the aerosol cloud, we do not yet know the effective swath width under similar conditions.

**8. Recommendations:** Conduct a similar series of tests using an active ingredient (Dibrom or similar) using mosquito bioassays as well as droplet analysis equipment. Also recommend repeating these tests at higher altitude as additional support for proof of concept in NVG night pesticide applications.

**9. Acknowledgements:** Many thanks to Capt (b) (6) SSgt (b) (6) , TSgt (b) (6) and MSgt (b) (6) for assistance in these field trials.

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND (AFRC)**

15 Dec 10

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray Training Avon Park, FL

1. One C-130 aerial spray equipped aircraft will be available 7-11 Mar 11 to proceed from Youngstown ARS, OH and stage at MacDill Aux Field, FL. The mission purpose is to conduct winter aerial spray semi-annual currency and proficiency training over Avon Park Bombing Range, FL and coastal waters. Additionally, 757AS entomologists will be conducting ground collection and analysis of ULV real swath width data for determining the control of aerial spray materials from 100' AGL and higher altitude applications.

2. Concept of Operations:

a. 24 January (Monday)

1000 Show KYNG  
1200 Depart KYNG  
1500 Land KAGR

b. 25-27 January (Tuesday-Thursday) Range: 0900-1300

0700 Show KAGR  
0900 Depart KAGR  
1300 Land KAGR

c. 28 January (Friday)

0800 Show KAGR  
1000 Depart KAGR  
1300 Land KYNG

3. Spray Configuration:

- a. MASS – SP2G
- b. MI: QZNRK9901024
- c. Parameters –100' AGL and above
- d. Chemical – BVA Oil to analyze swath width and droplet spectrum on slides

4. Maj (b) (6) (b) (6) will serve as Mission Commander.

5. Support required at Avon Park Bombing Range and LZ has been arranged.

(b) (6) , Capt, USAFR  
757<sup>th</sup> Aerial Spray

# AERIAL SPRAY OPERATIONAL SCHEDULE

AVON PARK, FL

7-11 March 11

**PURPOSE/OBJECTIVE/BENEFIT:** Flight testing of effective swath width at varying altitudes. Test will be conducted with BVA oil. Testing will monitor drop activity via slide readings.

## 1. 910 AW PARTICIPANTS:

### a. Aircrew:

1. Pilots: LTC (b) (6) (LZSO) (in place), LTC (b) (6), Maj (b) (6) (b) (6), Capt (b) (6)  
Capt (b) (6)
2. Navigators: LTC (b) (6)
3. Flight Engineers: SMSgt (b) (6)
4. Spray Operators: SMSgt (b) (6), MSgt (b) (6), MSgt (b) (6), SSgt (b) (6),  
SSgt Brent Bate

### b. Maintenance:

1. Spray Maintenance: TSgt (b) (6), TSgt (b) (6), SSgt (b) (6) (Lead)
2. Avionics: TSgt (b) (6)
3. Crew Chiefs: TSgt (b) (6), TSgt (b) (6)

### c. Entomologist/Ground Support: LTC (b) (6) (b) (6), Maj (b) (6) (b) (6)

## 2. SCHEDULE: (All times Local) All times and sequence of events are subject to change depending upon the needs of the testing and training.

### a. 24 January (Monday) (23 STS has the field until 1400 for airdrops)

1000 Show KYNG  
1200 Depart KYNG  
1500 Land KAGR

### b. 25-27 January (Tuesday-Thursday) Range: 0900-1300 except for Tuesday which is 0900-1200

0700 Show KAGR  
0900 Depart KAGR  
1300 Land KAGR

### c. 28 January (Friday) (23 STS has the airfield at 1130 for airdrops)

0800 Show KAGR  
1000 Depart KAGR  
1300 Land KYNG

## 3. ITEMS TO TAKE:

### a. Navigator: Maps with "No-Spray" Areas Marked

## 4. AIR TO GROUND FREQUENCIES:

- a. Spray: Primary 123.45, Secondary 122.9
- b. Patrick: TWR 133.75; GND 124.35; CMD POST 311.0; PTD 372.2
- c. Avon Park: TWR 292.2 (p), 126.15, 276.6 (s range) Hrs 0700-2300 M-F, S-S per flying schedule
- d. MacDill: TWR 123.7; GND 118.575; ATIS 133.825; CMD POST 311.0; PTD 372.2

## 5. SPRAY CONFIGURATION:

- a. MASS – SP2G
- b. Aircraft Number: 89-9103
- c. Nozzle Tips/Orientation: Fourteen 8005 nozzles -- straight down
- d. Mission Identifier: QZNRK9901024

## 6. MISSION PROTOCOLS:

- a. Altitude: up to 500' AGL flight effective swath characteristic testing/evaluation
- b. Ground Speed: 200 KNOTS
- c. Pesticide: None, BVA Oil
- d. Application Rate: 1.0 oz/acre
- e. Flow Rate: 7.2 Gallons/Minute
- f. Acreage: Configuration for testing only.
- g. Swath Width: As required
- h. \*\*\*See last page for details on mission protocols\*\*\*

## December 6-10 2010 Avon Park 500ft release Mission Protocols

**Purpose:** To determine the effectiveness and swath characterization of a 500' release of simulated adulticide using droplet analysis. These tests will be a continuation of tests conducted in early 2006 at Avon Park, FL to determine the proper methods for potential night spray operations.

### Proposed methods:

15 Sampling stations will be placed along a 5 mile transect. Sampling stations will be located approximately  $\frac{1}{4}$  mile apart for the first 5 stations, and  $\frac{1}{2}$  mile apart for the remainder. Each sampling station will be composed of a slide spinner mounted on a wood dowel pole, equipped with 2 teflon slides.

Two trials will be conducted each consisting of a single pass application dispensed at a rate of 1.0 ounces per acre (based on a 2000 foot swath). This translates into a flow rate of 7.2 gallons per minute. The sampling transect will be positioned parallel to the prevailing wind and the flight path of the aircraft will be perpendicular to the transect. Depending on prevailing wind velocity, the flight path (offset) of the aircraft will be from 1000 to 2000 feet upwind of the first sampling station.

TeeJet nozzles (8005) will be used for both trials. In both tests, fluorescent dye will be added to the spray tanks (0.25% Uvitex OB) to facilitate droplet counting and sizing using UV microscopy. Spray will be turned on 30 seconds prior to coming abeam of the sampling line and will be turned off 30 seconds after coming abeam of the sampling line. 30 minutes after each application, slides will be collected for analysis. Spray droplets will be counted and sized with a UV microscope equipped with a sizing reticle. 100 drops (if available) will be counted on each slide and the total area counted will be calculated.

### Materials/Resources required:

30 gallons BVA oil

Readily accessible, fairly open 5 mile long transects (N-S and E-W)

15 spinners/30 teflon slides/10 wooden dowels

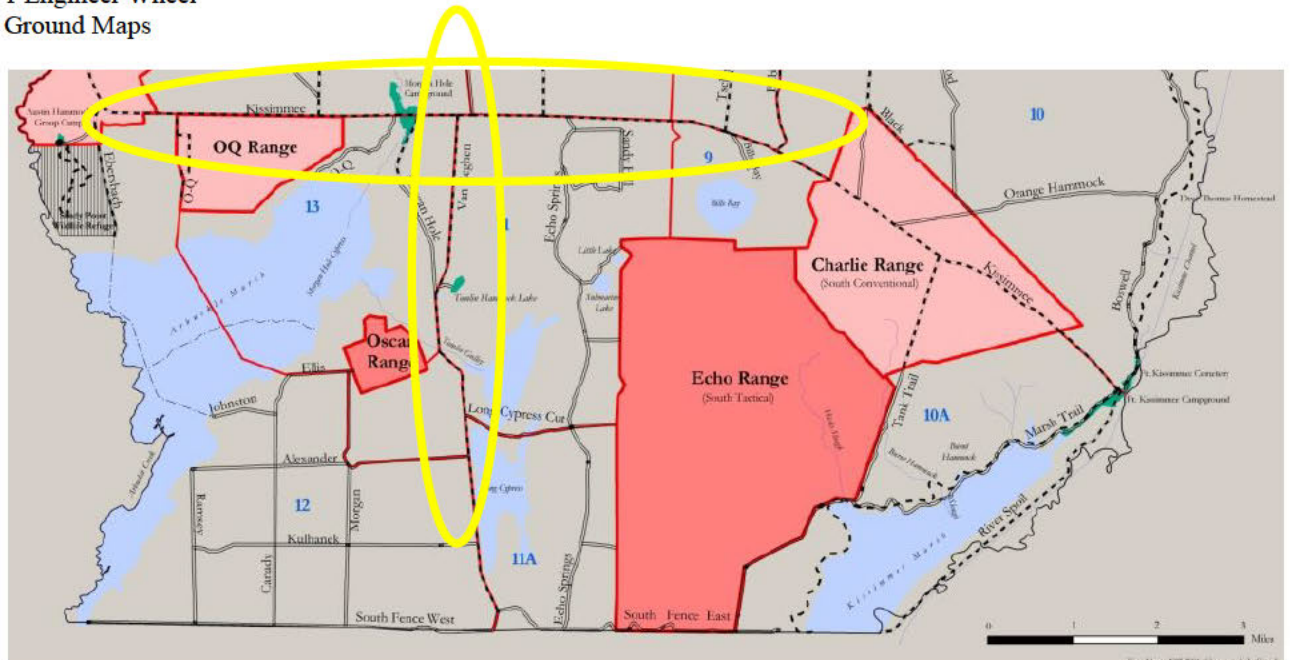

UV microscope

1 Signal Mirror

1 Spot Light

1 Engineer Wheel

Ground Maps

**910 AW AERIAL SPRAY UNIT -- POST-MISSION REPORT  
GRAND FORKS AFB & ARMY CORPS OF ENGINEERS  
PROPERTY NEAR WILLISTON ADULT MOSQUITO  
CONTROL 8-11 Aug 2011**

**1. MISSION BASICS:**

- a. Installation Sprayed: Grand Forks AFB & Williston ACE, North Dakota
- b. Mission Duration: 9-11 August 2011
- c. Purpose of Application: Control adult nuisance and vector mosquitoes (and gnats)
- d. Application Dates 9 & 10 Aug 2011
- e. Time of Application (Local): 1938-2048 hrs (9 Aug), 1925-2125 (10 Aug)
- f. Acres Treated: 12,248 (9 Aug); 33,536 (10 Aug); 45,784 total
- g. Project Coordinator/s (Name/Rank, Title, Phone #): TSgt(b) (6) NCOIC Pest Management Shop, DSN (b) (6)(b) (6) ACE
- h. Date Spray Map Last Approved: 10 Aug 2011
- i. Date of Waste Generation Letter: 22 June 2001
- j. Installation In-Briefing: (When/Where/Briefer/s): GFAFB CE Conference Room, LtCol (b) (6) Lt Col (b) (6)(b) (6) to Maj (b) (6) 319 CES/CC

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Entomologist (Category 11): Lt Col (b) (6)(b) (6) (safety briefer), Capt(b) (6) (b) (6)
- c. Aircrew:
  - 1) Pilots: Lt Col (b) (6), Maj (b) (6) Capt(b) (6)
  - 2) Navigators: Lt Col(b) (6), Lt Col(b) (6)
  - 3) Flight Engineer: TSgt(b) (6)
  - 4) Spray Operators: MSgt(b) (6) MSgt(b) (6) SSgt(b) (6) SSgt(b) (6)
- b. Maintenance:
  - 1) Spray Maintenance: (b) (6) TSgt (b) (6) TSgt (b) (6) SSgt(b) (6)
  - Crew Chief(s): MSgt (b) (6) TSgt (b) (6)
  - 2) Avionics: MSgt(b) (6)

**Flying Data:**

- (1) Spray Sorties/Hours: 2/2.1 (9Aug) + 4.5 (10 Aug); total 6.6
- (2) Ferry Sorties/Hours: 2/6.6
- (3) Mission ID: QZNRK9901220

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 90 gal Trumpet® (9 Aug); 80 gal Zenivex® in 80 gal of BVA (10 Aug)
- d. Gallons Pesticide Applied: 90 gal Trumpet® (9 Aug); 80 gal Zenivex® in 80 gal of BVA (10 Aug)

- e. Gallons and Name of Flush Used: 25 gal water (9 Aug); 15 gal BVA (10 Aug)
- f. Other Additives Used: none
- g. Application Rate: 0.94 oz/acre Trumpet® (9 Aug); 0.31 oz/acre Zenivex

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8005 Flat Fan (9 Aug); TeeJet® 8003 (10 Aug)
- e. Nozzle Orientation & Number Used: 17 straight down (9 Aug); 15 straight down (10 Aug)
- f. Pressure (PSI): 41-52 PSI (9 Aug); 31-38 PSI (10 Aug)
- g. Flow Rate: 7.0 GPM (9 Aug); 4.4 GPM (10 Aug)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 2000-4000' depending on wind speed
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 322-040° @ 4-9 knots (aerial observation); 2-4 knots (ground observation) (9 Aug); 212°@6-14 knots (aerial observation, Watford City), 018-030°@4-12 knots (aerial observation, Williston), 010°@2-4 knots (ground observation, Williston) (10 Aug)
- b. Temperature (Degrees Fahrenheit): 73-66 °F (9 Aug); 69-67°F (10 Aug)
- c. Relative Humidity: 55-80% (9 Aug); 73% (10 Aug)
- d. Cloud Cover: scattered clouds (9 Aug); scattered clouds/showers (10 Aug)
- e. Source: Ground observations and onboard aircraft readings

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 CES pest management conducts adult mosquito trapping to monitor mosquito densities on base. Williston Vector Control uses New Jersey traps to monitor mosquito densities.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito magnet traps
  - (2) Results: GFAFB pest management reported an overall reduction of 74% of all mosquitoes the day after sprays (attachment 1); Williston Vector Control reported near complete control of gnats the day following the application.

**8. (b) (6)** Continued moderate numbers of mosquitoes prompted GFAFB to make the decision to make an aerial spray application. The city of Larimore, ND was also included in this mosquito adulticide application. With an extra day left in the schedule, GFAFB graciously allowed spray operations to continue on 10 Aug to treat the Williston area near the Army Corps of Engineers property located on the western end of North Dakota. Areas treated are shown in attachments 2&3. Post-spray trap count data showed acceptable mosquito reductions (75%) following the application, and unless a night operation is approved, this reduction level may be the normal level against species that fly primarily at night. Many thanks to MSgt (b) (6) and the staff of the GFAFB pest control shop.

MEMORANDUM FOR 757 AS/DO

FROM: 757 AS/DOS

SUBJECT: Swath width characterization, logistics development and range orientation for future Barry Goldwater range/Luke AFB herbicide application mission.

1. Purpose:

2. Participants:

Aircrew:

1. Pilots: LTC (b) (6), MAJ (b) (6), CAPT (b) (6)
2. Navigators: LTC (b) (6)
3. Flight Engineers: TSGT (b) (6)
4. Spray Operators: SMSGT (b) (6), MSGT (b) (6)

Maintenance:

1. Spray Maintenance: TSGT (b) (6), TSGT (b) (6), TSGT (b) (6)
2. Avionics: TSGT (b) (6)
3. Crew Chiefs: TSGT (b) (6), SRA (b) (6)

Entomologists:

1. MAJ (b) (6), LTC (b) (6)

3. Spray Configuration:

Mass-SP2G

Aircraft Number: 99108

Mission Identifier: QZNRKA9901039

4. Spray Parameters:

Booms—Fuselage only.

Nozzles—RainDrop nozzles.

Number of Nozzles—27 total

Airspeed—200 knots ground speed.

Altitude—100' AGL.

Wind—Headwind application.

5. Aerial Spray Flight Data:

- |                            |                      |                   |
|----------------------------|----------------------|-------------------|
| a. 8 Feb 11: Ferry         | KYNG-KLUF 1745-0025Z | Flight Hours: 6.7 |
| b. 9 Feb 11: Spray Sortie  | KLUF-KLUF 1425-1625Z | Flight Hours: 2.0 |
| c. 10 Feb 11: Spray Sortie | KLUF-KLUF 1425-1625Z | Flight Hours: 2.0 |
| d. 11 Feb 11: Ferry        | KLUF-KYNG 1400-1705Z | Flight Hours: 5.1 |

**6. Methods & Results:** Swath characterization tests were conducted at Aux field 6 on the Barry Goldwater range. Aux 6 is an assault landing zone with 3 runways oriented 120 degrees from each other. Twenty-one water sensitive cards were placed in a straight line oriented as much as possible perpendicularly to the prevailing wind. The water sensitive cards were spaced 15 feet apart. The aircraft flew with the wind, flying over the card in the center of the card line dispensing water. Each test consisted of one pass. Following each pass, the water dispensed from the aircraft was allowed to settle, and the water sensitive cards were collected and bagged for future analysis. A total of 4 tests were conducted over 2 consecutive days. Cards were later analyzed using a SwathKit deposition image analyzer. Drop size, deposition rates and optimal lane separation lane separation were computed. Optimal lane separation was determined when coverage at the extreme edges of the swath exceeded a coefficient of variation of 0.20 of the swath mean. This figure is an industry standard when determining swath overlap.

February 9: Two swath characterizations were conducted. Water was applied in a direct headwind. Winds were approximately 4 knots. The temperature at the time of the first application was 52 degrees F. Application rate was 400 Gallons per minute.

February 10: Two Swath characterizations were conducted. Water was applied with an approximately 10 degree crosswind component. Winds were approximately 6 knots. The temperature at the time of the first application was 50 degrees F. Application rate was 400 Gallons per minutes.

**7. Conclusions:** Results from the 4 trials are shown in attachment 1, figures 1-4. The graph on the left shows the deposition characteristics, and the graph on the right indicates the approximate effective swath width. All 4 tests were consistent, and the effective swath width seems to be between 90 and 100 feet wide. At the flow rates shown (400 GPM) a 100 foot nominal swath results in a deposition rate of approximately 8.6 gallons per acre, which is reasonably close to the targeted deposition rate of 10.0 gallons per acre.

**8. Recommendations:** Accept the indicated swath width an application rate for herbicide application operations on the Barry Goldwater Range or retest using wing booms and increased flow rates in an attempt to achieve a wider swath width.

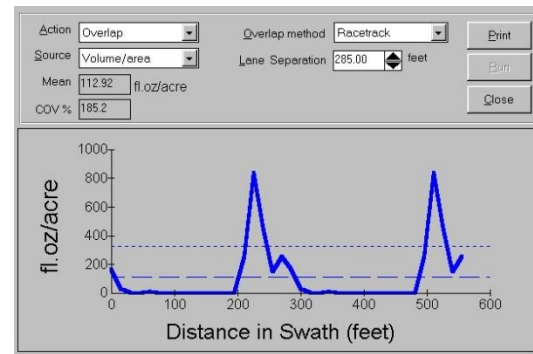

**9. Acknowledgements:** Many thanks to (b) (6) for his invaluable assistance in making this mission possible.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## GRAND FORKS AFB, ND

### 8-12 Aug 2011

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes in order to improve working conditions for members operating at Grand Forks, Grand Forks AFB and Williston, North Dakota.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- 1) Pilots: LTC (b) (6), Maj (b) (6), Capt (b) (6)
- 2) Navigators: LTC (b) (6), LTC (b) (6)
- 3) Flight Engineers: TSgt (b) (6)
- 4) Spray Operators: MSgt (b) (6), MSgt (b) (6) SSgt (b) (6) SSgt (b) (6)
- 5) Mission Commander: LTC (b) (6)

##### b. Maintenance:

- 1) Spray Maintenance: TSgt (b) (6), TSgt (b) (6), TSgt (b) (6), SSgt (b) (6)
- 2) Crew Chief(s): MSgt (b) (6), TSgt (b) (6)
- 3) Avionics: MSgt (b) (6)

##### c. Entomologist: LTC (b) (6) (b) (6) Capt (b) (6) (In Place)

#### 2. SCHEDULE: (All Local Times)

- a. 8 Aug (Monday)  
1300L Show KYNG  
1500L Depart KYNG  
1700L Land KRDR
- b. 9 Aug (Tuesday)

#### 3. ITEMS TO TAKE

- a. **Mission Commander:** Cell Phone, Mission Folder, FFT
- b. **Entomologist:** Cell Phone, Wind Gauge, 2 Compasses, Pest Safety Binder,  
1 VHF Radio, Water Sensitive Cards, Card Holders with  
Index Cards, 2 Spotlights, 1 Measuring wheel, 2 Signal Mirrors,  
Project Notebook, Entomologist's Tool Kit
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables
- e. **Spray Maintenance:** Deployment Kit, Support Equipment, Control®

#### 4. PPR: 08-01-MI

5. **RADIO FREQUENCIES:** Air To Ground Primary VHF 123.45 KRDR Tower 124.9 V; Grand Forks International 118.4 V

6. **CONFIGURATION: SP2G**

a. **System:** 2-Module System/Stainless Steel ULV Fuselage Booms

b. **Nozzle Tips/Orientation:** ULV (adulticide): 8005 (Grand Forks) and 8003 (Williston) Tee Jet oriented straight down

c. **Number:** ULV: 18 8005's total (9 each side) and 16 8003's total (8 each side)

e. **Aircraft:** 89-9105

f. **Mission Identifier:** QZNRK9901220

7. **SPRAY PARAMETERS:**

a. **Adulticide**

(1) **Area to be treated:** 11,518 acres (Grand Forks AFB), 18,346 (Grand Forks) and 877 (Grand Forks Intl) 32,214 (Williston)

(2) **Altitude:** 150' for Adulticide application

(3) **Swath Width.** 2000 feet

(4) **Flow Rate.** 7.26 gallons/minute (Grand Forks) and 4.4 gallons/minute (Williston)

(5) **Application Rate.** 1.0 oz/acre Trumpet (Grand Forks) and .32 oz/acre Zenivex (Williston)

(6) **Ground Speed:** 200 Knots

(7) **Flush:** With water (Trumpet) or BVA (Zenivex), triple rinse, then air purge

8. **SPRAY MIXING AND LOADING:** The amount of Trumpet and Zenivex to load will be determined on site

9. **TRANSPORTATION:** Transportation provided by base (DSN362-3976): One 15 pax van (MX), three 6 pax trucks (MC, OPS), one 1.5 ton truck (spray MX). Vehicles at Base Ops with the exception of Trumpet loaded truck

10. **LODGING:** Hilton Garden 701-775-6000 Directions and non-A's are in the spray folder.

Six full size cars reserved at \$377 each including taxes and fees  
MUO will supply one 15 PAX van for the drop off and pick up support crew  
Confirm #'s are 18921065 (12&13) and 18921116 (22&23)  
MUO Trans will supply a ride to Thrifty for rental pick up give them ETA

## **10. SPRAY CONFIGURATION:**

- a. System:** SP-3G
- b. Nozzle Tips/Orientation:** Raindrop/Straight Back
- c. Number:** Fuselage – 17 nozzles (8 left side: 9 right side)
- d. Booms:** Fuselage
- e. Aircraft:** 90-9107
- f. Profile:** Planned HV Profile

## **11. SPRAY PARAMETERS:**

- a. Altitude:** 100' AGL (we are treating at 46.5 acres/minute)
- b. Swath Width.** 100 feet
- c. Flow Rate.** 326 gal/min
- d. Application Rate.** 7 gal/acre; approximately 3,200 acres to be treated for cheatgrass
- e. Ground Speed:** 200 Knots

## **12. SPRAY MIXING AND LOADING:**

### **a. Composition of Each Gallon:**

- (1) 0.57 ounces of Panoramic SL® (we want 4oz in 7 gallons per acre)
- (2) 1 ounce of Sta-put® or Control Drift Retardant
- (3) 126.4 ounces of water

### **b. First Load (4 Tanks of 450 gallons each + sump of 75 gallons)**

- (1) Fill to 450 gal water/tank using the pump on the water tanker truck. This is done by putting the filler hose into the rear tank with all tanks open to the common sump. Total water in tanks = 1,800 gal.
  - (2) 75 gal/water in sump
  - (3) Total water added = 1,800 gallons
  - (4) Upload 8.03 gal (30.4L)/Panoramic; add 14 gal Sta-put (or Control) while agitating approximately 5-7 min
- Total quantity mix 1822 gallons

## **13. SPRAY MONITORING OR TESTING: Performed by the CPMPs**

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND (AFRC)**

1 Aug 11

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Mountain Home AFB, ID

1. Aerial Spray flight proficiency training will be accomplished at Saylor Creek Bombing Range near Mountain Home AFB, ID. Spray will aid their fire prevention program treating an invasive grass species (Cheat grass) that creates a fire hazard and has overtaken many of the areas on the bombing range. The operation applies herbicides targeting Cheat grass but allowing native fire resistant vegetation (sagebrush) to re-establish and become competitive.

2. Concept of Operations:

- a. 12 September (Monday)
  - 0900 Show KYNG
  - 1100 Spray aircraft depart KYNG
  - 1105 Support aircraft depart KYNG
  - 1430 Spray aircraft land KMUO
  - 1435 Support aircraft land KMUO
  - 1600 Installation briefing
- b. 13-16 September (Tuesday-Friday)
  - Spray aircraft:
  - 0500 Show KMUO
  - 0700 Depart KMUO
  - 0815 Land MUO
  - 0900 Depart KMUO
  - 1015 Land KMUO
- c. 17-18 September (Saturday-Sunday)
  - Static Display for Mountain Home AFB Airshow
- d. 19-22 September (Monday-Thursday)
  - 0500 Show KMUO

0700 Depart MUO  
0815 Land MUO  
0900 Depart KMUO  
1015 Land KMUO

e. 22 September (Thursday) Support aircraft  
0900 Show KYNG  
1100 Depart KYNG  
1430 Land KMUO

f. 23 September (Friday)  
0700 Show KMUO  
0900 Spray aircraft depart KMUO  
0905 Support aircraft depart KMUO  
1630 Spray aircraft land KYNG  
1635 Support aircraft land KYNG

3. Maj (b) (6) (b) (6) will act as Mission Commander.

4. Capt (b) (6) will act as Aircraft Commander.

5. Support required at Mountain Home AFB and Saylor Creek has been completed.

(b) (6), Capt, USAFR  
757AS Aerial Spray

# AERIAL SPRAY OPERATIONAL SCHEDULE

## NSB, KINGS BAY, GA

### 13-15 May 2011

**OBJECTIVE/PURPOSE AND BENEFIT:** Control nuisance biting midges and mosquitoes with aerial spray insecticide applications to reduce negative impact of insect bites on outdoor training at NSB, Kings Bay, GA.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: : Maj (b) (6) (b) (6) LtCol (b) (6) , Maj (b) (6)
- (2) Navigators: IN??, LtCol (b) (6)
- (3) Flight Engineers: Tsgt (b) (6)
- (4) Spray Operators: MSgt (b) (6) (b) (6) , MSgt (b) (6)

##### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6) , TSgt (b) (6) , SrA (b) (6)
- (2) Crew Chiefs: TSgt (b) (6) , SrA (b) (6)
- (3) Avionics: TSgt (b) (6)

##### c. Entomologist: MC Maj (b) (6) (b) (6)

##### d. Mission Commander: Maj (b) (6) (b) (6)

#### 2. PPR REQUIREMENTS: 041501

**3. PLANNED SEQUENCE OF EVENTS:** (All times local) Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated through the mission commander.

##### a. 15 Apr (Friday)

1500 Show KYNG  
1700 Depart KYNG  
1930 Land KNIP

##### b. 16 Apr (Saturday)

1630 Show KNIP  
1800 Depart KNIP  
2000 Land KNIP

##### c. 17 Apr (Sunday)

1630 Show KNIP  
1800 Depart KNIP  
2000 Land KNIP

##### d. 18 Apr (Monday)

1200 Show KNIP  
1400 Depart KNIP  
1630 Land KYNG

#### 4. ITEMS TO TAKE/NOTES:

##### a. Mission Commander:

- (1) Mission Commander Cell Phone use (b) (6)
- (2) Blue Force Tracker

##### b. Entomologist:

- (1) Wind Gauge & Compass
- (2) VHF Radios and Cellular Phone
- (3) Pesticide Safety Binder

##### c. Navigators:

- (1) Maps
- (2) Templates

##### d. Sprav Maintenance:

- (1) Spill Kit
- (2) Safety Equipment
- (3) Loading and Clean-up Equipment and Supplies

#### 5. SPRAY CONFIGURATION: SP-2G

- a. Mass: 2-Module System
- b. Booms: Stainless Steel ULV Fuselage Booms
- c. Nozzles: size = 8005; 18 open for 7.3 flow rate; oriented straight down.
- d. Differential GPS: Wingman Installed
- e. Aircraft: 89-9106
- f. Mission Identifier: QZNRK9902133

#### 6. Adult mosquito control spray Parameters: (Kings Bay)

- a. Pesticide:
  - Dibromt® (AI naled)
  - Organophosphate Insecticide
  - Signal Word: Danger
  - Antidote: Atropine, 2-PAM
  - Flushing Agent: Water
- b. Application: 1.0 oz/acre
- c. Spray Altitude: 150 Feet
- d. Swath Width: 2,000 Feet
- e. Ground Speed: 200 Knots (338 Feet/Second)
- f. Acreage: 15,000 Acres
- g. Spray-On Time: 16 minutes
- h. Flow Rate: 7.3 gallons/minute

#### 7. AMOUNT OF SPRAY MATERIAL AVAILABLE: Plan on loading 4 drums of Trumpet for Kings Bay.

#### 8. PARKING PLAN: NAS Jacksonville, FL

#### 9. AIR TO GROUND RADIO FREQUENCIES:

Navy Jax Ops-	310.2	Tower	120.0/340.2
Ground	128.6/336.4	Spray Ground:	123.45 VHF

##### c. Entomologist: Maj (b) (6) (b) (6) (MC), Capt (b) (6)

#### 2. PPR REQUIREMENTS: 136-01

#### 3. PLANNED SEQUENCE OF EVENTS: (All times local) Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated through the mission commander.

##### 16 May (Monday)

1300: Show  
1500: Depart KYNG  
1700: Land KNBC  
1800: Safety Brief

##### 17 May (Tuesday)

TBD Installation Brief  
1600: Show  
1630: WX Decision and Load Chemical  
1800: Depart KNBC  
2000: Land KNBC  
Sunset: 2015

##### 18 May (Wednesday) WX Backup or Training

1600: Show (Earlier if Training)  
1630: WX Decision and Load Chemical  
1800: Depart KNBC  
2000: Land KNBC  
Sunset: 2016

##### 19 May (Thursday) **\*\*Departure time may slip depending upon Wednesday evening completion time.**

1000: Show  
1200: Depart KNBC  
1400: Land KYNG

#### 4. ITEMS TO TAKE/NOTES:

##### a. Mission Commander:

- (1) Mission Commander Cell Phone
- (2) Friendly Force Tracker

- b. **Entomologist:**
  - (1) Wind Gauge & Compass
  - (2) VHF Radios and Cellular Phone
  - (3) Pesticide Safety Binder
- c. **Navigators:**
  - (1) Maps
  - (2) Templates
- d. **Spray Maintenance:**
  - (1) Spill Kit
  - (2) Safety Equipment
  - (3) Loading and Clean-up Equipment and Supplies

**5. SPRAY CONFIGURATION: SP-2G**

- a. **Mass:** 2-Module System
- b. **Booms:** Stainless Steel ULV Fuselage Booms
- c. **Nozzles:** size = 8003; 14 open If rate goes to 1oz/acre then we will need 18 sites open
- d. **Differential GPS:** Wingman Installed
- e. **Aircraft:** 89-9106
- f. **Mission Identifier:** QZNRK9901136

**6. SPRAY PARAMETERS: (PARRIS ISLAND MCRD SC)**

- a. **Pesticide:**
  - Dibrom® Concentrate (naled)
  - Organophosphate Insecticide
  - Signal Word: Danger
  - Antidote: Atropine, 2-PAM
  - Flushing Agent: BVA
- b. **Application:** 0.75 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 1,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** 7,500 Acres
- g. **Spray-On Time:** 15:45 Minutes
- h. **Flow Rate:** 2.7 gallons/Minute

**9. PARKING PLAN:** NAS Beaufort, SC. Please limit number of vehicles and trips on the flight line

**10. AIR TO GROUND RADIO FREQUENCIES:**

Beaufort Tower:	119.05/340.2 MCAS TWR
Beaufort Approach	123.7
Hilton Head Arpt:	118.975 Tower, 123.0 CTAF (tower open until 0100 hrs Z)
Beaufort Co Arpt:	122.7 UNI
Spray Ground:	123.4

**11. TRANSPORTATION:** Parris Island will provide 3 vehicles for transportation to and from quarters and for messing. Vehicles will be at Base Operations.

**12. SPRAY MONITORING/TESTING:** Ground monitoring by CPMP &Parris Island MCRD Project Coordinator.

**12. CONTACTS:**

**910 AW AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S**  
**POST-MISSION REPORT (replaces AFRC Form 55)**  
**PARRIS ISLAND MCRD, SC 18-21 October 2010**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island Marine Corps Recruit Depot, South Carolina
- b. Mission Duration: 18-21 Oct 2010
- c. Purpose of Application: Biting midge control; testing effects of the mosquito adulticide Duet
- d. Application Date: 19 October 2010
- e. Time/s of Application (Local): 1735-1920 hrs
- f. Acres Treated: 8,258
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6)  
Environmental/Spray Coordinator, DSN (b) (6)
- h. Date Spray Map Last Approved: 19 October 2010
- i. Date of Waste Generation Letter: 10 April 2000
- j. Installation In-Briefing: (When/Where/Briefer/s): 19 Oct; Deputy AC/S (b) (6) ; briefed by Lt Col (b) (6) Lt Col (b) (6) and Maj (b) (6)
- k. Mission Identifier: QZNRK9901291

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6) (b) (6)
- b. Aircrew:
  - (1) Pilots: Maj (b) (6) , Maj (b) (6) , Capt (b) (6)
  - (2) Navigators: Lt Col (b) (6) , Lt Col (b) (6)
  - (3) Flight Engineers: SMSgt (b) (6) , MSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) (b) (6) SMSgt (b) (6) , MSgt (b) (6)
- c. Maintenance:
  - (1) Spray Maintenance: MSgt (b) (6) , TSgt (b) (6) MSgt (b) (6) , Sra (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) , Sra (b) (6)
  - (3) Avionics: SSgt (b) (6)
- d. Entomologists: Lt Col (b) (6) (b) (6) (b) (6) and (b) (6) , Clarke Mosquito Control
- f. Flying Data:
  - (1) Spray Sorties/Hours: 1/1.7 + 1 training sortie 1.0 hrs
  - (2) Ferry Sorties/Hours: 2/4.3

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Duet®
- b. EPA Registration Number: 1021-1795-8329
- c. Formulation Sprayed: Prallithrin (1%); Sumithrin (5%); Piperonyl Butoxide (5%)
- d. Gallons Pesticide Loaded: 80 gal
- e. Gallons Pesticide Applied: 80 gal
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 10 gal/BVA oil
- h. Other Additives Used: None
- i. Application Rate: 1.24 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99107
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 15 oriented straight down
- f. Pressure: 46 p.s.i.
- g. Flow Rate: 4.5 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 180-220°/3.0-5.0 knots
  - (2) Release Altitude: 176-243/9-17 knots
- b. Temperature (Degrees Fahrenheit): 77-73° F
- c. Relative Humidity: 40-65%
- d. Cloud Cover: mostly clear
- e. Source: Ground observations at the MCRD Golf Course and on the aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: glass microscope slides; caged mosquitoes; landing rates
  - (2) Results: coverage throughout spray area
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito and midge numbers were determined prior to and after spraying using CO<sub>2</sub>-baited traps and landing rates.
  - (2) Results: Over all reductions did not reach threshold that would be considered successful for pest control at the MCRD.

**8. REMARKS:** This was the third replication aimed at evaluating Duet at Parris Island with the primary purpose to evaluate how well this mosquito adulticide performs against biting midges. This insecticide boasts a low mammalian toxicity and contains an insect irritant that, in theory, will excite biting flies to take to the wing where contact with the active ingredient component is more likely. Once again, considerable effort was input into this trial from the Marine Corps, Air Force, Beaufort County Mosquito Control, and Clarke (the manufacturer) in regard to pre- and post-analysis of the spray. Researchers arrived prior to the spray aircraft and sampled locations on the Depot as well as a control site off the Depot that would not be affected by the application. The flight of the spray aircraft is shown in Attachment 1. Mosquitoes and midge numbers were closely monitored and identified to species. During the testing period, biting midges were present only in low to medium densities, while mosquito numbers were very high. Field-collected caged mosquitoes were favorably impacted by the sprays at two locations with an average mortality of 95% and poorly impacted at 2 locations (30% mortality) (Attachment 2). Overall, wild mosquitoes and biting midge numbers were not effectively reduced following the sprays, relative to expected reduction thresholds on the MCRD (Attachment 3).

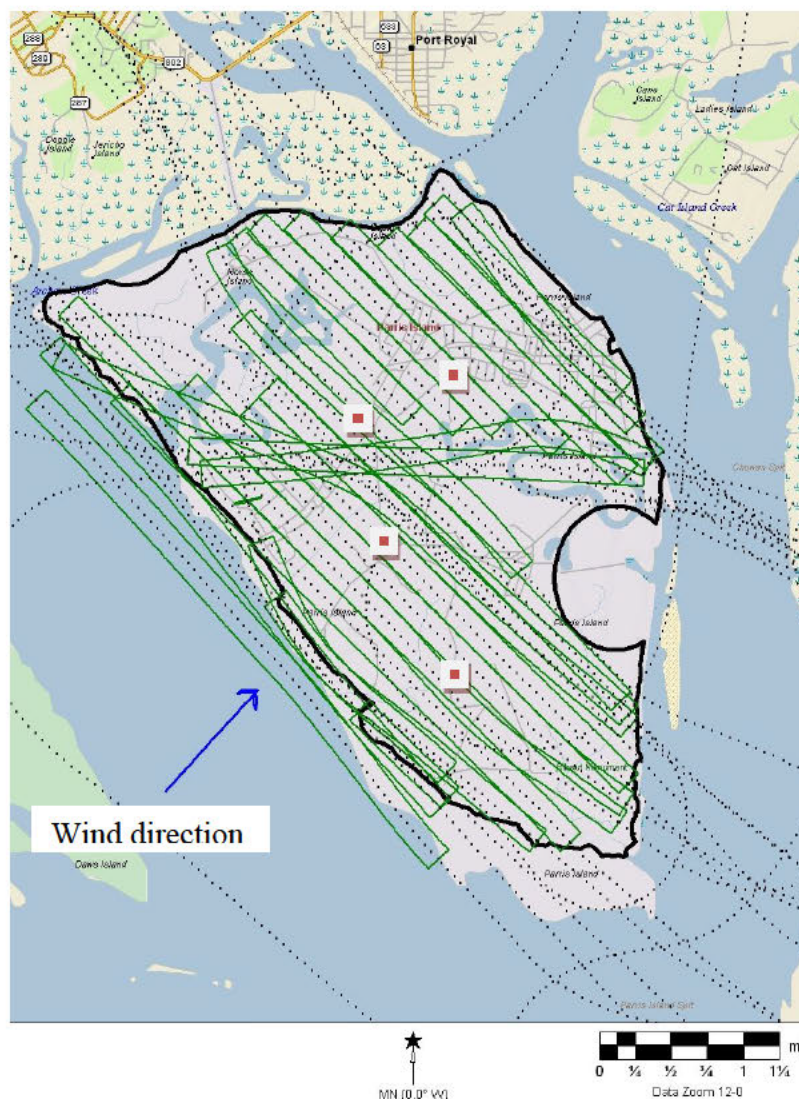

A follow up on the previous Duet application and potentially contaminated drum from the previous spray (see PMP report 12-15 April): Manufacturer did not find any sandy material and did not note any problem with the material when tested.

The next opportunity for Parris Island MCRD to receive military aerial sprays is scheduled for 25-28 April 2010. No further Duet tests are scheduled. A very special thanks to Beaufort Co. Mosquito Control for use of their excellent facilities and to (b) (6) for tabulating the data and determining the droplet densities.

//signed//

(b) (6) (b) (6) Lt Col, PhD, USAFR  
DoD CERTIFIED PEST MANAGEMENT PROFESSIONAL

Attachment 1. Image showing track of the spray aircraft for 19 October 2010. Black outlines are block edges. Partial circles represent bald eagle nesting areas that were avoided as no spray/no fly areas. Green rectangles represent the spray swath, black dots are the path of the aircraft. Small red squares were trapping locations for midges and mosquitoes; landing rates were made at these locations as well. The blue arrow shows the average wind direction.

Attachment 2. Mortality of caged mosquitoes serving as bioassays and droplet densities collected on glass microscope slides.

# **AERIAL SPRAY OPERATIONAL SCHEDULE**

## **PARRIS ISLAND MCRD, SC**

### **18-21 OCT 10**

**OBJECTIVE/PURPOSE AND BENEFIT:** Control nuisance biting midges and mosquitoes with aerial spray insecticide applications to reduce negative impact of insect bites on outdoor training at Parris Island MCRD SC.

#### **1. 910 AW PARTICIPANTS:**

##### **a. Aircrew:**

- (1) Pilots: Maj(b) (6) , Maj(b) (6) , Capt(b) (6)
- (2) Navigators: Lt Col (b) (6) , Lt Col (b) (6)
- (3) Flight Engineers: CMSGT (b) (6) , SMSGT (b) (6)
- (4) Spray Operators: SMSGT (b) (6) (b) (6) SMSGT (b) (6) , MSGT (b) (6)

##### **b. Maintenance:**

- (1) Spray Maintenance: MSGT (b) (6) , TSgt (b) (6) , MSGT (b) (6) , SRA (b) (6)
- (2) Crew Chiefs: TSgt (b) (6) , SRA (b) (6)
- (3) Avionics: SSGT (b) (6)

##### **c. Pest Management Professionals/Entomologist:** Maj (b) (6) (b) (6) (MC)

##### **d. Public Affairs:** N/A

#### **2. PPR REQUIREMENTS: 291-01**

#### **3. PLANNED SEQUENCE OF EVENTS:** (All times local) Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated through the mission commander.

##### **18 OCT (Monday): Deploy to KNBC**

1500: Show Time  
1700: Takeoff KYNG  
1900: Land KNBC  
1915: Safety Briefing/vehicle assignments

##### **19 OCT (Tuesday): Adulticide Spray**

TBD Installation Brief  
1530: Show Time/WX Decision  
1530: Load Chemical  
1700: Takeoff KNBC  
1845: Sunset

##### **20 OCT (Wednesday): WX Backup**

1530: Show Time/WX Decision  
1530: Load Chemical  
1700: Takeoff KNBC  
1843: Sunset

##### **21 OCT (Thursday): Return Homestation**

1000: Show Time  
1200 Takeoff KNBC  
1400 Land YNG

#### **4. ITEMS TO TAKE/NOTES:**

##### **a. Mission Commander:**

- (1) Mission Commander Cell Phone
- (2) Blue Force Tracker

##### **b. Entomologist/CPMP:**

- (1) New and Improved Wind Gauge & Compass
- (2) VHF Radios and Cellular Phone
- (3) Pesticide Safety Binder

**c. Navigators:**

- (1) Maps
- (2) Templates

**d. Spray Maintenance:**

- (1) Spill Kit
- (2) Safety Equipment
- (3) Loading and Clean-up Equipment and Supplies

**5. SPRAY CONFIGURATION: SP-2G**

- a. **Mass:** 2-Module System (PI)
- b. **Booms:** Stainless Steel ULV Fuselage Booms
- c. **Nozzles:** 15 open for 8003's oriented straight down
- d. **Differential GPS:** Installed
- e. **Aircraft:** 89-910
- f. **Mission Identifier:** QZNRK9901291

**6. SPRAY PARAMETERS: (PARRIS ISLAND MCRD SC)**

- a. **Pesticide:**
  - Duet -- Prallithrin (1%); Sumithrin (5%); Piperonyl Butoxide (5%)
  - Signal Word: Caution
  - Flushing Agent: BVA oil
- b. **Application:** 1.24 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 1,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** 7,500 Acres
- g. **Spray-On Time:** 16 Minutes
- h. **Flow Rate:** 4.5 gallons/Minute

**7. AMOUNT OF SPRAY MATERIAL AVAILABLE:** Plan on loading 2.5 drums of Duet

**8. PARKING PLAN:** Beaufort MCAS Ramp

**9. AIR TO GROUND RADIO FREQUENCIES:**

Air Traffic Control: 119.05 Beaufort MCAS TWR  
 Hilton Head Arpt: 118.8 CTAF  
 Beaufort Co Arpt: 122.7 UNI  
**Spray Ground: Primary 123.45 Secondary 130.30**

**10. TRANSPORTATION:** Parris Island will provide two vans and staff car for transportation to and from quarters and for messing. (1 Van for MX, 1 Van for Aircrew E's, Staff Car for O's)

**11. SPRAY MONITORING/TESTING:** This is an evaluation test of Duet for control of mosquitoes and biting midges. Please see Entomologist for application parameters. There will be caged mosquitoes and droplet collection devices used. (b) (6) and (b) (6) of Clarke Mosquito Control will be participating.

**12. CONTACTS:**

##### b. Entomologist:

- (1) Wind Gauge & Compass
- (2) VHF Radios and Cellular Phone
- (3) Pesticide Safety Binder

##### c. Navigators:

- (1) Maps
- (2) Templates

##### d. Spray Maintenance:

- (1) Spill Kit
- (2) Safety Equipment
- (3) Loading and Clean-up Equipment and Supplies

**5. SPRAY CONFIGURATION: SP-2G**

- a. **Mass:** 2-Module System
- b. **Booms:** Stainless Steel ULV Fuselage Booms
- c. **Nozzles:** size = 8003; 6 open; 8008; 3 open; oriented straight down.
- d. **Differential GPS:** Wingman Installed
- e. **Aircraft:** 90-9107
- f. **Mission Identifier:** QZNRK9901108

**6. Spray Parameters:**

- a. **Pesticide:**
  - Aqualuer® 20+20 (AI Permethrin) specific gravity = 0.84
  - Pyrethroid Insecticide
  - Signal Word: Caution
  - Flushing Agent: BVA 13
- b. **Application:** 0.512 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 1,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** single pass sprays
- g. **Spray-On Time:** approx 30 sec passes
- h. **Flow Rate:** 1.82 gallons/minute

**7. AMOUNT OF SPRAY MATERIAL AVAILABLE:** Plan on loading 1 drums of Aqualuer and 60 gallons of BVA.

**8. PARKING PLAN: NAS Jacksonville, FL**

**9. AIR TO GROUND RADIO FREQUENCIES:**

Navy Jax Ops-	310.2/134.775	Tower	120.0/340.2
Ground	128.6/336.4	<b>Spray Ground:</b>	<b>123.45 VHF</b>
ATIS	281.0	Range Control 134.100 VHF, POC is Sgt Ground 904-682-3824	

**Camp Blanding Range PPR: 103-72**

**Pilot Note:** 5-6 miles out contact Range Control, ask for range brief (to determine which ranges are hot). Squawk 4000. The radio room personnel are not ATC trained. Range Control will call the ground units to put them in a check fire status. After each range is in a check fire status, Pilot will receive check fire status call for planned 20 minutes. If we don't use duration of the 20 minutes, give it back to the range once clear. Further details will be available for review during mission planning.

**910 AW AERIAL SPRAY UNIT -- POST-MISSION REPORT  
MINOT AFB ADULT MOSQUITO CONTROL & ARMY CORPS  
OF ENGINEERS PROPERTY NEAR WILLISTON 18-22 JUL 2011**

**1. MISSION BASICS:**

- a. Installation Sprayed: Minot AFB, North Dakota and Army Corps of Engineers Property near Williston, ND.
- b. Mission Duration: 18-22 July 2011
- c. Purpose of Application: Adult Mosquito Control
- d. Application Date/s: 19 & 21 July 2011
- e. Time/s of Application (Local): 1926-2136 (19 Jul) & 1928-2233 (21 Jul)
- f. Acres Treated: 13,949 (19 Jul) & 32,214 (21 Jul) = 46,163 acres
- g. Project Coordinator/s (Name/Rank, Title, Phone #): (b) (6), Pest control supervisor/spray coordinator, DSN (b) (6), (b) (6), Land Manager, (b) (6)
- h. Date Spray Map Last Approved: 13, 19 July 2011
- i. Date of Waste Generation Letter: 17 July 2006
- j. Installation In-Briefing: (When/Where/Briefer/s): 16 Jul; 5 CES Conference Room; Lt Col (b) (6) (Mission Commander) and 5CES Deputy Civil Engineer, Ms. (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Certified PMP/Entomologists (Category 11): Lt Col (b) (6), (b) (6) Capt (b) (6) (safety briefer)
- c. Aircrew:
  - (1) Pilots: Maj (b) (6), Maj (b) (6)
  - (2) Navigators: Lt Col (b) (6)
  - (3) Flight Engineers: MSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6), (b) (6), TSgt (b) (6), SSgt (b) (6), (b) (6) SrA (b) (6)
- d. Maintenance:

Spray Maintenance: TSgt (b) (6), TSgt (b) (6), SSgt (b) (6), (b) (6)

Crew Chiefs: MSgt (b) (6), SrA (b) (6)

Avionics: MSgt (b) (6)

**Flying Data:**

  - (1) Spray Sorties/Hours: 2 sorties (2.2 + 3.1) = 5.3
  - (2) Ferry Sorties/Hours: 2 sorties (4.3 + 4.0) = 8.3

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet<sup>®</sup> EC Concentrate (78% naled); Zenivex (20% etofenprox)
- b. EPA Registration Number: 59639-90-5481 Trumpet; 2724-791 Zenivex
- c. Formulation Sprayed: Emulsified Concentrate (Trumpet); E20 (Zenivex)
- d. Gallons Pesticide Loaded: 90 gal Trumpet (19 Jul); 80 gal Zenivex (21 Jul)
- e. Gallons Pesticide Applied: 90 gal (19 Jul) & 80 gal (21 Jul)
- f. Gallons and Name Diluent Used: 80 gal BVA-13 with Zenivex
- g. Gallons and Name of Flush Used: 150 gal (water); 10 gal (BVA)
- h. Other Additives Used: None
- i. Application Rate: 0.82oz/acre (19 Jul); 0.32 oz/acre (21 Jul);

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99108
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet<sup>®</sup> 8005 Flat Fan (19 Jul); TeeJet<sup>®</sup> 8003 Flat Fan (21 Jul)
- e. Nozzle Orientation & Number Used: 16-8005s total (19 Jul) and 16-8003's (21 Jul) oriented straight down
- f. Pressure: 35-42 psi
- g. Flow Rate: 6.5 gallons per minute (19 Jul); 4.4 gallons per minute (21 Jul)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray offset: 2000' (20 Jul); 2000' (21 Jul)
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 4-6 knots @ 140° (19 Jul) & 2.5-3 knots @ 346° (21 Jul)
  - (2) Release Altitude: 12-18 knots @ 140° (19 Jul) & 6-12 knots @ 346 (21 Jul)
- b. Temperature (Degrees Fahrenheit): 89-85° (19 Jul) & 81° (21 Jul)
- c. Relative humidity: 75-85% (19 Jul) & 53% (21 Jul)
- d. Cloud Cover: Scattered clouds
- e. Source: Ground observations and aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Monitoring in Williston was done with New Jersey light traps. The night after the spray mosquito numbers dropped 90-95%.
- b. Minot AFB Pest Control Shop (5 CES/CEOUE) collected 340 mosquitoes per trap the night prior to the application and 145 mosquitoes per trap the night following the application.

No data was reported from the city of Minot, but judging the excellent environmental conditions and results at the AFB, we expect significant reduction in mosquito activity.

**8. REMARKS AND RECOMMENDATIONS:** This was the 3rd year of spray operations conducted from Minot AFB in which sprays of the areas surrounding the Army Corps of Engineers' property near Williston ND were included. The rising waters of the Souris and the subsequent flooding of the City of Minot were major news events this year and the confluence of the Missouri and Yellowstone rivers reached the highest level ever recorded. The tremendous amount of precipitation and flooding may have altered the biting fly fauna around Williston and Minot. For example, water levels normally fluctuate with snow melt, but this year they remained high and have only recently receded. It is possible that the high waters suppressed the egg hatch of certain floodwater mosquito species (i.e., *Aedes vexans*), since they normally hatch after the river rises but then falls. Additionally, this year an abnormal number of gnats were seen, both non-biting eye gnats (*Hippolates spp.*) and black flies (Diptera: Simuliidae). Black flies are generally found in clean cold and fast moving water and are normally only a minor nuisance around Williston. Mosquitoes and gnats were targeted during all sprays which began 2 hours prior to sunset. Attachments 1 & 2 show the path of the aircraft during the applications. The sprays are reported to have significantly reduced gnats but they had returned to nuisance levels on the third night following the spray.

8a. Lt Col (b) (6) and Dr. (b) (6) from the Armed Forces Pest Management Board were present and made ground observations during the application at Minot AFB, City of Minot, and Williston. Of particular interest were their observations of dead insects which were found in a white truck bed and on the hoods of cars at Minot AFB. There were both flies and mosquitoes seen but also some medium-sized dragonflies. Like the gnats, this year has seen an incredible surge in dragonfly numbers. It is unusual to see mortality in these relatively large insects and it is unknown if the high temperatures and humidity may have played a role or whether their particular behavior (darting about) exposed this species to a greater extent than other insects. The following day, however, there was no noticeable decrease in the overall number of dragonflies seen on base. Nonetheless, an application after dark would decrease the exposure to dragonflies since they do not fly after dark and night operations should be considered for next year.

Once again the 5<sup>th</sup> CES at Minot AFB provided outstanding support for our operation. We appreciate the insights and participation of Lt Col (b) (6) and Dr. (b) (6) during this mission.

//signed//

(b) (6) (b) (6) Lt Col, USAFR  
Entomologist and DoD Certified Applicator

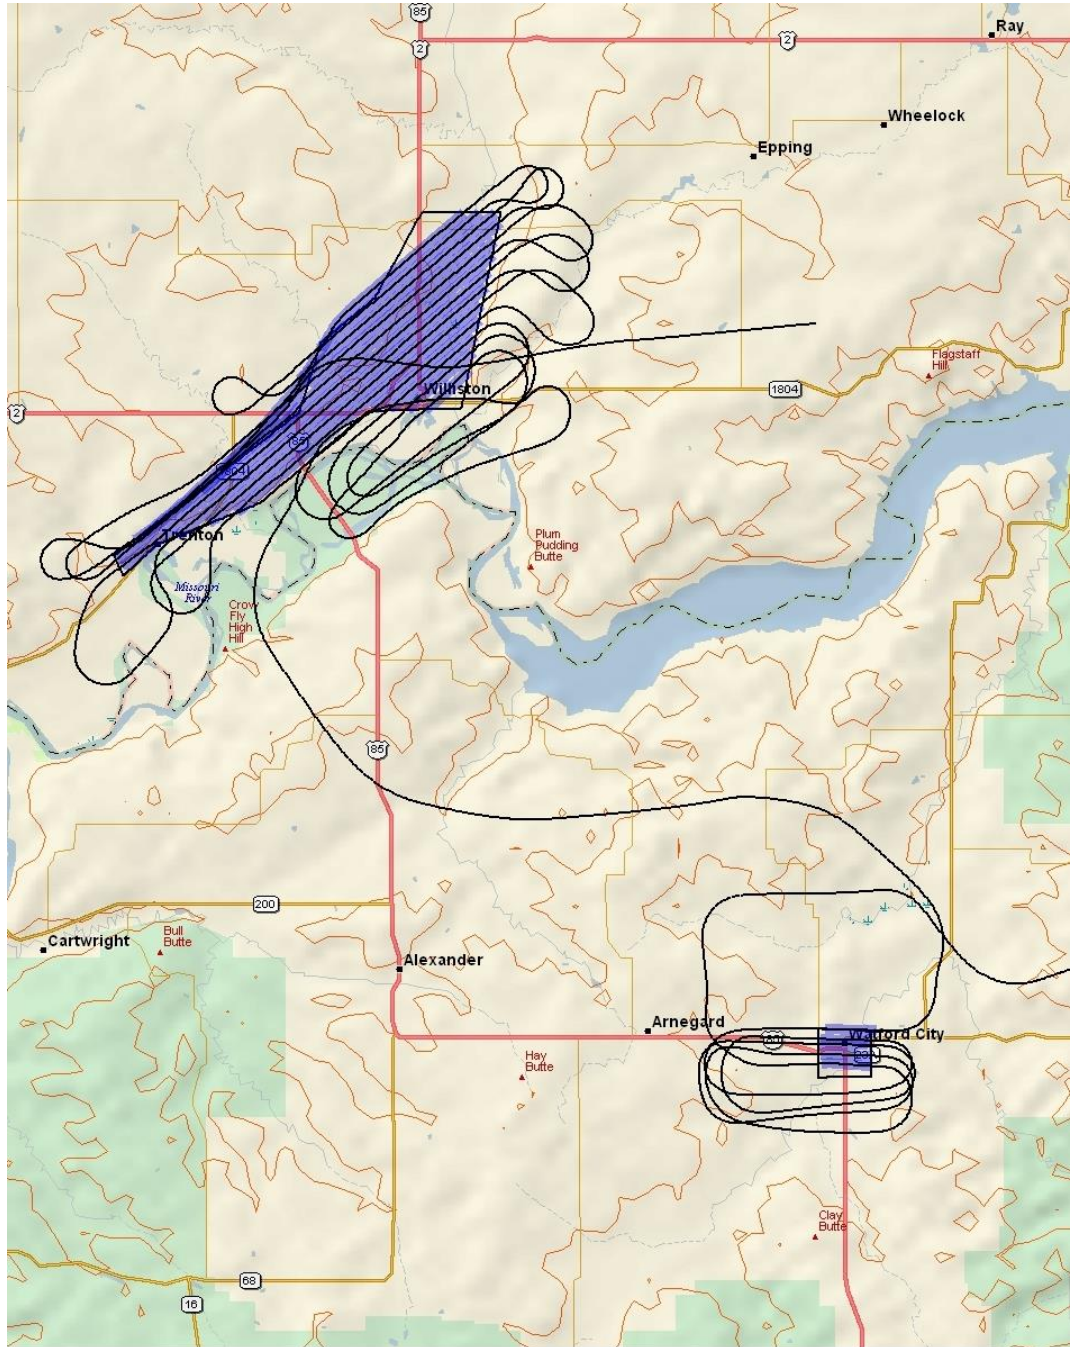

Attachment 1. Shows the areas treated on 19 and 21 July. The two larger areas are Minot AFB (northern block) and City of Minot (southern block). These were sprayed on 19 July. The smaller spray block is the town of Burlington which was sprayed on 21 July. The black dots are the track of the aircraft and the blue

lines are the track of the aircraft while spraying. Some areas flown outside the spray block were treated so that the pesticide would drift back into the target area with the prevailing wind direction.

Attachment 2. Shows areas treated on 21 July 2001 in and near Williston ND. The black outline represents the proposed treatment area. The black dots are the track of the aircraft and the blue lines are the track of the aircraft while spraying. Some areas flown outside the spray block were treated so that the pesticide would drift back into the target area with the prevailing wind direction

# AERIAL SPRAY OPERATIONAL SCHEDULE

## Minot AFB, ND and Williston ACE, ND

### 18-22 July 2011

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes in order to improve working conditions for members operating at Minot AFB, ND and the developed areas surrounding the Army Corp of Engineers property near Williston, ND.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: LTC (b) (6), Maj (b) (6), Maj (b) (6)
- (2) Navigators: LTC (b) (6)
- (3) Flight Engineers: MSgt (b) (6)
- (4) Spray Operators: MSgt (b) (6), TSgt (b) (6), SSgt (b) (6), SrA (b) (6)

##### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
- (2) Crew Chief(s): MSgt (b) (6), SrA (b) (6)
- (3) Avionics: MSgt (b) (6)

##### c. Entomologists: LTC (b) (6) (b) (6) (lodged at Williston), Capt (b) (6) (b) (6) (In place – driving POV)

#### 2. SCHEDULE: (All Local Times)

- a. 18 Jul (Monday)
  - 1300L Show KYNG
  - 1500L Depart KYNG
  - 1735L Land KMIB
- b. 19 Jul (Tuesday) Spray Minot AFB and Minot
  - Installation Brief 1500
  - 1730L Show KMIB
  - 1930L Depart KMIB
  - 2130L Land KMIB
- c. 20 Jul (Wednesday) Spray Williston
  - 1730L Show KMIB
  - 1930L Depart KMIB
  - 2130L Land KMIB
- d. 21 Jul (Thursday) WX backup
  - 1730L Show KMIB
  - 1930L Depart KMIB
  - 2130L Land KMIB
- e. 22 Jul (Friday)
  - 1130L Show KMIB
  - 1330L Depart KMIB
  - 1805L Land KYNG

#### 3. ITEMS TO TAKE

- a. **Mission Commander:** Cellular Phone, Mission Folder, FFT
- b. **Entomologist:** Cell Phone, Wind Gauge, Compass, Pest Safety Binder,  
1 VHF radio Project Notebook
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables
- e. **Spray Maintenance:** Deployment Kit, Support Equipment

#### 4. PPR: 1802WX

**5. RADIO FREQUENCIES: Air To Ground Primary VHF 123.45**

Minot AFB Tower 120.65 V, 236.6, 253.5; Minot International 118.2 V or Unicom 122.95

**6. CONFIGURATION: SP2G**

**a. System:** 2-Module System/Stainless Steel ULV Fuselage Booms

**b. Nozzle Tips/Orientation:** ULV (adulticide): 8005 Tee Jet oriented straight down

**c. Number:** ULV: 16 8003s total (8 each side) for 1000' swaths and 32 8003's (16 each side) for 2000' swaths at Williston 14 8003s (7 each side)

**d. Aircraft:** 90-9108

**e. Mission Identifier:** QZNRK9901199

**7. SPRAY PARAMETERS:**

**a. Adulticide (Minot AFB- Trumpet)**

(1) **Area to be treated:** 26,800 acres

(2) **Altitude:** 150' for Adulticide application

(3) **Swath Width.** 1000 feet for AFB; 2000' City of Minot or as determined by the PMP

(4) **Flow Rate.** 3.6 gallons/minute for 1000' swaths; 7.2 gal/min for 2000' swaths

(5) **Application Rate.** 1.0 oz/acre Trumpet, ULV

(6) **Ground Speed:** 200 Knots (338 Feet/Second)

(7) **Flush:** With water, triple rinse, then air purge

**b. Adulticide (Williston ACE - Zenivex)**

(1) **Area to be treated:** ~23,573 acres

(2) **Altitude:** 150' for Adulticide application

(3) **Swath Width.** 2000' City of Williston or as determined by the PMP

(4) **Flow Rate.** 4.4 gal/minute (1:1 dilute solution)

(5) **Application Rate.** 0.035 lbs/acre A.I. Zenivex, ULV (0.30 oz/acre neat, 0.60 oz/acre 1:1 dilution)

(6) **Ground Speed:** 200 Knots (338 Feet/Second)

(7) **Flush:** With BVA, triple rinse, then air purge

**8. SPRAY MIXING AND LOADING:** See Ento; A good flush with water after Trumpet sprays; flush with BVA after Zenivex spray

**9. TRANSPORTATION:** One 8 pax van, Three 6 PAX, will be available at MIB transpo

**10. LODGING:** **Grand International 1505 North Broadway (701) 852-3161**

# AERIAL SPRAY OPERATIONAL SCHEDULE

## LANGLEY AFB, VA

### 20-24 JUNE 11

**Purpose/Objectives/Benefits:** Aerial application of insecticide to control the populations of nuisance and disease carrying mosquitoes at LFI and the surrounding communities.

**1. 910 AW PARTICIPANTS:**

**a. Aircrew:**

- (1) Pilots: LTC (b) (6) , Maj (b) (6) (b) (6) Capt (b) (6)
- (2) Navigator: LTC (b) (6)
- (3) Flight Engineers: SMSgt (b) (6)
- (4) Spray Operators: MSgt (b) (6) , MSgt (b) (6) , SSgt (b) (6)

**b. Maintenance:**

- 1. Spray Maintenance: TSgt (b) (6) , TSgt (b) (6) , TSgt (b) (6)
- 2. Crew Chiefs: TSgt (b) (6) , SrA (b) (6)
- 3. Avionics: TSgt (b) (6)
- 4. MX Officer: Capt (b) (6)

**c. Entomologist:** Maj (b) (6) (b) (6)

**2. Vehicles:** Langley will supply us with 2x9pax vans and 2 cars

- **MC / Entomologist:** One Car
- **Ops:** One van (9 pax), One car
- **Mx:** One Van (9 pax)

**3. Billeting:** **Hampton Inn** 12251 Jefferson Avenue, Newport News, VA 23602 (757) 249-0001  
Confirmation # 83592300

**910 AW AERIAL SPRAY UNIT  
CERTIFIED PEST MANAGEMENT PROFESSIONAL'S  
POST-MISSION REPORT LANGLEY AFB, VA 20-25 JUNE  
2011**

**1. MISSION BASICS:**

- a. Installation Sprayed: Langley AFB, VA and surrounding communities.
- b. Mission Duration: 20-25 June 2011
- c. Purpose of Application: Adult mosquito control
- d. Application Dates: 21, 22, and 23 June
- e. Times of Application (Zulu): 2245 (21 June); 2215 (22 June); 2230 (23 June)
- f. Acres Treated: 49,156 total: 26,880 (21 June); 3,600 (22 June); 18,676 (23 June)
- g. Project Coordinator (Name, Phone #): (b) (6)
- h. Date Spray Map Last Approved: 21 June 2011
- i. Date of Waste Generation Letter: 4 April 1996
- j. Installation In-Briefing: 1 CE Conference Room, Langley AFB; 21 June; Lt Col (b) (6), Maj (b) (6) Maj (b) (6) Lt Col (b) (6)
- k. Mission identifier: QZNRK9901171

**2. OPERATIONAL:**

**910 AW PARTICIPANTS:**

**a. Aircrew:**

- (1) Mission Commander: Maj (b) (6) (b) (6)
- (2) Pilots: Lt Col (b) (6), Capt (b) (6)
- (3) Navigator: Lt Col (b) (6)
- (4) Flight Engineers: MSgt (b) (6)
- (5) Spray Operators: SSgt (b) (6), MSgt (b) (6), MSgt (b) (6)  
(b) (6)

**b. Maintenance:**

- 1. Spray Maintenance: TSgt (b) (6), TSgt (b) (6), TSgt (b) (6)  
(b) (6)
- 2. Crew Chiefs: SrA (b) (6), TSgt (b) (6)
- 3. Avionics: TSgt (b) (6)

**c. Entomologist: Maj (b) (6) (b) (6)**

**d. Flying Data:**

- (1) Spray Sorties/Hours: 3/4.4 [1.4 (21 June); 1.5(22 June); 1.5 (23 June)]
- (2) Ferry Sorties/Hours: 2/2.7

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate (87.4% Naled)
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Dibrom<sup>®</sup> Concentrate (neat)
- d. Gallons Pesticide Loaded: 210 total
- e. Gallons Pesticide Applied: 196 total; 105 (21 June); 14 (22 June); 77 (23 June);
- f. Gallons and Name Diluent Used: none
- g. Gallons and Name of Flush Used: 10 Gallons BVA Oil
- h. Other Additives Used: n/a
- i. Application Rate: 0.50 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 90-9108
- b. Spray System (Modules Used) and System ID #: SP2G MASS ULV
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: TeeJet 8005 flat fan nozzles
- e. Nozzle Orientation & Number Used: 10 straight down
- f. Pressure (PSI): 40-50
- g. Flow Rate: 3.6 gpm

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000 feet
- b. Spray Off Set: 2000 feet
- c. Spray Release Altitude: 150 feet
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed in knots): 220-170/4-11 (21 June) Langley Peninsula; 040-110°/7-11 (22 June) Craney Island, 060-080°/4 ground and 090-100 aircraft (23 June) western portion of peninsula
- b. Temperature (°F): 82-80 (21 June) 75 (22 June); 73-71 (23 June)
- c. Cloud Cover: mostly sunny 21-23 June
- d. Source: Observations at altitude during spray sorties

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) n/a
- b. Effectiveness:
  - (1) Technique/s Used: carbon dioxide-baited traps were used to monitor mosquito densities pre- and post-treatment by the various community and Base mosquito control professionals.

(2) Results: Langley pest management reported a 60% reduction post-spray; York Co. reported no mosquitoes flying the day after the application. No data was available from Portsmouth at time of publication.

8. **REMARKS:** Rainfall has produced significant mosquito problems along the Atlantic coast this year. On this mission significant problems were encountered with the filter screens clogging with debris, limiting the areas sprayed. Typically, less than 20 minutes of spray-on time was accomplished before system pressures were unsustainable. At these times, the aircraft landed and the filter systems were cleaned or replaced. This resulted in approximately half the planned area being completed. It appears the problem was that 3 drums of older stock Dibrom were used and the precipitates were clogging the system. In future only newer stock Dibrom should be used so as to avoid these problems. Less than ideal control was observed around the Langley area as reported by pest management undoubtedly because winds shifted up to 90 degrees between the northern part of the spray block and the southern part of the spray block. Thus, around the Langley AFB area there was essentially a headwind/tailwind during application. This would produce significant gaps in the treatment because of a lack of crosswind component to effectively disperse the spray material. Many thanks to (b) (6) and his staff for facilitating this mission's activities.

- f. Gallons and Name Diluent Used: none
- g. Gallons and Name of Flush Used: none
- h. Other Additives Used: n/a
- i. Application Rate: 0.52 oz/acre (23 Aug); 0.55 oz/acre (24 Aug)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 90-9106
- b. Spray System (Modules Used) and System ID #: SP2G MASS ULV
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: TeeJet 8005 flat fan nozzles
- e. Nozzle Orientation & Number Used: 10 straight down
- f. Pressure (PSI): 40-55
- g. Flow Rate: 3.6 gpm

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000 feet
- b. Spray Off Set: 2000-4000 feet
- c. Spray Release Altitude: 150 feet
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed in knots): 060/6 (23 Aug) York Co; 145°/7-9 ground 185/10 aircraft (Langley) and 151@8 aircraft over Craney Island (24 Aug)
- b. Temperature (°F): 77-74 (23 Aug) 82-80 (24 Aug)
- c. Cloud Cover: mostly sunny 23-24 Aug
- d. Source: Observations at altitude and on the ground during spray sorties

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) n/a
- b. Effectiveness:
  - (1) Technique/s Used: carbon dioxide-baited traps were used to monitor mosquito densities pre- and post-treatment by the various community and Base mosquito control professionals.
  - (2) Results: The following are comments from the biologists in the treatment areas and indicated a successful application. Some post application surveillance was not possible because of preparations for the arrival of Hurricane Irene. CRANEY ISLAND: The spray application was successful on the Craney Island facility. We had a very large number of

adult mosquitoes prior to flight; no adults apparent the days following spray. LANGLEY: Trap numbers are very low. Went from low 100's per night to 7 in last night's trap (*Anopheles*). Great results. PORTMOUTH: A decent kill with a few skips. YORK COUNTY: The aerial spray greatly reduced our mosquito annoyance.

8. **REMARKS:** This was a standard adult mosquito control spray mission for Langley AFB and the surrounding areas. Some communities decided not to participate in this spray. Unfortunately, this decision negatively impacts the overall effectiveness of the operation by leaving large areas where mosquitoes breed untreated and thus allowing these mosquitoes to move quickly into treated areas. The large spray block planned for Newport News was not sprayed because of high winds on the day of the application. Areas sprayed are shown in Attachment 1. Hurricane Irene dumped over 8 inches of rain on Langley AFB a few days after the spray and they also experienced tidal surges. It is likely that there will be a tremendous surge in saltwater nuisance mosquitoes in approximately 3 weeks. There are no scheduled aircraft for that timeframe but an out of cycle request could be made for the Spray Flight's return.

//Signed//

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND (AFRC)**

15 April 2011

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Grand Forks AFB, ND

1. One C-130 will be available 23-27 May 11 for the requested spray larvacide mission helping to control nuisance and vector species of mosquitoes reducing the negative impact these organisms generate on outdoor activities.

2. Concept of Operations:

- a. 23 May (Monday)  
1000 Show KYNG  
1200 Depart KYNG  
1300 Land KRDR
- b. 24-26 May (Tuesday-Thursday)  
0430 Show KRDR  
0600 Depart KRDR  
0900 Land KRDR
- c. 27 May (Friday)  
0700 Show KRDR  
0900 Depart KRDR  
1500 Land KYNG

3. Maj (b) (6) (b) (6) is the MC and Maj (b) (6) (b) (6) is the AC.

5. Support required at Grand Forks AFB, ND has been coordinated.

(b) (6), Capt, USAFR  
757<sup>th</sup> AS Aerial Spray

# AERIAL SPRAY OPERATIONAL SCHEDULE

## GRAND FORKS AFB, ND

### 23-27 May 2011

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes and thereby improving working conditions and lower mosquito-borne illness for members operating at Grand Forks AFB, North Dakota.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- 1) Pilots: LtCol (b) (6) , Maj (b) (6)
- 2) Navigators: LtCol (b) (6)
- 3) Flight Engineers: TSgt (b) (6)
- 4) Spray Operators: MSgt (b) (6) , SSgt (b) (6)

##### b. Maintenance:

- 1) Spray Maintenance: TSgt (b) (6) , TSgt (b) (6) , TSgt (b) (6) , SrA (b) (6)
- 2) Crew Chiefs: SSgt (b) (6) , SrA (b) (6)
- 3) Avionics: MSgt (b) (6)

##### c. Entomologist: Maj (b) (6) (b) (6) (MC), Capt (b) (6) (Driving)

#### 2. SCHEDULE: (All Local Times) PPR: 23-05-1/DM

- a. 23 May (Monday)  
0900 Show KYNG  
1100 Depart KYNG  
1300 Land KRDR  
1430 Installation Briefing
- b. 24-26 May (Tuesday-Thursday)  
0430 Show KRDR  
0600 Depart KRDR  
0900 Land KRDR
- c. 27 May (Friday)  
0700 Show KRDR  
0900 Depart KRDR  
1500 Land KYNG

#### 3. ITEMS TO TAKE

- a. **Mission Commander:** Cell Phone, Mission Folder, Friendly Force Tracker
- b. **Entomologist:** Cell Phone, Wind Gauge, 2 Compasses, Pest Safety Binder, 1 UHF Radio, Water Sensitive Cards, Card Holders with Index Cards, 2 Spotlights, 1 Measuring wheel, 2 Signal Mirrors, Project Notebook, Entomologist's Tool Kit
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables
- e. **Spray Maintenance:** Deployment Kit, Support Equipment

#### 4. PPR: 23-05-1/DM

#### 5. RADIO FREQUENCIES: Air To Ground Primary VHF 123.45; secondary UHF 392.2; KRDR Tower 124.9 V; Grand Forks International 118.4 V

## **6. CONFIGURATION: SP2G**

- a. System:** 2-Module System/ Fuselage Booms
- b. Nozzle Tips/Orientation:** Larvicide: Raindrop nozzles straight back
- c. Number:** Larvicide: fuselage only, 12 total (6 each side) straight back
- d. Booms:** Fuselage
- e. Aircraft:** 90-9107
- f. Mission Identifier:** QZNRK9901143

## **7. SPRAY PARAMETERS:**

- a. Larvicide**
  - (1) **Area to be treated:** approx. 1,636 acres
  - (2) **Altitude:** 100' for Larvicide application
  - (3) **Swath Width.** 200 feet
  - (4) **Flow Rate.** 186 gallons/minute
- b. Application Rate.** 2 gallons/acre (water with 0.75 oz of Altosid®)
- c. Ground Speed:** 200 Knots

## **8. SPRAY MIXING AND LOADING: (For Larvicide Spray Sorties)**

- a. Composition of each Gallon:**
  - (1) 0.375 ounces of Altosid® 20
  - (2) 0.64 ounces of AirexDC™ drift retardant
  - (3) Water
- b. Typical load:** (2 tanks of 450 gallons each)
  - (1) Fill with 450 gallons of water/tank. Total water in tanks = 900 gal.
  - (2) Total water added = 900 gallons
  - (3) Add 1.33 (1 1/3) gallons of Altosid® per tank (2 2/3 gallons total).
  - (4) 2.5 gal AirexDC per tank (5 Gal total) while agitating approximately 15 min
  - (5) Total quantity mix. 908 gallons
- c. Final Load for complete flush**
  - (1) Fill tanks with the amount of water necessary for a proper system flush
- d. Mixing Instructions:**

SHAKE WELL BEFORE USING. Altosid® may separate on standing and must be thoroughly agitated prior to dilution.

PRECAUTIONARY STATEMENT: Spray solution should be used within 48 hours; always agitate before spraying.

## **9. TRANSPORTATION:** One 13 PAX van, Three 6 PAX trucks, One stake bed truck

## **10. LODGING: On Base Billeting:** DSN 362-7200 or (701) 594-8431, FAX 362-3069 -- Prime Knight DSN 362-3844 or (701) 747-3844

## 11. CONTACTS:

### a. 319 CES/CEVP, 525 6<sup>th</sup> Ave, Grand Forks AFB ND 58205

# AERIAL SPRAY OPERATIONAL SCHEDULE

## MCRD, PARRIS ISLAND, SC

### 25-28 April 2011

**OBJECTIVE/PURPOSE AND BENEFIT:** Control nuisance biting midges and mosquitoes with aerial spray insecticide applications to reduce negative impact of insect bites on outdoor training at Parris Island MCRD SC. Conduct trial with Duet for efficacy evaluation against biting midges.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Pilots: LtCol (b) (6) , LtCol (b) (6) , LtCol (b) (6)
- (2) Navigators: Capt (b) (6)
- (3) Flight Engineers: SSgt (b) (6)
- (4) Spray Operators: SMSgt (b) (6) (b) (6) MSgt (b) (6) (b) (6)

##### b. Maintenance:

- (1) Spray Maintenance: TSgt (b) (6) , SSgt (b) (6) , SrA (b) (6)
- (2) Crew Chiefs: TSgt (b) (6) , SrA (b) (6)
- (3) Avionics: TSgt (b) (6)

##### c. Entomologist: Maj (b) (6) (b) (6) Maj (b) (6) (b) (6) (MC)

#### 2. PPR REQUIREMENTS: 102-01 SPRAY07

#### 3. PLANNED SEQUENCE OF EVENTS: (All times local) Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated through the mission commander.

##### 25 APR (Monday)

1400: Show  
1600: Depart KYNG  
1800: Land KNBC  
1830: Safety Brief

##### 26 APR (Tuesday) Fly training sortie prior to actual application; Start application at calculated time based on sunset.

TBD Installation Brief  
1600: Show  
1630: WX Decision and Load Chemical  
1800: Depart KNBC  
2000: Land KNBC  
Sunset: 1959

##### 27 APR (Wednesday) WX Backup or Training

1600: Show (Earlier if Training)  
1630: WX Decision and Load Chemical  
1800: Depart KNBC  
2000: Land KNBC  
Sunset: 1959

##### 28 APR (Thursday) \*\*Departure time may slip depending upon Wednesday evening completion time.

1000: Show  
1200: Depart KNBC  
1400: Land KYNG

#### 4. ITEMS TO TAKE/NOTES:

##### a. Mission Commander:

- (1) Mission Commander Cell Phone
- b. **Entomologist:**
  - (1) Wind Gauge & Compass
  - (2) VHF Radios and Cellular Phone
  - (3) Pesticide Safety Binder
- c. **Navigators:**
  - (1) Maps
  - (2) Templates
- d. **Spray Maintenance:**
  - (1) Spill Kit
  - (2) Safety Equipment
  - (3) Loading and Clean-up Equipment and Supplies

## 5. SPRAY CONFIGURATION: SP-2G

- a. **Mass:** 2-Module System
- b. **Booms:** Stainless Steel ULV Fuselage Booms
- c. **Nozzles:** size = 8003; 13 open
- d. **Differential GPS:** Wingman Installed
- e. **Aircraft:** 90-9107
- f. **Mission Identifier:** QZNRKA902102

## 6. SPRAY PARAMETERS: (PARRIS ISLAND MCRD SC)

- a. **Pesticide:**
  - Duet—Prallithring (1%); Sumithrin (5%); Piperonyl Butoxide (5%)
  - Signal Word: Caution
  - Flushing Agent: BVA Oil
- b. **Application:** 1.24 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 1,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** 7,500 Acres
- g. **Spray-On Time:** 16 Minutes
- h. **Flow Rate:** 4.7 gallons/Minute

## 9. PARKING PLAN: NAS Beaufort, SC. Please limit number of vehicles and trips on the flight line

## 10. AIR TO GROUND RADIO FREQUENCIES:

Beaufort Tower: 119.05/340.2 MCAS TWR  
 Beaufort Approach 123.7  
 Hilton Head Arpt: 118.975 Tower, 123.0 CTAF (tower open until 0100 hrs Z)  
 Beaufort Co Arpt: 122.7 UNI  
 Spray Ground: 123.4

## 11. TRANSPORTATION: Parris Island will provide 3 vehicles for transportation to and from quarters and for messing. Vehicles will be at Base Operations.

## 12. SPRAY MONITORING/TESTING: Ground monitoring by CPMP & Parris Island MCRD Project Coordinator.

## 12. CONTACTS:

- a. **Parris Island MCRD SC: (MCRD/MCAS Com: (843) 228-XXXX); Off Station Com: (843) 525-XXXX**

**PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**HOMESTEAD ARB, FL ADULT MOSQUITO CONTROL 25-29 July 2011**

**1. MISSION BASICS:**

- a. Installation Sprayed: Homestead ARB, FL.
- b. Mission Duration: 25-29 July 2011
- c. Purpose of Application: Adult Mosquito Control
- d. Application Date/s: 26-28 July 2011
- e. Flying Data:
  - i. Spray Sorties/hours: 3 sorties (2.2 + 2.5 + 1.4 + 0.6) = 6.7
  - ii. Ferry Sorties/hours: 2 sorties (3.7 + 3.7) = 7.4
- f. Time/s of Application (Local): 1800-2015 (26 July), 1800-2015 (27 July), & 1800-2010 (28 July)
- g. Acres Treated: 35,941 (26 July), 35,925 (27 July), 24,983 (28 July) = 96,850 acres
- h. Project Coordinator/s (Name/Rank, Title, Phone #): Lt Col (b) (6), Wing Safety Officer/spray coordinator, DSN (b) (6)
- i. Date Spray Map Last Approved: 25 July 2011
- j. Date of Waste Generation Letter: 5 Sept 2009
- k. Installation In-Briefing: (When/Where/Briefer/s): 26 July; 482 FW/CC Conference Room; Maj (b) (6) (Mission Commander), Maj (b) (6), LTC (b) (6), CAPT (b) (6)
- l. Mission identifier: QZNRK9901206

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6)
- b. Certified PMP/Entomologists (Category 11): Maj (b) (6) (safety briefer),
- c. Aircrew:
  - (1) Pilots: Capt (b) (6), Capt (b) (6)
  - (2) Navigators: LTC (b) (6)
  - (3) Flight Engineers: CMSGT (b) (6), SMSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6), MSgt (b) (6), MSgt (b) (6), SSgt Bull Luchkiw
- d. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6), TSgt (b) (6), SSgt (b) (6), SrA (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6), SRA (b) (6)
  - (3) Avionics: TSgt (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate (87.4% Naled)
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Dibrom<sup>®</sup> Concentrate (neat)
- d. Gallons Pesticide Loaded: 210 gal (26 July); 120 gal (27 July); 30 gal (28 July)
- e. Gallons Pesticide Applied: 135 gal (26 July), 135 gal (27 July), & 90 gal (28 July); 360 total
- f. Gallons and Name Diluent Used: none
- g. Gallons of Flush Used: 5 gallon BVA oil
- h. Other Additives Used: None
- i. Application Rate: 0.5 oz/acre

#### **4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet® 8005 Flat Fan
- e. Nozzle Orientation & Number Used: 10-8005s oriented straight down
- f. Pressure: 45-90 psi
- g. Flow Rate: 3.5 gallons per minute

#### **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray offset: 1000-2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

#### **6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 2 knots @ 250° (2 Sept), 2 knots @ 050° (3 Sept), & 2 knots @ 040° (4 Sept)
  - (2) Release Altitude: 5 knots @ 250° (2 Sept), 4 knots @ 050° (3 Sept), & 8 knots @ 040° (4 Sept)
- b. Temperature (Degrees Fahrenheit): 82-80° (2 Sept), 78° (3 Sept), & 75° (4 Sept)
- c. Relative humidity: 81-88% (2 Sept), 86% (3 Sept), & 89-91% (4 Sept)
- d. Cloud Cover: Scattered clouds, mostly cloudy, thunderstorms
- e. Source: Ground observations and aircraft

#### **7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Monitoring was done by Miami Dade Mosquito Control using landing counts and carbon dioxide-baited traps.
- b. Monitoring data showed that mosquito landing counts dropped measurably in areas treated with decreases between 90-100% (Attachment 1). In addition, the primary target pest (*Aedes taeniorhynchus*) populations were decreased by 85-95%, while populations in areas not sprayed remained at largely at pre-spray levels.

#### **8. REMARKS:**

a. Homestead AFB received aerial applications for mosquito control for years until Hurricane Andrew devastated the area in 1992. This application marked the return of the Air Force Aerial Spray Flight to this base. Lt Col (b) (6) initiated the process and Dr. (b) (6) wrote the environmental assessment. Miami Dade Co. Mosquito Control Division of Public Works, offered technical expertise and pesticide for areas of Miami Dade County which were treated. This follows a model of training and function that has been a mutually beneficial for the Spray Unit and various host installations around the country.

b. A wet summer season left south Florida with several hatches of salt marsh mosquitoes and trap numbers easily met the prescribed minimum to trigger the potential for adult mosquito control. Since this was the first application in recent memory, a thorough discussion was performed at the in-brief for all partners/collaborators prior to flying. We received excellent support from all sections including 482<sup>nd</sup> PA, CES, and the TA folks. Thunderstorms prompted a weather cancellation on 2 Sept and delayed take-off times on other days. A small amount of pesticide dripped from an internal section of the MASS onto absorbent but was sufficient to force a shortened sortie for safety reasons on 3 Sept. The problem was quickly fixed by Spray Maintenance. The Mission Commander coordinated with all parties for an extended spray period and the entire crew agreed to stay over on Friday evening to complete the spray area. The Spray Unit has done well controlling this species of salt marsh mosquito and this application was no exception. The County Mosquito Control personnel reported mosquito numbers dropped by 85-95% in all treated areas while counts remained stable in un-sprayed areas. Areas sprayed are shown in Attachment 2.

c. Special thanks are given to Miami Dade County for providing outstanding support in the form of mosquito surveillance data both pre- and post-spray. This was the last application for the year in which we had an aircraft scheduled at Homestead ARB. However, depending on mosquito levels and

aircraft/personnel availability, an additional application may be possible. We hope that Homestead finds the application effective and will request dates for next year's program.

//signed//

(b) (6) (b) (6) MAJ, USAFR  
Entomologist and DoD Certified Applicator

Attachment 1. Mosquito numbers measured by landing rate and collected in traps within Miami Dade County, FL 31 Aug – 4 Sept 2009 before and after adult mosquito control operations by the Air Force Aerial Spray Unit.

Attachment 2. Homestead ARB area spray blocks. The green blocks are the proposed treatment areas. The red blocks are the actual spray areas. The black dotted lines are the track of the aircraft while spraying.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## HOMESTEAD ARB, FL

### 25-30 Jul 11

**OBJECTIVE/PURPOSE AND BENEFIT:** To control nuisance and vector mosquitoes in order to improve working conditions for members operating at Homestead ARB, FL and surrounding communities.

**1. 910 AW PARTICIPANTS:**

**a. Aircrew:**

- (1) Pilots: Maj (b) (6) (b) (6) Capt (b) (6) , Capt (b) (6)
- (2) Navigators: LTC (b) (6)
- (3) Flight Engineers: CMSgt (b) (6) , SMSgt (b) (6)
- (4) Spray Operators: MSgt (b) (6) , MSgt (b) (6) , MSgt (b) (6) , SSgt (b) (6)

**b. Maintenance:**

- (1) Spray Maintenance: TSgt (b) (6) TSgt (b) (6) , SSgt (b) (6) , SrA (b) (6)
- (2) Crew Chiefs: TSgt (b) (6) , SrA (b) (6)
- (3) Avionics: TSgt (b) (6)

**c. Entomologist:** Maj (b) (6) (b) (6)

**2. PPR REQUIREMENTS: 20601AJ**

**3. PLANNED SEQUENCE OF EVENTS:** All times are local. Early return is most definitely authorized

- a. 25 Jul (Monday)  
1300 Show KYNG  
1500 Depart KYNG  
1830 Land KHST
- b. 26-29 Jul (Tuesday-Friday) Spray Sorties  
1100 In brief  
1600 Show KHST  
1800 Depart KHST  
2030 Land KHST
- c. 30 Jul (Saturday)  
1000 Show KHST  
1200 Depart KHST  
1530 Land KYNG

**4. SPRAY CONFIGURATION: SP-2G**

- a. **Mass:** 2-Module System
- b. **Nozzle Tips/Orientation:** 9 8005 nozzles -- straight down (4 left - 5 right)
- c. **Differential GPS:** Wingman Installed
- d. **Aircraft:** 89-9105
- e. **Mission Identifier:** QZNRK9901206

**5. SPRAY PARAMETERS:**

- a. **Altitude:** 150' AGL
- b. **Ground Speed:** 200 KNOTS
- c. **Pesticide:** Dibrom® Concentrate
- d. **Application Rate:** 0.5 oz/acre or as determined by entomologist
- e. **Flow Rate:** 3.6 Gallons/Minute
- f. **Acreage:** Potentially 107,663 acres but final acreage TBD
- g. **Swath Width:** 2000 foot

**6. RADIO FREQUENCIES AND AIRFIELD PHONE NUMBERS**

- a. Homestead ARB (KHST): GND 121.75/275.8 TWR 133.45/279.55 APP&DEP 125.5/354.1  
Command Post (Reef Control) 252.1 **Wing Common Freq not being used 238.3 (Spray GND)**
- a. Kendall Tamiami Executive (KTMB): Class D TWR 118.9 CTAF 125.5/354.1 APP&DEP 125.5/354.1  
Airfield Manager (305) 869-1700 TWR 305-256-7628
- b. Opa Locka Executive (KOPF): Class D TWR 118.6/360.8 CTAF 120.7 APP&DEP 128.6/306.975  
Coast Guard Base Ops 800-253-3851
- c. Homestead General (KX51): Class E CTAF 122.8 Airfield Manager (305) 869-1701/(305) 247-4883
- d. Miami International (KMIA): Class B TWR 118.3/256.9 APP&DEP 124.85/322.3  
Miami TWR 305-869-5400/ Fax 305-869-5499. Plans & Procedures 305-869-5403. Fax a chart with the spray area and a description of the spray operation the day prior. Morning of spray call around 1130 to clarify any special procedures needed for operating in class B airspace near runway ends.  
TWR OPS POC email: (b) (6)  
Plans and Procedures POC email: (b) (6)

**7. BILLETING:** 18 Rooms Reserved at Hampton Inn, maps are in the spray folder

**8. TRANSPORTATION:** 2 FS cars & 2 Minivans from Enterprise, 305-246-2056, delivered to B OPS Confirm # 102NSY

**9. CONTACTS:**

- a. **Homestead ARB, FL:** Commercial (305) 224-XXXX; DSN 791-xxxx
  - 1. Spray Coordinator (Base Safety Officer): Lt Col (b) (6) ; cell (b) (6)
  - 2. Natural Resources Program Manager: Dr. (b) (6)
  - 3. HST TWR: (305) 224-6524
  - 4. Airfield Manager: x7072
  - 5. Base Ops: x7516/7071 Fax 7512
  - 6. Weather: x7511
  - 7. Billeting: x7198 Fax 7290
  - 8. Transportation: x7456
  - 9. Command Post: x7068
  - 10. Base Operator: x7000
- b. **Miami-Dade County Mosquito Control:** (b) (6)

# AERIAL SPRAY OPERATIONAL SCHEDULE

## GRAND FORKS AFB, ND

### 27 Jun – 1 Jul 2011

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes in order to improve working conditions for members operating at Grand Forks and Grand Forks AFB, North Dakota.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- 1) Pilots: Maj (b) (6), Maj (b) (6)
- 2) Navigators: LTC (b) (6)
- 3) Flight Engineers: MSgt (b) (6)
- 4) Spray Operators: SMSgt (b) (6) (b) (6) MSgt (b) (6), SrA (b) (6)
- 5) Mission Commander: Maj (b) (6) (b) (6)

##### b. Maintenance:

- 1) Spray Maintenance: MSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
- 2) Crew Chief: TSgt (b) (6), SrA (b) (6)
- 3) Avionics: MSgt (b) (6)

##### c. Entomologists/Ground Support: LTC (b) (6) Maj (b) (6) (in place), Capt, (b) (6) (in place)

#### 2. SCHEDULE: (All Local Times)

- a. 27 Jun (Monday)
  - 1030L Show KYNG
  - 1230L Depart KYNG
  - 1430L Land KRDR
  - 1545L Installation Brief CE Conference RM Bldg 410
  - 1800L Show KRDR
  - 2000L Depart KRDR
  - 2130L Land KRDR
- b. 28 Jun (Tuesday)
  - 1700L Show KRDR
  - 1930L Depart KRDR
  - 2130L Land KRDR
- c. 29 Jun (Wednesday) If Grand Forks spray blocks are complete, the mission will continue with Minot AFB spray blocks
  - 1700L Show KRDR
  - 1930L Depart KRDR
  - 2130L Land KRDR
- d. 30 Jun (Thursday)
  - 1700L Show KRDR
  - 1930L Depart KRDR
  - 2130L Land KRDR
- e. 1 Jul (Friday)
  - 1130 Show KRDR
  - 1330 Depart KRDR
  - 1730 Land KYNG

### 3. ITEMS TO TAKE

- a. **Mission Commander:** Cellular Phone, Mission Folder, FFT
- b. **Entomologist:** Cell Phone, Wind Gauge, 2 Compasses, Pest Safety Binder, 1 VHF Radio, Water Sensitive Cards, Card Holders with Index Cards, 2 Spotlights, 1 Measuring wheel, 2 Signal Mirrors, Project Notebook, Entomologist's Tool Kit
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables
- e. **Spray Maintenance:** Deployment Kit, Support Equipment, Control®

### 4. PPR: 27-06-1/DM

### 5. RADIO FREQUENCIES: Air To Ground Primary VHF 123.45 KRDR Tower 124.9 V; Grand Forks International 118.4 V

### 6. CONFIGURATION: SP2G

- a. **System:** 2-Module System/Stainless Steel ULV Fuselage Booms
- b. **Nozzle Tips/Orientation:** ULV (adulticide): 8005 Tee Jet oriented straight down
- c. **Number:** ULV: 18 8005s total (9 each side)
- e. **Aircraft:** 89-9106
- f. **Mission Identifier:** QZNRK9901178

### 7. SPRAY PARAMETERS:

- a. **Adulticide**
  - (1) **Area to be treated:** 11,518 acres (Grand Forks AFB), 18,346 (Grand Forks) and 877 (Grand Forks Intl)
  - (2) **Altitude:** 150' for Adulticide application
  - (3) **Swath Width.** 2000 feet
  - (4) **Flow Rate.** 7.26 gallons/minute ULV
  - (5) **Application Rate.** 1.0 oz/acre Trumpet, ULV
  - (6) **Ground Speed:** 200 Knots
  - (7) **Flush:** With water, triple rinse, then air purge

### 8. SPRAY MIXING AND LOADING: The amount of Trumpet to load will be determined on site

### 9. TRANSPORTATION: Transportation provided by base (DSN362-3976): One 15 pax van (OPS), three 6 pax trucks (MC, OPS, MX), one 1.5 ton truck (spray MX). Vehicles at base ops with the exception of Trumpet loaded truck

### 10. LODGING: Onbase Billeting : DSN 362-7200 or (701) 594-8431, FAX 362-3069 -- Prime Knight DSN 362-3844 or (701) 747-3844

## 11. CONTACTS:

### a. 319 CES/CEVP, 525 6<sup>th</sup> Ave, Grand Forks AFB ND 58205

- (1) **Base Operations:** Airfield Manager DSN 362-4409  
-- DSN 362-xxxx or (701) 747-xxxx20
- (2) **Pest Management:** TSgt (b) (6) DSN (b) (6) , FAX 3432)
- (3) **Base Civil Engineer:** Lt Col (b) (6)
- (4) **Environmental Officer:** (b) (6) , DSN (b) (6) FAX 6155, TSgt (b) (6) DSN (b) (6)
- (5) **Public Affairs:** DSN 362-5608/5023 (off duty CP ext 6711)
- (6) **Weather:** DSN 362-4396
- (7) **Billeting:** DSN 362-3070/6189/7200 or (701) 594-8431, FAX 362-3069  
-- Prime Knight DSN 362-3844 or (701) 747-3844
- (8) **Fargo FSDO: POC** (b) (6) (b) (6) Fax (701) 492-5828

**910 AW AERIAL SPRAY UNIT POST-MISSION REPORT  
GRAND FORKS AFB/MINOT AFB – ADULT MOSQUITO CONTROL  
27-30 June 2011**

**1. MISSION BASICS:**

- a. Installations Sprayed: Grand Forks AFB; Minot AFB
- b. Mission Duration: 27-30 June 2011
- c. Purpose of Application: Control adult nuisance mosquitoes
- d. Application Dates: 28 and 29 June 2011
- e. Times of Application (Local): 1938-2122 hrs 28 June; 1830-2200 hrs 29 June 2011
- f. Acres Treated: 11,518 acres Grand Forks AFB; 12,000 acres Minot AFB and City of Minot
- g. Project Coordinator/s (Name/Rank, Title, Phone #): (b) (6), NCOIC Grand Forks  
Pest Management Shop, DSN(b) (6); (b) (6), Supervisor, Minot Pest  
Management Shop, DSN(b) (6)
- h. Date Spray Map Last Approved: 27 June 2011
- i. Date of Waste Generation Letter: 22 June 2001
- j. Installation In-Briefing: (When/Where/Briefer/s): GFAFB CE Conference Room, Maj (b) (6)  
(b) (6) Maj Cathy Miller; Lt Col Eric Bishop; Lt Col (b) (6); Lt Col (b) (6)  
(b) (6) Maj (b) (6); Capt (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6) (b) (6)
- b. Entomologists (Category 11): Lt Col (b) (6), Maj (b) (6); Capt (b) (6)  
(b) (6)
- c. Aircrew:
  - 1) Pilots: Maj (b) (6); Lt Col (b) (6)
  - 2) Navigators: Lt Col (b) (6)
  - 3) Flight Engineers: MSgt(b) (6)
  - 4) Spray Operators: SMSgt (b) (6) (b) (6) MSgt(b) (6); SrA (b) (6)
- d. Maintenance:
  - 1) Spray Maintenance: MSgt (b) (6); TSgt (b) (6); TSgt (b) (6)
  - 2) Crew Chief(s): TSgt (b) (6); SrA (b) (6)
  - 3) Avionics: MSgt (b) (6)
- e. Flying Data:
  - (1) Spray Sorties/Hours: 2/5.2
  - (2) Ferry Sorties/Hours: 2/6.8
  - (3) Mission ID: QZNRK9901178

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 120 gal Trumpet® (28 June); 60 gal Trumpet® (29 June)
- d. Gallons Pesticide Applied: 84 gal Trumpet® (28 June); 96 gal Trumpet® (29 June)
- e. Gallons and Name of Flush Used: 10 gal water
- f. Other Additives Used: none
- g. Application Rate: 1.0 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8005 Flat Fan
- e. Nozzle Orientation & Number Used: 18 straight down
- f. Pressure (PSI): 40 PSI
- g. Flow Rate: 7.26 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): Grand Forks 180° @ 3-6 knots (ground observation)  
Minot 140°-180° @ 5-8 knots (ground observation)
- b. Temperature (Degrees Fahrenheit): Grand Forks 73°F (28 June); Minot 87°F (29 June)
- c. Relative Humidity: Grand Forks 69% (28 June); Minot 67% (29 June)
- d. Cloud Cover: Clear
- e. Source: Ground observations and National Weather Service

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 MDG/ADS and 5 MDG/ADS conducts adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito traps and landing counts
  - (2) Results: Trap data pending from 319 MDG/ADS; 5 CES reported landing rate counts reduced from 5/min to only 1 in 30 min

**8. REMARKS:** The 5th Bomb Wing and 91st Missile Wing Commanders issued a stop movement order of personnel to Minot AFB due to flooding of the Souris River in the City of Minot from snow melting in Canada. Significant flood damage is expected to remain through the summer and produce high populations of mosquitoes. Aerial spraying began 2.0 hrs before sunset over Minot AFB before spraying the City of Minot to maximize the efficiency of our spray effort during peak mosquito activity. The control of adult mosquitoes will benefit displaced persons and emergency relief personnel. Excellent control of mosquitoes was reported from Minot AFB.

Heavy rains and standing water prompted GFAFB Public Hhealth to make the decision to spray the base with Trumpet EC. Historically, mosquito populations peak just prior to July 4<sup>th</sup> following spring rains and snowmelt. The application began 2.0 hrs before sunset to maximize the efficiency of our spray effort during peak mosquito activity. The City of Grand Forks did not require spraying.

Many thanks to TSgt (b) (6) (GFAFB pest control NCOIC) and (b) (6) (MAFB pest control supervisor) for coordinating this mission and providing great logistical support.

//signed//

(b) (6) Lt Col, USAFR  
DoD CERTIFIED PEST MANAGEMENT PROFESSIONAL

**Attachment 1. Image shows Grand Forks AFB and pesticide application swaths (blue) during application on 28 Jun 2011. A 2000' offset was used to compensate for southern winds.**

**Attachment 2. Image shows Minot AFB (top) and the City of Minot (bottom). Pesticide application swaths (blue) during application on 29 Jun 2011. Wind direction changed from 180°-160° over Minot AFB and from 160°-140° over the City of Minot. A 2000' offset was used to compensate for winds.**

# SPRAY OPERATIONAL SCHEDULE

## UTAH TEST AND TRAINING RANGE MISSION

### 28 Mar – 8 APR 2011

**PURPOSE/BENEFIT/OBJECTIVE:** Aerial spray herbicide mission controlling Halogeton on Targets 21 and 24 at the Utah Test and Training Range (UTTR) aiding vegetation control for bombing mission test evaluations and unexploded ordnance recovery.

#### 1. AIRCREW1: -CALL SIGN: SPRAY 05

- a. **Pilots:** MAJ (b) (6), Maj (b) (6), Maj (b) (6)
- b. **Navigators:** LTC (b) (6) (R2); Maj (b) (6) (R1)
- c. **Flight Engineers:** Msg (b) (6)
- d. **Spray Operators:** Msg (b) (6), Msg (b) (6), Smsgt (b) (6)
- e. **Crew Chiefs:** Ssg (b) (6), Tsg (b) (6)

#### AIRCREW 2:- CALL SIGN: SPRAY 08

- f. **Pilots:** Capt (b) (6) (R2), Lt Col (b) (6), Maj (b) (6) (R1)
- g. **Navigators:** LtCol (b) (6)
- h. **Flight Engineers:** Tsgt (b) (6)
- i. **Spray Operators:** Msg (b) (6), Tsg (b) (6), Sra (b) (6)
- j. **Crew Chiefs:** Msg (b) (6), Sra (b) (6)

#### 2. MISSION SUPPORT:

- a. **Mission Commander:** Maj (b) (6) (b) (6)
  - 1. Makes final decision on all changes to the schedule
  - 2. Confirm all hotel information is correct upon check in
  - 3. Report flight data to AFRC daily (See contact info on reporting sheet)
  - 4. Coordinate any range schedule conflicts/changes
- b. **Entomologists:** LTC (b) (6) (b) (6) Maj (b) (6) (b) (6)
- c. **ARMS:** Msg (b) (6) (R1), Tsg (b) (6) (R2)
- d. **Public Affairs:** Msg (b) (6) (inplace), Tsg (b) (6) (in place)

#### 3. UTTR GROUND PARTY:

- a. **Entomologist/Pest Management Professional(s):** Maj (b) (6) (b) (6) will direct ground sprays as certified applicator;  
Additional Range support personnel:
  - 28 Mar – 1 Apr (b) (6) (b) (6) (b) (6) (b) (6)
  - 3 Apr- 7 Apr (b) (6) (b) (6) (b) (6) (b) (6)

#### 4. MAINTENANCE:

- a. **910 MX Supervisor:** Msg (b) (6) (b) (6)
- b. **910 Spray MX:** Msg (b) (6), Tsg (b) (6), Tsg (b) (6), Tsg (b) (6), Tsg (b) (6),  
Ssg (b) (6)
- c. **Instruments/Avionics:** Tsg (b) (6), Msg (b) (6)
- d. **Hydraulics/Electrician:** Msg (b) (6), Tsg (b) (6)
- e. **Engine:** Msg (b) (6)
- f. **Mx Officer:** MAJ(b) (6)

#### 5. COMM: None

#### 6. IN-BRIEFING: (UTTR Staff)

- a. **When/Time:** ASAP upon arrival
- b. **Who:** EVERYONE!! Do Not leave area until cleared out by the MC.
- c. **Where:** Forestry ramp -Safety brief all personnel  
Base Operations – Flight line drivers only
- d. **Briefing Plan**
  - a. Vehicles- See item 16 h below
  - b. Schedule of events
  - c. Billeting- See item 16.g below
  - d. Weather call
  - e. Cellular Phone numbers for all personnel (Provide info to MC)
  - f. FLT Line Driving (1500 or as soon as possible after landing)

#### 7. PLANNED SEQUENCE OF EVENTS: Hill AFB Tower Control and Runway Hours 24/7

NOTES:

1. Scheduling reflects no weather or maintenance delays. In the event of weather or maintenance delays, the missions will be adjusted as required. ALL TIMES SUBJECT TO ADJUSTMENT BY MISSION COMMANDER
2. DUTY DAY FOR CIVILIANS WILL BE AS REQUIRED WITHIN CREW REST CONSTRAINTS.
3. Tower Control, Runway & Airfield hours 24/7, M-F
4. UTTR RANGE TIMES: 1400-1900Z
5. ALL MX & A/C PERSONNEL WILL REMAIN ON DUTY UNTIL AIRCRAFT IS PRE-FLIGHT COMPLETE AND RELEASED BY THE MISSION COMMANDER.

**a. 28 March (Monday)**

**Vader21**

**MI: QDNRK0201087**

**PPR: TM2801**

0900 Show KYNG

1100 Depart KYNG with extra crew, maintenance, and support equipment

1430 Land KHIF drop off extra crew, maintenance, and support equipment

Time TBD: MC, Maint, and extra crew members work out logistics of buildings, access cards, vehicles, and obtain billeting information

**b. 29 March (Tuesday)**

0700 Show KYNG

0900 Depart KYNG Spray05 MI: QZNRK9901088

PPR: TM2901

0905 Depart KYNG Spray 08 MI: QZNRK9902088

PPR: TM2902

1230 Land KHIF

Briefing: MC, arriving MX, and crew members: safety briefing, access cards, vehicles, and obtain billeting information prior to leaving the ramp area.

**c. 30 March – 1 APR (Wednesday-Friday)**

**2 sorties as wx permits each day.**

0500 Show KHIF Spray 05 crew 1; 0545 Spray 08 Crew 2 (Alternating daily)

0530 Weather call and mixing begin

0700 Depart KHIF

1300 Land KHIF

**\*\*Weekend flying is currently unavailable. If significantly wx or Mx delayed, then weekend operations will be considered as a last resort per Hill AFB.**

**d. 4 Apr -7 Apr (Monday-Thursday) 2 sorties as wx permits each day.**

0500 Show KHIF

0530 Weather call and mixing begin

0700 Depart KHIF

1300 Land KHIF

**7 Apr Support Aircraft**

0800 Show KYNG

1000 Depart KYNG

1330 Arrive KHIF

**e. 8 April (Friday) All personnel**

0730 Checked out of billeting

0800 Return Rental vehicles

1000/1005/1010 Depart KHIF

1600/1605/1610 Land KYNG

**\*\*If completed early, the aircrews and airframes may return early. TBD by the mission commander.**

**8. ITEMS TO TAKE:**

**a. PMP:**

- (1) Project Notebook with Recording Sheets and Maps
- (2) Laptop Computer and Batteries
- (3) 2 Compasses and Stop Watch
- (4) 2 Signal Mirrors and 2 Spot Lights
- (5) Measuring Wheels and Tape

- (6) Entomologists' Tool Kit
- (7) UHF/VHF Radios and VHF Radios
- (8) Cellular Phone
- b. **Mission Commander:** Mission Folder, Cellular Phone
- c. **Navigator:** Maps
- d. **Spray Maintenance:**
  - (1) MASS Spares and Spill Kit
  - (2) Tools and Other Equipment
  - (3) Herbicide Safety Binder
  - (4) Safety Equipment
- e. **Maintenance:** Applicable Equipment

**9. SPRAY CONFIGURATION: SP3G**

- a. Two Aircraft and Systems
- b. MASS Modules 1, 2 and 3
- c. UHV Fuselage booms oriented straight back

**10. PPR REQUIREMENTS:** All required, see Form 33 setup sheets for aircraft and above itinerary

**11. PARKING PLAN:** Forestry Ramp and Building requested

**12. RADIO FREQUENCIES:**

- **Clover Range Control:** UHF 285.65, 275.9, 361.4 (p)
- **Eagle Tower:** UHF 351.0; Mawk 4 ((b) (6) (b) (6))
- **Diddle Knoll & Spray Ops Freq:** UHF 398.1 (Primary), 383.2 (Back-up); VHF 134.1, 118.45
- **Spray Inter plane:** UHF 237.05 / VHF 138.375
- **Spray Ground to Spray Maintenance:** See Iridium Phones
- **Base OPS:** 139.3
- **HF Operations:** Designated by Comm. See attached list.
- **Communications Ground Freq:** LMR nets are trunked at Hill.

- **IRIDIUM PHONES - Numbers TBD Upon issue**

**13. SPRAY PARAMETERS:**

- a. **Herbicide:** Krovar 1DF®
- b. **Application Rate:** 22.5 gal/acre (10 lbs of Krovar in 22.4 gal of water)
- c. **Acreage:** 1,283 Acres (Targets 21, 24 and a couple passes on Nord LZ)
- d. **Ground Speed:** 200 Knots (337.55 ft/sec)
- e. **Spray Altitude:** 100 Feet AGL
- f. **Swath Width:** 35 Feet
- g. **Flow Rate:** 366.1 Gallons/Minute

**14. HERBICIDE LOADING: (For Partial Loads Use Table on Last Page)**

- a. **Sequence for Loading 1,000 Gallon Mixing Tank:**
  - (1) Fill with water up to 750 Gallon Mark, then add:
    - (a) 450 Pounds of Krovar 1DF® (9 bags, 50 # each)
    - (b) 4.0 Gallons (15,140 ml) of StaPut®
    - (c) 64 Ounces (1,892 ml) of Foam Fighter F®
    - (d) 200 Ounces (5,913 ml) Hi-Light® Dye
    - (e) Add Water to 1,000 Gallon Mark and Agitate for 30 Minutes
- b. **When:** Start at 0500 Hours on first full day of spraying and adjust as necessary through end of the daily mission as called by Mission Commander.
- c. **Items to be furnished by installation:**
  - (1) Krovar 1 DF® (12,660 pounds)
  - (2) Foam Fighter F® (15 gallons)
  - (3) StaPut® Additive (114 gallons)
  - (4) Hi-Light® Dye (45 gallons)
  - (5) Remove Nutra-Sol Tank Cleaner
  - (6) Loading Personnel and All Loading Equipment
  - (7) All Necessary Cleanup and Hazardous Waste Disposal
  - (8) Aircraft Support Equipment and TA Support
  - (9) Wash Rack and Fuel Priority

**15. SPRAY MONITORING AND TESTING.** By CPMP & ground support personnel

**17. SEQUENCING:**

**a.** Target sequencing is determined by UTTR personnel based upon EOD clearance schedule and airspace scheduling.

**b.** Spray ops aircraft must stay south of Base Leg Knoll during turns on north run on Target 21. Coordination with range control is essential to assure that this portion of the range is released for air operations.

**c.** When winds blow directly from one side of the target to the middle of the target or during early morning when wind speed is low, ground monitors will direct the “dress up” of the target edges.

**d. Spraying Priorities:**

- (1) Target 21
- (2) Target 24

**a. Multiple-Target Alignments for Possible Future Operations.**

Whenever possible, multiple in line targets will be treated on the same pass to facilitate aircraft line-up and turning efficiency (in which case two separate ground-monitoring and marking parties will be required).

- (1) The west edges of Targets 21 & 24 are contiguous and can be treated on the same pass with a spray-off gap between targets.

**18. GENERAL TARGET INFORMATION:**

**a. Target 21:**

- (1) Dimensions: 4,980' X 7,770'
- (2) Acreage: 888
- (3) Acres Sprayed in 2004: 888
- (4) Aircraft Loads: 18,869 Gal
- (5) Sorties: 17
- (6) Passes (35' Swath): 157
- (7) Spray-On Time/Pass: 23 Seconds
- (8) Spray Heading: 00/180

**b. Target 24:**

- (1) Dimensions: 1,600' X 6,080'
- (2) Acreage: 223
- (3) Acres Sprayed in 2004: 223
- (4) Aircraft Loads: 5,263 Gal
- (5) Sorties: 7
- (6) Passes (35' Swath): 47
- (7) Spray-On Time/Pass: 18 Seconds
- (8) Spray Heading: 00/180

### **UTTR GEOGRAPHIC LOCATION**

Target areas on UTTR are geographically located in northwestern Utah, directly west of the Great Salt Lake and Hill Air Force Base. The complex is positioned between 40 and 41 degrees north latitude and close to 113 degrees ten minutes west longitude. The targets are within range 12 west and Township two and three north, Salt Lake Baseline Meridian.

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND (AFRC)**

18 Feb 11

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Hill AFB/UTTR, UT

1. Aerial Spray flight proficiency training will be accomplished on targets 21, 24, and Wildcat at the Utah Test and Training Range(UTTR) applying Krovar controlling vegetation (i.e Halogenton) growth to aid bombing mission test evaluations and unexploded ordnance recovery. Two Spray configured C-130's will be available 29 Mar – 8 Apr 11 for the requested spray mission. One Support C-130 will be used for position and deposition of spray ground personnel and maintenance equipment.

**2. Concept of Operations:**

- a. 28 March (Monday)
  - 0900 Show KYNG
  - 1100 Support aircraft depart KYNG
  - 1430 Land KHIF
  - \* Support aircraft returns to KYNG at 1800 on 29 March
- b. 29 March (Tuesday)
  - 0700 Show KYNG
  - 0900 1<sup>st</sup> Spray aircraft depart KYNG
  - 0915 2<sup>nd</sup> Spray aircraft depart KYNG
  - 1230 1<sup>st</sup> Spray aircraft land KHIF
  - 1245 2<sup>nd</sup> Spray aircraft land KHIF
- c. 30 March – 1 April (Wednesday-Friday)
  - 0500 Show KHIF
  - 0700 Depart KHIF
  - 1200 Land KHIF
  - \* 2 spray sorties planned each day per aircraft

d. 4 – 7 April (Monday-Thursday)

0500 Show KHIF

0700 Depart KHIF

1200 Land KHIF

\* 2 sorties planned each day per aircraft

e. 7 April (Thursday)

0800 Show KYNG

1000 Support aircraft depart KYNG

1330 Land KHIF

f. 8 April (Friday)

0800 Show KHIF

1000 1<sup>st</sup> Spray aircraft depart KHIF

1005 2<sup>nd</sup> Spray aircraft depart KHIF

1010 Support aircraft depart KHIF

1600 1<sup>st</sup> Spray aircraft land KYNG

1605 2<sup>nd</sup> Spray aircraft land KYNG

1610 Support aircraft land KYNG

3. Maj (b) (6) (b) (6) is the Mission Commander.

4. LTC (b) (6) and Maj (b) (6) are the Aircraft Commanders

5. Support required at Hill AFB and the UTTR has been completed.

  - (7) **ARMS:** MSGT (b) (6) TSGT (b) (6)
- c. **Entomologists:** MAJ (b) (6) (b) (6) application supervision, Cat 11 (UTTR), LTC (b) (6) (b) (6) pesticide mixing and loading Cat 11, safety briefer (Hill AFB)
- d. **Ground Support:** SMSgt (b) (6) (UTTR), TSGT (b) (6)
- e. **Flying Data:**
  - (1) 3 Spray Sorties on 30 MAR –108
  - (2) 3 Spray Sorties on 31 MAR –108
  - (3) 4 Spray Sorties on 1 APR – 3 108; 1 105.
  - (4) 3 Spray Sorties on 4 APR – 1 108; 2 105.
  - (5) 3 Spray Sorties on 5 APR – 2 108; 1 105
  - (6) Ferry Sorties/Hours: 4/19.5
  - (7) Spray sorties/hours: 16/21.8

**3. PESTICIDE:**

- a. Trade Name: Krovar® IDF
- b. EPA Registration Number: 352-505
- c. Formulation Sprayed: 10 lbs Krovar® per 22.5 gallons formulation.
- d. Gallons Pesticide Mix Loaded: 25733
- e. Gallons Pesticide Mix Applied: 25733
- f. Formulation Used: 450 lbs Krovar®, 4.0 gal StaPut®, ½ gal Foam Fighter®, 200 ounces Hi-Light® Dye, remainder water per 1000 gal of spray mix.
- g. Gallons and Name of Flush Used: 900 gal water
- h. Other Additives Used: 102 gal StaPut®; 40.6 gal Hi-Light® dye; 12.7 gal No-foam
- i. Application Rate: 22.5 gal/acre

#### **4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105, 99108
- b. Spray System (Modules Used) and System ID #: 3 and 5.
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 2 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 366 gallons per minute.

#### **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 35'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

#### **6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) 30 MAR – beginning 229° at 5 knots; ending 220° at 8 knots
  - (2) 31 MAR – beginning calm; ending 117° at 4 knots.
  - (3) 1 APR – beginning light & variable; ending 220° at 6 knots.
  - (4) 4 APR – beginning 170° at 7 knots; ending 160° at 9 knots.
  - (5) 5 APR – beginning calm; ending 220 at 8 knots.
- b. Temperature (Degrees Fahrenheit):
  - (1) 30 MAR – 39° F - 66° F.
  - (2) 31 MAR – 45° F - 75° F.
  - (3) 1 APR – 39° - 69° F.
  - (4) 4 APR – 32° - 55° F
  - (5) 5 APR - 35° - 64° F
- c. Relative Humidity:
  - (1) 30 MAR – 42 % - 37 %.
  - (2) 31 MAR – 52 % - 43 %.
  - (3) 1 APR – 42 %.
  - (4) 4 APR – 36 %.
  - (5) 5 APR – 26 %
- d. Cloud Cover: Variable from 0 % to 100 % over the duration of the project; but mostly low cloud cover while spraying.
- e. Source: Ground observations at UTTR Target 21 and 24.

#### **7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: blue dye pattern on targets and observations from ground markers.

- (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring.
  - (2) Results: will be determined this spring by range personnel.
- 8. **REMARKS:** No spraying was conducted on 2 and 3 April because the airfield was closed for the weekend. The spray for Target 24 was completed on March 31, 2011 and the spray for Target 21 was completed on April 5, 2011. The Aerial Spray Squadron used 26,094 gallons of herbicide mix for the spray (Specific data is shown in Attachment 1). Aircraft 105 was non-functional early in the mission, but contributed later on. Outside of this, there were no major limiting factors for this mission and the spray application was completed within the allowed time parameters. UTTR personnel are considering expanding the scope of this mission to include additional targets next year. The herbicide appears to remain highly effective.

- a. Trade Name (% Active Ingredient): Vectobac 12AS (1200 ITU/mg)
- b. EPA Registration Number: 73049-38
- c. Gallons Pesticide Loaded: 1,547
- d. Pesticide Applied: 1,547 gal
- e. Diluent: 31,474 gallons water and 1,000 gallons of water rinse and flush
- f. Other Additives Used: Sta-Put and Airex-DC® drift reduction agents
- g. Application Rate: 24 oz/acre Vectobac 12AS®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 9106, 9108
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: SP3-Module System/Fuselage Booms
- d. Nozzle Type/Size: Raindrop nozzles
- e. Nozzle Orientation & Number Used: 24- straight back
- f. Pressure (PSI): 59-60
- g. Flow Rate: 372 gpm

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 200'
- b. Spray Offset: none
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): variable conditions at speeds varying from calm to 15 kts. Sprays were conducted into the wind.
- b. Temperature (Degrees Fahrenheit): 48-72° F
- c. Relative Humidity: 35-93%
- d. Cloud Cover: varied between cloudy to clear
- e. Source: Ground observations/aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Areas were sampled using standard larval surveillance techniques to determine pest densities. Larval density ranged between 9-150 larvae per dip depending on location
- b. Effectiveness:
  - (1) Technique/s Used: Larval dip samples
  - (2) Results: Post application monitoring was done by Williston Vector Control (see attachment 2.

8. **REMARKS:** This is the third application at the Williston Army Corps of Engineers (ACE) property and associated areas near Williston ND. This year's mission was challenging as the Missouri River reached historic flood levels on 9 June. The extensive flooding made surveillance and targeting of mosquito development areas difficult. In addition, rainy and windy weather forced the cancellation of several sorties. These adverse factors contributed to fewer acres sprayed than last year. Attachment 3 shows the portion of the proposed spray blocks actually treated by the Air Force. Portions of the spray blocks were left for smaller aircraft and priorities were determined daily by Williston Vector Control. Post-application sampling was also difficult as water levels were constantly fluctuating, nonetheless, spot checks showed high larval mortality. We appreciate the support of all the agencies involved, but specifically Minot AFB 5CES. Adult mosquito control may occur at Williston during the 18-22 July 2011 mission to Minot AFB, if this can be coordinated.

**SUBJECT:** Capability and Concept of Operations for Aerial Spray Training Avon Park, FL

1. One C-130 aerial spray equipped aircraft will be available 6-10 Dec 10 to proceed from Youngstown ARS, OH and stage at MacDill AFB, FL. The mission purpose is to conduct winter aerial spray semi-annual currency and proficiency training over Avon Park Bombing Range, FL and coastal waters. Additionally, 757AS entomologists will be conducting ground collection and analysis of ULV real swath width data for determining the control of aerial spray materials from 100' AGL and higher altitude applications.

2. Concept of Operations:

- a. 6 December (Monday)  
1100 Show KYNG  
1300 Depart KYNG  
1600 Land KAGR
- b. 7-9 December (Tuesday-Thursday) Range: 0900-1300

757<sup>th</sup> Aerial Spray, Capt, USAFR

#### MASS Accomplishments for FY11:

The 910 AW conducted 18 operational and testing missions at various DOD installations around the country. We also participated in a joint USCG and AF oil spill operation on the west coast. As part of our mission, we performed a joint test in the development of a newer, more environmentally sensitive material for pest control with the USDA. Our operational season was reduced this year below our normally scheduled missions. Several installation cancellations occurred this year due to a dryer season than normal resulting in lower pest populations.

#### Operational Mission Data:

81 operational sorties dispensing active chemical

117 flying hours dispensing more than 60,000 gallons of pesticides and herbicides

Treated approximately 340,000 acres

#### Total times including all training, operational sorties, and Ferry data:

158 sorties

361 flying hours

# 910 AW AERIAL SPRAY UNIT POST-MISSION REPORT

## GRAND FORKS AFB – LARVAL MOSQUITO CONTROL 23-27 May 2011

### 1. MISSION BASICS:

- a. Installation Sprayed: Grand Forks AFB, ND
- b. Mission Duration: 23-27 May 2011
- c. Purpose of Application: Control nuisance and vector mosquitoes
- d. Application Date: 24-26 May
- e. Time of Application (Local): 0600 May 24-26
- f. Acres Treated: 1425
- g. Project Coordinator/s (Name/Rank, Title, Phone #): TSG (b) (6) , NCOIC Pest Management Shop, DSN (b) (6)
- h. Date Spray Map Last Approved: 23 May 2011
- i. Date of Waste Generation Letter: 22 June 2001
- j. Installation In-Briefing: (When/Where/Briefer/s): GFAFB CE, MAJ (b) (6) (b) (6) LTC (b) (6) , LTC (b) (6) , MAJ (b) (6) (b) (6) , CAPT (b) (6)

### 2. OPERATIONAL:

- a. Mission Commander: MAJ (b) (6) (b) (6)
- b. Certified PMP/s (Category 11): MAJ (b) (6) (b) (6) CAPT (b) (6)
- c. Aircrew:
  - 1) Pilots: LTC (b) (6) , MAJ (b) (6)
  - 2) Navigators: LTC (b) (6)
  - 3) Flight Engineers: TSGT (b) (6)
  - 4) Spray Operators: MSGT (b) (6) , SSGT (b) (6)
- d. Safety Briefer: MAJ (b) (6) (b) (6)
- e. Spray Maintenance: TSGT (b) (6) , TSGT (b) (6) , TSGT (b) (6) , SRA Kaylin Celedonia
- f. Spray Ground Monitors: MAJ (b) (6) (b) (6)
- g. Crew Chief: SSGT (b) (6) , SRA (b) (6)
- h. Avionics: SMSGT (b) (6)
- i. Flying Data:
  - (1) Spray Sorties/Hours: 6/5.6
  - (2) Ferry Sorties/Hours: 2/6.5

### 3. PESTICIDES:

- a. Trade Name (% Active Ingredient): Altosid Liquid Larvicide Concentrate (20% methoprene)
- b. EPA Registration Number: Altosid Liquid Larvicide Concentrate 272446
- c. Gallons Pesticide Loaded: 2.6 (24 May); 7.8 (25 May); 1.3 (26 May)
- d. Gallons Pesticide Applied: 42 Gal tank mix (24 May); 2535 Gal tank mix (25 May); 274 Gal tank mix (26 May)
- e. Gallons and Name of Flush Used: 450 gallons of water flush
- f. Other Additives Used: AirexDC® drift reduction agent (1.28 oz/acre; 14.25 gal total)
- g. Application Rate: 0.75 oz/acre Altosid®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99107
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: R-20 Raindrop
- e. Nozzle Orientation & Number Used: 12 Straight back
- f. Pressure (PSI): 38 PSI
- g. Flow Rate: 186 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 200'
- b. Spray Off Set: None
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 028° @ 12 knots (aerial observation) (24 May); 009° @ 11 (25 May); 348° @ 8 (26 May)
- b. Temperature (Degrees Fahrenheit): 50-60 °F (24-26 May)
- c. Relative Humidity: 50-60%
- d. Cloud Cover: Clear/Scattered
- e. Source: Ground observations and National Weather Service

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 MDG/ADS conducts larval mosquito sampling to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: Larval dips
  - (2) Results: Post application data pending from 319 MDG/ADS

**8. REMARKS:** The threat of West Nile Virus prompted AF public health to make the decision to spray mosquito breeding sites for larval control. The applications were made early in the day to take advantage of relatively low wind speed in order to minimize drift. Many thanks to TSGT (b) (6) SSGT (b) (6) of the GFAFB pest control shop for their outstanding assistance.

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Parris Island MCRD, SC.

1. One C-130 will be available 18-21 October 10 for the requested adulticide spray mission. Aerial Spray flight proficiency training will be accomplished in addition to providing a beneficial reduction in mosquito and biting midge populations effecting the health and welfare of the personnel stationed at Parris Island MCRD, SC.

2. Concept of Operations:

- a. 18 Oct (Monday)  
1500L Show KYNG  
1700L Depart KYNG  
1900L Land KNBC
- b. 19 Oct (Tuesday)  
1530L Show KNBC  
1700L Depart KNBC  
1900L Land KNBC
- c. 20 Oct (Wednesday)  
1530L Show KNBC  
1700L Depart KNBC  
1900L Land KNBC
- d. 21 Oct (Thursday)  
1000L Show KNBC  
1200L Depart KNBC  
1400L Land KYNG

3. Aerial Spray Operation:
  - a. Chemical: Duet
  - b. Altitude: 150 AGL
  - c. Application rates: Approximately 3.6 gal/min (0.5 oz/acre)
  - d. Area: Approximately 8,000 acres
4. Maj (b) (6) (b) (6) will act as Mission Commander.
5. Maj (b) (6) will act as Aircraft Commander.
6. Support required at Beaufort MCAS and Parris Island MCRD has been coordinated.

(b) (6) (b) (6) MAJOR, USAFR  
757AS Chief of Aerial Spray

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Williston Army Corps, ND

1. Two C-130's will be available 31 May – 10 Jun 2011 for the requested larvicide spray mission. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations effecting the health and welfare of the citizens of Williston. Operations will be conducted out of Minot AFB, ND since no suitable airfield is in the vicinity of Williston.

2. Concept of Operations:

- a. 31 May (Tuesday)  
Spray aircraft:  
1000 Show KYNG  
1200 and 1205 Depart KYNG  
1530 and 1535 Land KMIB
- b. 1-3 Jun (Wednesday-Friday)  
0400 Show KMIB  
0545 and 0630 T/O KMIB  
\*Multiple 1.5 hr sorties each day depending upon weather
- c. 6-9 Jun (Monday-Thursday)  
0400 Show KMIB  
0545 and 0630 T/O KMIB  
\*Multiple 1.5 hr sorties each day depending upon weather
- d. 10 Jun (Friday)  
0800 Show KMIB  
1000 and 1005 T/O KMIB  
1430 and 1435 Land KYNG

3. Aerial Spray Operation:

- a. Chemical: Vectobac

- b. Altitude: 100 AGL for Larvicide application
- c. Application rates: 4 gal/acre
- d. Area: Maximum available 24,000 acres

- 4. Maj (b) (6) (b) (6) will act as Mission Commander.
- 5. Lt Col (b) (6) and Maj (b) (6) will act as Aircraft Commanders
- 6. Support required at Minot AFB and Williston Army Corps has been completed.

(b) (6) (b) (6) Maj, USAFR  
757AS Chief of Aerial Spray

# AERIAL SPRAY OPERATIONAL SCHEDULE

## WILLISTON ARMY CORPS OF ENGINEERS, WILLISTON, ND

### 31May – 10 Jun 2011

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes, with larvicide, in order to improve working conditions and lower risk of vector-borne illness to individuals working and living in and around the City of Williston.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew Spray 06: MI: QZNRK9901151

- (1) Pilots: LtCol Tim Austin, LtCol (b) (6), Capt (b) (6) (3-10)
- (2) Navigators: Capt (b) (6) (31-3), (b) (6) (3-10)
- (3) Flight Engineers: MSgt (b) (6) (31-3), TSgt (b) (6) (3-10)
- (4) Spray Operators: MSgt (b) (6), TSgt (b) (6), MSgt (b) (6) (31-3), MSgt (b) (6) (3-10)

##### Aircrew Spray 08: MI: QZNRK9902151

- (1) Pilots: Maj (b) (6) (31-3), Maj (b) (6) (31-3), Maj (b) (6) (31-3), Capt (b) (6) (3-10)
- (2) Navigators: Capt (b) (6) (31-3), Maj (b) (6) (3-10), LtCol (b) (6) (3-10)
- (3) Flight Engineers: MSgt (b) (6)
- (4) Spray Operators: SSgt (b) (6), MSgt (b) (6) (31-3), MSgt (b) (6) (3-10)
- (5) Mission Commander: Maj (b) (6) (b) (6)

##### Vader 05: MI: QDNRK9901151

##### b. Maintenance:

- (1) Spray Maintenance: MSgt (b) (6), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6)  
(b) (6) SrA (b) (6)
- (2) Crew Chief(s): MSgt (b) (6), TSgt (b) (6), SrA (b) (6), SrA (b) (6)
- (3) Avionics: MSgt (b) (6)
- (4) Engines: TSgt (b) (6)
- (5) Hydraulics: TSgt (b) (6)
- (6) ELEN: TSgt (b) (6)
- (6) MX Officer: Capt (b) (6)

##### c. Entomologist: Maj (b) (6) (b) (6) LTC (b) (6) (b) (6) (3-10); Capt (b) (6) (6-10)

##### d. Admin: SMSgt (b) (6)

#### 2. SCHEDULE: (All Local Times)

##### 31 May (Monday):

- 1000 Show time
- 1200 Spray 06 depart KYNG PPR 1901DL
- 1215 Spray 08 depart KYNG PPR 1903DL
- 1230 Support Aircraft depart KYNG PPR 1902DL
- 1530 Land KMIB
- 1545 Safety brief, and mission plan coordination briefings. Depart to get vehicles, hotels, etc
- 1800 Installation in-Brief via teleconference

##### 1-3 Jun (Wed-Fri): \*As many sorties as wx permits each day

- 0400 Show time/WX Decision
- 0430 Load water & Vectobac
- 0545 06Takeoff KMIB (Larvicide Spray Sortie) at Williston ACE property (near KISN).
- 0630 08 Takeoff KMIB
- 0555 Sunrise

##### 3 Jun (Friday) PPR 1904DL MI: QDNRK9902154

- 0700 Show KYNG
- 0900 Depart KYNG
- 1200 Land KMIB
- 1400 Depart KMIB
- 1830 Land KYNG

##### 6-9 Jun (Mon-Thur) : As many sorties as wx permits each day

- 0400 Show time/WX Decision
- 0430 Load water & Vectobac
- 0545 08Takeoff KMIB (larvicide Spray Sortie) at Williston ACE property (near KISN).
- 0630 06 Takeoff KMIB
- 0555 Sunrise

**9 Jun (Thursday) PPR 1905DL MI: QDNRK9901160**

0800 Show KYNG  
1000 Depart KYNG  
1300 Land KMIB

**10 Jun (Friday)**

0800 Show KMIB  
1000 Spray 06 depart KMIB  
1005 Spray 08 depart KMIB  
1010 Support aircraft depart KMIB  
1430 Land KYNG

**3. ITEMS TO TAKE**

- a. **Mission Commander:** Cellular Phone, Mission Folder
- b. **Entomologist:** Cell Phone, Wind Gauge, Compass, Pest Safety Binder,  
1 VHF radio Project Notebook
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables
- e. **Spray Maintenance:** Deployment Kit, Support Equipment

**4. KMIB PPR: See in itinerary**

**5. RADIO FREQUENCIES: Air To Ground Primary UHF 392.2; VHF 123.45**

Minot AFB Tower 120.65 V, 236.6, 253.5; Minot International 118.2 V, 393.1 or Unicom 122.95

**6. CONFIGURATION: SP3G**

- a. **System:** 3-Module System/Fuselage Booms
- b. **Nozzle Tips/Orientation:**  
Larvicide: Raindrop nozzles straight back
- c. **Number:**  
Larvicide: fuselage only, 24 total (12 each side) straight back
- d. **Booms:** Fuselage
- e. **Aircraft:** 899106, 909108
- f. **Mission Identifier:** See in itinerary

**7. SPRAY PARAMETERS:**

- a. **Larvicide**
  - (1) **Area to be treated:** approx. 24,000 acres (plan on 52 sorties as able)
  - (2) **Altitude:** 100' for Larvicide application
  - (3) **Swath Width.** 200 feet
  - (4) **Flow Rate.** 372 gallons/minute \*\*Please spray out entire volume on each sortie!
- b. **Application Rate.** 4 gallons/acre (water with 1.5 pints of Vectobac®)
- c. **Ground Speed:** 200 Knots

**8. SPRAY MIXING AND LOADING:** Plan to load 1800 gallons of water per lift.

Full load will consist of 1800 gallons of water + 85 gallons of Vectobac AS + 4 gallons of Staput

Subsequent loads can be calculated by the following formulas:

Determine the volume remaining in MASS. Add water to give 1800 gallons total. Then add Vectobac at 0.05 gallons per gallon of water added; Staput is added at 0.00023 gallons per gallon of water added.

**9. TRANSPORTATION:** \*\*9Pax van from Minot Trans

Enterprise Rent a Car  
1825 S Broadway  
Minot ND 58701  
(701)838-3800 Office  
(701)838-4255 Fax

(b) (6) , (b) (6) (b) (6) – FS Car  
(b) (6) (b) (6) - Minivan

**10. LODGING:** Vegas Motel  
2315 North Broadway

Minot, ND 58703  
(701) 839-3000

**910 AW AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S**  
**POST-MISSION REPORT (replaces AFRC Form 55)**  
**PARRIS ISLAND MCRD, SC 1-4 October 2012**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island Marine Corps Recruit Depot, South Carolina
- b. Mission Duration: 1-4 October 2012
- c. Purpose of Application: Biting Midge (*Culicoides* spp.)/Mosquito Control
- d. Application Date: 3 Oct 2012
- e. Time/s of Application (Local): 1730-1837; 1858-1928
- f. Acres Treated: 4,410
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) ,  
Environmental/Spray Coordinator, DSN(b) (6)
- h. Date Spray Map Last Approved: 1 Oct 2012
- i. Date of Waste Generation Letter: 10 April 2000
- j. Installation In-Briefing: (When/Where/Briefer/s): 1 Oct 12 with (b) (6) and Lt Col  
(b) (6) at NREAO
- k. Mission Identifier: QZNRK9901275

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6) (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) (b) (6) Maj (b) (6) , Maj (b) (6)
  - (2) Navigators: Lt Col (b) (6)
  - (3) Flight Engineers: SMSgt (b) (6) , MSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) , MSgt (b) (6) , MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (b) (6) MSgt (b) (6) TSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) , SrA (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6) (b) (6) (safety briefer)
- e. **Flying Data:**
  - (1) Spray Sorties/Hours: 2/1.6
  - (2) Ferry Sorties/Hours: 2/4.1

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 40 gal
- e. Gallons Pesticide Applied: 26 gal
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 10 gal/BVA oil
- h. Other Additives Used: None
- i. Application Rate: 0.75 oz/acre

#### **4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-9105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 15, oriented straight down
- f. Pressure: 42-62 p.s.i.
- g. Flow Rate: 2.7 gallons per minute

#### **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

#### **6. WEATHER OBSERVATIONS (25 Oct):**

- a. Winds (Direction/Speed):
  - (1) Ground: 180°/1-2 Knots
  - (2) Release Altitude: 180° /5 Knots
- b. Temperature (Degrees Fahrenheit): 80-77° F
- c. Relative Humidity: 70-84%
- d. Cloud Cover: Overcast
- e. Source: Aircraft/ground measurements

#### **7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: visual observation of aircraft course (GPS)
  - (2) Results: Good coverage throughout spray area; some areas were not treated (see remarks and attachment 1)
- b. Effectiveness:
  - (1) Technique/s Used: Biting midge numbers were determined prior to spraying using light traps (2 Oct) and CO<sub>2</sub> traps (3 Oct). Post-spray monitoring was carried out by Pest Management personnel.
  - (2) Results: Biting midge numbers were significantly reduced at the following locations following the application (e.g., 4 Oct):

	Date		
	2-Oct	3-Oct	4-Oct
Location			
Elliot Beach	110	400	2
Page Field	780	400	15
Outdoor Pool	700	800	2
Horse Island	300	125	15

#### **8. OPERATIONS TRAINING:**

The first spray of FY 13 provided some good training opportunities for 910 OG members. Along with several crewmembers accomplishing spray currency events, three crewmembers gained valuable experience towards completion of their aerial spray certification. By participating in the installation brief, Maj J George completed upgrade to aerial spray aircraft commander. Also this mission allowed MSgt C Rilling, his first opportunity to fly an actual pesticide sortie. His FE spray certification should be completed in the local area in the near future. Unfortunately for MSgt Soles, an upgrade spray operator candidate, problems with the system (discussed in Remarks section) prohibited his ability to complete his upgrade

training. His ULV certification completion date will be dictated by his availability to participate in scheduled future ULV spray trips.

**9. MX TRAINING:**

No significant training events noted.

**10. REMARKS:** This was the first application of FY2013 at Parris Island and midges were present in moderate numbers based on trap counts and personal experience via landing counts. On 2 Oct, a spray sortie was cancelled due to thunderstorms. A calibration was carried out that day and during the process, nozzle clogging occurred at several sites. The nozzles were cleared by Spray Maintenance personnel and on 3 Oct an actual spray sortie went forward. During the sortie the ULV nozzles again clogged and the aircraft was forced to land and shut down engines. Spray Maintenance again cleared the nozzles and the aircraft returned to Parris Island to complete the spray. However, once again, several nozzles clogged and the sortie had to be truncated. Decreasing visibility as civil twilight approached negated any further work. At this time we have not specifically identified the cause of the clogging. We are examining both the pesticide and the processes currently used to load and clean the MASS; this includes a consultation with a representative from the manufacturer (AMVAC). About 2/3 of the total prescribed area was sprayed and trap results indicated good control in those areas and in areas where the spray cloud drifted (See Attachment 1). We used a 1,000 ft offset during the spray based on wind speed and direction. The next spray mission to Parris Island is scheduled for 15-19 Oct.

- e. **Flying Data:**
  - (1) Training Sorties/Hours: 1/ 2.7
  - (2) Ferry Sorties/Hours: 2/4.4

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 120 gallons
- d. Gallons Pesticide Applied: 120 gallons
- e. Gallons and Name Diluent Used: N/A
- f. Gallons and Name of Flush Used: 10 Gallons HAN
- g. Other Additives Used: None
- h. Application Rate: 0.86 oz/acre

## **APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99104
- b. Spray System (Modules Used) and System ID #: 1
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 3003
- e. Nozzle Orientation & Number Used: 28 Total; 14 left, 14 right
- f. Pressure: 45 p.s.i.
- g. Flow Rate: 6.0 gallons/minute

## **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 KTS

## **6. WEATHER OBSERVATIONS:** Wind; 350 at 10 knots (average) on aircraft; Ground observation were 2-4 knots from same direction. Temp; 83 degrees F; Humidity 76 percent.

## **7. SPRAY MONITORING:** Pre and Post spray mosquito collections were taken at 5 locations using CO<sub>2</sub>-baited CDC mosquito traps.

Trap 1: (DTP)	912 females (30 Aug); 52 females (9 Sept) 94 % reduction
Trap 2: SPAWAR:	944 females (30 Aug); 149 females (9 Sept) 84 % reduction
Trap 3: (Golf Course)	1014 females (30 Aug); 164 females (9 Sept) 83% reduction
Trap 4: (NPTU)	884 females (30 Aug); 168 females (9 Sept) 81% reduction
Trap 5: Wharf A	1288 females (30 Aug) 42 Female (9 Sept) 96 % reduction

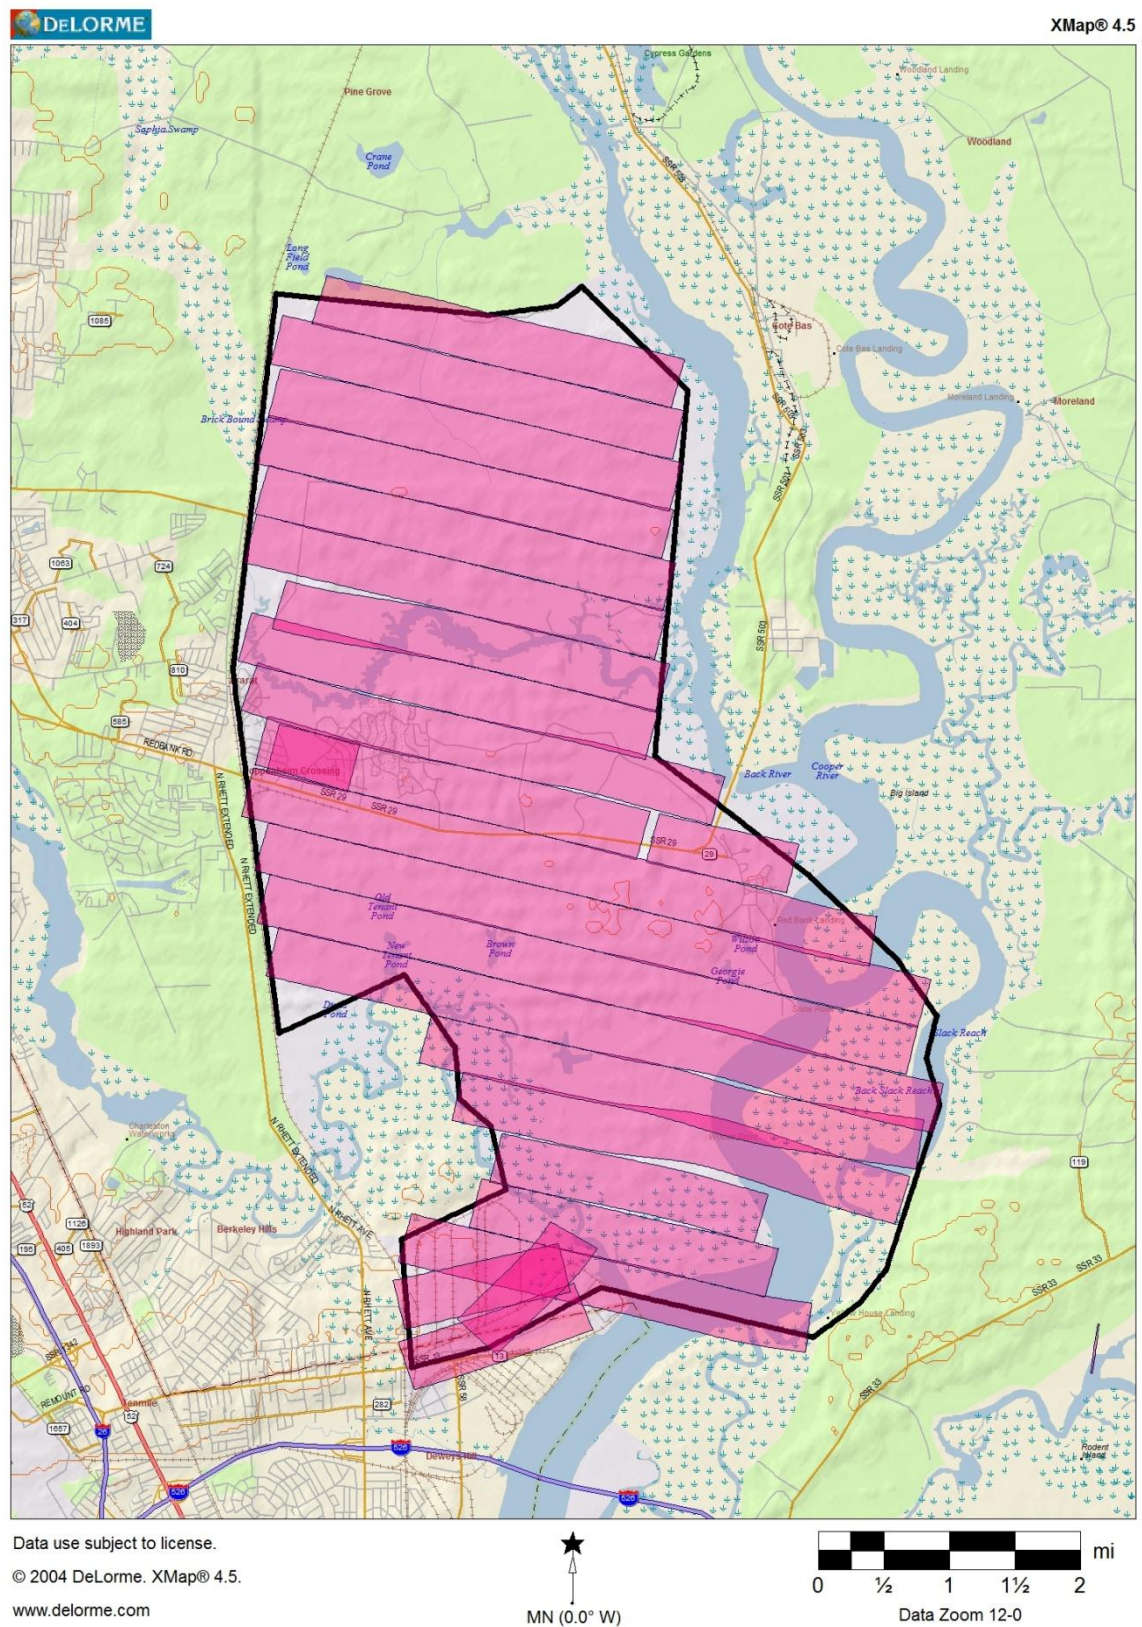

**8. REMARKS:** This application is the second adulticide application conducted at the Naval Weapons Station at JB Charleston for FY 13. No significant problems were encountered during this application, and results appear to be excellent. Because of the large dredge spoil and marshlands associated with the Naval Weapons Station, future larvicide operations are being considered. While we appreciate the sincere support we encountered from ALL sections at JB Charleston, special thanks goes to (b) (6) for his thorough coordination at all levels.

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Joint Base Charleston, SC.

1. One C-130 will be available 3-6 Sept. 2013 in response to a requested aerial spray to control adult mosquitoes for Joint Base Charleston. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations effecting the health and welfare of the personnel of JB Charleston. Operations will be conducted out of JB Charleston.

2. Concept of Operations:

**SCHEDULE: (All times local)**

**a. 3 Sept. (Tuesday)**

1400L Show KYNG  
1600L Depart KYNG  
1800L Land KCHS

**4-5 Sept. (Wednesday- Thursday)**

Sunset: 1940-1939

1630L Show KCHS  
1800L Depart KCHS (Spray JB Charleston)  
2030L Land KCHS

**6 Sept. (Friday)**

0930L Show KCHS  
1130L Depart KCHS  
1330L Land KYNG

**3. SPRAY PARAMETERS:**

- a. Altitude:** 150' AGL
- b. Ground Speed:** 200 knots
- c. Pesticide:** Trumpet EC®
- d. Application Rate:** 1.0-1.2 oz/acre
- e. Flow Rate:** 7.3 – 8.7 Gallons/Minute
- f. Acreage:** Approximately 20,000 acres

**g. Swath Width:** 2000 foot

4. Lt Col (b) (6) (b) (6) will act as Mission Commander.
5. Lt Col (b) (6) will act as Aircraft Commander.
6. Support required at JB Charleston has been completed.

(b) (6), TSgt, USAFR  
757AS Aerial Spray Flight Engineer

2 February 2012

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray Application at Luke AFB

1. One C-130 aerial spray equipped aircraft will be available 5-15 March to proceed from Youngstown ARS, OH and stage at Luke AFB, AZ. The mission purpose is the control of invasive weed species by aerial spray application on Barry Goldwater Range, semi-annual currency events, and proficiency training.

**2. Concept of Operations:**

a. 5 March (Monday)  
0800 Show KYNG  
1000 Depart KYNG  
1340 Land KLUF

b. 6-14 March (Tuesday-Wednesday) Range: 0620-0800  
0400 Show KLUF  
0600 Depart KLUF  
0830 Land KLUF

c. 15 March (Thursday)  
0600 Show KLUF  
0800 Depart KLUF  
1540 Land KYNG

**3. Spray Configuration:**

- a. MASS – SP3G
- b. MI: QZNRK9901065
- c. Parameters –100' AGL and above
- d. Chemical – Glyphosate (Roundup)

4. Maj (b) (6)(b) (6) will serve as Mission Commander.

5. Support required at Luke AFB and Barry Goldwater range has been coordinated.

**910 AW AERIAL SPRAY UNIT – PEST MANAGEMENT's POST-  
MISSION REPORT FOR GRAND FORKS AFB ADULT  
MOSQUITO CONTROL  
5-8 August 2013**

**1. MISSION BASICS:**

- a. Installation Sprayed: Grand Forks AFB North Dakota
- b. Mission Duration: 5-7 August 2013
- c. Purpose of Application: Control adult nuisance and vector mosquitoes
- d. Application Date 6 August 2013
- e. Time of Application (Local): 2000 -2045
- f. Acres Treated: 9,100 (6 August)
- g. Project Coordinator/s (Name/Rank, Title, Phone #): MSgt (b) (6) NCOIC Pest Management Shop, DSN (b) (6)
- h. Date Spray Map Last Approved: 6 August 2013
- i. Date of Waste Generation Letter: 22 June 2001
- j. Installation In-Briefing: (When/Where/Briefer/s): 6 August; GFAFB CE Conference Room, Lt Col (b) (6) Lt Col (b) (6) Maj (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Maj. (b) (6)
- b. Entomologist (Category 11): (b) (6) Lt Col (b) (6)
- c. Aircrew:
  - 1) Pilots: Lt Col (b) (6) Lt Col (b) (6) Maj (b) (6)
  - 2) Navigators: Lt Col (b) (6)
  - 3) Flight Engineer: MSgt (b) (6)
  - 4) Spray Operators: TSgt (b) (6) TSgt (b) (6) SSgt (b) (6)
- d. Maintenance:
  - 1) Spray Maintenance: MSgt (b) (6) TSgt (b) (6) TSgt (b) (6) SSgt (b) (6) Crew Chief(s): MSgt (b) (6) SrA (b) (6)
  - 2) Avionics: TSgt (b) (6)
- e. Flying Data:
  - (1) Spray Sorties/Hours: 1/1.6 on 6 August; total 1.6
  - (2) Ferry Sorties/Hours: 2/6
  - (3) Mission ID: QENRK3501217

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 73 gal Trumpet®
- d. Gallons sprayed: 71
- e. Gallons and Name of Flush Used: 10 gal HAN
- f. Other Additives Used: none
- g. Application Rate: 1.0 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99107
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 30 straight down
- f. Pressure (PSI): 41-52 PSI
- g. Flow Rate: 7.25 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 750'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 340-350° @ 9 knots (aerial); 330-10° @ 4-7 knots (ground)
- b. Temperature (Degrees Fahrenheit): 63.5 °F
- c. Relative Humidity: 60-75%
- d. Cloud Cover: scattered clouds
- e. Source: Ground observations and onboard aircraft readings

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 CES pest management conducts adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito Magnet traps. See Attachment 1 for Magnet trap locations.
  - (2) Results: GFAFB pest management reported an average of:

133 average per trap on August 5, 2013

14 average per trap on August 7

12 average per trap on August 12

Overall reduction of 90% of mosquitoes following spray of 6 August.

**8. REMARKS:** A trap average of 133 and a collection of a West Nile virus-positive bird on GFAFB prompted GFAFB to make the decision to make an aerial spray application. Spray operations were conducted on the evening of August 6, 2013. Spraying was delayed for 30 minutes until wind speeds were below 9 knots. Spraying commenced smoothly and effectively on August 6 (See Attachment 2). Subsequent trap collections demonstrated an effective reduction of 90%. Magnet collections the following week demonstrated a long-term effectiveness of the August 6 spray mission.

The City of Grand Forks declined to have their town included in the spray mission because their primary target is the night-flying vector of West Nile virus (*Culex tarsalis*) and Air Force spraying does not currently include operations after sunset.

Special thanks to MSgt (b) (6) and the staff of the GFAFB pest control shop.

- d. **Entomologists:** Lt Col (b) (6) Lt Col (b) (6) (safety briefer)
- e. **Flying Data:**
  - (1) Spray Sorties/Hours: 3/4.5
  - (2) Ferry Sorties/Hours: 2/4.0

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 45 gal
- e. Gallons Pesticide Applied: 36 gal (3 testing, 33 actual)
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 5 gal/HAN
- h. Other Additives Used: None
- i. Application Rate: 0.75 oz/acre (testing); 0.69 oz/acre (actual)

#### **4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-9107
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 14, oriented straight down
- f. Pressure: 42-62 p.s.i.
- g. Flow Rate: 2.7 gallons per minute(testing), 2.5 gallons per minute (actual)

#### **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 300' (testing), 150' (actual)
- d. Ground Speed: 200 Knots (338 Feet/Second)

#### **6. WEATHER OBSERVATIONS (25 Oct):**

- a. Winds (Direction/Speed):
  - (1) Ground: 160-210°/3-8 Knots (testing), 180° @ 4-7 Knots (actual)
  - (2) Release Altitude: 190° /10 Knots
- b. Temperature (Degrees Fahrenheit): 76-80° F (testing); 79° F (actual)
- c. Relative Humidity: 64-67%
- d. Cloud Cover: Overcast
- e. Source: Aircraft/ground measurements

#### **7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: visual observation of aircraft course (GPS)
  - (2) Results: Good coverage throughout spray area (see Attachment 1)
- b. Effectiveness:
  - (1) Technique/s Used: Biting midge numbers were determined prior to spraying using light traps (2 Oct) and CO<sub>2</sub> traps (3 Oct). Post-spray monitoring was carried out by Pest Management personnel.
  - (2) Results: Light trap data pending. No adverse effects of spraying noticed. Midge activity prior to spray was significant. Low biting counts and little midge/mosquito activity noted after spray.

#### **8. Testing:**

A collaborative testing effort has been ongoing between the USAFR aerial spray group and the USDA Center for Medical and Veterinary Entomology (CMAVE). Objectives of the test carried out at Parris Island was to further validate the efficacy of applications of pesticides at 300' AGL, an altitude which could be used for night application of pesticides using NVG's. For the tests, transects of caged mosquitoes were placed along Wake Blvd (Attachment 2) and the Causeway (Attachment 3). Pesticide was aerially applied at 300' AGL in a flight line upwind and perpendicular to the transect of caged mosquitoes. Winds were largely unfavorable for the Wake Blvd test as the prevailing wind was within 30 degrees of being parallel to the line of flight, thereby limiting downwind drift of pesticide, and as a result, little mortality was seen distant from the line of flight. Winds from the Causeway test were much more favorable to downwind drift. Wind direction was approximately 45 degrees from the line of flight. Mortality of caged mosquitoes was complete over a majority of the causeway. These results indicate that a 300' AGL spray altitude is viable for control of mosquitoes, and that the effective swath width under ideal conditions may be wider than anticipated. We hope to continue these collaborative efforts with the USDA in future.

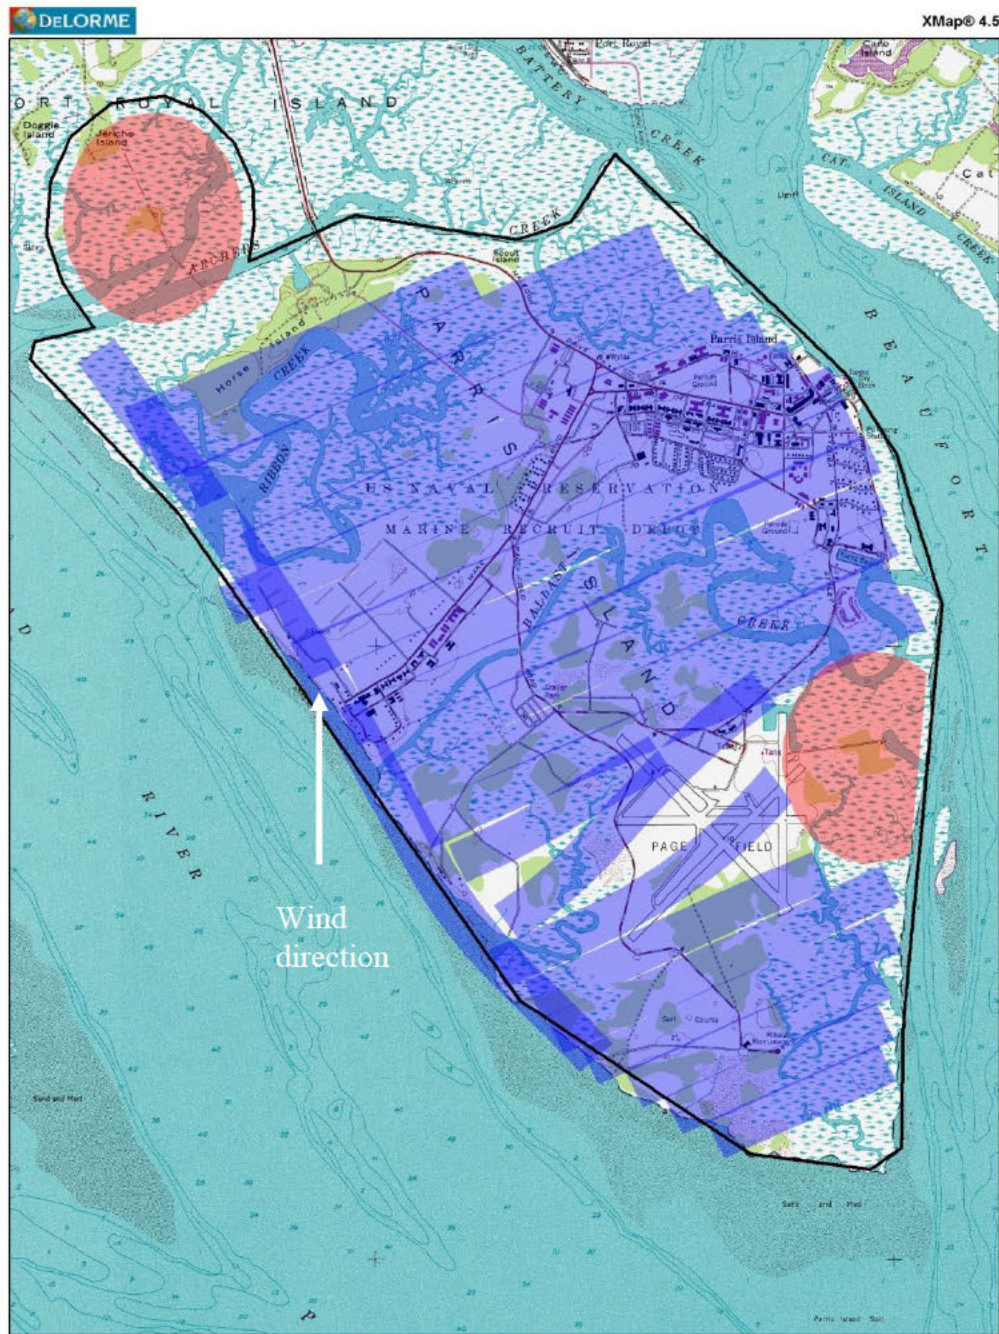

9. **REMARKS:** This was the first application of calendar year 2013 at Parris Island. Midges were present in significant numbers based on trap counts and personal experience via landing counts. After treatment, base personnel reported very little midge or mosquito activity throughout the island. No technical issues were encountered during the operational aspects of this mission.

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 90 gal Trumpet®
- d. Gallons and Name of Flush Used: 8 gal aromatic naptha
- e. Other Additives Used: none
- f. Application Rate: 1.0 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99103
- b. Spray System (Modules Used) and System ID #: 3

- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 30 straight down
- f. Pressure (PSI): 41-52 PSI
- g. Flow Rate: 7.26 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 2000-4000' depending on wind speed
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 330-340° @ 10 knots (aerial); 2-4 knots (ground)
- b. Temperature (Degrees Fahrenheit): 78 °F
- c. Relative Humidity: 55-80%
- d. Cloud Cover: scattered clouds
- e. Source: Ground observations and onboard aircraft readings

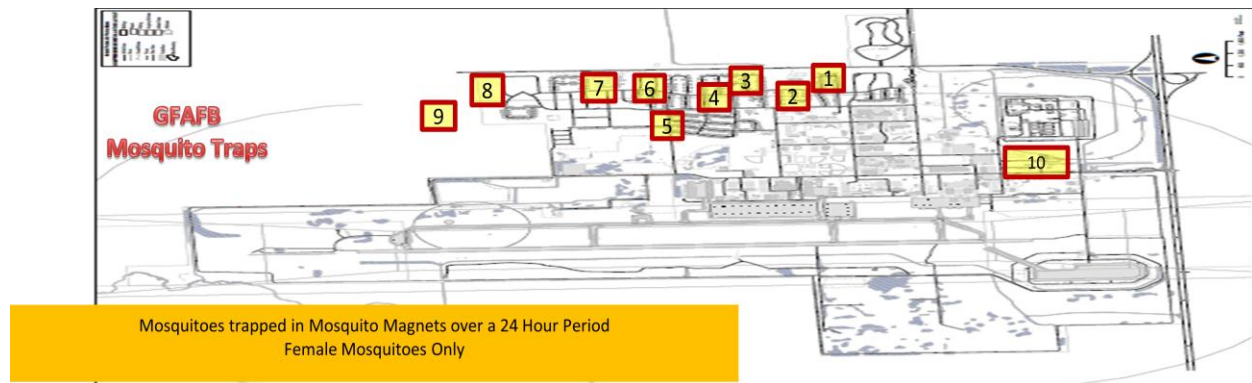

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 CES pest management conducts adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito magnet traps
  - (2) Results: GFAFB pest management reported an overall reduction of 65% of all mosquitoes the day after sprays

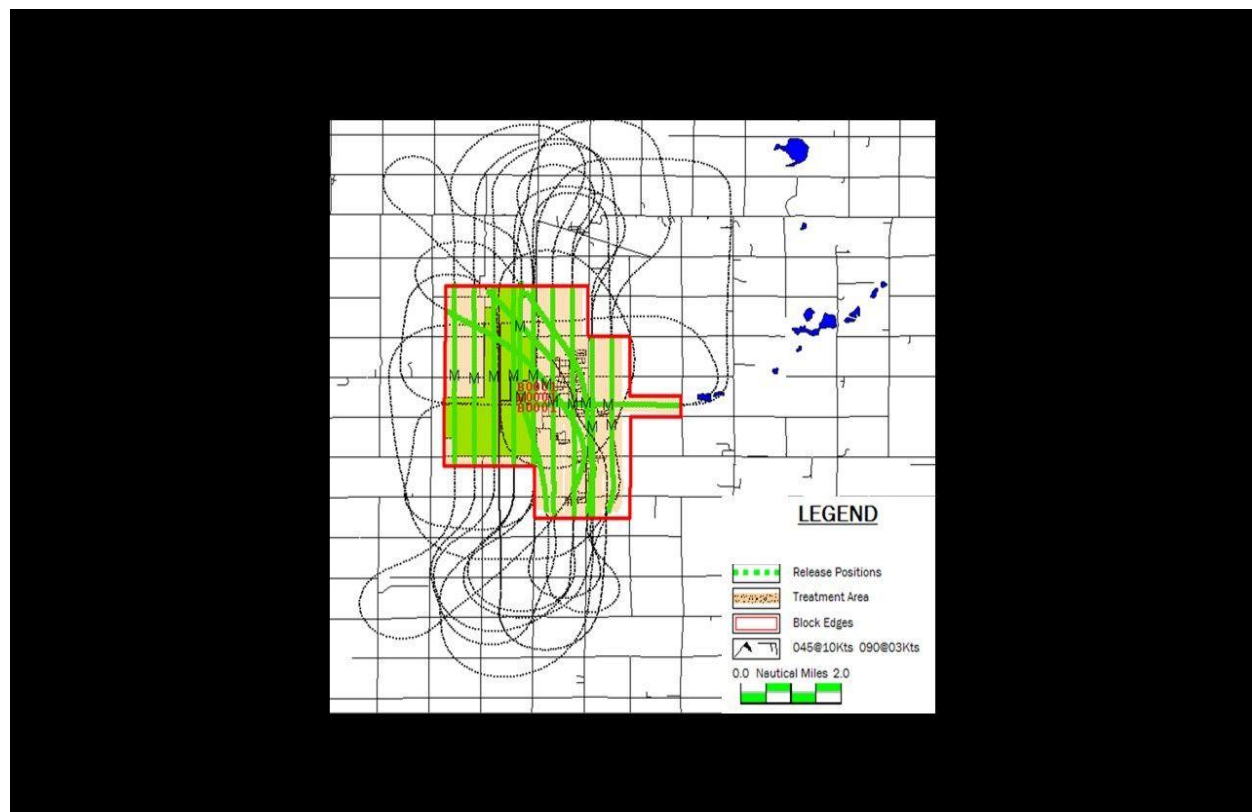

**8. REMARKS:** Continued moderate numbers (134 average) of mosquitoes prompted GFAFB to make the decision to make an aerial spray application. Spray operations for the evening of 9 July were delayed for 24 hours due to marginal weather conditions in addition to weather forecasts predicting higher temps and lighter winds for 10 July 2013. Post-spray trap count data showed acceptable mosquito reductions (65%, 47 average) following the application. Special thanks to MSgt (b) (6) and the staff of the GFAFB pest control shop.

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Hill AFB/UTTR, UT

1. Aerial Spray flight proficiency training will be accomplished on targets 21, 24, Nord LZ, and Wildcat at the Utah Test and Training Range(UTTR) applying Krovar controlling vegetation (i.e Halogenton) growth to aid bombing mission test evaluations and unexploded ordnance recovery. Two Spray configured C-130's will be available 11 Mar – 22 Mar 13 for the requested spray mission. One Support C-130 will be used for position and deposition of spray ground personnel and maintenance equipment.

2. Concept of Operations:

- a. 11 March (Monday)
  - 0800 Show KYNG
  - 1000 1<sup>st</sup> Spray aircraft depart KYNG
  - 1015 2<sup>nd</sup> Spray aircraft depart KYNG

CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
UTAH TEST AND TRAINING RANGE, 11-22 MAR 2013

1. MISSION BASICS:

- a. Installation Sprayed: Utah Test and Training Range (UTTR)
- b. Mission Duration: 11-22 Mar 2013
- c. Purpose of Application: Weed control on UTTR Targets 21, 23 and 24, facilitate UXO recovery
- d. Application Dates: 12-15, 18 Mar 2013
- e. Times of Application (Local): see attachment 1
- f. Acres Treated: 1,094
- g. Ferry Sorties/hours: 4/19.5 + 6/30.8 support sorties
- h. Spray sorties/hours: 14/19.3 + 6/11.7 flush sorties
- i. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) Range Specialist/DSN (b) (6)  
(b) (6) Environmental Coordinator (b) (6) DSN (b) (6)
- j. Date Spray Map Last Approved: 8 Mar 2013
- k. Installation In-Briefing: (When/Where/Briefer/s): Maj (b) (6) Lt Col (b) (6)

2. OPERATIONAL:

- a. Mission Commanders: Lt Col (b) (6) (11-17 Mar); Maj (b) (6) (18-22 Mar)

- b. Aircrew  
1st HALF AIRCREW (11-17 Mar)

AIRCREW 1: CALL SIGN: SPRAY 05

Pilots: Lt Col (b) (6) Maj (b) (6)

Navigators: Lt Col (b) (6)

Flight Engineers: TSgt (b) (6)

Spray Operators: SMSgt (b) (6) TSgt (b) (6) SrA (b) (6)

Crew Chiefs: TSgt (b) (6) SrA (b) (6)

- c. Entomologists: Lt Col (b) (6) application supervision, Cat 11 (UTTR, 11-17 Mar), Lt Col (b) (6) pesticide mixing and loading Cat 11 (Hill AFB, 11-17 Mar), safety briefer, onboard application supervision (18 Mar)
- d. ARMS: SMSgt (b) (6)
- e. Range: Lt Col (b) (6) Maj (b) (6) and Capt (b) (6)

### 3. PESTICIDE:

- a. Trade Name: Krovar<sup>®</sup> IDF
- b. EPA Registration Number: 352-505
- c. Formulation Sprayed: 10 lbs Krovar<sup>®</sup> per 22.5 gallons formulation.
- d. Gallons Pesticide Mix Loaded: 24,621
- e. Gallons Pesticide Mix Applied: 24,621
- f. Formulation Used: 450 lbs Krovar<sup>®</sup>, 4.0 gal StaPut<sup>®</sup>, ½ gal Foam Fighter<sup>®</sup>, 200 ounces Hi-Light<sup>®</sup> Dye, remainder water per 1000 gal of spray mix.
- g. Gallons and Name of Flush Used: 900 gal water
- h. Other Additives Used: 102 gal StaPut<sup>®</sup>; 40.6 gal Hi-Light<sup>®</sup> dye; 12.7 gal No-foam
- i. Application Rate: 22.5 gal/acre

### 4. APPLICATION EQUIPMENT:

- a. Aircraft Tail Number: 99105, 99106
- b. Spray System (Modules Used) and System ID #: 3 and 5.
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 2 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 366 gallons per minute.

### 5. APPLICATION PARAMETERS:

- a. Swath Width Flown: 35'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

### 6. WEATHER OBSERVATIONS:

- a. Winds (Direction/Speed):
  - (1) 12 Mar– beginning calm; ending 300° at 5 knots
  - (2) 13 Mar – beginning 190° at 9; ending 205° at 11 knots
  - (3) 14 Mar– beginning light & variable; ending 170° at 6 knots
  - (4) 15 Mar– 220° at 5 knots
  - (5) 18 Mar– beginning 130 at 7; ending 220° at 6 knots

- b. Temperature (Degrees Fahrenheit):
  - (1) 12 Mar – 41°-60° F
  - (2) 13 Mar – 37° - 59° F
  - (3) 14 Mar– 39° - 61° F
  - (4) 15 Mar– 32° - 55° F
- c. Relative Humidity:
  - (1) 12 Mar – 53- 31 %
  - (2) 13 Mar – 51- 37 %
  - (3) 14 Mar– 56-37%
  - (4) 15 Mar– 47-26%
- d. Cloud Cover: Variable from 0 % to 100 % over the duration of the project; but mostly sky clear while spraying
- e. Source: Ground observations at UTTR Target 21 and 24

7. **SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: blue dye pattern on targets and observations from personnel on the range (
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring
  - (2) Results: will be determined this spring by range personnel

8. **REMARKS:** Deep snow on the targets the week prior to this application prevented EOD from surveying and clearing the targets (21, 23-24) and consequently no personnel were admitted onto the targets. Therefore, this year's application is unique in that all of the spraying was conducted using the DGPS agricultural spraying system (Wingman) for proper placement of aircraft. In the past, it was felt that it would not be practical for pilots to maintain the plane within a few feet of the swath line using only the light bar. However, after reviewing the track/path of the aircraft while spraying we found that nearly all passes over the target were maintained within the 35 foot swath width. Therefore, it is our opinion that ground personnel on the target using trucks as spotting landmarks for the spray aircraft may not be necessary (pending actual efficacy results of this year's spray). We do maintain that at least one person should be located on each target to observe and provide confirmation/feedback to the aircraft on the uniformity of the application. No spraying was conducted on 16-17 March as the UTTR was not open. UTTR staff have expressed an interest in adopting new target areas and cooperating with the 75CES to treat cheat grass for fire suppression during the same early-spring timeframe. A DoD approved active ingredient (herbicide) is available (imazapic ammonium salt) and is effective against cheat grass as well as halogeton. An updated EA should be completed by UTTR and 75CES staff at least 90 days prior to an application in 2014. Because of an increased swath width and smaller application rate, it is possible that all areas can be sprayed in a similar amount of time (2 weeks). Specific spray data for the mission is shown in Attachment 1.

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Revised Capability and Concept of Operations for Aerial Spray Training Avon Park, FL (Original Concept of Operations 20 Dec 2012)

1. Due to budgetary constraints, the previously planned week long C-130 aerial spray refresher at Avon Park, FL during 13-18 Jan 2013 has been cancelled. Instead only one C-130 aerial spray equipped aircraft will be sent and the mission duration has been shortened by one day. This aircraft will conduct aerial spray training to prepare aircrew and maintenance personnel for the upcoming spray season, while supporting unit entomologists teaching the DoD Aerial Application Pest Control Course (AAP-001) at Ft Meyers, FL (KFMY). Training will take place over Avon Park Bombing Range, FL and coastal waters.
2. Concept of Operations:
  - a. 13 Jan (Sunday)  
Aircraft will depart KYNG and land at KFMY to drop off entomologists and LZSO. The aircraft will RON at MacDill AFB.
  - b. 14 Jan (Monday)  
Aircraft will arrive at Avon Park, configure for spray operations and fly a training sortie.
  - c. 15 Jan (Tuesday)  
Aircraft will depart Avon Park to fly overwater training sortie then land at KFMY to assist in DoD Aerial Application Pest Control Course (AAP-001).
  - d. 16 Jan (Wednesday)  
Aircraft will fly training mission at Avon Park.
  - e. 17 Jan (Thursday)  
Aircraft will fly training mission at Avon Park, deconfigure spray equipment, fly to KFMY to pick up personnel and return to KYNG.
3. Spray Configuration:
  - a. MASS – SP2G

- b. Parameters –100' AGL and above
  - c. Chemical – Water
4. Maj (b) (6) will now serve as Mission Commander.
  5. Support required at MacDill AFB and Avon Park Bombing Range has been arranged.
  6. The majority of the planned aerial spray refresher (ground and flight training) will be conducted at KYNG 14-16 Jan 13.

**SUBJECT:** Capability and Concept of Operations for Aerial Spray Training Avon Park, FL

1. Two C-130 aerial spray equipped aircraft will proceed from Youngstown ARS, OH to Avon Park, FL during 13-18 Jan 18. The mission purpose is to conduct aerial spray training to prepare all aircrew positions and maintenance personnel for the upcoming spray season. This training will take place over Avon Park Bombing Range, FL and coastal waters. In addition, assets will support unit entomologists teaching the DoD Aerial Application Pest Control Course (AAP-001) at Ft Meyers, FL. ADVON aircraft will depart on 13 Jan, while the main body will depart YNG on 14 Jan.

- d. **Entomologist:** Lt Col (b) (6)(b) (6)
- e. **Flying Data:**
  - (1) Training Sorties/Hours: 1/1.9
  - (2) Ferry Sorties/Hours: 2/3.9

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 150 gallons
- d. Gallons Pesticide Applied: 150 gallons
- e. Gallons and Name Diluent Used: N/A
- f. Gallons and Name of Flush Used: 7 Gallons HAN
- g. Other Additives Used: None
- h. Application Rate: 1.1 oz/acre

## **APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99107
- b. Spray System (Modules Used) and System ID #: 1
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 3003
- e. Nozzle Orientation & Number Used: 30 Total; 15 left, 15 right
- f. Pressure: 45 p.s.i.
- g. Flow Rate: 7.9-8.0 gallons/minute (1.1 oz/acre)

## **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 500'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 KTS

## **6. WEATHER OBSERVATIONS:** Wind; 130 at 6 knots (average) on aircraft; Ground observation were 2-4 knots from same direction. Temp; 79 degrees F; Humidity 65-63 percent.

## **7. SPRAY MONITORING:** Pre and Post spray mosquito collections were taken at 3 locations using CO<sub>2</sub>-baited CDC mosquito traps and 1 location using New Jersey Light trap

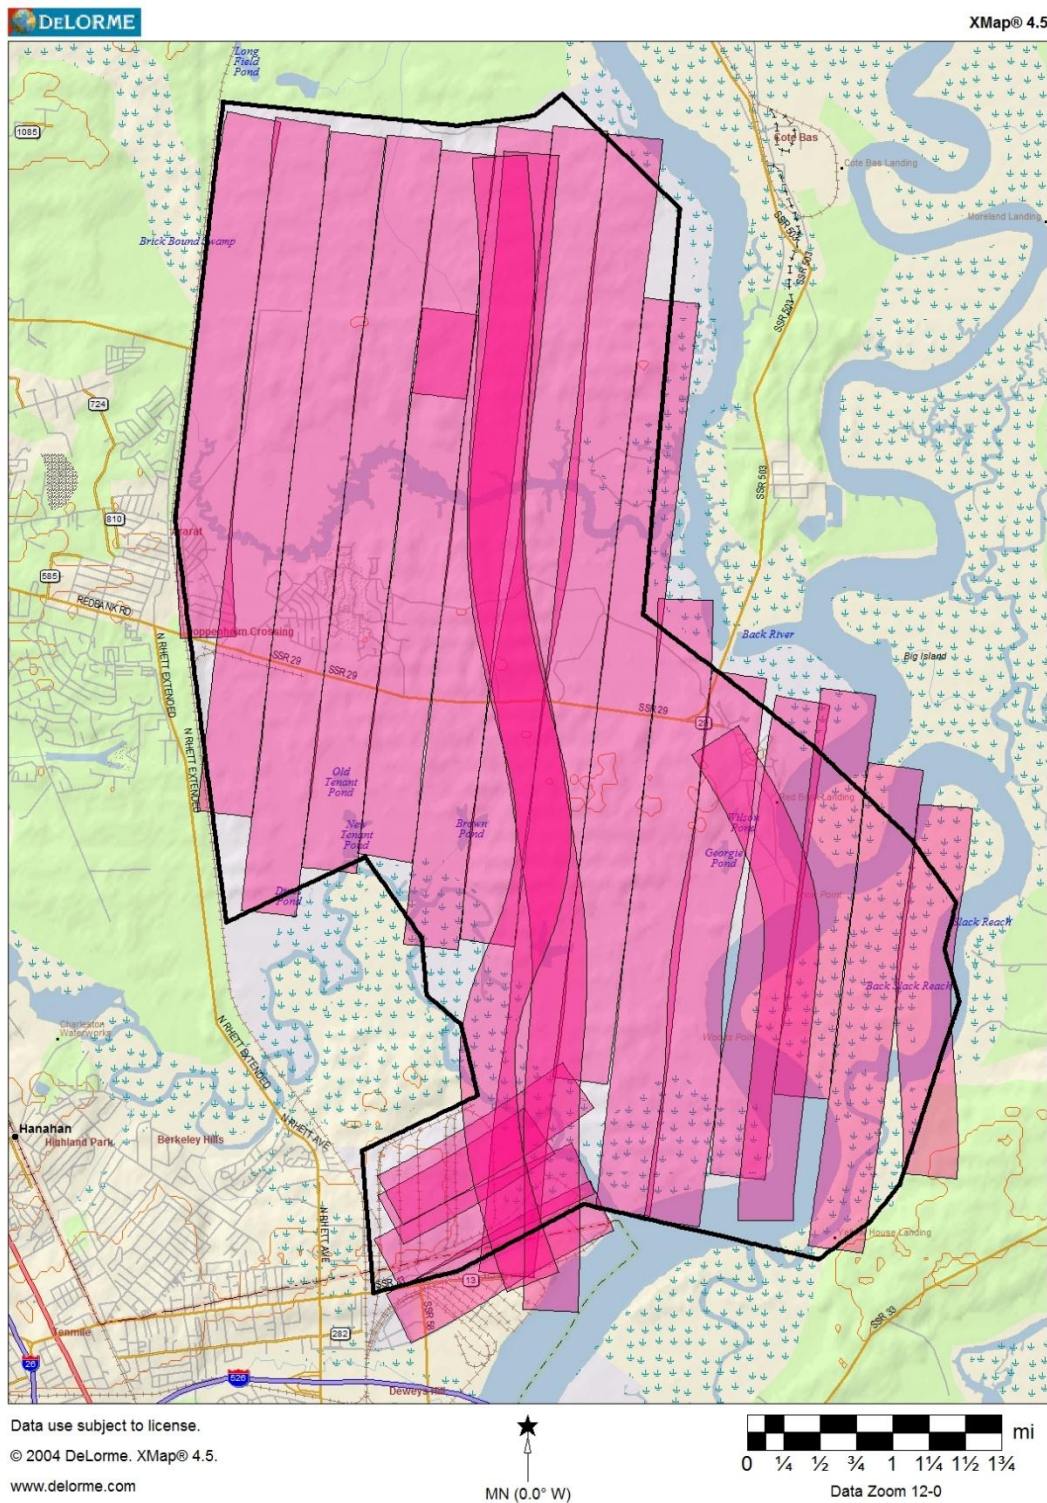

Trap 1: (DTP) 400 females (13 June); 79 females (20 June) 80 % reduction  
Trap 2: (Golf Course) 1760 females (13 June); 112 females (20 June) 94% reduction  
Trap 3: (NPTU) 1216 females (13 June); 135 females (20 June) 89% reduction  
Goose Creek NJ Light : 171 Females (June 14) 1 Female (June 18) 99.5 % kill

**8. REMARKS:** This application is the second adulticide application conducted at the Naval Weapons Station at JB Charleston. Last year, a contingency spray was initiated to combat historically high mosquito counts. This year, JB Charleston completed all NEPA documentation to continue routine aerial applications for nuisance and disease carrying mosquitos. No significant problems were encountered during this application, and results appear to be excellent despite the fact that the post application CDC mosquito traps were not deployed until almost 1 week post spray due to inclement weather conditions. Because of the large dredge spoil and marshlands associated with the Naval Weapons Station, future larvicide operations are being considered. While we appreciate the sincere support we encountered from ALL sections at JB Charleston, special thanks goes to (b) (6) (b) (6) for his thorough coordination at all levels.

**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S**  
**POST-MISSION REPORT (replaces AFRC Form 55)**  
**PARRIS ISLAND MCRD, SC 15-19 October 2012**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island Marine Corps Recruit Depot, South Carolina
- b. Mission Duration: 15-19 October 2012
- c. Purpose of Application: Biting Midge (*Culicoides* spp.)/Mosquito Control
- d. Application Date: 17 Oct 2012
- e. Time/s of Application (Local): 1610-1831
- f. Acres Treated: 7,922
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6)  
Environmental/Spray Coordinator, DSN (b) (6)
- h. Date Spray Map Last Approved: 1 Oct 2012
- i. Date of Waste Generation Letter: 10 April 2000
- j. Installation In-Briefing: (When/Where/Briefer/s): 16 Oct 12 with (b) (6) and Lt  
Col (b) (6) at NREAO
- k. Mission Identifier: QZNRK3401289

**2. OPERATIONAL:**

- a. **Mission Commander:** Maj (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6), Lt Col (b) (6) Maj (b) (6)
  - (2) Navigators: Lt Col (b) (6)
  - (3) Flight Engineers: TSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6), SMSgt (b) (6) MSgt (b) (6)  
MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6), TSgt (b) (6) TSgt (b) (6)  
(b) (6) TSgt (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6) SrA (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6) (b) (6) (safety briefer), Lt Col (b) (6) (b) (6) Lt Col  
(b) (6)
- e. **Flying Data:**
  - (1) Spray Sorties/Hours: 2/3.4 (including 1 training sortie for 1.0 hrs)
  - (2) Ferry Sorties/Hours: 2/3.8

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 54 gal
- e. Gallons Pesticide Applied: 54 gal
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 10 gal/BVA oil
- h. Other Additives Used: None
- i. Application Rate: 0.87 oz/acre

#### 4. APPLICATION EQUIPMENT:

- a. Aircraft Tail Number: 89-9104
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 18, oriented straight down
- f. Pressure: 42-62 p.s.i.
- g. Flow Rate: 3.3 gallons per minute (calibrated on-site)

#### 5. APPLICATION PARAMETERS:

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 150' (300 ft for bioassay spray passes)
- d. Ground Speed: 200 Knots (338 Feet/Second)

#### 6. WEATHER OBSERVATIONS (17 Oct):

- a. Winds (Direction/Speed):
  - (1) Ground: 050°/1-5 Knots
  - (2) Release Altitude: 050°/5 Knots
- b. Temperature (Degrees Fahrenheit): 73 dropping to 72° F
- c. Relative Humidity: 61 increasing to 68%
- d. Cloud Cover: Mostly cloudy-clear
- e. Source: Aircraft/ground measurements

#### 7. SPRAY MONITORING (Pre- and Post-Treatment):

- a. Deposition Pattern:
  - (1) Technique/s Used: visual observation of aircraft course (GPS)
  - (2) Results: good coverage throughout spray area
- b. Effectiveness:
  - (1) Technique/s Used: Biting midge numbers were determined prior to spraying using light traps (16 Oct). Post-spray monitoring was carried out by Pest Management personnel with light traps (19 Oct).
  - (2) Results: Biting midge numbers were significantly reduced at the following locations following the application. The reduction was spectacular at the Page Field sampling location:

	Date		
	16-Oct	17-Oct	19-Oct
Location			
Elliot Beach	690	250	20
Page Field	4,000	20,000	100
Outdoor Pool	240	400	50
Horse Island	261	1,242	20

8. **REMARKS:** The primary purpose of this application was to lower the number of biting midges on the Depot because the bites of these insects can become infected and result in dermatitis and, ultimately, lost training, the latter which can directly impact the Parris Island MCRD (PIMCRD) mission. In addition, two single-pass replications from 300 ft above ground level were carried out to verify this altitude as functional for night operations (previously work without active ingredient has been done from this height and other altitudes since 2003). Night operations are needed to maximize the effect of sprays against night flying mosquito species including the primary vectors of West Nile virus. High numbers of midges were present on the PIMCRD (see 7.b) with one location collecting more than 20,000 midges in a single night. Following

the application, midge numbers were reduced significantly (overall reduction was 94%, considering all sampling locations shown in 7.b). The treatment map is shown in Attachment 1.

a. Prior to the application on 17 Oct, two bioassays were conducted with caged mosquitoes using the same application parameters but with a 300 ft release height. The results of the bioassays were clear with both replications reflecting similar results (Attachment 2). Graphs show 100% mortality began 500-750ft downwind from the release point and continued downwind 500 to 750ft when mortality began to decrease. The second release results agreed with the first and also had a second 100% mortality peak beginning downwind at 2,500ft. It is unknown if the short waiting period between the first and second pass allowed for some drifting pesticide from the first pass to impact mosquitoes used during the second pass or if this was exclusively drift from the second pass. Mosquitoes in the control cages were placed 500ft upwind from the release point and had 0% mortality after the first pass and 3% mortality after the second. We consider the above information, in conjunction with previous work carried out at Avon Park (contact POC for technical reports), to indicate that a 300ft release height is an appropriate and functional altitude for aerial sprays when safety concerns related to night operations necessitate a higher release height. Special thanks to USDA-ARS Center for Medical and Veterinary Entomology for providing the mosquitoes used in the bioassays and to Peter Connelly (AMVAC) for technical support.

Attachment 1. Coverage of Dibrom application over Parris Island MCRD, SC 17 Oct 2012. Purple indicates a 1,000ft swath. We used a 1000ft offset. Red circles at the NW and SE edges of the block are no spray areas indicating locations of bald eagle nests. White arrow gives wind direction (050 @ 8-11 knots at altitude). Green line is the transect where mosquito bioassay cages were placed. Dotted black line is track of aircraft during 300 ft release. White arrow indicates wind direction.

Attachment 2. Bioassay results from 300ft release passes. Blue and green lines track insect mortality; bottom scale is in linear feet from the spray release point, boxes represent locations where bioassay cages were placed. Top graph is trial 1, bottom graph is trial 2. Graphs show 100% mortality began 500-750ft downwind from release point and continued downwind for 500 to 750ft when mortality began to decrease. The second release results agreed with the first and also had a second 100% mortality peak beginning downwind at 2,500ft. It is unknown if the short waiting period between the first and second pass allowed for some drifting pesticide from the first pass to impact mosquitoes used during the second pass or if this was exclusively drift from the second pass. Mosquitoes in the control cages were placed 500ft upwind from the release point and had 0% mortality after the first pass and 3% mortality after the second. We consider the above information, in conjunction with previous work carried out at Avon Park (contact POC for technical reports), to indicate that a 300ft release height is an appropriate and functional altitude for aerial sprays when safety concerns related to night operations necessitate a higher release height.

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Mountain Home AFB, ID

1. Aerial Spray flight proficiency training will be accomplished at Saylor Creek Bombing Range near Mountain Home AFB, ID. Spray will aid their fire prevention program treating an invasive grass species (Cheat grass) that creates a fire hazard and has overtaken many of the areas on the bombing range. The operation applies herbicides targeting Cheat grass but allowing native fire resistant vegetation (sagebrush) to re-establish and become competitive. This mission will also provide real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations:

- a. 16 September (Monday)

  - (3) Avionics: TSgt (b) (6)
- c. **Flying Data:**
  - (1) Spray Sorties/Hours: 1/2.0
  - (2) Ferry Sorties/Hours: 2/3.0

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate (87.4% Naled)
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Dibrom<sup>®</sup> Concentrate (neat)
- d. Gallons Pesticide Loaded: 30 total
- e. Gallons Pesticide Applied: 30
- f. Gallons and Name Diluent Used: none
- g. Gallons and Name of Flush Used: 10 aromatic naptha
- h. Other Additives Used: n/a
- i. Application Rate: 0.50 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 90-9105
- b. Spray System (Modules Used) and System ID #: SP2G MASS ULV
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: TeeJet 8003 flat fan nozzles
- e. Nozzle Orientation & Number Used: 18 straight down
- f. Pressure (PSI): 40-60
- g. Flow Rate: 3.6 gpm

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000 feet
- b. Spray Off Set: 2000-3000 feet
- c. Spray Release Altitude: 150 feet
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed in knots): 330°/7-8 knots (Langley AFB); 330°/8-9 knots (Craney Island)
- b. Temperature (°F) and relative humidity: 75 and 78%
- c. Cloud Cover: mostly cloudy
- d. Source: Observations at altitude during spray sorties

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:  
(1) n/a

- b. Effectiveness:
- (1) Technique/s Used: carbon dioxide-baited traps were used to monitor mosquito densities pre- and post-treatment by Portsmouth Mosquito Control and Base mosquito control professionals.
  - (2) Results: Langley Pest Management was not able to set traps for post spray monitoring immediately because the following day was a furlough day. Three days later, when trapping was done, a decrease of about 50% was reported (see Attachment 1A). Portsmouth Mosquito Control reported an 82% reduction post-spray of the target species *Aedes sollicitans* (Attachment 1B). Neither agency was able to provide data from collections outside of the spray area (control area).

8. **REMARKS:** Moderate numbers of mosquitoes on the Langley peninsula left our innovative readiness training partners with the tough decision not to participate in this spray. Mosquito counts were high on Craney Island and increasing at Langley to prompt those entities to request an application. Post-spray recording was impacted by the furlough as the application occurred on a Thursday evening and the furlough was on Friday which pushed the next trapping opportunity to Monday night. Waiting that long to trap skews the impact results of the spray by letting adults from outside the area return as well as new insects emerging from the treated marshes. Therefore, the spray efficacy at Langley was probably at least a bit better than the reported value. We received great support from Langley AFB, especially the 633CES and an aircraft is scheduled for a spray opportunity including IRT partners for 26-30 Aug.

12 February 2013

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray Application at Luke AFB

1. One C-130 aerial spray equipped aircraft will be available 25 Feb – 1 Mar 2013 to proceed from Youngstown ARS, OH and stage at Luke AFB, AZ. The mission purpose is the control of invasive weed species by aerial spray application on Barry Goldwater Range, semi-annual currency events, and proficiency training. The range roadways will be sprayed to control the growth of Saharan Mustard on the range. This will be a small area test application to ensure the application technique and chemical combination will properly manage the pest.

2. Concept of Operations:

- a. 25 February (Monday)  
0800 Show KYNG  
1000 Depart KYNG  
1340 Land KLUF
- b. 26 -28 February (Tuesday-Thursday) Range: 0730-0930  
0530 Show KLUF  
0715 Depart KLUF  
0945 Land KLUF
- c. 1 March (Friday)  
0600 Show KLUF  
0800 Depart KLUF  
1540 Land KYNG

3. Spray Configuration:

- a. MASS – SP2G
- b. Parameters –100' AGL and above
- c. Chemical – Glyphosate (Roundup)
- d. Rate – 440 GPM (10 Gal/Acre finished rate)

4. Maj (b) (6) will serve as Mission Commander.

5. Support required at Luke AFB and Barry Goldwater range has been coordinated. Please contact the aerial spray office if you have any concerns at DSN: (b) (6)

5 March 2013

MEMORANDUM FOR 757 AS/DO

FROM: 757 AS/DOS

SUBJECT: Mission Report for 25 February to 1 March 2013 Luke AFB/Barry M. Goldwater Range.

**1. Purpose:** Herbicide application of Ranger Pro® (Glyphosate) to Sahara Mustard, and invasive noxious weed present in spoil areas of Barry M. Goldwater Bombing Range, Arizona.

**2. Participants:**

**Aircrew:**

1. **Mission Commander:** Major (b) (6)
2. **Pilots:** Lt Col (b) (6), (b) (6) Major (b) (6)
3. **Navigators:** Captain (b) (6)
4. **Flight Engineers:** MSgt (b) (6)
5. **Spray Operators:** SMSgt (b) (6), SMSgt (b) (6), SSgt (b) (6), Sra (b) (6)

**Maintenance:**

1. **Spray Maintenance:** MSgt (b) (6), TSGT (b) (6), TSgt (b) (6) (MX lead)
2. **Avionics:** SSgt (b) (6)
3. **Crew Chiefs:** SSgt (b) (6), SRA (b) (6)

**Entomologist/Ground Support:** Lt Col (b) (6), (b) (6)

**3. Spray Configuration:**

Mass-SP2G  
Aircraft Number: 99103  
Mission Identifier: QZNRK9901056

**4. Spray Parameters:**

Booms—Fuselage  
Nozzles—RainDrop nozzles.  
Number of Nozzles— 28 total  
Airspeed—200 knots ground speed.  
Altitude—100' AGL.

**5. Aerial Spray Flight Data:**

a. 25 Feb 13: Ferry	KYNG-KLUF 1623-2223Z	Flight Hours: 6.0
b. 26 Feb 13: Spray Sortie	KLUF-KLUF 1500-1638Z	Flight Hours: 1.6
c. 27 Feb 13: Spray Sortie	KLUF-KLUF 1453-1604Z	Flight Hours: 1.4
d. 28 Feb 13: Rinse Sortie	KLUF-KLUF 1439-1548Z	Flight Hours: 0.8
e. 1 Mar 13: Ferry	KLUF-KYNG 1500-2100Z	Flight Hours: 6.0

**7. Conclusions:** Results from the 3 trials are shown in attachment 1, figures 1-3. The graph on the left shows the deposition characteristics, and the graph on the right indicates the approximate effective swath width. All 3 tests were fairly consistent, and the effective swath width appears to be between 125 to 150 feet wide. At the flow rates shown (500-530) a 125 foot nominal swath results in a deposition rate of approximately 8.9 gallons per acre, which is reasonably close to the targeted deposition rate of 10.0 gallons per acre. However, it should be noted that deposition rates in the center of the swath are approximately 3 times the deposition rates on the edges of the swath. While these deposition rates would presumably be effective, the purpose of increasing the swath width with the addition of wing booms is to facilitate a one-pass operation in treating the roads on the Barry M. Goldwater range. In this circumstance, if the aircraft was flown directly down the road while applying herbicide, a majority of the herbicide mix (assuming light or no wind), would be deposited directly on the road, which itself is devoid of weeds. Since the targets are the weeds on the side of the road, using a smaller swath using only the fuselage booms with a 2 pass scenario would result in less wastage of material. When considering the treatment of targets with herbicide, the situation may be slightly different. In that case, an increased swath width using the wing booms in addition to the fuselage booms would result in approximately 30 percent greater application efficiency.

**9. Acknowledgements:** Many thanks to (b) (6) for his invaluable assistance in making this mission possible.

- b. Spray Off Set: 2000 feet
- c. Spray Release Altitude: 150 feet
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed in knots): 230-260°/6-10 knots (release altitude), 235-260°/4-5.2 knots (ground observations) (27 Aug); 50-60°/15 knots (at altitude, Craney Island), 50-60°/6-8 knots (ground observation) (29 Aug)
- b. Temperature (°F) and relative humidity: 70-71°F and 58-71% RH (27 Aug); 77-76°F and 79-82% RH (28 Aug);
- c. Cloud Cover: mostly cloudy to cloudy both days
- d. Source: Observations at altitude and on the ground during spray sorties

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

a. Deposition Pattern:

(1) n/a

b. Effectiveness:

(1) Technique/s Used: carbon dioxide-baited traps were used to monitor mosquito densities pre- and post-treatment by Portsmouth Mosquito Control and Base mosquito control professionals.

(2) Results: Langley Pest Management was not able to set traps for post spray monitoring immediately but will trap early next week. York County trap volunteers reported no mosquitoes in traps. Highest pre- spray count was 2,490 mosquitoes for a 1 week period. Portsmouth Mosquito Control will report post spray numbers next week. This report will be updated when post spray numbers become available.

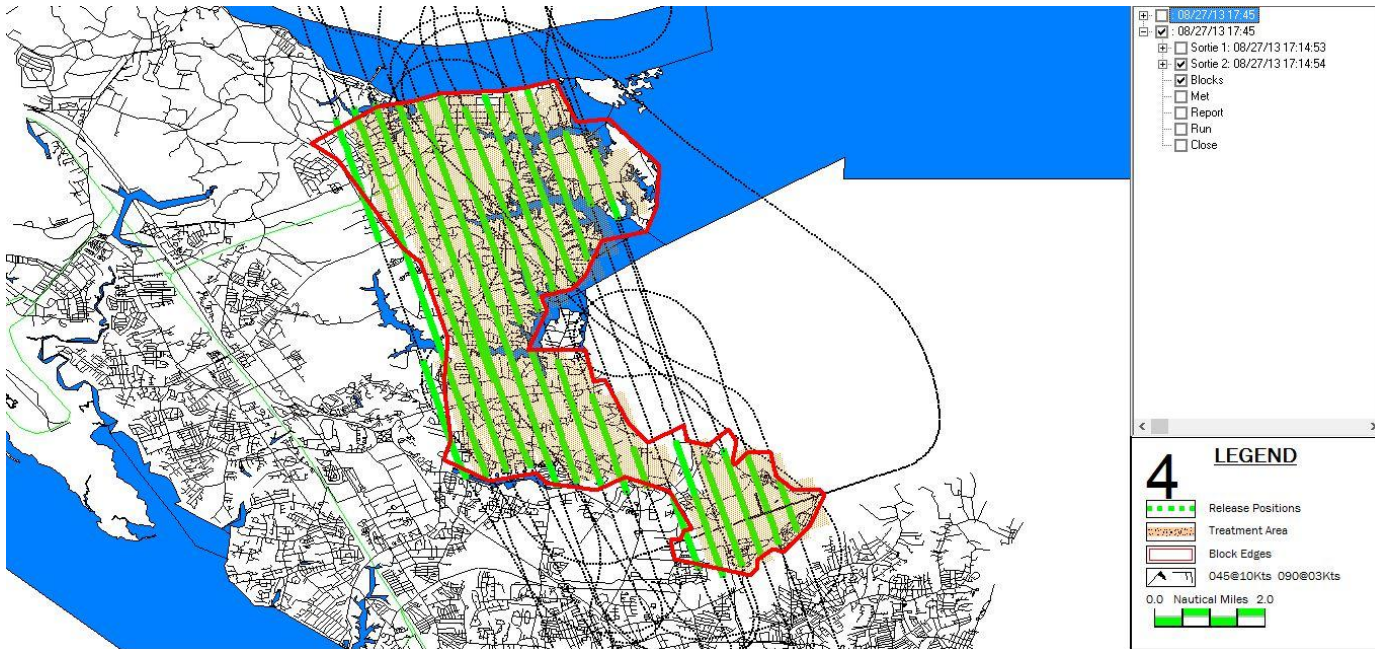

- 8. REMARKS:** High numbers of mosquitoes on the Langley peninsula brought a request for a spray from our innovative readiness training partner York Co. Additionally, mosquito counts were high on Langley AFB. Aerial mosquito control has become a hotly debated topic on the peninsula with individuals arguing for and against (see <http://www.dailypress.com/news/york-county/dp-nws-york-mosquito-spraying-folo-20130823,0,6078824.story> as well as <http://www.dailypress.com/news/york-county/dp-nws-york-mosquito-spraying-again-20130822,0,5961521.story>). The local public health authorities request and approve these sprays and provide options for those who are concerned (such as covering bee hives). There does not appear to be any contention to this historically welcomed operation in the Portsmouth Community directly surrounding Craney Island. Mr. (b) (6) from the VA Department of Agriculture and Consumer Services Office of Pesticide Services was invited to conduct an inspection of the aerial spray operation and he monitored both applications. We again received great support from Langley AFB, especially the 633CES and this is the last aircraft scheduled for spray operations for FY13.

- d. Ground Speed: 200 knots (338 feet/second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 270°/5 (30 Jul); 320°/7 (31 Jul); 020°/9 (1 Aug)
- b. Temperature (Degrees Fahrenheit): 69°F (30 Jul); 71°F (31 Jul); 73°F (1 Aug)
- c. Relative humidity: 44% (30 Jul); 61% (31 Jul); 41% (31 Jul);
- d. Cloud Cover: Scattered
- e. Source: Minot AFB Weather Flight/Ground observations

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Mosquito activity was high the week prior to aerial spraying in the City of Minot (as reported during the State Fair). No light trap data for pre- or post- spraying was provided by the City of Minot. Local accounts post-spray indicated a significantly reduced mosquito population.
- b. Minot AFB Public Health provided pre-treatment mosquito counts of 127 per night. The Mosquito Magnet used for trapping mosquitoes was damaged and no post-treatment collections were made. Observations of mosquito activity was greatly reduced following the aerial spraying.
- c. Williston Vector Control monitors mosquitoes with 8 New Jersey traps positioned throughout their spray area. Pre-spray mosquito collections ranged from 1-31 per night. Following the spray, Williston reported an overall reduction in trap collections of 70%. (Attachment 3).

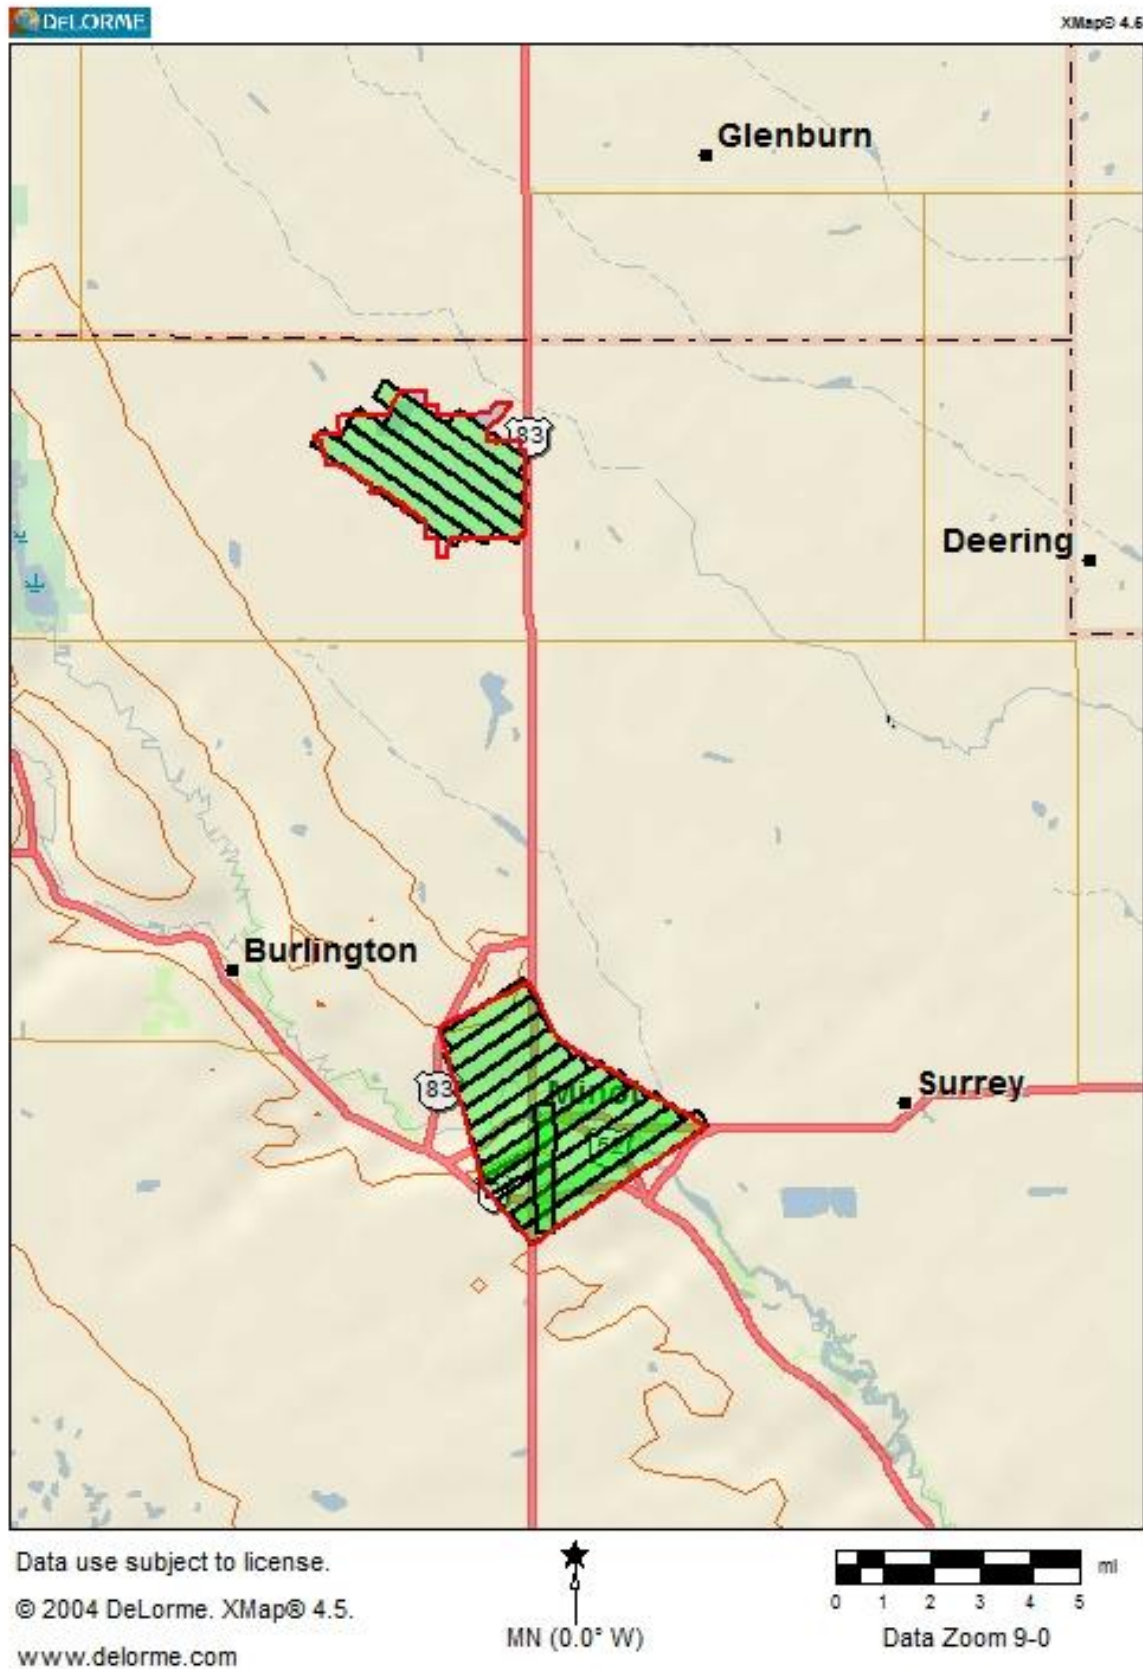

**8. REMARKS:** Several dead birds in North Dakota have tested positive for West Nile Virus (WNV). This zoonotic disease is transmitted to humans and horses by *Culex tarsalis* mosquitoes in North Dakota. Application of mosquito larvicides earlier in June coupled with adulticide applications in early and late July should help suppress biting activity and disease transmission in areas treated.

This is the second application of adulticides for mosquito control for the Cities of Minot and Williston by the Air Force Spray Flight under the recently approved Innovative Readiness Training (IRT) program. Under the IRT, the Air Force works directly with representatives of the communities of City of Minot and Williston to provide vector control (mosquito control) via aerial applications while simultaneously accomplishing military training. North Dakota has received significant rainfall this year and floodwater mosquito numbers have been well above levels seen during the relatively dry year in 2012. Favorable weather and hard work allowed for the three separate areas to be treated on three separate nights. The mission was also complicated because Williston Vector Control uses a different pesticide than Minot AFB and City of Minot. However, the different pesticide provides the spray team with additional training opportunities for maintenance personnel performing system calibration. Mosquito counts were reduced significantly following applications.

**910 AW AERIAL SPRAY  
PMP'S POST-MISSION REPORT  
SMOKY HILL ANGR, KS 29 Oct-9Nov 2012**

**1. MISSION BASICS:**

- a. **Installation Sprayed:** Smoky Hill ANGR, Salina KS
- b. **Mission Duration:** 29 Oct – 9 November 2012
- c. **Purpose of Application:** Control of Musk Thistle (*Cardus nutans*) on Smoky Hill, ANGR.
- d. **Application Date/s:** 30 October-7 November 2012  
**Time/s of Application (Local):** See attachment 2
- e. **Acres Treated:** 3926
- f. **Project Coordinator/s (Name/Rank, Title, Phone #):** (b) (6) , Aerial Spray Coordinator, Smoky Hill ANGR, DSN (b) (6)
- g. **Date Spray Map Last Approved:** 29 November 2012
- h. **Date of Waste Generation Letter:** N/A

**2. OPERATIONAL:**

- a. **Mission Commander:** Maj (b) (6) (1<sup>st</sup> half), Maj (b) (6) (2<sup>nd</sup> half)
- b. **Certified PMP (Category 11):** Lt Col (b) (6) Lt Col (b) (6)(b) (6) (1<sup>st</sup> half), Lt Col (b) (6)(b) (6) (2<sup>nd</sup> half)
- c. **Aircrew:**
  - (1) Aircraft Pilots: Maj (b) (6) , Lt Col (b) (6) (1<sup>st</sup> half), Maj (b) (6) (2<sup>nd</sup> half), Capt (b) (6) (2<sup>nd</sup> half)
  - (2) Navigators: Lt Col (b) (6) (1<sup>st</sup> half), Lt Col (b) (6) (2<sup>nd</sup> half)
  - (3) Flight Engineer(s): MSG (b) (6) (1<sup>st</sup> half), MSG (b) (6) (1<sup>st</sup> half), SMSG (b) (6) (2<sup>nd</sup> half)
  - (4) Spray Operators: MSG (b) (6) , MSG (b) (6) (1<sup>st</sup> half), MSG (b) (6) (b) (6) MSG (b) (6) (2<sup>nd</sup> half)
- d. **Safety Briefer:** Lt Col (b) (6)(b) (6)
- e. **Spray Maintenance/Pesticide Loaders:** SMSG (b) (6)(b) (6) MSG (b) (6) (b) (6) TSG Michael Lamantia, TSG (b) (6) , TSG (b) (6) , TSG (b) (6)
- f. **Spray Ground Monitors:** Lt Col (b) (6)(b) (6) Lt Col (b) (6) Lt Col (b) (6) (b) (6)
- g. **Crew Chief(s):** TSG (b) (6) Sra (b) (6)
- h. **Avionics:** MSG (b) (6)
- i. **Flying Data:**
  - 1. Spray Sorties/Hours: 21/21.6 Total; 17 Actual, 4 Flush Sorties

**3. PESTICIDE:**

- a. **Trade Name (% Active Ingredient):** Milestone®
- b. **EPA Registration Number:** 62719-6
- c. **Formulation Sprayed:** Milestone® mixed with water and AirexDC® Drift Control
- d. **Gallons Pesticide Loaded:** 150 Gallons Milestone Concentrate/ 75 Gallons AirexDC®
- e. **Gallons Pesticide Applied:** 150 Gallons Milestone Concentrate
- f. **Gallons and Name Diluent Used:** Approx. 26,200 gallons water
- g. **Gallons and Name of Flush Used:** Approx 7,200 gallons water
- h. **Other Additives Used:** 5 gallons of AirexDC® per load
- i. **Application Rate:** 7 gallons finish spray/acre

**4. APPLICATION EQUIPMENT:**

- a. **Aircraft Type (Tail Number):** 909105
- b. **Spray System (Modules Used) and System ID #:** 3-Module system
- c. **Spray System Configuration:** Fuselage Booms
- d. **Nozzle Type/Size:** R-20 Raindrop Nozzles
- e. **Nozzle Orientation & Number Used:** 17 Total, straight back
- f. **Pressure:** 36-52
- g. **Flow Rate:** 320-340 GPM

**5. APPLICATION PARAMETERS:**

- a. **Swath Width Flown:** 100'
- b. **Spray Off Set:** N/A
- c. **Spray Release Altitude:** 100' AGL
- d. **Ground Speed:** 200 Knots

**6. WEATHER OBSERVATIONS:**

- a. **Winds (Direction/Speed):**  
Ground: 245@4 (30 Oct), 254@4 (31 Oct), 250@8 (1 Nov), 130@10 (2 Nov), 330@5 (3 Nov), 220@5 (4 Nov), 340@15 (5 Nov), 350@12 (6 Nov), 280@5 (7 Nov)
- b. **Temperature Range During Application (°F):** 56°- 77°
- c. **Source:** Ground observations

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. **Deposition Pattern:**  
(1) Monitors observed/confirmed swath width from ground positions
- b. **Effectiveness:**  
(1) Technique/s Used: Visual field observations will be carried out in the spring by the Smoky Hill Staff. Good control is expected due to excellent coverage and application timing

**8. OPERATIONS TRAINING:**

The trip to Salina Kansas provided an excellent training opportunity for the aerial spray operations personnel. The unit had not sprayed there since 2006. For many aircrew members and one entomologist this was their first experience in the Smokey Hill range. Exposure to any new spray area provides excellent training for spray personnel. This location provided an opportunity for MSgt (b) (6) to continue his LV/HV spray operator upgrade. Also in addition to accomplishing continuation training several aircrew members were able to complete their annual SP 30 Actual Sortie requirement.

**9. MX TRAINING:**

Like the operations section, the trip to Salina Kansas was an excellent training opportunity for the 910 AW Aerial Spray Maintenance section. During the past 6 years, the maintenance section has acquired many new technicians, with only 2 personnel having experience and knowledge of the operations there. Valuable training was accomplished to include: safety practices, general maintenance practices, MASS configuring, coordinating load times, MASS preflight, water delivery procedures, water loading procedures, chemical loading procedures, chemical mixing procedures, MASS servicing procedures, aircrew debriefing, MASS troubleshooting, clean up procedures and MASS deconfiguring f which are specific to the Smokey Hill mission.

**10. REMARKS:** Yearly aerial applications for the control of musk thistle were discontinued in 2006 as headquarters ANG natural resources personnel allocated monies for the purchase of tractors to ground apply pesticides. Not taken into consideration was the roughness of the terrain, which severely impacted the efficiency and effectiveness of ground applications. By 2010 certain parts of the range were completely overwhelmed with musk thistle to the point that infestations were considered uncontrollable by ground application techniques. In light of this, the ANG natural resources office instigated the draft of a new environmental assessment (EA) concerning the aerial application of pesticides on range property. In this EA, provisions were made for application of a variety of more environmental friendly and effective pesticides than had been used previously. In 2012 aerial applications were resumed. Good results are expected as the product is highly effective against musk thistle, and the coverage was exceptional. Attachment 1 shows some of the designated areas covered on this mission. Unfortunately, a problem with the recording function of the GPS prevented complete data logging. However, all of the designated blocks were completed with the exception of a small portion of the block located in the NE corner of the range. If musk thistle continues to be a problem on other parts of the range, this mission will be continued in following years and areas will be treated on a rotational basis. Many thanks to Smoky Hill ANGR personnel for making this mission an operational success.

  - (1) Pilots: LtCol (b) (6), Capt (b) (6)
  - (2) Navigators: LtCol (b) (6)
  - (3) Flight Engineers: TSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6), MSgt (b) (6), TSgt (b) (6), SSgt (b) (6)
- d. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6), TSgt (b) (6), MSgt (b) (6), (b) (6), SrA (b) (6)
  - (2) Crew Chiefs: SSgt (b) (6), SrA (b) (6)
  - (3) Avionics: SSgt (b) (6)
- e. Flying Data:
  - (1) Spray Sorties/Hours: 3 sorties (1.7 + 1.8 + 3.4) = 6.9 hrs (see Attachments 1-3)
  - (2) Ferry Sorties/Hours: 2 sorties (3.5 + 3.5) = 7.0 hrs

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet<sup>®</sup> EC Concentrate (78% naled); Permanone 30+30 (30% Permethrin and 30% piperonyl butoxide)
- b. EPA Registration Number: 59639-90-5481 Trumpet; 432-1235 Permanone 30+30
- c. Formulation Sprayed: Emulsified Concentrate (Trumpet); 30+30 (Permanone 30+30)
- d. Gallons Pesticide Loaded: 120 gal Trumpet (30 Jun); 50 gal Permanone 30+30 (2 Jul)
- e. Gallons Pesticide Applied: 90 gal (19 Jul) & 50 gal (2 Jul); 37 gal Permanone (2 Jul)
- f. Gallons and Name Diluent Used: 35 gal BVA with Permanone 30+30
- g. Gallons and Name of Flush Used: 20 gal aromatic naptha
- h. Other Additives Used: None
- i. Application Rate: 1.1oz/acre (30 Jun, 1 Jul); 0.18 oz/acre (2 Jul)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99103
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet<sup>®</sup> 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 16-8003s total (30 Jun) and 32-8003's (1 Jul), 9-8003s (2 Jul); oriented straight down
- f. Pressure: 35-42 psi
- g. Flow Rate: 4.0 gallons per minute (30 Jun); 8.0 gallons per minute (1 Jul); 2.6 gallons per minute (2 Jul)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1,000 ft (30 Jun); 2000 ft (1-2 Jul)
- b. Spray offset: 1000 ft (30 Jun); 2000 ft (1-2 Jul)
- c. Spray Release Altitude: 150 ft'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 4-6 kts @ 070° (30 Jun) 4-6 kts @ 180° (1 Jul) 5kts @ 120° (2 Jul)
  - (2) Release Altitude: 6 kts @ 070° (30 Jun) 8 kts @ 180° (1 Jul) 8kts @ 120° (2 Jul)
- b. Temperature (Degrees Fahrenheit): 80-83° (30 Jun-2 Jul)
- c. Relative humidity: 75-85% (19 Jul) & 53% (21 Jul)
- d. Cloud Cover: Scattered clouds
- e. Source: Ground observations and aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Monitoring is done with New Jersey light traps in the City of Minot. Pre-application mosquito counts on 24 June averaged at 104/night (City of Minot); No post spray information was provided by the City of Minot at the time of this writing. Local accounts were that mosquitoes were significantly reduced.
- b. No pre or post mosquito counts were provided by Minot AFB Public Health. This may be a result of the weekend application and rapid departure of the spray team. Local personal accounts were that mosquito numbers were significantly reduced following the spray.
- c. Williston Vector monitors mosquitoes with 9 New Jersey traps positioned throughout their spray area. Pre-spray collections ranged from 1-833/per night. Following the spray, Williston reported a 50-80% reduction in trap collections with an overall 76% reduction.

**8. REMARKS AND RECOMMENDATIONS:** These applications mark the return of the Air Force Spray Flight to North Dakota under the recently approved Innovative Readiness Training (IRT) program. Under the IRT, the Air Force works directly with representatives of the communities of City of Minot and Williston to provide vector control (mosquito control) via aerial applications while simultaneously accomplishing military training. North Dakota has received significant rainfall this year and floodwater mosquito numbers have been well above levels seen during the relatively dry year in 2012. Favorable weather and hard work allowed for the three separate areas to be treated on three separate nights, including an application in the same evening that the spray plane arrived. The mission was also complicated because Williston Vector uses a different pesticide than the AFB and City of Minot. However, the different pesticide provides the spray team with additional training opportunities and experience. Mosquito counts were reduced significantly following applications. However, it was readily observed, by even the layperson, what science has clearly indicated: *Aedes vexans* (the primary target for this spray) has a primary activity period near and past sunset. Mosquitoes began biting aggressively about the time the spray plane returned (sunset) in contrast to a relatively mosquito free period during the application (personal observations at Minot AFB). Recommend that the Air Force move quickly to develop a night operation for North Dakota spray projects for night flying vectors. This will improve the efficacy of the pesticide application and reduce non-target impacts (as suggested in the caption on the front page of the Minot newspaper - Attachment 4).

- a. Ms. (b) (6), who had coordinated these spray events for several years has recently accepted a position at JB Elmendorf and we appreciate all the work she has done in the past to build this program into the successful mosquito control instrument that it is. In her place, SrA (b) (6) (5CES/ CEOUE) worked diligently to make these series of spray flights possible. The 5<sup>th</sup> CES Pest Management Shop accepts and transfers pesticides from the IRT participants which facilitates this partnership. We would also like to extend our appreciation to the various directorates at the Air Force Reserve Command (A1/A3/A7/JA) who used professionalism, knowledge, and expediency to make this IRT possible. Special mention goes to Maj (b) (6) for her skillful management of the packages and to Mr. (b) (6) and Maj (b) (6) for their legal insight.

**DEPARTMENT OF THE AIR FORCE**

**910<sup>th</sup> Operations Group**

3976 King Graves Road Unit 24

Vienna OH 44473-5924

17 Jan 13

**MEMORANDUM FOR RECORD**

**FROM:** 757AS/DOS

**SUBJECT:** Aerial Spray Refresher Recap

1. The 757 AS Aerial Spray Refresher was scheduled to occur in Avon Park, FL from 13-18 Jan 2013. Sixty seven operations and maintenance personnel were scheduled to attend this training to prepare for the upcoming spray season. Training was to take place over the Avon Park Bombing Range, FL and coastal waters. In addition, personnel planned to support unit entomologists teaching the DoD Aerial Application Pest Control Course (AAP-001) at Ft. Meyers, FL.

2. On 9 Jan, due to budgetary constraints, 757AS leadership decided to cancel the flyaway portion of the planned refresher. One aircraft and crew was allocated to support the DoD Aerial Application Pest Control Course (AAP-001) at Ft. Meyers, FL, while operating out of Avon Park, FL. Details of the specific training accomplished during the trip will be outlined in the Avon Park Post Mission Report.

3. A modified Aerial Spray Refresher training schedule was created for operations personnel and training was conducted at home station (YNG) from 14-16 Jan. All positions were provided opportunities for ground and flight training. The first two days ground training centered on topics applicable to all crew positions. Flight training consisted of a sortie over the Ravenna Arsenal and an additional sortie (overwater oil spill scenario) over Lake Erie. Due to inability to spray water (winter), spray operators conducted simulated sprays on the training MASS located in the spray hangar. The training plan is included as Attachment 1.

4. Although this training was not mandatory, a total of 37 personnel attended the some portion of the training. Five sorties totaling 7 hours were flown over the 3 days. In general, feedback from operations personnel regarding both the ground training and the oil spill scenario was very positive, with some minor suggestions to improve the course content. Ground training sessions were greatly enhanced and crosstalk between sections initiated as individuals shared past spray experiences.

5. The loss, of the flyaway portion, however did negatively affect the original intent and scope of the planned training. The spray operators lost valuable training sorties for a number of personnel and did not have an opportunity to experience the planned hot reload training scheduled on Day 4 at Avon Park. Most importantly, with the training being held at home station, several ARTs, unfortunately burdened with their civilian

duties throughout each day were unable to attend all training opportunities.

6. Lastly, MSgt (b) (6), MSgt (b) (6), and TSgt (b) (6) should be commended for a great job developing and organizing their specific sections' training during the week.

(b) (6), Lt Col, USAFR  
757 AS/ADO

## Aerial Spray Refresher @ YNG 14-16 Jan 2013

Below is the proposed replacement home station training to replace the flyaway which was cancelled due to budget restraints. The goal is to maximize refresher training to all crew positions.

Each training day will consist of ground and flight training. There will be 2 hours of ground training in the morning and flying each afternoon. Ground training on the first two days is designed for all crew positions. Weds ground training will be crew position specific.

Those planning to fly will be divided into two crews: A & B. Each crew will experience 1 overwater oil spill scenario on one day and a spray sortie over the Ravenna Arsenal on the opposite day. The third flying day will be utilized for those crewmembers requiring additional practice and the scenario will be determined by training needs. Only one sortie will fly over Ravenna on a given day to reduce the possibility of noise complaints.

Due to cool weather in the local area, no water will be sprayed over during the flight training. To accomplish this training, spray operators will perform simulated spray sorties in the spray hangar.

Depicted below is the actual refresher schedule presented during 14-16 Jan.

### MONDAY 14 JAN

<b>0830-1030 GND TRNG</b>	Intro and Spray Program Brief General Principles /Techniques	Aircrew briefing rm
<b>1030-1200</b>	Preflight / Msn Planning	Crew A
<b>1200-1330</b>	Overwater Scenario Flight	Crew A
<b>1200-1330</b>	Preflight / Msn Planning	Crew B
<b>1330</b>	ERCC	Crews A & B
<b>1400-1530</b>	Arsenal Flight	Crew B

### TUESDAY 15 JAN

<b>0830-1030 GND TRNG</b>	Public Affairs / Legal Oil Spill	Aircrew briefing rm
<b>1030-1200</b>	Preflight / Msn Planning	Crew B
<b>1200-1330</b>	Overwater Scenario Flight	Crew B
<b>1200-1330</b>	Preflight / Msn Planning	Crew A
<b>1330</b>	ERCC	Crews A & B
<b>1400-1530</b>	Arsenal Flight	Crew A

**WEDS 16 JAN**

<b>0830-1030</b> <b>GND TRNG</b>	Spray Math Mission Commander	Aircrew briefing rm
		Aircrew briefing rm
	FE systems	FE room
	Spray Operators	Spray Hangar
<b>1030-1200</b>	Preflight / Msn Planning	
<b>1300-1430</b>	Arsenal / Overwater Flight	

Note: Spray Operators completed simulated sprays on water only MASS each day in hangar.

Front end crewmembers given the ability to witness simulated spray on Weds.

Only one sortie flown on Weds due to low ceilings. Instead second sortie consisted of flights over both the arsenal and Lake Erie to provide both training opportunities for all crewmembers who were unable to fly earlier in the week.

**910 AW AERIAL SPRAY UNIT**  
**PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**Mountain Home AFB, Saylor Creek Range, ID 16-27 Sep 2013**

**1. MISSION BASICS:**

- a. Installation Sprayed: Mountain Home AFB, Saylor Creek Range, ID
- b. Mission Duration: 16-27 Sep 2013
- c. Purpose of Application: Herbicide application to control cheat grass to suppress range fires and promote healthy native flora.
- d. Application Date(s) and time(s) (Local): see attachment 1.
- e. Acres Treated: 3,063
- f. Flying Data:
  - (1) Spray Sorties/Hours: 13 sorties/8.6 hours
  - (2) Ferry Sorties/Hours:
    - (a) Spray aircraft 99105: 2 ferries; 10.8 hours
    - (b) Support aircraft: 4 ferries/28.3 hours
- g. Project Coordinator (Name/Rank/Title/Phone #): Mr. (b) (6) Natural Resource Manager, (b) (6)
- h. Date Spray Map Last Approved: 8Sep 2013, delivered via email from Mr. (b) (6)
- i. Installation In-Briefing: (When/Where/Briefer/s): 16 Sep 13, Mountain Home AFB, Mr. (b) (6) (b) (6) and Maj (b) (6)
- j. Mission identifier: QENRK3501259

**2. OPERATIONAL:**

- a. **Aircrew:**
  - 1) Mission Commander: Maj (b) (6) (16-20); Lt Col (b) (6) (20-27)
  - 2) Pilots: LtCol (b) (6), Maj (b) (6) (16-20), Capt (b) (6) (16-20), Lt Col (b) (6) (b) (6) (20-27), Maj (b) (6) (20-27), Capt (b) (6) (20-27)
  - 3) Navigator: Capt (b) (6) (16-20), Lt Col (b) (6) (20-27)
  - 4) Flight Engineer: TSgt (b) (6) (16-20), MSgt (b) (6) (20-27)
  - 5) Spray Operators: MSgt (b) (6), SMSgt (b) (6) (16-20), SSgt (b) (6) (16-20), MSgt (b) (6) (20-27), (b) (6) (20-27)
- b. **Maintenance:**
  - 1) Spray MX: SMSgt (b) (6) MSgt (b) (6) TSgt (b) (6), TSgt (b) (6) TSgt (b) (6)
  - 2) Crew Chief: TSgt (b) (6) (16-20), SSgt (b) (6) (16-20), TSgt (b) (6) (20-27), SSgt (b) (6) (20-27)
  - 3) Hyd/Prop/EE/Avi/Com: TSgt (b) (6), TSgt (b) (6), MSgt (b) (6), SSgt (b) (6), MSgt (b) (6)
  - 4) MX Supervisor: SMSgt (b) (6)
- c. **Entomologists:** Lt Col (b) (6) (b) (6) Maj (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Plateau®/ Panoramic 2SL
- b. EPA Registration Number: 241-365 (Plateau); 66222-141-81927 (Panoramic 2SL)
- c. Formulation Sprayed: Liquid herbicide with active ingredient (AI) = ammonium salt of imazapic (Plateau 23.6% AI; Panoramic 2SL 23.3% AI)
- d. Gallons Pesticide Loaded: total 104 gal (17-19 Sep - 56 gal Plateau; 24-26 Sep 48 gal Panoramic); 16 (17 Sep); 16 (18 Sep); 24 (19 Sep); 24 (23 Sep); 16 (24 Sep); 8 (26 Sep)
- e. Gallons Pesticide Applied: total 104 gal (17-19 Sep - 56 gal Plateau; 24-26 Sep 48 gal

- Panoramic); 16 (17 Sep); 16 (18 Sep); 24 (19 Sep); 24 (23 Sep); 16 (24 Sep); 8 (26 Sep)
- f. Gallons and Name Diluent Used: 1,800 gallons water per lift (23,400 total)
- g. Gallons and Name of Flush Used: 200 gal of water final flush (24 Sep)
- h. Other Additives Used: 5 gallons of Control<sup>®</sup> and 1 gallon of Prevent.
- i. Application Rate: 7 Gal/Acre (4.35 oz/acre Plateau<sup>®</sup>)

#### **4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): C-130H2 (89-9103)
- b. Spray System (Modules Used) and System ID #: SP-3G
- c. Spray System Configuration: fuselage booms
- d. Nozzle Type/Size: Raindrop nozzles
- e. Nozzle Orientation & Number Used: Fuselage; Straight Back; 18 total)
- f. Pressure: 40 psi
- g. Flow Rate: 326 gpm

#### **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100 Ft
- b. Spray Offset: weather dependant. No offset when flown into the wind.
- c. Spray Release Altitude: 100 Ft AGL
- d. Ground Speed: 200 knots

**6. WEATHER OBSERVATIONS:** Environmental conditions were monitored on the spray aircraft at altitude and by ground monitoring personnel using handheld equipment. Wind speeds were between 3 and 8 mph each day and the direction was generally between 210 and 310°. On a few occasions, wind shifts required an offset (generally of 100-200 feet) these were visually measured by ground personnel who were well-positioned to observe deposition on the range (see attachment 3).

#### **7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS on aircraft and visual observations from ground personnel on the range (see attachments 2&3)
  - (2) Results: See remarks
- b. Effectiveness:
  - (1) Technique/s Used: Vegetation measurements
  - (2) Results: Will be determined in the spring of 2014

#### **8. REMARKS:**

This mission continues the mitigation of the invasive weed, cheat grass, in order to suppress range fires and promote the reestablishment of healthy native flora, in particular, native bunch grasses and sagebrush. Results from the 2.0 oz/acre treatment last season, showed this treatment tended to slow the growth of cheat grass rather prevent germination. Therefore, it was decided to use 4.0 oz/acre this year, which is still a mid-level rate of application. Mr. (b) (6) (366 CES/CEIEC) was successful in installing a range weather station which records environmental conditions hourly. We found this system to be extremely helpful in giving mission planning members early morning feedback of weather conditions at the target location as the station measurements can be accessed remotely. Furthermore, Mr. (b) (6) analyzed data from the weather station over the past year and used his data to orient the spray block to align with the prevailing wind pattern. His forward thinking played out very well as the majority of the sorties were flown with a

headwind or tailwind and less than a 45% crosswind component, thus promoting the integrity of the projected 100 foot swath width. All applications were observed from the target by ground personnel. Efficacy of the 2013 application will be determined by Mountain Home AFB, Office of Natural Resources during the spring season 2014.

We would like to thank Mountain Home AFB personnel for excellent mission support, in particular: airfield operations, fire department, POL, RAPCON, and TA was outstanding during the entire mission.

**AIR FORCE RESERVE COMMAND (AFRC)**

25 July 13

**MEMORANDUM FOR HQ AFRC/DOOM**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Revised Concept of Operations for Aerial Spray at Homestead ARB, Minot AFB, and Minot/Williston ND.

1. Originally one C-130 was scheduled 29 Jul - 2 Aug 2013 for the requested Innovative Readiness Training (IRT) adulticide spray mission at Homestead ARB and surrounding areas. At present, the IRT package has not been signed by the SAF. Additionally due to an aircraft maintenance problem, the 15-19 Jul IRT adulticide mission to Minot AFB and communities in ND was unable to be accomplished. In light of these facts, the best Aerial Spray flight proficiency training will be accomplished in ND while providing a beneficial reduction in mosquito populations affecting the health and welfare of the base populous and state's citizens. This mission will also provide real-world training for aerial spray entomologists and maintenance personnel. Operations will be conducted out of Minot AFB, ND.

2. Concept of Operations:

- a. 29 Jul (Monday)
  - 1200 Show KYNG
  - 1400 Depart KYNG
  - 1730 Land KMIB
- b. 30 Jul-1 Aug (Tuesday-Thursday) Spray Sorties
  - 1700 Show KMIB
  - 1900 Depart KMIB
  - 2100 Land KMIB
- c. 2 Aug (Friday)
  - 1100 Show KMIB
  - 1300 Depart KMIB
  - 1630 Land KYNG

3. Aerial Spray Operation:

- a. Chemical: Trumpet (KMIB and Minot City) Permanone (Williston, ND)
- b. Altitude: 150 AGL

- c. Application rates: .75 oz/acre (Trumpet) 2.62gal/min (Permanone)
- d. Area: 5160 acres (KMIB) 35500 acres (communities)

- 4. Lt Col (b) (6) will act as Mission Commander.
- 5. Maj (b) (6) will act as Aircraft Commander.
- 6. Support required at Minot AFB, ND has been coordinated.

**910 AW AERIAL SPRAY  
PMP'S POST-MISSION REPORT  
SMOKY HILL ANGR, KS 4-15 Nov 2013**

**1. MISSION BASICS:**

- a. **Installation Sprayed:** Smoky Hill ANGR, Salina KS
- b. **Mission Duration:** 4-15 November 2013
- c. **Purpose of Application:** Control of Musk Thistle (*Cardus nutans*) on Smoky Hill, ANGR.
- d. **Application Date/s:** 6 – 14 November 2013  
**Time/s of Application (Local):** 1315-2300 Z
- e. **Acres Treated:** 3415
- f. **Project Coordinator/s (Name/Rank, Title, Phone #):** (b) (6) Aerial Spray  
Coordinator, Smoky Hill ANGR, DSN (b) (6)
- g. **Date Spray Map Last Approved:** 4 November 2013
- h. **Date of Waste Generation Letter:** N/A

**2. OPERATIONAL:**

- a. **Mission Commander:** Maj (b) (6) (1<sup>st</sup> half), Lt Col (b) (6) (2<sup>nd</sup> half)
- b. **Certified PMP (Category 11):** Lt Col (b) (6), Maj (b) (6) (1<sup>st</sup> half), Lt Col (b) (6) (2<sup>nd</sup> half)
- c. **Aircrew:**
  - (1) Aircraft Pilots: Maj (b) (6), Lt Col (b) (6) (1<sup>st</sup> half), Lt Col (b) (6) (2<sup>nd</sup> half) Capt (b) (6)
  - (2) Navigators: Lt Col (b) (6)
  - (3) Flight Engineer(s): MSG (b) (6) (1<sup>st</sup> half), MSG (b) (6) (2<sup>nd</sup> half)
  - (4) Spray Operators: SMSG (b) (6), , MSG (b) (6), TSGT (b) (6)
- d. **Safety Briefer:** Maj (b) (6)
- e. **Spray Maintenance/Pesticide Loaders:** SMSG (b) (6), TSGT (b) (6), TSGT (b) (6), SrA (b) (6)
- f. **Spray Ground Monitors:** Lt Col (b) (6), Lt Col (b) (6) Maj (b) (6)
- g. **Crew Chief(s):** TSGT (b) (6), TSGT (b) (6)
- h. **Avionics:** TSGT (b) (6), SrA (b) (6)
- i. **Flying Data:**
  - 1. Spray Sorties/Hours: 16/18.6 Total; 15 Actual, 1 Flush Sorties

**3. PESTICIDE:**

- a. **Trade Name (% Active Ingredient):** Milestone<sup>®</sup>
- b. **EPA Registration Number:** 62719-6
- c. **Formulation Sprayed:** Milestone<sup>®</sup> mixed with water and AirexDC<sup>®</sup> Drift Control
- d. **Gallons Pesticide Loaded:** 151 Gallons Milestone Concentrate/ 35 Gallons AirexDC<sup>®</sup>
- e. **Gallons Pesticide Applied:** 151 Gallons Milestone Concentrate
- f. **Gallons and Name Diluent Used:** Approx. 23,500 gallons water
- g. **Gallons and Name of Flush Used:** Approx 1,700 gallons water
- h. **Other Additives Used:** approx 2.5 gallons of AirexDC<sup>®</sup> per load
- i. **Application Rate:** 7 gallons finish spray/acre

**4. APPLICATION EQUIPMENT:**

- a. **Aircraft Type (Tail Number):** 909106

- b. **Spray System (Modules Used) and System ID #:** 3-Module system
- c. **Spray System Configuration:** Fuselage Booms
- d. **Nozzle Type/Size:** R-20 Raindrop Nozzles
- e. **Nozzle Orientation & Number Used:** 17 Total, straight back
- f. **Pressure:** 36-52
- g. **Flow Rate:** 320-340 GPM

**5. APPLICATION PARAMETERS:**

- a. **Swath Width Flown:** 100'
- b. **Spray Off Set:** N/A
- c. **Spray Release Altitude:** 100' AGL
- d. **Ground Speed:** 200 Knots

**6. WEATHER OBSERVATIONS:**

- a. **Winds (Direction/Speed):**  
Ground: 320@12 (6 Nov), 328-355@8 (7 Nov), 055-063@3-5 (9 Nov), 083-110@8 (10 Nov), 001-020@3 (12 Nov), 198-208@8 (14 Nov)
- b. **Temperature Range During Application (°F):** 56°- 67°
- c. **Source:** Airborne observations

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. **Deposition Pattern:**  
(1) Monitors observed/confirmed swath width from ground positions
- b. **Effectiveness:**  
(1) Technique/s Used: Visual field observations will be carried out in the spring by the Smoky Hill Staff. Good control was achieved in areas similarly treated in 2012.

**10. REMARKS:** Yearly aerial applications for the control of musk thistle were discontinued in 2006 as headquarters ANG natural resources personnel allocated monies for the purchase of tractors to ground apply pesticides. Not taken into consideration was the roughness of the terrain, which severely impacted the efficiency and effectiveness of ground applications. By 2010 certain parts of the range were completely overwhelmed with musk thistle to the point that infestations were considered uncontrollable by ground application techniques. In light of this, the ANG natural resources office instigated the draft of a new environmental assessment (EA) concerning the aerial application of pesticides on range property. In this EA, provisions were made for application of a variety of more environmental friendly and effective pesticides than had been used previously. In 2012 aerial applications were resumed. Good results were achieved on last year's application areas (b) (6), pers com) and the product is highly effective against musk thistle. Attachment 1 shows some of the designated areas covered on this mission. If musk thistle continues to be a problem on other parts of the range, this mission will be continued in following years and areas will be treated on a rotational basis. Many thanks to Smoky Hill ANGR personnel for making this mission an operational success.

//Signed//

(b) (6) (b) (6) Lt Col, USAFR  
Certified Pest Management Professional

**Attachment 1.** Map depicting range and designated spray areas.

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND (AFRC)**

23 October 2013

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Smoky Hill ANG Range, Salina, KS.

1. Control musk thistle at the Smoky Hill ANGR, to improve grazing areas, to eliminate the Range as a source of infestation to neighboring farms from wind-blown musk thistle seeds and to support state and local noxious weed control efforts. This mission will also provide real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations:

- a. 4 November (Monday)  
1300 Depart KYNG  
1500 Land KSLN  
1600 Installation Brief
- b. 4-9 November (Tuesday - Saturday)  
0645 Depart KSLN  
1030 Land KSLN
- c. 9-14 November (Sunday - Thursday)  
0630 Depart KSLN  
1030 Land KSLN
- d. 15 November (Friday)  
0800 Show Time KSLN  
1000 Depart KSLN  
1400 Land KYNG

3. Maj (b) (6) will be the Mission Commander (4-9 Nov.) Lt Col (b) (6) (b) (6) (9-15 Nov).

4. Lt Col (b) (6) will be the Aircraft Commander (4-9 Nov) Lt Col (b) (6) (9-15 Nov).

5. Support at Smoky Hill and Salina has been completed.

(b) (6), TSgt, USAFR  
757AS Aerial Spray

# AERIAL SPRAY OPERATIONAL SCHEDULE

## SMOKY HILL ANG RANGE, KS

### 4-15 Nov 2013

### QENRK3502308

**PURPOSE/OBJECTIVE/BENEFIT:** Control musk thistle at the Smoky Hill ANGR, to improve grazing areas, to eliminate the Range as a source of infestation to neighboring farms from wind-blown musk thistle seeds and to support state and local noxious weed control efforts.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- (1) Mission Commander: Maj (b) (6) (1<sup>st</sup> half), Lt Col (b) (6) (2<sup>nd</sup> half)
- (2) Pilots: Maj (b) (6) (1<sup>st</sup> half), Lt Col (b) (6) (1<sup>st</sup> half), Lt Col (b) (6) (2<sup>nd</sup> half), Capt (b) (6) (2<sup>nd</sup> half)
- (3) Navigators: LtCol (b) (6)
- (4) Flight Engineers: MSgt (b) (6) (1<sup>st</sup> half), MSgt (b) (6) (2<sup>nd</sup> half)
- (5) Spray Operators: SMSgt (b) (6), MSgt (b) (6), and TSgt (b) (6)

##### b. Maintenance:

- (1) Spray MX: SMSgt (b) (6), TSgt, TSgt (b) (6), TSgt (b) (6), SrA (b) (6),
- (2) Crew Chiefs: TSgt (b) (6), TSgt (b) (6)
- (3) Avionics: TSgt (b) (6), SrA (b) (6)

- c. Entos: LtCol (b) (6) (In Place), Maj (b) (6) (1<sup>st</sup> half), LtCol (b) (6) (2<sup>nd</sup> half)

#### 2. SCHEDULE: (All Local) Times

##### 4 Nov (Monday)

0900: Show at KYNG  
1300: Depart KYNG  
1300: Support Depart KYNG  
1500: Land KSLN/Safety Briefing  
1600: Support Depart KSLN  
2000: Support Land KYNG

##### 5-9 Nov (Tuesday-Saturday): Sunrise 0702 + 1 min daily

0500: Show time \*As needed

0645: Take Off KSLN \*\*\*Multiple Sorties\*\*\*5 Nov Range time 0740 –1100L\*\*\*

**8 Nov-** 1000: Swap out/ Support Depart KYNG

1000: Land KSLN

1200: Support Land KSLN

1330: Support Depart KSLN

1730: Support Land KYNG

**9-14 Nov (Sunday-Thursday):** Sunrise 0707 + 1 min daily

0500: Show time

0645: Take Off KSLN

1000: Land KSLN

**15 Nov (Friday)**

0800: Show time

1000: Take Off KSLN

1000: Support Plane Take Off KYNG

1200: Support Land KSLN

1300: Support Take Off KSLN

1400: Land KYNG

1730: Support Land 1730

### **3. ITEMS TO TAKE:**

**a. Mission Commander:** 1 Cellular Phone

**b. Entomologist:** 1 Cellular Phone, Wind Gauge, Compass  
Pest Safety Binder, Signal Mirrors, Validation Map,

**c. Navigator:** Maps/Map Bag,

**d. Spray Operator:** Safety Gear, Spray Computer

**e. Spray Maintenance:** Deployment Kit, Stake Bed Truck, Support Equipment

**f. Avionics:** Wingman unit cards, Air to ground radios

**4. NOTIFICATION NECESSARY FOR THIS MISSION:** None Required.

**5. PARKING PLAN:** North Ramp (same as last time) Highway Patrol Ramp (by the Civil Air Patrol Hangar). A10s will be using same ramp area.

### **6. RADIO FREQUENCIES:**

**a. Air To Ground:** Primary 392.2

**b. Salina:** CTAF: 119.3, UNICOM: 122.95, ATIS: 120.15, TWR: 119.3 / 257.7, GND:  
121.9 /

397.9, NG OPS: 49.95 / 304.6

**c. Smoky Hill:** Primary 316.9, Secondary 304.9; Victor Freq: 139.7 Smoky Hill  
departure. Expect IFR clearance from KCC on 363.2 UHF 134.9 VHF. Advise them  
you are departing R3601

**7. IN-BRIEFING:** Upon Arrival.

**8. SPRAY CONFIGURATION:** (Note: File support a/c Chap 3 to AFJI 24-204)

- a. System:** SP-3G
- b. Nozzle Tips/Orientation:** Raindrop Nozzles; Pointed Back (R-20)
- c. Number:** Fuselage. 17 Total (8 left 9 right)
- d. Booms:** Fuselage Booms.
- e. Aircraft:** 90-9106
- f. Mission Identifier:** QENRK3502308

**9. SPRAY PARAMETERS:**

**Altitude:** 100' AGL

**Swath Width.** 100 feet.

**Flow Rate.** 326 Gallons/Minute

**Application Rate.** 7 Gal finish spray/Acre (water with 0.35 Oz of AirexDC® & 0.71 Oz of Milestone®/gallon)

**Ground Speed:** 200 Knots

**10. SPRAY MIXING AND LOADING:**

**a. Composition of Each Gallon:**

- (1) 0.71 Ounces of Milestone®
- (2) 0.35 Ounces of AirexDC® Drift Retardant
- (3) 126.9 Ounces of Water

**b. First Load (4 Tanks of 425 Gallons Each + Sump of 75 Gallons)**

- (1) Fill to 425 Gal Water/Tank using the pump on the water tanker truck.
- (2) 75 Gal/Water in Sump
- (3) Total Water Added = 1,800 Gallons
- (4) Upload 2.5 Gal/Milestone® per tank (10 Gallons Total for 4 Tanks + sump)
- (5) Add 1.25 GalAirexDC® per tank (5 Gallons Total for 4 Tanks + sump)
- (6) Total Quantity Mix. 1815 Gallons

**c. Mixing Time/Load.** Agitate by recirculating each mix for approximately 15 minutes.

**d. It is important to empty ALL the tanks each sortie.**

**11. SPRAY MONITORING OR TESTING: Performed by the CPMPs**

**NOTES:**

Ideal to have westerly wind to spray west boundary.

Ideal to have easterly wind to spray east boundary.

(November winds expected to be predominately from the north)

**12. CONTACTS:**

**Quarters: Nickell Barracks Training Center,  
2930 Scanlan Avenue, Salina KS  
(785) 822-1198**

Holiday Inn, 785-823-5606/8574 fax

#### **2. PPR REQUIREMENTS: 125-01**

**3. PLANNED SEQUENCE OF EVENTS:** (All times are local) Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

##### **a. 5 May (Monday)**

1700 Depart KYNG (MC and safety brief prior to T/O)  
1900 Land KNBC

##### **b. 6 May (Tuesday) \*Sunset at both locations for the week 2007L-2009L**

1030 Parris Island MCRD Installation Brief  
1700 WX decision (Calibration to follow after chemical loading)  
1900 Depart KNBC  
Spray Parris Island MCRD  
2015 Land KNBC

##### **c. 7 May (Wednesday)**

1630 WX decision  
1830 Depart KNBC  
Spray Kings Bay NSB  
2045 Land KNBC

##### **d. 8 May (Thursday) WX backup**

Times are req'd

- e. 9 May (Friday)  
1100 Depart KNBC  
1300 Land KYNG

**4. ITEMS TO TAKE/NOTES:**

- a. **Mission Commander:**
  - (1) Computer
- b. **Entomologist:**
  - (1) Wind Gauge & Compass
  - (2) VHF Radios (provided by avionics)
  - (3) Pesticide Safety Binder
- c. **Navigators:**
  - (1) Maps
  - (2) Templates (if needed)
- d. **Avionics:**
  - (1) Air to ground handheld radios (2 units)
  - (2) Wingman unit cards
- e. **Spray Maintenance:**
  - (1) Spill Kit
  - (2) Safety Equipment
  - (3) Loading and Clean-up Equipment and Supplies

**5. SPRAY CONFIGURATION: SP-2G**

- a. **Mass:** 2-Module System
- b. **Booms:** Stainless Steel ULV Fuselage Booms
- c. **Nozzles:** Size = 8003; 14 open (PI) and 28 for Kings Bay; subject to change: see PMP
- d. **Differential GPS:** Wingman Installed
- e. **Aircraft:** TBD
- f. **Mission Identifier:** QENRK3591125

**6. SPRAY PARAMETERS: (PARRIS ISLAND MCRD SC)**

- a. **Pesticide:**  
Dibrom-Naled Organophosphate insecticide
- b. **Application:** 0.75 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 1,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** 7,500 Acres
- g. **Spray-On Time:** 16 Minutes
- h. **Flow Rate:** 2.7 GPM

**SPRAY PARAMETERS: (KINGS BAY NSB, GA)**

- a. **Pesticide:** Dibrom-Naled Organophosphate insecticide
- b. **Application:** 0.75 oz/acre
- c. **Spray Altitude:** 150 Feet
- d. **Swath Width:** 2,000 Feet
- e. **Ground Speed:** 200 Knots (338 Feet/Second)
- f. **Acreage:** 13,700 Acres

g. **Spray-On Time:** 15 Minutes

h. **Flow Rate:** 5.4 GPM

7. **PARKING PLAN:** NAS Beaufort, SC. Please limit number of vehicles and trips on the flight line.  
Radio with tower permission is required to drive to aircraft

8. **AIR TO GROUND RADIO FREQUENCIES:**

Beaufort Tower: 119.05/340.2 MCAS TWR

Beaufort Approach 123.7

Hilton Head Arpt: 118.975 Tower, 123.0 CTAF (tower open until 0100 hrs Z)

Beaufort Co Arpt: 122.7 UNI

**POST-MISSION REPORT (replaces AFRC Form 55)**  
**PARRIS ISLAND MCRD, SC 05 – 09 May 2014**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island Marine Corps Recruit Depot, South Carolina
- b. Mission Duration: 05 – 09 May 2014
- c. Purpose of Application: Biting Midge (*Culicoides* spp.)/Mosquito Control
- d. Application Date/s: 07 May 2014
- e. Time/s of Application (Zulu): 2230 Takeoff
- f. Acres Treated: 7,500
- g. Project Coordinator: (b) (6) , Environmental/Spray Coordinator, DSN (b) (6)
- h. Date Spray Map Last Approved: 1 Apr 2014
- i. Date of Waste Generation Letter: 10 April 2000
- j. Installation In-Briefing: None
- k. Mission Identifier: QENRK3591125

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6) (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) , Capt (b) (6)
  - (2) Navigator: Lt Col (b) (6)
  - (3) Flight Engineer: MSgt (b) (6) ce
  - (4) Spray Operators: MSgt (b) (6) , MSgt (b) (6) , MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: MSgt (b) (6) , TSgt (b) (6) , TSgt (b) (6) , SSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) , SrA (b) (6)
  - (3) Avionics: SSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6) (b) (6) Lt Col (b) (6) (b) (6) Maj (b) (6)
- e. **Flying Data:**
  - (1) Application Sorties/Hours: 1/1.9
  - (2) Training Sorties/Hours: 0
  - (3) Ferry Sorties/Hours: 2/4.0

**3. PESTICIDE:**

- a. Trade Name: Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 60 Gallons
- e. Gallons Pesticide Applied: 47 Gallons
- f. Gallons and Name Diluent Used: N/A
- g. Gallons and Name of Flush Used: None/Air purge
- h. Other Additives Used: None
- i. Application Rate: 3.1 Gallons per Minute (0.85 oz/acre per calculating 47 gal/7,068 acres)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 13 Total; 6 left, 7 right
- f. Pressure: 40 - 52 PSI
- g. Flow Rate: 3.1 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind; 170 at 5.5 kts (average) Ground observation.  
Temp; 81 degrees F. Humidity; 46 percent.

**7. SPRAY MONITORING:** Pre and post spray mosquito collections were taken at 6 locations using light traps. Results indicate a 98.6% reduction in target mosquito population. Additionally, landing counts showed that biting midges were absent from the area following the spray. During application, the treatment site was monitored on the ground. There was no evidence of adverse effects of application on non-target species.

**8. REMARKS:** Two eagles' nests on the island were active, and as usual a ½ mile no-spray/no-fly buffer was maintained around the nests. A computer glitch prevented us from projecting the flight pattern on a background map. The next projected opportunity of an application at the Parris Island MCRD will be in October.

- d. **Entomologists:** Lt Col (b) (6) Maj (b) (6)
- e. **Flying Data:**
  - (1) Training Sorties/Hours: 1/1.7
  - (2) Ferry Sorties/Hours: 2/4.0

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 120 gallons
- d. Gallons Pesticide Applied: 120 gallons
- e. Gallons and Name Diluent Used: N/A
- f. Gallons and Name of Flush Used: 6 Gallons aromatic naphtha
- g. Other Additives Used: None
- h. Application Rate: 0.85 oz/acre

## **APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99103
- b. Spray System (Modules Used) and System ID #: SP2G
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 26 Total; 12 left, 14 right
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 6.5 gallons/minute

## **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 KTS

## **6. WEATHER OBSERVATIONS:** Wind; 230° at 3.5 knots (average) ground observation. Temp; 81°F; Humidity 89 percent.

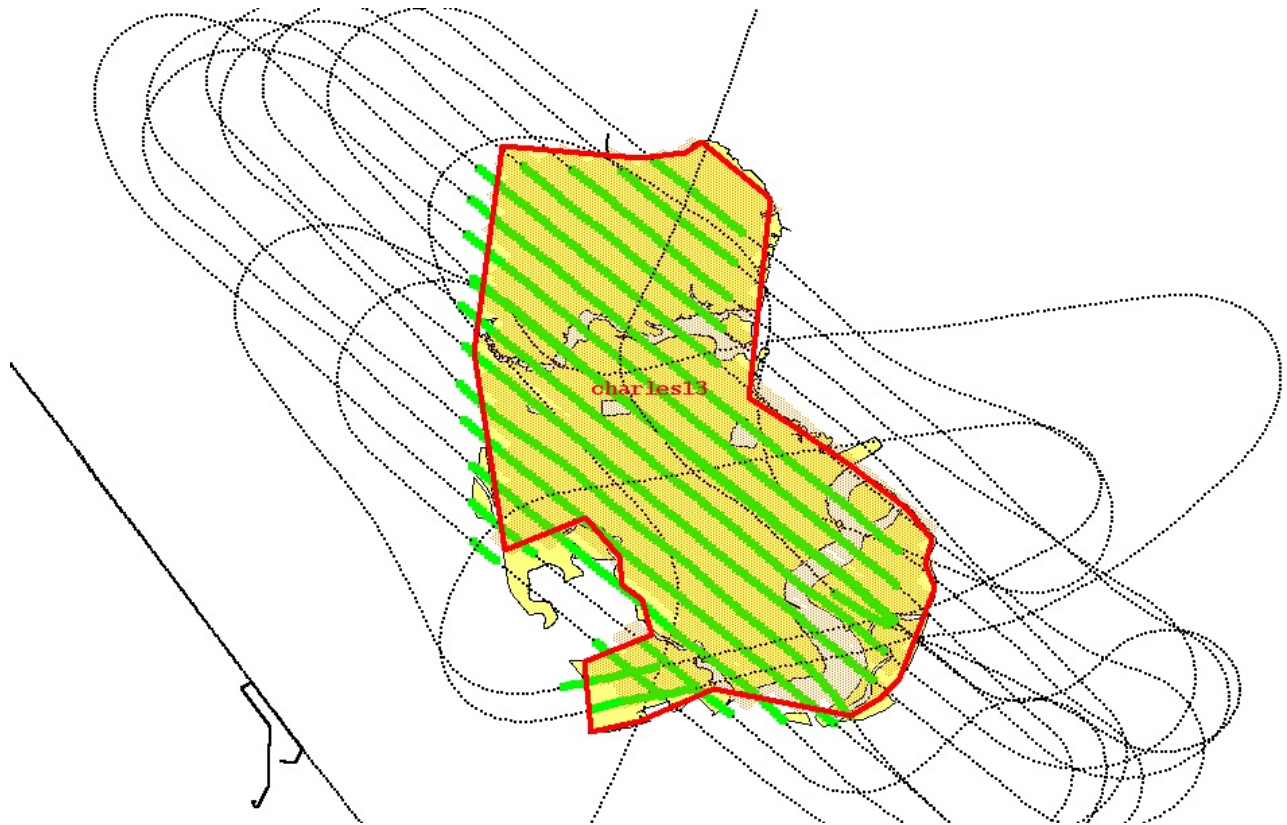

**7. SPRAY MONITORING:** Pre- and post-spray mosquito collections were taken at 5 locations, including one control location, using CO<sub>2</sub>-baited CDC mosquito traps. Landing rates were used to monitor populations at the spoil site and a New Jersey trap was used to monitor populations at GC bridge.

Trap 1: DTP	Average 74 females (1 Sep, 3 Sep); 11 females (9 Sep) 85% reduction
Trap 2: SPAWAR:	Average 25 females (1 Sep, 3 Sep); 16 females (9 Sep) 36% reduction
Trap 3: Golf Course	Average 1,054 females (1 Sep, 3 Sep); 12 females (9 Sep) 99% reduction
Trap 4: Wharf A	Average 127.5 females (1 Sep, 3 Sep); 6 females (9 Sep) 95% reduction
Landing count at:	
Spoil site (per minute)	Average 9 females (1 Sep, 3 Sep); Average 0.3 (7 Sep, 8 Sep, 9 Sep) 97% reduction
New Jersey Trap at:	
GC Bridge	Average 51.5 females (1 Sep, 3 Sep); Average 0 females (8 Sep, 9 Sep) 100% reduction
Control Site-NPTU	Average 186 females (1 Sep, 3 Sep); 26 females (9 Sep) 86% reduction (No Spray Area)

**8. REMARKS:** This application is the second adulticide application conducted for FY 14. No significant problems were encountered during this application, and results appear to be good. Because of the large dredge spoil and marshlands associated with the Naval Weapons Station, future larvicide operations are being considered. Berkeley County, with dredge spoil areas adjacent to JB Charleston, is interested in participating in the JB Charleston spray program and JA and Environmental sections are looking into spraying acreage outside the boundaries of the Weapons Station. This would greatly reduce mosquitoes flying in from adjacent wetlands. We appreciate the support we received from ALL sections at JB Charleston, with special thanks going to (b) (6) for his thorough coordination at all levels.

Attachment 1. Application to Naval Weapons Station, JB Charleston 6 Sep 2014. Spraying positions are in green while the swath is slightly shaded. In order to account for pesticide drift, some spraying occurs outside of the area and the pesticide drifts back inside the spray zone. Dotted black line is the path of the aircraft. A 2,000 ft offset was utilized to compensate for crosswind deposition.

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Capability and Concept of Operations for Aerial Spray at Joint Base Charleston, SC.

1. Aerial spray deployment of one C-130 during 6-8 Sept 2014 in response to a requested aerial spray to control adult mosquitoes for JB Charleston, SC. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of JB Charleston. Operations will be conducted from JB Charleston.

2. Concept of Operations (All times are local)

- a. 6 Sept (Sat)  
1300 Depart KYNG  
1500 Land KCHS
- b. 7 Sept (Sun)  
1800 Depart KCHS  
2000 Land KCHS
- c. 8 Sept (Mon)  
1100 Depart KCHS  
1300 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 20,000 acres
- b. Altitude: 150 ft for adulticide application
- c. Swath Width: 2000ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 1.0-1.2 oz/acre of Trumpet EC

4. Lt Col (b) (6) ] will serve as the Mission Commander. Lt Col (b) (6) ] will be the Aircraft Commander. Required support at JB Charleston has been coordinated.

- q. Flight Engineers: MSgt (b) (6)
- r. Spray Operators: MSgt (b) (6) , TSgt (b) (6)
- Crew Chiefs: MSgt (b) (6) , TSgt (b) (6)

#### 2. MISSION SUPPORT:

- a. Mission Commander: Maj (b) (6) (b) (6)
  - 1. Makes final decision on all changes to the schedule
  - 2. Confirm all hotel information is correct upon check in
  - 3. Report flight data to AFRC daily (See contact info on reporting sheet)
  - 4. Coordinate any range schedule conflicts/changes
- b. Entomologists: Lt Col (b) (6) (b) (6) @ Hill AFB mixing (10-21), Lt Col (b) (6) (b) (6) (1<sup>st</sup> half-Range – In place), Lt Col (b) (6) (b) (6) (2<sup>nd</sup> half -range)
- c. ARMS: SMSgt (b) (6) (1<sup>st</sup> half), SrA (b) (6)
- d. Range: Lt Col (b) (6) (1<sup>st</sup> half), Lt Col (b) (6) (2<sup>nd</sup> half), Maj. (b) (6) , Maj (b) (6) and Maj. (b) (6) ,

#### 3. UTTR GROUND PARTY:

- a. **Entomologist/Pest Management Professional(s):** Lt Col (b) (6) (b) (6) will be at Hill AFB and direct product mixing. Lt Col (b) (6) will be the certified applicator on the range (11-14 Mar) and Lt Col (b) (6) (17-20) k

**4. MAINTENANCE:**

- a. **910 MX Supervisor:** SMSgt (b) (6)  
**910 Spray MX** TSgt (b) (6) (lead), MSgt (b) (6), TSgt (b) (6), SSgt (b) (6)  
(b) (6) TSgt (b) (6), TSgt (b) (6), SrA (b) (6) (b) (6)  
b. **Instruments/Avionics:** TSgt (b) (6), MSgt (b) (6)  
c. **Hydraulics/Electrician:** SrA (b) (6), MSgt (b) (6)  
d. **Engine:** MSgt (b) (6)  
e. **Crew Chiefs:** MSgt (b) (6), SrA (b) (6), MSgt (b) (6),  
TSgt (b) (6)

5. **COMM:** Capt. (b) (6) (2<sup>nd</sup> half Commercial), SMSgt (b) (6), TSgt (b) (6), SSgt  
(b) (6) SSgt (b) (6), SSgt (b) (6), SrA (b) (6), SrA (b) (6)

**6. IN-BRIEFING:** (UTTR Staff)

- a. **When/Time:** ASAP upon arrival  
b. **Who:** **EVERYONE!! Do not leave area until cleared out by the MC.**  
c. **Where:** Forestry ramp -Safety brief all personnel  
Base Operations – (As required)  
d. **Briefing Plan**  
a. Vehicles- See item **16.h** below  
b. Schedule of events  
c. Billeting- See item **16.g** below (On Base)  
d. Weather call  
e. Cellular Phone numbers for all personnel (Provide info to MC)  
f. FLT Line Driving (1430 or as required after landing)

**\*Note: Will have to supply toilet paper and paper towels. Forestry building will be kept clean. In short, CLEAN UP AFTER YOURSELVES.**

**7. PLANNED SEQUENCE OF EVENTS:** Hill AFB Tower Control and Runway Hours

Opr 1500Z-0700Z Mon-Sat, 1600Z-0000Z Sat-Sun

**NOTES:**

1. Scheduling reflects no weather or maintenance delays. In the event of weather or maintenance delays, the missions will be adjusted as required. ALL TIMES SUBJECT TO ADJUSTMENT BY MISSION COMMANDER
2. DUTY DAY FOR CIVILIANS WILL BE AS REQUIRED WITHIN CREW REST CONSTRAINTS.
3. ALL MX & A/C PERSONNEL WILL REMAIN ON DUTY UNTIL AIRCRAFT IS PRE-FLIGHT COMPLETE AND RELEASED BY THE MISSION COMMANDER.

**a. 10 March (Monday)**

0800 Show KYNG

1000 Depart KYNG

**Vader 06 MI: QENRK3501069**

**PPR: MM1001**

1015 Depart KYNG

**Vader 08 MI: QENRK3502069**

**PPR: MM1002**

1305 Land KHIF

Briefing: MC, arriving MX, and crew members: safety briefing, access cards, vehicles, and obtain billeting information prior to leaving the ramp area.

**b. 11 March – 15March (Tuesday-Friday)**

**2 sorties as WX permits each day.**

0600 Show KHIF Spray 06 crew 1; 0630 Spray 08 Crew 2 (Alternating daily)

0630 Weather call and mixing begin

0800 Depart KHIF

1300 Land KHIF

**\*\*Weekend flying is currently unavailable. If significantly wx or Mx delayed, then weekend operations will be considered as a last resort per Hill AFB.**

**c. 15 March (Saturday Swap out)**

**Vader 22**

**MI: QENRK3531074**

**PPR: MM-15-01**

0600 Swap Out Crew show KYNG

0800 Depart KYNG

1105 Land KHIF

1230 Depart KHIF

1935 Land KYNG

**d. 16 Mar. - 21 Mar. (Monday-Friday) 2 sorties as WX permits each day.**

0600 /0630 Show KHIF

0630 Weather call and mixing begin

0800 Depart KHIF

1300 Land KHIF

**e. 21 Mar. (Friday) All personnel**

0700 Checked out of billeting

0730 Return Rental vehicles

0930/0945/ Depart KHIF

1635/1640/ Land KYNG

**\*\*If completed early, the aircrews and airframes may return early. TBD by the Mission Commander.**

**8. ITEMS TO TAKE:**

**a. PMP:**

(1) Project Notebook with Recording Sheets and Maps

(2) Laptop Computer and Batteries

(3) 2 Compasses and Stop Watch

(4) 2 Signal Mirrors

(5) Entomologists' Tool Kit

(6) UHF/VHF Radios and VHF Radios

**b. Mission Commander: Mission Folder**

**c. Navigator: Maps**

**d. Spray Maintenance:**

(1) MASS Spares and Spill Kit

(2) Tools and Other Equipment

(3) Herbicide Safety Binder

(4) Safety Equipment

**e. Maintenance: Applicable Equipment**

**9. SPRAY CONFIGURATION: SP3G**

**a.** Two Aircraft and Systems

**b.** MASS Modules 1, 2 and 3

**c.** UHV Fuselage booms oriented straight back

**10. PPR REQUIREMENTS:** All required, see Form 33 setup sheets for aircraft and above itinerary

**11. PARKING PLAN:** Forestry Ramp and Building

**12. RADIO FREQUENCIES:**

- **Clover Range Control:** UHF 285.65, 275.9, 361.4 (p)

- **Eagle Tower:** UHF 351.0; Mawk 2 ((b) (6))

- **Diddle Knoll & Spray Ops Freq:** UHF 398.1 (Primary), 383.2 (Back-up); VHF 134.1, 118.45
- **Spray Inter plane:** UHF 237.05 / VHF 138.375
- **Spray Ground to Spray Maintenance:** See Iridium Phones
- **Base OPS:** 139.3
- **Communications Ground Freq:** LMR nets are trunked at Hill.

### 13. SPRAY PARAMETERS:

- a. **Herbicide:** Krovar 1DF®
- b. **Application Rate:** 22.5 gal/acre (10 lbs of Krovar in 22.4 gal of water)
- c. **Acreage:** 1,283 Acres (Targets 21, 23, 24)
- d. **Ground Speed:** 200 Knots (337.55 ft/sec)
- e. **Spray Altitude:** 100 Feet AGL
- f. **Swath Width:** 35 Feet
- g. **Flow Rate:** 366.1 Gallons/Minute

### 14. HERBICIDE LOADING: \*\*\*NOTE THAT SOME OF THESE AMOUNTS HAVE CHANGED\*\*\*

- a. **Sequence for Loading 1,000 Gallon Mixing Tank:**
  - (1) Fill with water up to 750 Gallon Mark, then add:
    - (a) 450 Pounds of Krovar 1DF® (18 bags, 25 # each)
    - (b) 4.0 Gallons (15,140 ml) of StaPut®
    - (c) 15 oz of FTF Defomer®
    - (d) 400 Ounces Hi-Light® Dye
    - (e) Add Water to 1,000 Gallon Mark and Agitate for 30 Minutes
- b. **When:** Start at 0500 Hours on first full day of spraying and adjust as necessary through end of the daily mission as called by Mission Commander.

### 15. SPRAY MONITORING AND TESTING. By CPMP & ground support personnel

### 16. CONTACTS: Commercial prefix (801) 777-XXXX; DSN 777-xxxx

#### a. 388<sup>th</sup> RANS/RSO, Range Control Officer/Installation Spray Coordinator:

**17. SEQUENCING:**

- a. Target sequencing is determined by UTTR personnel based upon EOD clearance schedule and airspace scheduling.
- b. Spray ops aircraft must stay south of Base Leg Knoll during turns on north run on Target 21. Coordination with range control is essential to assure that this portion of the range is released for air operations.
- c. When winds blow directly from one side of the target to the middle of the target or during early morning when wind speed is low, ground monitors will direct the “dress up” of the target edges.
- d. **Spraying Priorities:**
  - (1) Target 21
  - (2) Target modified target 23/24

**a. Multiple-Target Alignments for Possible Future Operations.**

Whenever possible, multiple in line targets will be treated on the same pass to facilitate aircraft line-up and turning efficiency (in which case two separate ground-monitoring and marking parties will be required).

- (1) The west edges of Targets 21 & 24 are contiguous and can be treated on the same pass with a spray-off gap between targets.

**18. GENERAL TARGET INFORMATION:**

**a. Target 21:**

- (1) Dimensions: 4,980' X 7,770'
- (2) Acreage: 888
- (3) Acres Sprayed in 2004: 888
- (4) Aircraft Loads: 18,869 Gal
- (5) Sorties: 17
- (6) Passes (35' Swath): 157
- (7) Spray-On Time/Pass: 23 Seconds
- (8) Spray Heading: 00/180

**b. Target 23 / 24:**

- (1) Dimensions: 16,675' X 1,657'
- (2) Acreage: 580
- (3) Acres Sprayed in 2004: 223
- (4) Aircraft Loads: 13050 Gal
- (5) Sorties: 7
- (6) Passes (35' Swath): 47
- (7) Spray-On Time/Pass: 49 Seconds
- (8) Spray Heading: 004/184

**c. WildCat**

SW Corner:	N402543.14	W1131719.00

**UTTR GEOGRAPHIC LOCATION**

Target areas on UTTR are geographically located in northwestern Utah, directly west of the Great Salt Lake and Hill Air Force Base. The complex is positioned between 40 and 41 degrees north latitude and close to 113 degrees ten minutes west longitude. The targets are within range 12 west and Township two and three north, Salt Lake Baseline Meridian.

- c. Entomologists: application supervision (Cat 11- UTTR): Lt Col (b) (6) (b) (6) (10-14 Mar), Lt Col (b) (6) (b) (6) (17-19 Mar), Lt Col (b) (6) (b) (6) pesticide mixing and loading, safety briefer (Cat 11-Hill AFB)
- d. ARMS: SMSgt (b) (6) (1<sup>st</sup> half); SrA (b) (6) (2<sup>nd</sup> half)
- e. Range: Lt Col (b) (6) (1<sup>st</sup> half), Lt Col (b) (6) (2<sup>n</sup> half), Maj. (b) (6), Maj. (b) (6) Maj. (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Krovar<sup>®</sup> IDF
- b. EPA Registration Number: 352-505
- c. Formulation Sprayed: 10 lbs Krovar<sup>®</sup> per 22.5 gallons formulation.
- d. Gallons Pesticide Mix Loaded: 29,250
- e. Gallons Pesticide Mix Applied: 29,250
- f. Formulation Used per 1,000 gallons of finished mix: 450 lbs Krovar<sup>®</sup>, 4.0 gal StaPut<sup>®</sup>, ½ gal Foam Fighter<sup>®</sup>, 200 ounces Hi-Light<sup>®</sup> Dye, remainder water.
- g. Gallons and Name of Flush Used: 900 gal water
- h. Other Additives Used: 102 gal StaPut<sup>®</sup>; 40.6 gal Hi-Light<sup>®</sup> dye; 12.7 gal No-foam
- i. Application Rate: 22.5 gal/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99106, 99108
- b. Spray System (Modules Used) and System ID #: 3 and 5.
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 2 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 366 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 35'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) 12 Mar– beginning 010° @ 12; ending 355° at 9 knots
  - (2) 13 Mar – beginning 190° @ 6; ending 195° at 8 knots
  - (3) 14 Mar– beginning 181° @ 11; ending 180° at 8 knots
  - (4) 18 Mar– beginning 065° @ 3; ending light & variable
  - (5) 19 Mar– beginning 180 @ 5; ending 200° at 6 knots
- b. Temperature (Degrees Fahrenheit):
  - (1) 12 Mar – 32° - 37° F
  - (2) 13 Mar – 35° - 39° F
  - (3) 14 Mar– 34° - 37° F

- (4) 18 Mar– 27° - 29° F
  - (5) 19 Mar– 30° F
- c. Relative Humidity:
  - (1) 12 Mar – 78- 67 %
  - (2) 13 Mar – 48- 45 %
  - (3) 14 Mar– 59-56%
  - (4) 18 Mar– 59-54%
  - (5) 19 Mar– 46%
- d. Cloud Cover: Variable from 0 % to 100 % over the duration of the project
- e. Source: Aircraft observations over UTTR Targets 21 and 24 and Diddle Knoll weather station.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: blue dye pattern on targets and observations from personnel on the range.
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring
  - (2) Results: will be determined this spring by range personnel

- 8. REMARKS:** This year we continued the newly adopted practice of spraying UTTR targets (21, 23-24) using the DGPS agricultural spraying system (Wingman) for proper placement of the aircraft rather than ground personnel. Additional marker dye was used to highlight the treatment areas to determine coverage. The spray area was increased by 28% this year, despite 2 inclement weather day cancellations. Specific spray data for this project is shown in Attachment 1. An update of the current environmental assessment is in progress. This update will include the control of cheat grass for fire suppression. It is proposed that sprays to control cheat grass on the HAG/GAT be made in the fall timeframe (i.e., October).

//signed//

**910 AW AERIAL SPRAY UNIT – POST-MISSION REPORT FOR  
Minot AFB, Minot, Burlington, Surrey, Watford City, & Williston ND  
Adult Mosquito Control 14-18 July 2014**

**1. MISSION BASICS:**

- a. Installation Sprayed: Minot AFB and the cities of Minot, Burlington, Surrey, Williston and Watford City, North Dakota
- b. Mission Duration: 14-18 July 2014
- c. Purpose of Application: Control adult nuisance and vector mosquitoes
- d. Application Date: 15, 16, and 17 July 2014
- e. Time of Application (Local): 1955 -2130
- f. Acres Treated: 22,600 (Minot/Burlington/Surrey), 5,000 (Minot AFB), 32,000 Williston/Watford City
- g. Project Coordinator/s (Name/Rank, Title, Phone #): Mr. (b) (6) Supervisor - Pest Management Shop, DSN (b) (6) Williston Vector Control, (b) (6), ((b) (6) Minot City, (b) (6) ((b) (6)
- h. Date Spray Map Last Approved: 17 June 2014
- i. Date of Waste Generation Letter: 28 July 2013
- j. Installation In-Briefing: (When/Where/Briefer/s): Minot AFB CE Conference Room, Lt Col (b) (6) and Maj (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: LtCol (b) (6)
- b. Entomologist (Category 8 & 11): Maj (b) (6)
- c. Aircrew:
  - 1) Pilots: Maj (b) (6) Maj (b) (6)
  - 2) Navigators: Lt Col (b) (6)
  - 3) Flight Engineer: MSgt (b) (6)
  - 4) Spray Operators: SMSgt (b) (6), MSgt (b) (6), MSgt (b) (6)
- b. Maintenance:
  - 1) Spray Maintenance: TSgt (b) (6) (Lead), SMSgt (b) (6), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6), SrA (b) (6), (b) (6)
  - Crew Chief(s): MSgt (b) (6), SrA (b) (6)
  - 2) Avionics: TSgt (b) (6)

**Flying Data:**

- (1) Spray Sorties/Hours: 3/6.2
- (2) Ferry Sorties/Hours: 2/7.1
- (3) Mission ID: QENRK3531195

**3. PESTICIDES:**

**Minot et al.**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 200 gal Trumpet®
- d. Gallons and Name of Flush Used: 15 gal Water
- e. Other Additives Used: none
- f. Application Rate: 0.9 oz/acre Trumpet®

**Williston et al.**

- g. Trade Name: Zenivex E20
- h. EPA Registration Number: 2724-791
- i. Gallons Pesticide Loaded: 80 gal Zenivex 80 gal BVA
- j. Gallons and Name of Flush Used: 8 gal aromatic naptha
- k. Other Additives Used: none
- l. Application Rate: 0.0037 lbs/acre A.I. Etofenprox (0.32 oz/acre), (0.64 oz/acre 1:1 dilution)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 89106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 24 straight down for Minot & 13 for Williston
- f. Pressure (PSI): 41-52 PSI
- g. Flow Rate: 7.00 GPM for Minot and 4.65 GPM for Williston

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 2000-4000' depending on wind speed
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 15 July 330-340° @ 10 knots (aerial); 2 knots (ground)  
16 July 230-260° @ 10 knots (aerial); 2 knots (ground)  
17 July 160-190° @ 12 knots (aerial); 4 knots (ground)
- b. Temperature (Degrees Fahrenheit): 75 +or - 2 °F
- c. Relative Humidity: 65% + or - 8%
- d. Cloud Cover: clear to scattered clouds
- e. Source: Ground observations and onboard aircraft readings

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The Minot AFB CES pest management and Williston Mosquito control conducts adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: CDC light traps
  - (2) Results: Mosquitoes counts pre and post spray for the Williston area are in Attachment
  - (3) Public Health for Minot AFB did not report trap counts.

**8. REMARKS:** Continued high numbers of mosquitoes in both the Minot and Williston ND areas along with Minot AFB prompted each location to make the decision to have an aerial spray application. Spray operations were conducted on the evenings of 15, 16, and 17 July. Weather conditions were superb with both temperature and winds being excellent for an effective application. Minor malfunctions in the pressure indicator of the spray system was the only interruption of spray operations, however, these were quickly corrected, calibrations were verified, and spray operations continued without incident for the remainder of the mission. A seamless transition and flawless calibrations were made when changing chemicals from the Minot to the Williston portion of the mission, much to the credit of the spray maintenance personnel. Sortie information can be found in Attachments 2-5.

**AERIAL SPRAY OPERATIONAL SCHEDULE**  
**Minot, MAFB, & Williston, ND**  
**14-18 July 2014**  
**V4**  
**MI: QENRK3531195**  
**AFRC IRT#:14-08-MASS1**

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes in order to improve working conditions and lower risk of vector-borne illness to individuals working and living in and around Minot AFB and the cities of Minot and Williston ND. Aerial Spraying of the cities of Minot and Williston will be in accordance with the IRT program.

**1. 910 AW PARTICIPANTS:**

Msn Commander:	Lt Col (b) (6)	(b) (6)
Entomologist:	Maj (b) (6)	(in place) (b) (6)
Pilots:	Maj (b) (6)	, Maj (b) ((b) (6)
Navigator:	Lt Col (b) (6)	
Flight Engineer:	MSgt (b) (6)	
Spray Operators:	SMSgt (b) (6)	, MSgt (b) (6) , MSgt (b) (6)
Spray Maintenance:	MSgt (b) (6)	Lead) (b) (6)
	SMSgt (b) (6)	, TSgt (b) (6) , TSgt (b) (6)
	TSgt (b) (6)	, SrA (b) (6)
Crew Chiefs:	MSgt (b) (6)	, SrA (b) (6)
Avionics:	MSgt (b) (6)	

**2. REQUIRED ITEMS:**

Msn Commander:	Mission Folder, Laptop
Entomologist:	Wind Gauge, Compass, Pest Safety Binder, Project Notebook
Navigator:	Maps/Map Bag, Validation Map
Spray Operators:	PPE, Calibration Tables/Laptop and or Spray datasheet, O2 hose extensions
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand held radios

**3. SCHEDULE: (All Local Times)**

**14 July (Monday): PPR: N/A (KMOT Minot International)**

0900: Show KYNG  
1100: Depart KYNG  
1335: Land KMOT

**15-17 July (Tues-Thurs): Spray sorties Sunset 2147 (Minot) 2155 (Williston)**

1000: In brief (Tues @ KMIB CE SQ)  
1700: Showtime/WX decision  
1730: Load  
1930: Takeoff KMOT (subject to change dependent upon location)  
2200: Land

**18 July (Friday)**

1030: Crew show

1230: Depart KMOT  
1630: Land KYNG

**3. AIRCRAFT & SPRAY CONFIGURATION:**

Aircraft: 89-9106  
System: SP2G (2-Module System) with Fuselage Booms  
Nozzle/Orientation: ULV 8003 Tee Jet oriented straight down  
Number of Nozzles: Trumpet: 26 (13 per side for 2000' swath @ Minot & MAFB)  
Zenivex: 16 (2000' swaths @ Williston)

**4. SPRAY MIXING AND LOADING:**

Entomologist will determine quantity to load and work with the local pest managers to determine the application rate. 160 gal of Trumpet is needed for Minot City and 40 for MAFB. Williston will use approximately 160 gal (80 Zenivex and 80 BVA). System will be calibrated after the Zenivex load. Please see entomologist for final flow spray parameters as these numbers are subject to change depending on user requirements.

**5. SPRAY PARAMETERS:**

**Location: Minot AFB & City of Minot**

Chemical: Trumpet  
Area to be treated: Minot City (22,600 acres) MAFB (5,000 acres)  
Swath Width: 2,000'  
Flow Rate: 7.0 gal/min for 2,000' swath (Trumpet @ EC Concentrate - 78% naled)  
Application Rate: 0.9 oz/acre Trumpet  
Altitude: 150'  
Ground Speed: 200 Knots  
Flush:

**Location: Williston**

Chemical: Zenivex  
Area to be treated: 32,000 acres  
Swath Width: 2,000'  
Flow Rate: 4.65 gal/minute (1:1 BVA:Zenivex E20)  
Application Rate: 0.0037 lbs/acre A.I. Etofenprox (0.32 oz/acre), (0.64 oz /acre 1:1 dilution)  
Altitude: 150'  
Ground Speed: 200 Knots  
Flush: With aromatic naptha, triple rinse, then air purge

**6. RADIO FREQUENCIES:**

MAFB Twr: 120.65, 236.6, 253.5;  
Minot Intr'l: 118.2, 251.125 or Unicom 122.95  
Williston: 122.8 CTAF/UNICOM  
Spray Gnd: VHF 123.45 UHF 392.2

**7. TRANSPORTATION:**

Minot Vehicle Ops: 701-723-3176 / DSN 453-3121  
2 six pax trucks and 2 eight pax vans Confirmation # 23195723  
2 additional vehicles from ND Guard

**8. LODGING:**

Sleep Inn in Minot, ND

2400 10th St SW, Minot, ND 58701  
(701) 837-3100  
Non- A's to be emailed to aerial spray shop

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Capability and Concept of Operations for Aerial Spray at Mountain Home AFB and Saylor Creek Bombing Range, ID

1. Aerial spray deployment of one C-130 from 14-25 Sept 2015 in response to an aerial spray request to aid fire prevention on Saylor Creek Bombing Range located near Mountain Home AFB, ID. A herbicide will be applied to target cheat grass while allowing native fire resistant vegetation (sagebrush) to re-establish and become competitive. During the operation aerial spray flight proficiency training will be accomplished while providing real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations (All times are local)

- a. 14 Sep (Mon)  
1100 Support Spray aircraft depart KYNG  
1200 Aircraft depart KYNG  
1500 Spray aircraft land KMUO  
1510 Support aircraft land KMUO
- b. 15-18 Sep (Tues - Fri) Spray Sorties  
0700 Depart KMUO  
1115 Land KMUO  
TBD Support aircraft return to YNG
- c. 21-24 Sep (Mon-Thur)  
0700 Depart KMUO  
1115 Land KMUO  
TBD Support aircraft return to YNG
- d. 25 Sept (Fri) Redeployment  
0900 Spray aircraft depart KMUO  
0910 Support aircraft depart KMUO  
1600 Spray aircraft land KYNG  
1610 Support aircraft land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 3200 acres
- b. Altitude: 100' AGL for herbicide application
- c. Swath Width: 100ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 0.57 ounces of Panoramic 2SL in 7 gal water per acre

4. Lt Col (b) (6) will serve as the Mission Commander. Lt Col (b) (6) will be the Aircraft Commander. Required support at both Mountain Home AFB and Saylor Creek has been coordinated.

//SIGNED//

(b) (6), Lt Col, USAFR  
Chief, Aerial Spray

**AERIAL SPRAY OPERATIONAL SCHEDULE V1**  
**SAYLOR CREEK RANGE / MT HOME AFB, ID**  
**14-25 SEPT 2015**  
**QENRK3531258**

**Purpose/Objectives/Benefits:** One C-130 will deploy to Mt Home, IID from 14-25 Sep, 2015. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in to prevent fire hazards, inhibit annual re-growth of cheatgrass on Saylor Creek Bombing Range, ID and allow native vegetation to establish and be competitive.

**1. 910 AW PARTICIPANTS:**

Msn Commander:	Lt Col (b) (6)	(15-19)	(b) (6)

### **16-18 Sept (Tues-Thur) Spray Sorties   Range: 0700L - 1100L**

0500 Show KMUO/WX decision/load  
0700 Depart KMUO  
1115 Land KMUO

### **19-21 Sept (Fri-Sun)**

No Flying –Participate in Airshow

### **22 Sept (Mon) Spray Sorties Range: 0700 - 1100L**

The post-airshow Wing FOD-walk will be from 0700-0900 Monday the 22nd. We can't take off until they are done. If we need LOX we will fly to KBOI.

0700 Show KMUO  
0900 Depart KMUO/KBOI  
1115 Land KMUO

### **23-25 Sept (Tues-Thurs) Spray Sorties   Range: 0700L - 1100L**

0500 Show KMUO/WX decision/load  
0700 Depart KMUO  
1115 Land KMUO

### **25 Sept (Thurs) Support**

0800 Show KYNG  
1000 Depart KYNG   **Mission # QENRKXXXXX**  
1400 Land KMUO   **PPR: EA-247-03**

### **26 Sept (Fri)   Redeploy to YNG**

0700 Show KMUO  
0900 Spray aircraft depart KMUO  
0910 Support aircraft depart KMUO  
1600 Spray aircraft land KMUO  
1610 Support aircraft land KYNG

## **4. AIRCRAFT & SPRAY CONFIGURATION:**

Aircraft:	89-9108
System:	SP-3G MASS: 3
Nozzle /Orientation:	Raindrop/Straight Back

Number of nozzles:

Fuselage – 18 nozzles

## **5. SPRAY MIXING AND LOADING:**

### **a. In each gallon of mix:**

0.57 ounces of Plateau herbicide (0.44 gallons in 100 gallons of water)

0.32 ounces of Control AMS DR (2 pints in 100 gallons)

0.0058 ounces of Prevent (0.5 oz in 100 gallons)

127.1 ounces of water

### **b. First Load (4 Tanks of 450 gallons each + sump of 75 gallons)**

Fill to 450 gal water/tank using the pump on the water tanker truck. This is done by putting the filler hose into the rear tank with all tanks open to the common sump.

Total water in tanks = 1,800 gal.

75 gal/water in sump

Total water added = 1,875 gallons

Load 8.3 gallons of Plateau; add 4.7 gallons of Control AMS, and 9 oz of Prevent while agitating approximately 5-7 min

Total quantity mix 1888 gallons

### **c. Subsequent Loads**

Fill with water for a total of 1800 gallons; use “per 100 gallons of water” measurements given above. When the MASS is returned empty load 1800 gallons of water and add: 8.1 gallons of Plateau; 4.5 gal of Control, and 9 oz of Prevent

## **6. SPRAY PARAMETERS:**

Chemical: Plateau Herbicide (active ingredient: 23.6% Ammonium salt of imazapic)

Area to be treated: 3,216 acres

Swath Width: 100 feet

Flow Rate: 326 gal/min (we are treating at 46.5 acres/minute)

Application Rate: 7 gal/acre (4 oz of Plateau per acre)

Altitude: 100’ AGL

Ground Speed: 200 Knots

Flush: Water

## **7. SPRAY MONITORING OR TESTING**

Water sensitive cards may be used to verify swath width by the CPMPs

## **8. PARKING PLAN:**

Transient Ramp in front of Base Operations

## **9. RADIO FREQUENCIES:**

**Mt Home:**

PTD: 372.2/138.9

# AERIAL SPRAY OPERATIONAL SCHEDULE

## MINOT AFB/Williston, ND

### 16 – 20 June 2014

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes, with adulticide, in order to improve working conditions and lower risk of vector-borne illness to individuals working and living in and around Minot AFB, the cities of Minot and Williston ND. Aerial Spraying of the cities of Minot and Williston will be in accordance with the IRT program.

**1. 910 AW PARTICIPANTS: Aircrew Spray 04: MI: QENRK3531167**

- (1) Pilot: Maj (b) (6)
- (2) Copilot: Capt (b) (6) in

**3. SCHEDULE: (All Local Times)**

**16 June (Monday):**

0900: Show KYNG  
1100: Depart KYNG  
1335: Land KMOT

**17-19 June (Tues-Thurs.): \* as wx permits each day.\* PPR: N/A (KMOT Minot International)**

1000: Inbrief @ MIB (Civil Engineer SQ)  
1700: Show time/WX Decision  
1730: Load  
1930: Takeoff KMOT  
2147: Sunset (2155 for Williston)  
2200: Land

**20 June (Friday)**

1030: Show; return vehicles  
1230: Depart KMOT  
1630: Land KYNG

**3. ITEMS TO TAKE**

- a. **Mission Commander:** Mission Folder, Laptop
- b. **Entomologist:** Cell Phone, Wind Gauge, Compass, Pest Safety Binder,  
1 VHF radio Project Notebook
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables/Laptop and or Spray data sheet
- e. **Spray Maintenance:** Deployment Kit, Support Equipment

**4. KMIB PPR: N/A (Operations out of Minot International)**

**5. RADIO FREQUENCIES:**

Air to Ground Primary UHF 392.2; VHF 123.45  
Minot AFB Tower 120.65, 236.6, 253.5;  
Minot International 118.2, 251.125 or Unicom 122.95  
Williston: 122.8 CTAF/UNICOM

## 6. CONFIGURATION: SP2G

a. **System:** 2-Module System/Fuselage Booms

b. **Nozzle Tips/Orientation:**

ULV (adulicide): 8003 Tee Jet oriented straight down

c. **Number:** ULV: Trumpet: 16 (8 per side for 1,000' swath); 32 (16 per side for 2000' swaths); Zenivex: 16

d. **Booms:** Fuselage

e. **Aircraft:** 89-9104

## 7. SPRAY PARAMETERS:

### A. Adulicide (Minot AFB/ City of Minot- Trumpet)

(1) **Area to be treated:** Minot AFB: 5,000 acres; City of Minot 22,000 acres

(2) **Altitude:** 150' for Adulicide application

(3) **Swath Width:** 1,000 feet for AFB; 2,000' City of Minot or as determined by the PMP

(4) **Flow Rate.** 7.3 gal/min for 2,000' swaths (Trumpet ® EC Concentrate - 78% naled)

(5) **Application Rate.** 1.0 oz/acre Trumpet, ULV

(6) **Ground Speed:** 200 Knots

### B. Adulicide (Williston City – Zenivex)

(1) **Area to be treated:** ~32,000 acres

(2) **Altitude:** 150' for Adulicide application

(3) **Swath Width.** 2,000' City of Williston or as determined by the PMP

(4) **Flow Rate.** 4.65 gal/minute (1:1 BVA:Zenivex E20)

(5) **Application Rate.** 0.0037 lbs/acre A.I. Etofenprox (0.32 oz/acre), (0.64 oz /acre 1:1 dilution)

(6) **Ground Speed:** 200 Knots (338 Feet/Second)

(7) **Flush:** With BVA, triple rinse, then air purge

8. **SPRAY MIXING AND LOADING:** Entomologist will determine quantity to load. Approximately 110 gal Trumpet needed for Minot City and AFB. Williston will use approximately 160 gal (80 Zenivex and 80 BVA). These numbers are subject to change depending on user requirements.

9. **TRANSPORTATION:** Minot Vehicle Ops: 701-723-3176 / DSN 453-3121

(2) 6 pax trucks and (2) 8 pax vans **Confirmation #** 23195723

2 additional vehicles from ND Guard

## 10. LODGING: Mainstay Suites in Minot, ND

1212 31<sup>st</sup> Avenue, SW, Minot, ND 58701

  - (1) Spray Maintenance: MSgt (b) (6), TSgt (b) (6), TSgt (b) (6), (b) (6) SrA (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6), TSgt (b) (6), (b) (6)
  - (3) Avionics: TSgt (b) (6)
- e. Flying Data:
  - (1) Spray Sorties/Hours: 1 sortie = 1.2
  - (2) Ferry Sorties/Hours: 2 sorties (3.8 + 3.1) = 6.9

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® EC Concentrate (78% naled)
- b. EPA Registration Number: 59639-90-5481 Trumpet
- c. Formulation Sprayed: Emulsified Concentrate (Trumpet)
- d. Gallons Pesticide Loaded: 148 gal (17 Jun) 90 gal (19 Jun)
- e. Gallons Pesticide Applied: 41 gal (19 Jul); 197 gallons downloaded 19 Jun (see remarks)
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 5 gal aromatic naphtha
- h. Other Additives Used: None
- i. Application Rate: 0.9 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99103
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 20-8003s total (17 Jun)
- f. Pressure: 55-65 psi
- g. Flow Rate: 6.54 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2,000 ft
- b. Spray offset: 2,000 ft
- c. Spray Release Altitude: 150 ft
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 4-6 knots @ 045°
  - (2) Release Altitude: 12-18 knots @ 045°
- b. Temperature (Degrees Fahrenheit): 73° F
- c. Relative humidity: 85%
- d. Cloud Cover: Overcast
- e. Source: Ground observations and aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Monitoring is done with New Jersey light traps in the city of Minot. Mosquito Magnets are used as traps by Minot AFB Public Health. Pre-application mosquito counts on 17 June were over 110 female mosquitoes at the single location sampled on Minot AFB. No after spray counts were received from Minot. Little control should be expected from the truncated spray sortie on 17 June (see attachment 1 for flight image).

**8. REMARKS AND RECOMMENDATIONS:**

- a. This mission was planned with the intention of spraying Minot, Minot AFB, and Williston (and Watford City) to control adult mosquitoes. However, a system leak a third of the way through the sortie brought the Minot spray to an early end on 17 June and subsequent weather and technical issues later in the week, prevented other areas from being sprayed. The leak was the result of a seal failure on the ULV line under tank 2. When the leak was discovered, the system was shut down and the crew donned oxygen and landed. None of the members reported any adverse effects from potential exposure issues. The following day, 18 June, was rainy and windy during the acceptable spray timeframe and so no spraying was attempted. On 19 June, some small amounts of residual pesticide were discovered on the aircraft floor under the spray system during the pre-flight inspection. The spray system had to be removed to inspect the extent of the pesticide contamination. Once the system had been downloaded, the crew was able to determine that no additional pesticide contamination had occurred on the plane. Unfortunately, removing the spray system was a protracted process and could not be accomplished before the window of opportunity for spraying closed. Thus, no spraying was conducted on 19 June and the crew redeployed on Friday 20 June as scheduled.
- b. One item worth noting was the unusual occurrence of “crystallization” encountered in the bottom of the Trumpet drums. Beyond the obvious frustration with finding anything but high quality product in the drum, an additional concern regarding the precipitation of

material in drums is the highly technical question of which component of the pesticide actually gels? If it is the active ingredient naled, then the result is potentially a significant loss of efficacy. The technical representative for the manufacturer (Mr. (b) (6) – AMVAC) is investigating the incidence of this peculiarity and plans to physically travel to Minot and take samples of the precipitant in the drums. There were no noticeable negative effects encountered when spraying the loaded Trumpet. It appears that any of the precipitant making it into the tanks was able to dissolve back into solution as no nozzle clogging was seen.

- c. Mr. (b) (6) (formally MSgt (b) (6) of Grand Forks AFB Pest Management) is now the Minot AFB Pesticide Shop Supervisor, replacing Ms. (b) (6). We look forward to working with Mr. (b) (6) in his new role as he brings a lot of aerial spray experience with him from Grand Forks AFB.

Entomologist/DoD Certified Applicator

Attachment 1. Shows the areas treated 17 June over Minot, ND. The red outline is the designated spray area. The black dots are the track of the aircraft and the light green lines are the 2,000 ft swath treated while spraying. Some areas show an offset. In this case, the green blocks shows the area where the pesticide drifted. Wind was from the northeast.

- a. Deposition Pattern:
  - (1) Technique/s Used: visual observation of aircraft course (GPS)
  - (2) Results: good coverage throughout spray area
- b. Effectiveness:
  - (1) Technique/s Used: Biting midge numbers were determined prior to spraying using light traps. Post-spray monitoring was carried out by Pest Management personnel with light traps(28 Oct).

Location	Pre Spray	Post Spray
Horse Island	12	2
Rifle Range	33	4
Elliot's Beach	15	0
Page Field	29	0
ODP	14	0

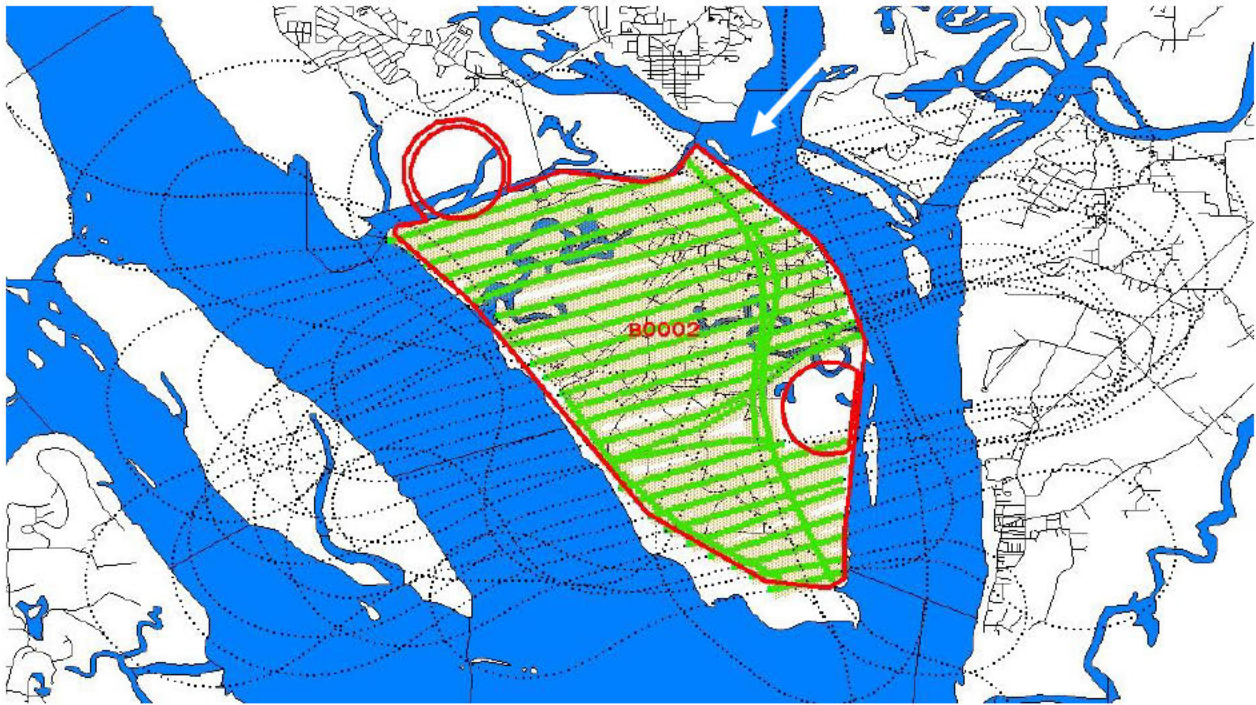

**10. REMARKS:**

Despite the relatively low insect populations, this mission was initiated as a prophylactic response to a suspected human case of Eastern Equine Encephalitis of a Parris Island recruit, as well as several seropositive pools detected in local mosquito populations. The mission proceeded with no notable problems encountered.

**DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND**

11 June 2014

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Capability and Concept of Operations for Aerial Spray at Joint Base Charleston, SC.

1. Aerial spray deployment of one C-130 during 24-27 June 2014 in response to a requested aerial spray to control adult mosquitoes for JB Charleston, SC. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of JB Charleston. Operations will be conducted from JB Charleston.

2. Concept of Operations (All times are local)

- a. 24 June (Tues)  
1700 Depart KYNG  
1900 Land KCHS
- b. 25-26 June (Weds-Thurs)  
TBD Inbrief with user (Weds)  
1830 Depart KCHS  
2100 Land KCHS
- c. 27 June (Fri)  
1100 Depart KCHS  
1300 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 20,000 acres
- b. Altitude: 150 ft for adulticide application
- c. Swath Width: 2000ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 1.0-1.2 oz/acre of Trumpet EC

4. Lt Col (b) (6) will serve as the Mission Commander. Lt Col (b) (6) will be the Aircraft Commander. Required support at JB Charleston has been coordinated.

- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 120 gallons
- d. Gallons Pesticide Applied: 120 gallons
- e. Gallons and Name Diluent Used: N/A
- f. Gallons and Name of Flush Used: 10 Gallons aromatic naptha
- g. Other Additives Used: None
- h. Application Rate: 0.85 oz/acre

**APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99108
- b. Spray System (Modules Used) and System ID #: SP2G
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 28 Total; 14 left, 14 right
- f. Pressure: 45 p.s.i.
- g. Flow Rate: 6.5 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind; 210° at 7.5 knots (average) ground observation. Temp; 86 degrees F; Humidity 70 percent.

**7. SPRAY MONITORING:** Pre- and post-spray mosquito collections were taken at 6 locations (1 location was outside the spray area) using CO<sub>2</sub>-baited CDC mosquito traps and landing rates were monitor at the spoil site.

Trap 1: DTP	Trap Malfunction – no data
Trap 2: SPAWAR:	3 females (24 Jun); 0 females (26 Jun) 100% reduction
Trap 3: Golf Course	80 females (24 Jun); 0 females (26 Jun) 100% reduction
Trap 4: Wharf A	60 females (24 Jun); 5 females (26 Jun) 92% reduction
Trap 5: GC Bridge	89 females (24 Jun); 1 females (26 Jun) 99% reduction
Landing count at	
Spoil site (per minute)	17 (24 Jun); 0 (26 Jun) 100% reduction

Control Site-NPTU 60 females (24 Jun); 16 females (26 Jun) 73% reduction (No Spray Area)

**8. REMARKS:** Cases of West Nile virus are being detected near the Naval Weapons Station at JB Charleston. This application is the first adulticide application conducted for FY 14. No significant problems were encountered during this application, and results appear to be excellent. Because of the large dredge spoil and marshlands associated with the Naval Weapons Station, future larvicide operations are being considered. It appears that Berkeley County, with dredge spoil areas adjacent to JB Charleston, is interested in participating in an IRT program to spray acreage outside the boundaries of the Weapons Station. This would greatly reduce mosquitoes flying in from adjacent wetlands. We appreciate the support we received from ALL sections at JB Charleston, special thanks goes to (b) (6) for his thorough coordination at all levels.

## **Joint Base Charleston, SC**

### **24-27 June 2014**

**Purpose/Objectives/Benefits:** Aerial spray deployment of one C-130 during 24-27 June 2014 in response to a requested aerial spray to control adult mosquitoes for Joint Base Charleston, SC. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of JB Charleston. Operations will be conducted out of JB Charleston.

#### **1. 910 AW PARTICIPANTS:**

##### **a. Aircrew:**

- (1) Pilots: Lt Col (b) (6), Capt (b) (6)
- (2) Navigator: Lt Col (b) (6)
- (3) Flight Engineers: SMSgt (b) (6)
- (4) Spray Operators: SMSgt (b) (6), MSgt (b) (6)

##### **b. Maintenance:**

Spray Maintenance: SMSgt (b) (6), TSgt (b) (6) TSgt (b) (6),  
SSgt (b) (6), MSgt (b) (6)  
Crew Chiefs: MSgt (b) (6), SrA (b) (6)  
Avionics: MSgt (b) (6)

**c. Entomologists:** Lt Col (b) (6) (b) (6) (in place); Maj (b) (6) (in place)

**d. MC :** Lt Col (b) (6)

#### **2. Transportation Provided by Tony Mincey Vehicles:**

- Ops: (1) Minivan (SMS (b) (6))
  - Mx: (1) 8 pax van (TSgt (b) (6))
  - MC: Lt Col (b) (6) (1) Rental Car
  - AC: Lt Col (b) (6) (1) Rental Car
- Charleston U-Drive Vehicles Confirmation # 23277185: 843-963-4238  
Enterprise Number @ CHS international airport: 843-767-1109

**3. Charleston Billeting: ON BASE.** POC: Mrs. (b) (6) DSN 673-8000 x8102 Comm  
843-963-4667 FAX DSN 673-3963.

**4. PPR: NOT REQUIRED PER BASE OPS CHS (MSN IS LOADED INTO GDSS2)**

#### **5. SCHEDULE: (All times local)**

##### **24 June (Tuesday)**

1500: Show KYNG  
1700: Depart KYNG  
1900: Land KCHS / Safety Brief after post flight duties

##### **25-26 June (Wednesday- Thursday)**

1430: (Wednesday) Installation Brief  
1600: Show KCHS  
1630: Pesticide Loading  
1800: Depart KCHS (Sunset: 2032L)  
2030: Land KCHS

**27 June (Friday)**

0830-0900: Check out /Vehicle Return

0930: Show KCHS

1130: Depart KCHS

1330: Land KYNG

**6. ITEMS TO TAKE:**

- a. **Mission Commander:** Friendly Force Tracker, Laptop
- b. **Entomologist:** Kestrel Weather Monitor, Compass, Pest Safety Binder, VHF Radios, Laptop Computer
- c. **Navigator:** Maps/Map Bag, Validation Map
- d. **Spray Operator:** Safety Gear, Calibration Tables, Spray Operator laptop/data sheets
- e. **Spray Maintenance:** Deployment Kit/Supply Kit
- f. **Avionics:** Wingman card, laptop computer, VHF/UHF radios (2)

**7. NOTIFICATION NECESSARY FOR THIS MISSION:**

- a. **Charleston Tower:** 843-414-2808 POC: (b) (6)
- b. **Charleston Base Ops:** DSN 673-3026
- c. **FSDO:** (b) (6) / Air Field Manager: Sgt (b) (6)

**8. PARKING PLAN: Spot 34 near D taxiway**

**9. RADIO FREQUENCIES:**

- a. **Charleston AFB:** Tower 843-414-2808
  - (1) Tower - 126.0 or 239.0
  - (2) Ground - 121.9 or 348.6
  - (3) Clearance – 127.325 or 291.65
  - (4) ATIS – 124.75
  - (5) Palmetto Ops 134.1 or 349.4
- b. **Charleston Approach: 135.8 or 379.925**
- c. **Mt Pleasant Regional: CTAF 122.8**
- d. **Charleston Executive: CTAF 122.8**

**10. IN-BRIEFING: 1430 hrs. On Wednesday**

**11. SPRAY CONFIGURATION:**

- a. **System:** SP2G - MASS ULV; Fuselage booms
- b. **Nozzle Tips/Orientation:** 24 8003 nozzles -- straight down (12 left - 12 right)
- b. **Aircraft:** 89-9103
- c. **Mission Identifier:** QZNRK9931175

**12. SPRAY PARAMETERS:**

- a. **Altitude:** 150' AGL
- b. **Ground Speed:** 200 knots
- c. **Pesticide:** Trumpet EC®

- d. **Application Rate:** 0.9 oz/acre
- e. **Flow Rate:** 7.9 Gallons/Minute
- f. **Acreage:** Approximately 18,000 acres
- g. **Swath Width:** 2000 foot

**13. PESTICIDE LOADING:**

- a. **How Much Pesticide:** 4 drums
- b. **Where:** Spot 34 near taxiway D
- c. **When:** 1630 hrs each day pending weather and heat index.\*\*Calibration performed unless otherwise directed by the Entomologist or Mission Commander
- d. **Furnished by Installation:**
  - (1) Pesticide
  - (3) Hazardous Waste Disposal

**14. CONTACTS: JB CHARLESTON (843)-963-XXXX, DSN 673-XXXX**

- a. **Charleston AFB SC:**
  - Wing Commander: x3418
  - Mission Support Group Commander: x2200
  - Civil Engineer: x4956
  - Deputy Chief/Civil Engineer: x4954
  - Environmental Coordinator: x2711

**PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**MIAMI-DADE COUNTY INNOVATIVE READINESS TRAINING**  
**ADULT MOSQUITO CONTROL**  
**HOMESTEAD ARB, FL 25-29 August 2014**

**1. MISSION BASICS:**

- a. Location Sprayed: Miami-Dade County/Homestead ARB, FL.
- b. Mission Duration: 25-29 August 2014
- c. Purpose of Application: Adult Mosquito Control
- d. Application Date/s: 26-27 Aug 2014
- e. Flying Data:
  - i. Spray Sorties/hours: 2 sorties (2.4 + 2.9 + 0.6 [flush] = 5.9
  - ii. Ferry Sorties/hours: 2 sorties (3.7 + 3.5) = 7.2
- f. Time/s of Application (local) 1705-1945 (26 Aug), 1850-2001 (27 August)
- g. Acres Treated: 13,548 (26 Aug), 13,354 (27 August) = 26,902 acres
- h. Project Coordinator/s (Name/Rank, Title, Phone #): (b) (6) Miami-Dade Mosquito Control; (b) (6); (b) (6) Physical Scientist; DSN (b) (6)
- i. Date Spray Map Last Approved: 26 Aug 2014
- j. Date of Waste Generation Letter: 5 Sept 2012
- k. Installation In-Briefing: 26 Aug: 482 CES/CC Conference Room; Lt Col (b) (6) (b) (6) Lt Col (b) (6) Maj (b) (6) Mr. (b) (6) (Miami-Dade Co.), Lt Col (b) (6) (482 CES/CC), Dr. (b) (6) (482CES)
- l. Safety Briefer: Lt Col (b) (6) (b) (6)
- m. Mission identifier: QZNRK3531237

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6)
- b. Certified PMP/Entomologists (Category 11): Lt Col (b) (6) (b) (6) Lt Col (b) (6) (b) (6)
- c. Aircrew:
  - (1) Pilots: Col (b) (6) Lt Col (b) (6) Lt Col (b) (6)
  - (2) Navigators: Lt Col (b) (6)
  - (3) Flight Engineers: MSgt (b) (6) MSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6) MSgt (b) (6) MSgt (b) (6) (b) (6)
- d. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6) MSgt (b) (6) MSgt (b) (6) SSgt (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6) (b) (6) Avionics: TSgt (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate (87.4% Naled)
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Dibrom<sup>®</sup> Concentrate (neat)

- d. Gallons Pesticide Loaded: 60 gal (26 Aug); 60 gal (27 Aug);
- e. Gallons Pesticide Applied: 45 gal (26 Aug), 42 gal (27 Aug) = 87 total
- f. Gallons and Name Diluent Used: none
- g. Gallons of Flush Used: 7 gallon HAN
- h. Other Additives Used: None
- i. Application Rate: 0.40 oz/acre (26 Aug), 0.43 oz/acre (27 Aug)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99108
- b. Spray System (Modules Used) and System ID #: 4
- c. Spray System Configuration: 2-Module System/Stainless Steel, ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 18-8003 oriented straight down (26 Aug); 16-8003 (27 Aug)
- f. Pressure: 22-35 psi
- g. Flow Rate: 3.12 gal/min (26 Aug), 2.91 gal/min (27 Aug)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000 ft
- b. Spray offset: 3000 ft
- c. Spray Release Altitude: 150 ft
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed in knots):
  - i. Release altitude: 069°@11 (26 Aug), 085°@15 (27Aug)
  - ii. Ground: 045°@7 (26 Aug), 045°@3-6 (27 Aug)
- b. Temperature (Degrees Fahrenheit): 88-86°F (26 Aug), 88-86°F (27 Aug)
- c. Relative humidity: 64-66% (26 Aug), 63-66% (27 Aug)
- d. Cloud Cover: Scattered clouds, mostly cloudy, thunderstorms
- e. Source: Ground observations and aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Monitoring was done by Miami Dade Mosquito Control using carbon dioxide-baited traps.
- b. Monitoring trap data showed that mosquito populations dropped measurably in areas treated with decreases between 85-99% (Attachment 1), with a majority of the traps demonstrating decreases in excess of 95%.

**8. REMARKS:**

a. This was the second spray of the year conducted at Homestead ARB/Miami Dade County under the Innovative Readiness Training Program, which allows the military to work with communities in order to provide effective training for the military component, as well as being beneficial the participant community. Three pest controllers from 382 CES received aerial spray training: they observed pesticide loading including the use of personal protection equipment, instruction on how the MASS functions including calibration and flow rates. These members also went into the field and took wind measurements, mosquito counts, and served as monitors of the spray process. Recommend they participate in the Aerial Application of Pesticide Course for further competency in the subject and certification in EPA category 11.

b. The application went forward without incident and while wind speeds were near the maximum allowed on 26 Aug, they were also consistent. The results of the 3,000 ft offset to compensate for wind speed speak for themselves: post-spray counts dropped to zero and light trap data corroborated these findings (See Attachment 1). On the second evening (27 Aug), the remaining spray areas were treated. Treated spray areas are shown in Attachment 2.

c. Once again the technical support from Miami Dade County was critical for mission success this application by providing outstanding support in the form of mosquito surveillance data both pre- and post-

spray. We also thank the HARB CES personnel for coordinating the inbrief and 382 PA for covering the aerial spray activities on their social media sites.

Attachment 2. Spray blocks treated in Miami-Dade County including Homestead ARB. Red outline is the spray block, black dots or lines are the path of the aircraft. Green lines indicate when the aircraft was spraying. A 3,000 ft offset to the east was used on both days to compensate for the wind speed and direction. Therefore, intentional spraying occurred outside of the blocks in order to allow the insecticide to drift back through the intended target area.

**910 AW AERIAL SPRAY UNIT POST-MISSION REPORT**  
**WILLISTON ACE– LARVAL MOSQUITO CONTROL 27 May – 3 June**  
**2014**

**1. MISSION BASICS:**

- a. Installation Sprayed: Army Corps of Engineers, Williston, ND
- b. Mission Duration: 27 May – 6 June 2014
- c. Purpose of Application: Control of larval stage mosquitos
- d. Application Date: 28 May – 5 June 2014
- e. Time of Application (Local): Variable depending on WX conditions
- f. Acres Treated: 4184
- g. Project Coordinator/s (Name/Rank, Title, Phone #): (b) (6) , ACE supervisor, Williston ND, (b) (6)
- h. Date Spray Map Last Approved: 27 May 2014
- i. Date of Waste Generation Letter: 26 May 2009
- j. Installation In-Briefing: (When/Where/Briefer/s): 27 May 2014 Williston, Maj (b) (6) in place

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6) ; Lt Col (b) (6) (2<sup>nd</sup> half)
- b. Certified PMP/s (Category 11): Lt Col (b) (6) (b) (6) Maj (b) (6) (on site)
- c. Aircrew:
  - 1) Pilots: Lt Col (b) (6) , MAJ (b) (6) Lt Col (b) (6) (2<sup>nd</sup> half)
  - 2) Navigators: Lt Col (b) (6) ; Lt Col (b) (6) (2<sup>nd</sup> half)
  - 3) Flight Engineers: MSGT (b) (6) , SMSGT (b) (6) (2<sup>nd</sup> half)
  - 4) Spray Operators: TSGT (b) (6) , SSGT (b) (6) , CMSGT (b) (6) (2<sup>nd</sup> half)
- d. Safety Briefer: Lt Col (b) (6) (b) (6)
- e. Spray Maintenance: SSGT (b) (6) , TSGT (b) (6) (b) (6) TSGT (b) (6) (b) (6) TSGT (b) (6) , SSGT (b) (6)
- f. Spray Ground Monitors: SSGT (b) (6)

- i. Engine: TSGT (b) (6) wall
- j. Hydraulics: SSGT (b) (6) SSGT (b) (6)
- k. Flying Data:
  - (1) Spray Sorties/Hours: 12/20.4
  - (2) Ferry Sorties/Hours: 2/7.0

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Vectobac 12AS (1200 ITU/mg)
- b. EPA Registration Number: 73049-38
- c. Area applied: 4184 Acres
- d. Gallons Pesticide Loaded: 935 gallons total over 11 active sorties
- e. Gallons Finished Tank Mix Applied: 20357 (Total)
- f. Gallons and Name of Flush Used: 1800 gallons of water flush
- g. Other Additives Used: PolyControl drift reduction agent (6.2 Gallons total over 11 sorties)
- h. Application Rate: 5 gal per acre of water mixed with 24 oz/acre Vectobac 12AS®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 3-Module System/Fuselage Booms
- d. Nozzle Type/Size: R-20 Raindrop
- e. Nozzle Orientation & Number Used: 12 Straight back
- f. Pressure (PSI): 40 PSI
- g. Flow Rate: 232 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off Set: None
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): Variable
- b. Temperature (Degrees Fahrenheit): Variable
- c. Relative Humidity: Greater than 60%
- d. Cloud Cover: Variable
- e. Source: Ground and aerial observations

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Three locations/populations were sampled pre and post treatment with following results:

Location	# dips	Pre-application	Post-application
ACE levy	5	150+ per dip	0 per dip
ACE ponds	5	50+ per dip	0 per dip
City levy	5	25+ per dip	0 per dip

**8. REMARKS:** The mission operated out of Minot International airport, as the runway at Minot AFB was closed for repair. Normally, this mission employs 2 spray aircraft, however recent deployments have limited our resources and we managed to cover approximately half the area we would have liked to treat. Nevertheless, there were no major problems encountered save for a few days of poor weather. The results from the mission are quite encouraging; as it appears complete control may have been achieved in areas that were sprayed. We and the Williston ACE pest management professionals believe that this application will have significant impacts in what is shaping up to be a trying mosquito season. Many thanks to the City of Minot and the Minot Airport Authority for facilitating our operations

**SUBJECT:** Capability and Concept of Operations for Aerial Spray Application at Luke AFB

1. One C-130 aircraft will be available 27-31 January 2014 to proceed from Youngstown ARS, OH and stage out of Luke AFB, AZ. The mission purpose is the control of invasive weed species by aerial spray application on Barry Goldwater Range. Semi-annual events and proficiency training will be accomplished by all crew positions. The range roadways will be sprayed to control the growth of Saharan Mustard on the range. This mission will also provide real world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations:

- a. 27 January (Monday)  
0800 Show KYNG  
1000 Depart KYNG  
1340 Land KLUF
- b. 28-30 January (Tuesday-Thursday) Range: 0730-0930  
0530 Show KLUF  
0715 Depart KLUF  
0945 Land KLUF
- c. 31 January (Friday)  
0600 Show KLUF  
0800 Depart KLUF  
1540 Land KYNG

3. Spray Configuration:

- a. MASS – SP2G
- b. Parameters –100' AGL and above
- c. Chemical – Glyphosate (Roundup)
- d. Rate – 440 GPM (10 Gal/Acre finished rate)

4. Lt Col (b) (6) will serve as Mission Commander.

5. Lt Col (b) (6) will serve as Aircraft Commander

6. Support required at Luke AFB and Barry Goldwater range has been coordinated. Please contact the aerial spray office if you have any concerns at DSN: (b) (6)

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Parris Island MCRD, SC

1. Aerial spray deployment to Beaufort MCAS, SC (KNBC) to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards to recruits at Parris Island MCRD, SC.

2. Concept of Operations (All times are local):

- a. 27 October (Mon)  
1600 Depart KYNG  
1800 Land KNBC
- b. 28 October (Tues)  
TBD Installation Brief  
Calibration of MASS
- c. 29 October (Weds) Spray  
1715 Depart KNBC  
1915 Land KNBC
- d. 30 October (Thurs) Spray WX backup  
1715 Depart KNBC  
1915 Land KNBC
- d. 31 October (Fri)  
1200 Depart KNBC  
1400 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 7500 acres
- b. Altitude: 150' AGL
- c. Swath Width: 1000 ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 0.75 oz/acre of Dibrom-Naled Organophosphate insecticide

4. Maj (b) (6) will serve as the mission commander with Lt Col (b) (6) as the aircraft commander. Support at Parris Island MCRD and Beaufort MCAS has been completed.

**PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**HOMESTEAD ARB, FL ADULT MOSQUITO CONTROL 28 July – 2 August 2014**

**1. MISSION BASICS:**

- a. Installation Sprayed: Homestead ARB, FL.
- b. Mission Duration: 28 July-2 August 2014
- c. Purpose of Application: Adult Mosquito Control
- d. Application Date/s: 29 July 2014; 01 August 2014
- e. Flying Data:
  - i. Spray Sorties/hours: 2 sorties (1.4 + 1.9) = 4.3
  - ii. Ferry Sorties/hours: 2 sorties (3.7 + 3.5) = 7.2
- f. Time/s of Application (Zulu): 2305-0030 (29 July), 2221-0015 (01 August)
- g. Acres Treated: 8,500 (29 July), 21,500 (1 August) = 30,000 acres
- h. Project Coordinator/s (Name/Rank, Title, Phone #): (b) (6) Physical Scientist;  
DSN (b) (6); (b) (6) (b) (6) Miami-Dade Mosquito Control; (b) (6)
- i. Date Spray Map Last Approved: 29 July 2014
- j. Date of Waste Generation Letter: 5 Sept 2009
- k. Installation In-Briefing: (When/Where/Briefer/s): 29 July: 482 FW/CC Conference Room;  
Lt Col (b) (6) Lt Col (b) (6) (b) (6) Lt Col (b) (6) SMSgt (b) (6)
- l. Mission identifier: QENRK3531209

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Certified PMP/Entomologists (Category 11): Lt Col (b) (6) (b) (6) (safety briefer),
- c. Aircrew:
  - (1) Pilots: Maj (b) (6) Lt Col (b) (6)
  - (2) Navigators: Lt Col (b) (6)
  - (3) Flight Engineers: MSgt (b) (6) TSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) MSgt (b) (6) MSgt (b) (6)
- d. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6) TSgt (b) (6) MSgt (b) (6)  
TSgt Dave Robataille
  - (2) Crew Chiefs: MSgt (b) (6) SRA (b) (6)
  - (3) Avionics: MSgt (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate (87.4% Naled)
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Dibrom<sup>®</sup> Concentrate (neat)
- d. Gallons Pesticide Loaded: 90 gal (29 July); 30 gal (01 August);
- e. Gallons Pesticide Applied: 32 gal (29 July), 88 gal (01 Aug)= 120 total
- f. Gallons and Name Diluent Used: none
- g. Gallons of Flush Used: 7 gallon HAN
- h. Other Additives Used: None
- i. Application Rate: 0.5 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99108
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 18-8003s oriented straight down
- f. Pressure: 30-50 psi
- g. Flow Rate: 3.65 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray offset: 1000-2000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 6 knots @ 270° (29 July), 2 knots @ 270-010° (1 Aug)
- b. Temperature (Degrees Fahrenheit): 92° (27 July), 83° (1 Aug)
- c. Relative humidity: 81-88% (29 July), 86% (1 Aug)
- d. Cloud Cover: Scattered clouds, mostly cloudy, thunderstorms
- e. Source: Ground observations and aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Monitoring was done by Miami Dade Mosquito Control using carbon dioxide-baited traps.
- b. Monitoring trap data showed that mosquito populations dropped measurably in areas treated with decreases between 55-100% (Attachment 1), with a majority of the traps demonstrating decreases in excess of 92% . It appeared the spray was quite effective at controlling adult mosquito populations.

**8. REMARKS:**

a. This is the first spray conducted at Homestead ARB/Miami Dade county under the innovative readiness program, which allows the military to work with communities in order to provide effective training for the military component, as well as being beneficial the participant community.

b. A relatively wet summer season and prevailing westerly winds left south Florida with several hatches of salt marsh mosquitoes and trap numbers easily met the prescribed minimum to trigger the potential for adult mosquito control. Miami Dade Mosquito control identified approximately 40,000 acres which they felt would benefit from an aerial spray. Thunderstorms prompted a weather cancellation on 30 and 31 July. Additional mechanical problems (aircraft bleed air system) caused the mission to be extended by one day. The Mission Commander coordinated with all parties for an extended spray period and the entire crew agreed to stay over on Friday evening to attempt to complete the spray area. As a result, 30,000 acres was sprayed out of the intended 40,000 acres. The Spray Unit has done well controlling this species of salt marsh mosquito and this application was no exception. The County Mosquito Control personnel reported mosquito numbers dropped in most cases by greater than 92% in all treated areas while counts remained stable in un-sprayed areas. USDA personnel at HARB reported that the spray had the additional benefit of significantly reducing the presence of birds in the area of the airfield, as mosquitoes are a major food source for the resident majority species. Areas sprayed are shown in Attachment 2.

c. Special thanks are given to Miami Dade County for providing outstanding support in the form of mosquito surveillance data both pre- and post-spray, as well as HARB CE personnel for coordinating the inbrief and the media event covering the aerial spray activities.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## GRAND FORKS AFB, ND

### 30 June - 3 July 14

#### V1

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes in order to improve working conditions for members operating at Grand Forks and Grand Forks AFB, North Dakota.

#### 1. 910 AW PARTICIPANTS:

##### a. Aircrew:

- 1) Pilots: Maj (b) (6), Maj (b) (6)
- 2) Navigators: Maj (b) (6)
- 3) Flight Engineers: SMSgt (b) (6)
- 4) Spray Operators: CMSgt (b) (6), MSgt (b) (6)
- 5) Mission Commander: Lt Col (b) (6)

##### b. Maintenance:

- 1) Spray Maintenance: SSgt (b) (6) (LEAD), TSgt (b) (6), TSgt (b) (6), MSgt (b) (6)
- 2) Crew Chief: MSgt (b) (6), SrA (b) (6)
- 3) Avionics: TSgt (b) (6)

##### c. Entomologists/Ground Support: Maj (b) (6) (in place)

#### 2. SCHEDULE: (All Local Times)

- a. 30 June (Monday)
  - 0845L Show KYNG
  - 1100L Depart KYNG
  - 1300L Land KRDR
- b. 1-2 July (Tues-Weds.)
  - 1030L Installation Brief CE Conference RM Bldg 410
  - 1700L Show KRDR
  - 1930L Depart KRDR
  - 2130L Sunset
  - 2145L land KRDR
- c. 3 July (Thurs.)
  - 1130 Show KRDR
  - 1330 Depart KRDR
  - 1730 Land KYNG

#### 3. ITEMS TO TAKE

- a. **Mission Commander:** Laptop, Mission Folder, FFT
- b. **Entomologist:** Wind Gauge, compass, Pest Safety Binder
- c. **Navigator:** Validation Map, charts
- d. **Spray Operator:** Safety Gear, laptop/data sheets
- e. **Spray Maintenance:** Deployment Kit, Support Equipment
- f. **Avionics:** AG GPS card for Wingman system

#### 4. PPR: 3001-JS

**5. RADIO FREQUENCIES:** Air to Ground Primary VHF 123.45 KRDR Red River Tower 124.9;  
Grand Forks International 118.4

**6. CONFIGURATION: SP2G**

- a. System:** 2-Module System/Stainless Steel ULV Fuselage Booms
- b. Nozzle Tips/Orientation:** ULV (adulticide): 8003 Tee Jet oriented straight down
- c. Number:** ULV: 30 total (15 each side) 8003s
- e. Aircraft:** 89-9106
- f. Mission Identifier:** QZNRK9931181

**7. SPRAY PARAMETERS:**

**a. Adulticide**

- (1) **Area to be treated:** 11,518 acres (Grand Forks AFB)
- (2) **Altitude:** 150' for Adulticide application
- (3) **Swath Width.** 2000 feet
- (4) **Flow Rate.** 7.26 gallons/minute ULV
- (5) **Application Rate.** 1.0 oz/acre Trumpet, ULV
- (6) **Ground Speed:** 200 knots
- (7) **Flush:** aromatic naptha, then air purge

**8. SPRAY MIXING AND LOADING:** Plan to load 90 gallons of Trumpet

**9. TRANSPORTATION:** Transportation provided by base (DSN362-3976): One 15 pax van (OPS), three 6 pax trucks (MC, OPS, MX), one 1.5 ton truck (spray MX). Vehicles at base ops with the exception of Trumpet loaded truck

**10. LODGING:** On base Billeting: (POC) (b) (6)

--DSN 362-7200 or (701) 594-8431, FAX 362-3069

-- Prime Knight DSN 362-3844 or (701) 747-3844

**11. CONTACTS:**

**910 AW AERIAL SPRAY UNIT -- POST-MISSION REPORT FOR  
GRAND FORKS AFB ADULT MOSQUITO  
CONTROL 30 Jun – 3 July 2014**

**1. MISSION BASICS:**

- a. Installation Sprayed: Grand Forks AFB North Dakota
- b. Mission Duration: 30 June - 3 July 2014
- c. Purpose of Application: Control adult nuisance and vector mosquitoes
- d. Application Date 2 July 2014
- e. Time of Application (Local): 1955 -2130 (2 July)
- f. Acres Treated: 11,518 (2 July)
- g. Project Coordinator/s (Name/Rank, Title, Phone #): SSgt (b) (6) , NCOIC Pest Management Shop, DSN (b) (6)
- h. Date Spray Map Last Approved: 8 July 2013
- i. Date of Waste Generation Letter: 22 June 2001
- j. Installation In-Briefing: (When/Where/Briefer/s): GFAFB CE Conference Room, Lt Col (b) (6) and Maj (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Entomologist (Category 8 & 11): Major (b) (6)
- c. Aircrew:
  - (1) Pilots: Major (b) (6) , Maj (b) (6)
  - (2) Navigators: Maj (b) (6)
  - (3) Flight Engineer: SMSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6) , MSgt (b) (6)
- c. Maintenance:
  - (1) Spray Maintenance: SSgt (b) (6) (Lead), TSgt (b) (6) , TSgt (b) (6) , MSgt (b) (6) , Crew Chief(s): MSgt (b) (6) , SrA (b) (6)
  - (2) Avionics: TSgt (b) (6)
- d. Flying Data:
  - (1) Spray Sorties/Hours: 1/1.3
  - (2) Ferry Sorties/Hours: 2/5.9
  - (3) Mission ID: QZNRK9931181

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 90 gal Trumpet®
- d. Gallons and Name of Flush Used: 8 gal aromatic naphtha
- e. Other Additives Used: none
- f. Application Rate: 1.0 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 89-9106
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms

- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 24 straight down
- f. Pressure (PSI): 41-52 PSI
- g. Flow Rate: 7.26 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: 2000-4000' depending on wind speed
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 330-340° @ 12 knots (aerial); 1-3 knots (ground)
- b. Temperature (Degrees Fahrenheit): 78 °F
- c. Relative Humidity: 57-70%
- d. Cloud Cover: scattered clouds
- e. Source: Ground observations and onboard aircraft readings

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

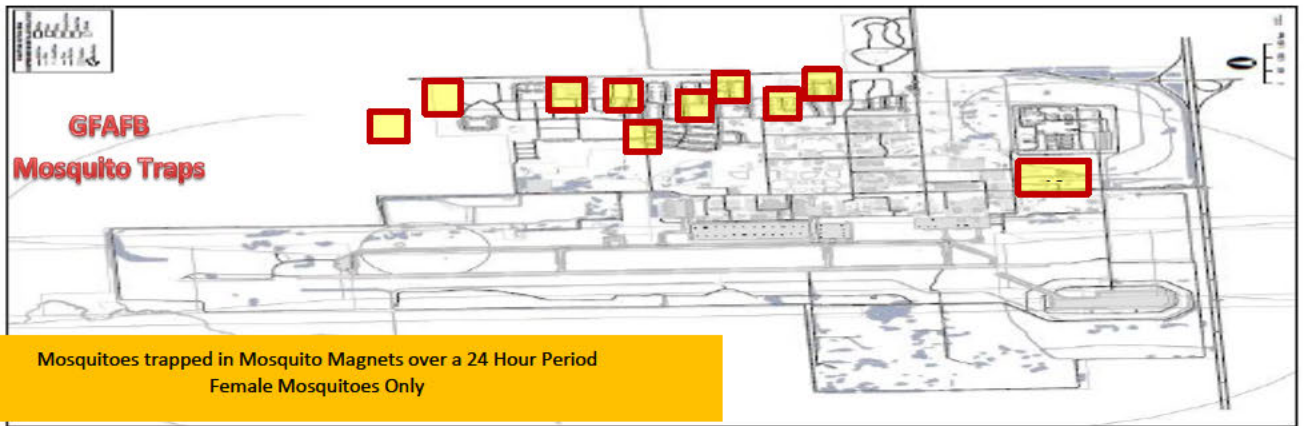

- a. The 319 CES pest management conducts adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito magnet traps
  - (2) Results: See Attachment 1 and 2

**8. REMARKS:** Continued high numbers of mosquitoes prompted GFAFB to approve an aerial spray application. Spray operations for the evening of 1 July were delayed for 24 hours due to marginal weather conditions. Weather conditions were forecast to be close to optimal for 2 July. A successful aerial application was made on 2 July in excellent application conditions (See Attachment 3). Observations of mosquito activity made immediately after application indicated a complete lack of insect activity within the area of application. Post-spray trap count data collections revealed some equipment malfunctions, but a week post application, indicated acceptable mosquito reductions following the application (See Attachment 1 and 2). Special thanks to SSgt (b) (6) and the staff of the GFAFB pest control shop.

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Altosid Liquid Larvicide Concentrate (20% methoprene)
- b. EPA Registration Number: Altosid Liquid Larvicide Concentrate 272446
- c. Area applied: 912 Acres
- d. Gallons Pesticide Loaded: 5.0 (1 June)
- e. Gallons Pesticide Applied: 1845 Gallons Tank Mix
- f. Gallons and Name of Flush Used: 200 gallons of water flush
- g. Other Additives Used: AirexDC® drift reduction agent (5.0 Gallons)
- h. Application Rate: 0.71 oz/acre Altosid®

#### **4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 3-Module System/Fuselage Booms
- d. Nozzle Type/Size: R-20 Raindrop
- e. Nozzle Orientation & Number Used: 10 Straight back
- f. Pressure (PSI): 40 PSI
- g. Flow Rate: 186 GPM

#### **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 200'
- b. Spray Off Set: None (E/W); 200' (N/S)
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 Knots (338 Feet/Second)

#### **6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 7 @ 030°
- b. Temperature (Degrees Fahrenheit): 70 °F
- c. Relative Humidity: 95%
- d. Cloud Cover: Scattered
- e. Source: Ground observations and National Weather Service

#### **7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 MDG/ADS conducts larval mosquito sampling to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: Larval dips
  - (2) Results: Pre Application dips: 159 Larvae collected from 20 sites within treatment area. Post Application dips: 0 Larvae collected from same sites previously sampled 3 days following application.

**8. REMARKS:** The threat of West Nile Virus being vectored by large mosquito populations prompted GFAFB public health to make the decision to spray mosquito breeding sites for larval control. The application at Grand Forks was conducted on one day in conjunction with a larvicide operation at Williston ACE. The mission operated out of Minot International airport, as the runway at Minot AFB was closed for repair. Mission Commander Lt Col (b) (6) (b) (6) and PMP Lt Col Karl (b) (6) traveled to Grand Forks AFB the previous week to conduct a formal inbrief with base personnel and to pick up the material to be sprayed. Good post-spray results were reported by the Grand Forks AFB pest control supervisor, SSGT (b) (6). Thanks go to the Pest Control Shop and Airfield Management at GFAFB for excellent pre and post spray population monitoring, and for facilitating the mission in non-standard circumstances.

AIR FORCE RESERVE COMMAND**

17 Aug 2015

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Aerial application of insecticide to control populations of adult nuisance and disease carrying mosquitoes at Langley AFB and Craney Island Army Corps of Engineers, VA.

1. Aerial spray deployment of one C-130 to Langley AFB, VA. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of Langley AFB. Operations will be conducted out of Langley AFB, VA.

2. Concept of Operations: All times local

- a. 31 Aug (Monday)  
1600 Depart KYNG  
1700 Land KLF I
- b. 1-3 Sep (Tuesday-Thursday)  
1800 Depart KLF I  
2030 Land KLF I
- c. 4 Sep (Friday)  
1300 Depart KLF I  
1400 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Location: Langley AFB and Craney Island, VA
- b. Altitude: 150 ft for adulticide application
- c. Swath Width: 2,000 feet
- d. Airspeed: 200 KGS
- e. Application Rate: 1.0 oz/acre Trumpet

4. Lt Col (b) (6) will serve as the Mission Commander. Support required at Langley AFB, VA is completed.

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for Aerial Spray at Smoky Hill ANG Range, Salina, KS.

1. Control musk thistle at the Smoky Hill ANGR, to improve grazing areas, to eliminate the Range as a source of infestation to neighboring farms from wind-blown musk thistle seeds and to support state and local noxious weed control efforts. This mission will also provide real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations:

- a. 4 November (Monday)  
1300 Depart KYNG  
1500 Land KSLN  
1600 Installation Brief
- b. 4-9 November (Tuesday - Saturday)  
0645 Depart KSLN  
1030 Land KSLN
- c. 9-14 November (Sunday - Thursday)  
0630 Depart KSLN  
1030 Land KSLN
- d. 15 November (Friday)  
0800 Show Time KSLN  
1000 Depart KSLN  
1400 Land KYNG

3. Maj (b) (6) will be the Mission Commander (4-9 Nov.) Lt Col (b) (6) (9-15 Nov).

4. Lt Col (b) (6) will be the Aircraft Commander (4-9 Nov) Lt Col (b) (6) (9-15 Nov).

5. Support at Smoky Hill and Salina has been completed.

1230 Land KYNG

3. Maj (b) (6) will be the Mission Commander. Lt Col (b) (6) will be the Aircraft Commander. Support at Parris Island MCRD and Beaufort MCAS has been completed.

(b) (6)

Lt Col, USAFR

## MT Home AFB 2014

15 September – 26 September

TSGT (b) (6) was the lead for spray MXS, Coordination with LTCOL (b) (6) was made two weeks prior to the trip. System strapping points were double checked with all tanks on MASS 3, to ensure QTY system was working properly. (b) (6) shared his concerns about trying to calibrate LV / HV system. Chemical load was discussed and corrections were made for the amount of plateau, control, and prevent. Coordination and communication was established between both parties and had a great impact on the success of this mission.

System was loaded on aircraft prior to the flight engineers -1 being complied with. Was instructed by (b) (6), and (b) (6) go ahead and load.

Day one mission commander LTCOL (b) (6), LTCOL (b) (6) (b) (6) SMSGT (b) (6), and TSGT (b) (6) established a plan for the first spray day on Tuesday Sept 16<sup>th</sup>. Spray MXS configured the aircraft. First load of H2O from fire dept was loaded. We loaded 1800 gals of H2O, discussed chemical to load next day. Loaded 8.0 gals of plateau, (2 gals per tank), 4 gals of control AMS (1 gal per tank) and approx 9 oz of prevent (dash in each tank). After the first flight they sprayed 1740. They came back with 60 gals. Total load was 1815. Only did one spray the first day due to quiet time on the range.

- Note we loaded H2O through the bazooka tube.

The rest of the trip we loaded approx 1880 gals of H2O, according to qty gauge and our loads were 8.5 gals of plateau, 5 gals of control, and same 9 oz of prevent. We did a total of 11 chemical spray sorties, totaling in 20,720 gals of chemical loaded and sprayed. We flushed Thursday 200 gals of H2O after the last spray of the day due to the air show. We purged at the end of every day. The last day we flushed after spray 200 gals of H2O with 1 gal of removed in flush tank. The next and last spray was strictly a flush sortie 1800 gals of H2O with 3 gals of remove added between the 4 main tanks and loaded 200 gals of H2O in flush tank to be flushed after the remove was sprayed out.

- Note was only able to spray 2 sorties each day due to the range times and unable to get the third lift off because we would have to fuel the plane, take too much time. Average take off time was 07:30 and return after second sortie was 10:25. Range time for us was till 11:00. Got extended range time the last day to do two spray sorties and one flush. The flush spray was from 12:30 to 13:00.

We had some aircraft maintenance issues with the cargo air conditioning (bleed air) and #3 GCU. On Wednesday September 24<sup>th</sup> we lost the two spray sorties due to these issues. We made them up Thursday with the extended range time.

AWMAS 3 had no problems at all. Everything sprayed, loaded, mixed, and everything worked properly with no issues. We only had to service the pneumatic bottles two times the whole trip. The communication from mission commanders both (LTCOL (b) (6) LTCOL (b) (6) the MXS Pro Sup

(SMSGT (b) (6) Entomologists (LT Col (b) (6)  
(b) (6) was outstanding.

Maj (b) (6) & the Spray MXS Lead (TSGT

4 November 2013

MEMORANDUM FOR 757 AS/DO

FROM: 757 AS/DOS

**SUBJECT:** Post-mission report Military Operations in Urban Terrain (MOUT)  
Collective Training Facility/Dengue Spray Trials with USDA-ARS (CMAVE) 28 Oct - 1  
Nov 2013.

**1. Purpose:** Aerial pesticide efficacy evaluation in partnership with USDA and the U.S. Navy using Dibrom<sup>®</sup> at Camp Blanding, Florida.

**2. Participants:**

**a. Aircrew:**

- (1) Pilots: Maj (b) (6), Lt Col (b) (6)
- (2) Navigators: Lt Col (b) (6)
- (3) Flight Engineers: TSgt (b) (6)
- (4) Spray Operators: TSgt (b) (6), SSgt (b) (6)

**b. Maintenance:**

- (1) Spray Maintenance: MSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
- (2) Crew Chiefs: MSgt (b) (6)
- (3) Avionics: MSgt (b) (6)

**c. Entomologists:** Lt Col (b) (6), (b) (6), Maj (b) (6)

**d. Mission Commander:** Maj (b) (6)

**3. Spray Configuration:**

- a. Mass:** 2-Module System SP-2G
- b. Booms:** Stainless Steel ULV Fuselage Booms
- c. Nozzles:** size = 8001; 24 open; 8003; 8 open; oriented straight down.
- d. Differential GPS:** Wingman Installed
- e. Aircraft:** 90-9106
- f. Mission Identifier:** QENRK3501301

**4. Spray Parameters:**

**a. Pesticide:**

Dibrom<sup>®</sup> (Naled)  
Organophosphate Pesticide  
Signal Word: Danger  
Flushing Agent: Aromatic Naptha

**b. Application:** 1.0 oz per acre target rate

**c. Spray Altitude:** 150 feet

- d. **Swath Width:** 500 feet
- e. **Ground Speed:** 200 knots
- f. **Acreage:** single pass sprays
- g. **Spray-On Time:** approx 20 sec passes
- h. **Flow Rate:** 1.82 gallons/minute

**5. Sequence of events:**

- a. 28 Oct (Monday)  
0900 Show KYNG  
1112 Depart KYNG  
1340 Land KNIP
- b. 29 Oct (Tuesday)  
0700 Show KNIP  
0800 Load Dibrom; Calibrated flow rate with 8001 nozzles  
1225 Depart KNIP  
1355 Land KNIP
- c. 30 Oct (Wednesday)  
0700 Show KNIP  
0800 Calibrated flow rate with 8003 nozzles  
0935 Depart KNIP  
1100 Land KNIP  
1335 Depart KNIP - flush sortie  
1421 Land KNIP
- d. 31 Oct (Thursday)  
Data processing all day by staff entomologists
- e. 1 Nov (Friday)  
0730 Show KNIP  
0900 Depart KNIP (Land @ KWRB to drop off personnel)  
1220 Land KYNG

**6. Operational Details:**

- a. **Flying Data:**
  - (1) Spray Sorties/hours: 3/3.7
  - (2) Ferry Sorties/hours: 3/5.3
- b. **Pesticide Applied:**
  - (1) 5.9 gal (29 Oct) covering 911 acres
  - (2) 7.0 gal (30 Oct) covering 890 acres
  - (3) Applications conformed to label; maximum label rate was not exceeded.

**7. Comments:** These tests seek to determine the feasibility of using a MASS equipped C-130 to control adult *Aedes aegypti* mosquitoes in a mock urban setting. This important mosquito is the primary vector of yellow fever and dengue fever in tropical/sub-tropical

regions worldwide. Dengue reemerged in South Florida in 2010 and could represent a significant public health threat to the warfighter depending on location and local conditions.

Attempts to reduce adult populations of this species using aerial applications during the dengue outbreak in San Juan Puerto Rico (1987) were reported to have mixed or low success. It is generally accepted that insects flying during aerial applications are more susceptible to the pesticide application than those resting. This species is known to enter homes and rest there, effectively protected from the pesticide. New technologies such as GPS, computer modeling of droplet fate, and new nozzles have become available in recent years and may allow for delivery of pesticide into structures that are not firmly sealed (i.e, window and doors open). Using part of the Florida National Guard's Military Operations in Urban Terrain (MOUT) Collective Training Facility, test mosquitoes were held in cages in multiple areas with varying degrees of direct or indirect exposure to a pesticide. Devices capable of collecting drifting pesticide drops were deployed throughout the study area, and will be analyzed to determine the size and density of droplets that moved through a given area. Additionally, environmental conditions were monitored on the ground and on the aircraft during the application. The pesticide studied during this experiment (Dibrom®) is the most commonly used mosquito adulticide sprayed from the air by the Air Force and Mosquito Control Districts in Florida. Additional pesticides may be examined in future evaluations.

Excellent spray conditions were present on both test days and provided mostly unidirectional winds (Attachment 1). The smaller 8001 nozzle size was used on 28 Oct and 8003 nozzles capable of spraying 3 times the volume and producing a larger average droplet size were employed 29 Oct (Attachment 1). Both tests involved a predetermined flyover starting point for pesticide dispersal followed by 5 additional passes with a 500 ft offset for each pass (Attachment 2).

Preliminary results are encouraging. While a full analysis of the findings will be developed and eventually published, these initial results show a high rate of mosquito mortality was found outside of the buildings. This was an expected outcome, but mortality was also recorded from mosquitoes inside of the buildings, even from those that were further placed in boxes (Attachment 3). This indoor mortality suggests aerial application may potentially be effective against indoor resting mosquitoes.

These results represent collaborative efforts between the USDA-ARS (CMAVE), Navy Entomology Center of Excellence (NECE), Florida National Guard, Manatee County Mosquito Control, and the Air Force Aerial Spray Unit. This evaluation was a continuation of a series of studies investigating the droplet fate of pesticide sprays under adverse conditions. Special thanks are extended to the staff at the Camp Blanding Joint Training Center, especially to (b) (6) (b) (6). In addition, the uniformed and civilian members representing NECE facilitated many behind-the-scenes issues and made the two-site test configuration possible. We hope this is the beginning of a series of further studies at this site, ultimately promoting health benefits for our deployed troops by furthering scientific understanding of ultra low volume pesticide applications for *Aedes aegypti* control.

- i. Application Rate: 2.8 Gallons per Minute (0.75 oz/acre per calculating 40 gal/6800 acres)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9103
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 15 Total; 7 left, 8 right
- f. Pressure: 40-52 PSI
- g. Flow Rate: 2.8 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind; 200 at 4.2 KTS (average) Ground observation.  
Temp; 70 degrees F. Humidity; 49 percent.

**7. SPRAY MONITORING:** Pre and post spray biting midge/mosquito collections were taken at 6 locations using light traps. Post mission collections demonstrated 75- 90% reduction in biting midge and mosquito populations at 4 of the 6 trap sites. During application, the treatment site was monitored on the ground. There was no evidence of adverse effects of application on non-target species.

**8. REMARKS:** Two eagles' nests on the island were active, and as usual a ½ mile no-spray/no-fly buffer was maintained around the nests (See attachment 1). All loaded pesticide was applied prior to completion of the mission resulting in 1.5 swaths being left untreated. Despite this, the spray appeared to be highly effective, significantly reducing nuisance pest populations which in turn improved the morale and productivity of base personnel.

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Minot AFB and the Communities of Minot and Williston, ND

1. Aerial spray deployment of one C-130 to Minot, ND to train aerial spray aircrew, pest management personnel, and maintenance members in the control of nuisance and vector mosquitoes, with adulticide in order to improve working conditions and lower the risk of vector-borne illness to individuals working and living on Minot AFB and the communities of Minot and Williston, ND. Aerial spraying performed off DOD installation property will be conducted IAW Innovative Readiness Training (IRT) Program criteria. The closure of Minot AFB runway has compelled operations to be conducted out of Minot International Airport.

2. Concept of Operations (All times are local)

- a. 16 June (Monday)  
1100 Depart KYNG  
1330 Land KMOT
- b. 17-19 June (Tues-Thurs) Application area TBD by weather  
1930 Depart KMOT  
2100 Land KMOT
- c. 6 June (Friday)  
1230 Depart KMOT  
1630 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: MAFB (5169 acres); Minot (9032 acres); Williston (26500 acres)
- b. Altitude: 150 ft for adulticide application
- c. Swath Width: MAFB (1000ft); Minot and Williston (2000ft)
- d. Groundspeed: 200 KIAS

- e. Application Rate: MAFB & Minot (1.1 oz/acre Trumpet); Williston (.18oz/acre Permanone 30 +30)

4. Lt Col (b) (6) will serve as the Mission Commander. Maj (b) (6) will be the Aircraft Commander. Required support at Minot AFB, ND Army National Guard, and Minot International Airport has been completed.

\\SIGNED\\  
(b) (6), Lt Col, USAFR  
Chief of Aerial Spray

**910 AW AERIAL SPRAY UNIT**  
**PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**Mountain Home AFB, Saylor Creek Range, ID 15-26 Sep 2014**

**1. MISSION BASICS:**

- a. Installation Sprayed: Mountain Home AFB, Saylor Creek Range, ID
- b. Mission Duration: 15-26 Sep 2014
- c. Purpose of Application: Herbicide application to control cheat grass to suppress range fires and promote native flora.
- d. Application Date(s) and time(s) (Local): see attachment 1.
- e. Acres Treated: 2,929
- f. Flying Data:
  - (1) Spray Sorties/Hours: 11 sorties + 1 flush sortie; 10.2 hours total
  - (2) Ferry Sorties/Hours:
    - (a) Spray aircraft 99108: 2 ferries; 11.9 hours
    - (b) Support aircraft 4 ferries; 22.4 hours
- g. Project Coordinator (Name/Rank/Title/Phone #): (b) (6), Natural Resource Manager, (b) (6)
- h. Date Spray Map Last Approved: 25 Aug 2014, delivered via email from Mr. (b) (6)
- i. Installation In-Briefing: (When/Where/Briefer/s): 12 Sep 14, via telephone, Mr. (b) (6) and Lt Col (b) (6) /Lt Col (b) (6) (b) (6)
- j. Mission identifier: QENRK3531258

**2. OPERATIONAL:**

- a. **Aircrew:**
  - 1) Mission Commander: Lt Col (b) (6) (15-19), Lt Col (b) (6) (21-26)
  - 2) Pilots: Lt Col (b) (6) Maj (b) (6) (15-19), Maj (b) (6) (21-26)
  - 3) Navigator: Maj (b) (6)
  - 4) Flight Engineer: SMSgt (b) (6) rkins)
  - 5) Spray Operators: CMSgt (b) (6) (15-22), MSgt (b) (6), MSgt (b) (6), MSgt (b) (6) (15-19), MSgt (b) (6) (21-26)
- b. **Maintenance:**
  - 1) Spray MX: SMSgt (b) (6), MSgt (b) (6), TSgt (b) (6) (Lead), TSgt (b) (6), TSgt (b) (6)
  - 2) Crew Chief: MSgt (b) (6), A1C (b) (6)
  - 3) Hyd/Prop/EE/Avi/Com: MSgt (b) (6), MSgt (b) (6), MSgt (b) (6), SrA (b) (6), SrA (b) (6)
- c. **Entomologists:**, Lt Col (b) (6) (b) (6) (15-20), Lt Col (b) (6) (b) (6) (21-26), Maj (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Plateau®
- b. EPA Registration Number: 241-365 (Plateau)
- c. Formulation Sprayed: Liquid herbicide with active ingredient (AI) = ammonium salt of imazapic (Plateau 23.6% AI)
- d. Gallons Pesticide Loaded: See attachment 1
- e. Gallons Pesticide Applied: See attachment 1
- f. Gallons and Name Diluent Used: See attachment 1
- g. Gallons and Name of Flush Used: 200 gal (18 Sep) + 2,000 gal (25 Sep)
- h. Other Additives Used: 25.5 gallons of Control® (14-20 Sep), 30 gallons of Control® (21-25)

- i. Sep); 0.69 gal of Prevent; 4 gal of Remove  
Application Rate: 7 gal/acre finished spray (4 oz/acre Plateau®)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): C-130H2 (89-9108)
- b. Spray System (Modules Used) and System ID #: SP-3G
- c. Spray System Configuration: fuselage booms
- d. Nozzle Type/Size: Raindrop nozzles
- e. Nozzle Orientation & Number Used: Fuselage; Straight Back; 18 total
- f. Pressure: 50 psi
- g. Flow Rate: 326 gpm

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100 Ft
- b. Spray Offset: weather dependent. No offset when flown into the wind.
- c. Spray Release Altitude: 100 Ft AGL
- d. Ground Speed: 200 knots

**6. WEATHER OBSERVATIONS: See Attachment 3.**

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: Visual observation from PMP on range; water sensitive cards used on range confirmed 100 ft swath on 18 Sep
  - (2) Results: See remarks
- b. Effectiveness:
  - (1) Technique/s Used: Vegetation measurements, visual observations
  - (2) Results: Will be determined in the spring of 2015

**8. REMARKS:**

Plateau treatments on the Saylor Creek Range continue to be highly successful in the promotion of a diverse native plant community and in the reduction of cheat grass. An independent assessment of this management strategy was completed in spring of 2013 and the findings were favorable. In short, average cheat grass cover in areas sprayed was lower than in areas unsprayed, even if those sprays had been in previous years. The report recommended continued control of cheat grass to reduce fire frequency. A local assessment of this application's efficacy will be completed in spring 2015.

The Aerial Spray Unit participated in Mountain Home AFB's Gunfighter Skies Airshow (20-21 Sept), providing a static display while the airfield was closed. This was a good opportunity for community outreach and to discuss our mission. Nearly everyone that spoke with Spray Unit personnel was aware of the fire danger associated with cheat grass, underscoring the importance of these types of applications. MUO Airfield operations, Fire department, POL, RAPCON, and TA support was outstanding during the entire mission.

## **After Mission Report Smoky Hill ANG Range**

Before leaving YARS training for the Salina spray trip started with myself SrA (b) (6) and TSgt (b) (6). With this being my first trip as a lead we started by going over all pre-mission preparation and procedures. After arriving to Salina the spray maintenance personnel and I configured the spray plane and set up for the following 2 weeks. After configuring the plane I then obtained contact information with the mission commander, the lead entomologist and all appropriate maintenance personnel. Throughout the trip I was trained on 3 module loading procedures to include, running the control panel, loading chemical and water. During the trip myself and TSgt (b) (6) were also trained on uploading chemical with engines running between sorties. Along with loading procedures we were also trained on cold weather procedures for handling of the spray system. Overall the trip ran very smooth other than days lost to inclement weather.

SrA (b) (6)

## Items to pack for Trip

Tape measure/Flip chart/

Camera/Tripod/etc.

Coolers/Water/Snacks/etc.

Radios

Gloves

Trash bags

## **OVERVIEW**

Two days of trials at Camp Blanding utilizing two sites. Two nozzle sizes will be tested (8001's on Tuesday) and (8005's or 8008's on Wednesday).

The sum of these trials will NOT exceed the labeled amount of product applied on either day.

## **DETAILS**

### **MONDAY October 28<sup>th</sup>**

Groups from USDA, NECE (?) Manatee Mosquito Control District, and AMVAC will meet at the Mout gate at 10:00 am.

Set up of the site and a run-through will be discussed with the group as to assignments, timetables etc.

Weather evaluation and predicted flight path discussed

- Weather station and survey tape installed at top of Holiday Hotel building at the Mout Site
- Team assignments:
  - Clean group
  - Collection group etc
- Spinner and Sentinel cage locations identified-
  - Village, approach and surrounding area
  - Mosque, approach and surrounding area
- Sentinel cage challenges identified
  - Inside open bldg
  - Inside closed bldg
  - Inside+cover, challenges etc.

Stands for sentinel cages and spinners will be placed accordingly. The goal will be to have enough stands to pre-mount the stands for spinners and cages at both the Mout and the Mosque sites prior to the trial so that ONLY the spinners and cages will have to be moved.

(b) (6)            comments-

I am having 60+ "indoor bases" for the spinners made up... these are simple 12" x 12" square plywood with 1/2" PVC pipe end caps screwed to the middle... the spinners will be mounted by means of PVC couplers (and PVC pipe lengths depending on spinner height requirement)... Does USDA intend to hang/co-locate cages with spinner stands (by means of a PVC crossbar with hooks that I will bring) or have them ALL hung/affixed/hidden separately?

By having this number of "indoor bases" we can choose locations/set them up at BOTH sites on Monday and leave them in place for the duration of the trial (only the spinner bodies will need moving between sites).

This leaves us with the 20 concrete block bases to use outside.(as permanent outdoor bases)

Background trap locations established and set by USDA

## MONDAY AFTERNOON

- (b) (6) , (b) (6) , (b) (6) and (b) (6) meet to discuss final instructions with questions/issues for meeting with (b) (6) (b) (6) later that evening.
- (b) (6) and (b) (6) (and anyone else with an interest) visit (b) (6) (b) (6) at JAX to discuss application details, review questions etc.

## TUESDAY AM

- (b) (6) travels to the Mout Site and joins /USDA/NECE to hang cages and place sentinels and spinners
- P. Connelly attends loading at JAX
  - Pull and inspect the upload filter
  - Flush the application tank with HAN (or preferred flush agent)
  - Pull and recheck the filter
  - Upload Dibrom
  - Pull and recheck upload filter

Given the config of the plumbing (forgive me I may need a refresher) steps 2 and 3 may not be necessary.

## **MOUT Application**

- USAF on inbound approach signals group of timetable.
- Spinners are turned on by means of WALKING to limit disturbance of dust and debris that will/could dirty slides.
- USAF applies at Mout Village site and holds or returns to JAX.
- No traffic in or out of Mout site for 1 hour post application
- NOTE: There may be an additional building set up if USDA wants to remove spinners and or cages sooner than the 1 hour post application wait time. This could easily be done on the periphery of the Mout Village, the Mosque site, or both.
- Spinners are collected, categorized and placed in the holding boxes by walking retrieval. Notation of 1 hour post application counts are made at time of collection

## **MOSQUE Application**

- Spinners are moved to Mosque site and fresh mosquitos are hung.
- Spinners at Mosque Site are turned on
- USAF applies at Mosque site
- USAF returns to JAX
  
- Cages and spinners are untouched for one hour
  
- Spinners, cages etc. collected from Mosque site by walking retrieval
- Notation of 1 hour post application counts are made at time of collection
  
  
- USDA/NECE handles the mosquito transport, set up and evaluation
- Mark Latham and P. Connelly (and any other interested parties) read the drops through DropVision program on site.
  
- 12 hour mortality counts taken

### **WEDNESDAY AM**

- Repeat Tuesday schedule with new nozzle configuration.

### **WEDNESDAY AFTERNOON or THURSDAY MORNING**

- Clean up as required

Blanding project ends...Reading continues at CMAVE

Open Bldg Indoor and outdoor placements (1 outside and 1 inside ..Total 2 each)

MOUT South (Approx. 5.75 acres)

Closed Bldg. indoor and outdoor placements (1 outside one inside total of 2 each)

Pependicular to flight path (example assumes a north wind)

## Mosque Site

Open Bldg Indoor and Outdoor Placements (2 each)

Closed Bldg. Indoor and Outdoor Placements (2 each)

Pependicular to flight path (example assumes a north wind)

## OUTDOOR Spinner/Cage Stand

*Teflon coated 3 MM slides. The coated end must face into the wind.*

### *Do's and Don'ts*

*Don't touch the slide unless you have been instructed on removal*

*Do carefully document the location of the slide before placing it in the box.*

## Slide Spinner

*This spinner and Mosquitoes should be placed behind this indoor table*

Open Bldg Indoor Placements

*This sequestered site would be a good spot for the outdoor placement*

Outdoor Placements Open

## Indoor Placements Closed Bldg

*Pick a corner of the room AWAY  
from the openings*

*This interior hallway would be an  
excellent spot*

**AERIAL SPRAY OPERATIONAL SCHEDULE**  
**NAS JACKSONVILLE, FL**  
**28 Oct - 1 Nov 2013**  
**QENRK3501301**

**a. OBJECTIVE/PURPOSE AND BENEFIT:** Provide an aerial spray platform for USDA to evaluate the control of *Aedes aegypti* inside two distinct urban settings (North American and Middle Eastern). The trials will be conducted at Camp Blanding, FL, an Army National Guard facility located near Jacksonville, FL.

**1. 910 AW PARTICIPANTS:**

**b. Aircrew:**

1. Pilots: Maj (b) (6) , Lt Col (b) (6)
2. Navigators: Lt Col (b) (6)(b) (6)
3. Flight Engineers: TSgt (b) (6)
4. Spray Operators: MSgt (b) (6) , SSgt (b) (6)
5. Mission Commander: Maj (b) (6)

**b. Maintenance:**

1. Spray Maintenance: MSgt (b) (6) , TSgt (b) (6) , TSgt (b) (6)  
(b) (6) SSgt (b) (6)
2. Crew Chiefs: MSgt (b) (6)
3. Avionics: SMS (b) (6)

**c. Entomologist:** Lt Col (b) (6) (b) (6) Maj (b) (6) (in place)

**2. PPR: 1028-01**

**3. PLANNED SEQUENCE OF EVENTS:** (All times local) Scheduled times may vary depending upon weather, and needs of the USDA test directors and entomologist.

**28 Oct Monday**

0900 Show  
1100 Depart KYNG  
1415 Land KNIP

**29-30 Oct Tuesday - Wed Range located in R-2903A Range Time 0730-1600**

0800 Show  
1000 Depart KNIP  
1200 Land KNIP  
1330 Depart KNIP

1530 Land KNIP

**31 Oct Thursday**

This day is for sample analysis, test equipment cleaning, and aircrew training. We do not currently have range times scheduled for this day. A local flight training event is anticipated.

**1 Nov Friday**

0930 Show

1130 Depart KNIP

1400 Land KYNG

**4. SPRAY CONFIGURATION: Please note that the spray configuration and parameters are subject to change as we test different methods to best deliver the pesticide.**

- a. **Mass:** 2-Module System SP-2G
- b. **Booms:** Stainless Steel ULV Fuselage Booms
- c. **Nozzles:** 8001's, 8003,8005's.
- d. **Differential GPS:** Wingman Installed
- e. **Aircraft:** 89-9104

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations of Larvacide Operations for Aerial Spray at Grand Forks AFB, ND and Army Corps of Engineers' property near Williston, ND.

1. Aerial spray deployment of one C130 to Minot, ND from 27 May-6 June 2014 for the requested larvacide spray on Grand Forks AFB, ND and the Army Corps of Engineers' property near Williston, ND. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel working on Grand Forks AFB, the Army Corps property, and by extension, the citizens of Williston. The combination of the closure of Minot AFB runway and no other suitable airfield in the vicinity of the Army Corps property drove operations to be conducted out of Minot International Airport. Mission objectives provide training for aerial spray aircrew, entomologists, and maintenance personnel in all aspects of the aerial spray mission including working with non-DOD assets which could be required during an emergency spray.

2. Concept of Operations:

- a. 27 May (Monday)
  - 1000 Depart KYNG (O/B support aircraft)
  - 1015 Depart KYNG (spray aircraft)
  - 1230 Land KMOT (O/B support aircraft)
  - 1245 Land KMOT
  - 1300 Depart KMOT (O/B support aircraft)
  - 1730 Land KYNG (O/B support aircraft)
- b. 28 May-05 June (Weds- Thurs)
  - 0600 Show KMOT
  - 0730 Depart KMOT
  - Multiple 1.5 hr sorties each day depending on weather
- c. 6 June (Friday)
  - 1000 Depart KYNG (O/B support aircraft)
  - 1030 Depart KMOT (spray aircraft)
  - 1230 Land KMOT (O/B support aircraft)
  - 1330 Depart KMOT (O/B support aircraft)
  - 1500 Land KYNG (spray aircraft)

1800 Land KYNG (O/B support aircraft)

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx 1600 acres (GFAFB) 6800 acres (Army Corps)
- b. Altitude: 100 ft for larvaicide application
- c. Swath Width: 200 ft
- d. Groundspeed: 200 KIAS
- e. Flow Rate: 186 gals/min
- f. Application Rate: 2 gal/acre water with 0.75 oz of Altosid® (GFAFB); 5 gal/acre water with VectoBac (Army Corps)

4. Lt Col (b) (6) will serve as the Mission Commander. Lt Col (b) (6) will be the Aircraft Commander. Support required at Minot AFB, Grand Forks AFB, the Army Corps of Engineers, and Minot International Airport has been completed.

CERTIFIED PEST MANAGEMENT PROFESSIONAL'S  
POST-MISSION REPORT (replaces AFRC Form 55)  
LANGLEY AFB, VA 3-6 AUGUST 2015**

**1. MISSION BASICS:**

- a. Installation Sprayed: Langley AFB, VA; Craney Island Army Corps of Engineers, Portsmouth, VA
- b. Mission Duration: 3-6 August 2015
- c. Purpose of Application: Control vector and nuisance control of mosquitoes
- d. Application Date: 5 August 2015
- e. Times of Application: 1811-2000 local
- f. Acres Treated: 11,060
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6), Environmental/Spray Coordinator, (b) (6)
- h. Date Spray Map Last Approved: 4 August 2015
- i. Date of Waste Generation acceptance: 4 April 1996
- j. Installation In-Briefing: Lt Col (b) (6), Lt Col (b) (6), Lt Col (b) (6) Maj (b) (6) Maj (b) (6) and CE staff @ 1500 hrs on 4 August 2015
- k. Mission Identifier: QENRK3531215

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Maj (b) (6), Maj (b) (6)
  - (2) Navigator: Lt Col (b) (6)
  - (3) Flight Engineer: SSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6), MSgt (b) (6), MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: SSgt (b) (6) (Lead), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6) SrA (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6) SSgt (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. **Entomologists:** Lt Col (b) (6), Maj (b) (6)
- e. **Flying Data:**
  - (1) Spray Sorties/Hours: 1/2.0
  - (2) Ferry Sorties/Hours: 2/2.8

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 90 gallons
- d. Gallons Pesticide Applied: 90 gallons
- e. Gallons and Name Diluent Used: N/A
- f. Gallons and Name of Flush Used: 6 gallons aromatic naptha
- g. Other Additives Used: None
- h. Application Rate: 1.04 oz/acre

**APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105
- b. Spray System (Modules Used) and System ID #: MASS 4

- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 22 Total; 11 left, 11 right
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 5.1 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1500'
- b. Spray Off-set: 1500'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind: 300° at 5.2 knots (average) ground observation.  
Temp: 88 degrees F, Humidity: 69 percent.

7. **SPRAY MONITORING:** Pre- and post-spray mosquito collections were taken at 6 locations at Langley AFB using CO2-baited CDC mosquito traps. Pre-spray collections were taken on 21 July, 23 July, and 4 August. Post-spray collections were taken on 6 August and 11 August. Similar collections were taken at Craney Island Army Corps of Engineers using both CO2-baited CDC traps and BG traps baited with CO2 and with BG lures.

**Langley AFB:**

Trap 1: Horse Stable	Average 0 females (Pre-Spray); 0 females (Post-Spray) No reduction
Trap 2: B-52	Average 115 females (Pre-Spray); 10 females (Post-Spray) 91.3% reduction
Trap 3: Pest Shop	Average 46.3 females (Pre-Spray); 47.5 females (Post-Spray) No reduction
Trap 4: WSA	Average 282.3 females (Pre-Spray); 22 females (Post-Spray) 92.2% reduction
Trap 5: WSA 2	Average 126 females (Pre-Spray); 0 females (Post-Spray) 100% reduction
Trap 6: Bethel Fam Camp	Average 0 females (Pre-Spray); 0 females (Post-Spray) No reduction

**Craney Island Army Corps of Engineers:**

Trap 1: Morro	29 females (Pre-Spray); 38 females (Post-Spray) No reduction
Trap 2: Morro BG	26 females (Pre-Spray); 8 females (Post-Spray) 69.2% reduction
Trap 3: CHS	6 females (Pre-Spray); 8 females (Post-Spray) No reduction
Trap 4: Flagship	3 females (Pre-Spray); 0 females (Post-Spray) 100% reduction
Trap 5: Landfill	243 females (Pre-Spray); 18 females (Post-Spray) 92.6% reduction
Trap 6: Bishop's Green	5 females (Pre-Spray); 2 females (Post-Spray) 60.0% reduction

8. **REMARKS:** This mosquito adulticide application at Langley AFB and Craney Island Army Corps of Engineers was intended to reduce nuisance and vector mosquito species. System calibration was conducted on the ground prior to application. No significant problems were encountered during this application, and results appear to be excellent, particularly in the areas of the B-52, WSA, and WSA 2 traps at Langley AFB and at the landfill location at Craney Island, which is located next to the dredge spoil area. It is of note that larviciding of the dredge spoil area is currently underway to provide additional and integrated control of the mosquito population. Larvicide application, in conjunction with this recent aerial spray application, is expected to significantly reduce mosquito numbers in the near future. We appreciate the support we received from ALL sections at Langley AFB and Craney Island Army Corps of Engineers, with special thanks going to (b) (6) and (b) (6) for their thorough coordination at all levels.

**8. REMARKS:** This night application represents the culmination of a 10-year effort to develop a technology transfer from the civilian sector to the Department of Defense. In short, night spraying can be more effective by targeting disease vector insects when they are actively host-seeking (many mosquito species are active after dark) while limiting pesticide exposure to pollinators, such as honey bees and butterflies, which are day active. The path to this first night pesticide spray was a cautious but steady development of the needed science and technology: years of data were analyzed to determine the highest effective altitude and still maintain safety. A modified crew compliment (NVG Cadre), daytime surveys, and GPS enabled flight aids with known obstacles were some of the factors implemented to ensure safety and efficacy. Flight crews made the application wearing night vision goggles and spraying at 300ft above ground level beginning approximately 30 minutes after sunset. Insect activity (biting midges and mosquitoes) at the time of the application was high and very annoying. Monitors on the ground reported a moderate and consistent wind from the south and the application lasted about 2 hours (See attachment 1). No adverse effects on wildlife were noted by ground observers. This spray was highly effective. Pre-spray biting fly (mosquitoes and midges) collections from mosquito magnets were some of the highest observed at Parris Island in recent years. Post-spray insect levels were substantially decreased based on personal observations, light trap collections, and Mosquito Magnet traps at various locations on the Depot. For example, in section 7 we see that target insects were decreased by an average of 90% (with a range of 56-100 % reductions). Calibration of the system was relatively straightforward. The "k" factor used was 0.250 which matches with previous work. Thanks to (b) (6) and (b) (6) for their consistent support of this integrated pest management program and to (b) (6) and (b) (6) for use of the Beaufort Co. Mosquito Control Laboratory for processing insect samples.

  - (2) Ferry Sorties/Hours: 2/4.5 (2.3 + 2.2)

**3. PESTICIDE:**

- a. Trade Name: Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 60 Gallons
- e. Gallons Pesticide Applied: 54 Gallons
- f. Gallons and Name Diluent Used: N/A
- g. Gallons and Name of Flush Used: None/Air purge
- h. Other Additives Used: None
- i. Application Rate: 2.9 Gallons per Minute (0.8 oz/acre)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9107
- b. Spray System ID #: MASS#4
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 13 Total; 6 left, 7 right
- f. Pressure: 30 - 38 PSI
- g. Flow Rate: 2.9 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 300' (8 Oct), 150' (9 Oct)
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind; 220°/16 knots (8 Oct) 090°/8 knots (9 Oct) at release height. Temperature 79.5 degrees F; humidity 75 percent.

**7. SPRAY MONITORING:**

Navy Preventative Medicine conducts weekly mosquito collections at 6 locations using light traps. During the application period only 2 locations returned information and indicate a 92% reduction in the *Aedes* spp. mosquito population.

**8. REMARKS:**

The application made on 08 October was in support of trials to determine efficacy of aerial applications using standard spray parameters at an altitude of 300ft (night spray altitude). This was done in conjunction with the USDA Center for Medical, Agricultural, and Veterinary Entomology using caged mosquitoes as bioassays and results are being collated and will be published in the Army's Medical Department Journal. A standard application for biting midge/mosquito control was conducted on 09 October, beginning an hour prior to sunset and conditions appeared to favor an excellent treatment (moderate steady winds and target pest activity). However, efficacy reports varied: members reported midges still present during the following day's formations, while others who worked outside reported far fewer mosquitoes. Insect trapping to evaluate the efficacy of the spray was difficult because traps would have needed to be deployed and recovered over the holiday weekend, which isn't feasible under the current financial situation and scheduling restrictions. In short, it appears the application wasn't "highly" successful in temporarily reducing the midge populations. Recommend applying at the higher 1.0 oz/acre rate when midge populations are high. Two eagles' nests on the island are considered to be in use, and as usual a ½ mile no-spray/no-fly buffer was maintained around the nests. The next projected opportunity of an application at the Parris Island MCRD will be in late October.

- e. **Flying Data:**
  - (1) Spray Sorties/Hours: 2/8.7 (includes NVG training)
  - (2) Ferry Sorties/Hours: 2/5.5

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Zenivex® (Etofenprox 1.48 lbs/gallon)
- b. EPA Registration Number: 2724-791
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 10 gal
- e. Gallons Pesticide Applied: 4 gal
- f. Gallons and Name Diluent Used: 10 gal BVA-13
- g. Gallons and Name of Flush Used: None
- h. Other Additives Used: None
- i. Application Rate: 0.60 oz/acre (50:50 Zenivex/BVA-13 mix)

#### **4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-9103
- b. Spray System (Modules Used) and System ID #: 1
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan (9 Dec); 8005 Flat Fan (10 Dec)
- e. Nozzle Orientation & Number Used: 14 (9 Dec); 8 (10 Dec) oriented straight down
- f. Pressure: 38 p.s.i.
- g. Flow Rate: 4.3 gallons per minute

#### **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 250 feet upwind of target (9 Dec); no offset (10 Dec)
- c. Spray Release Altitude: 140 feet
- d. Ground Speed: 200 Knots (338 Feet/Second)

#### **6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 300°@ 8 Knots (9 Dec); 280°@ 6 Knots (10 Dec)
  - (2) Release Altitude: 310°@12 Knots (9 Dec); 300°@9 Knots (10 Dec)
- b. Temperature (Degrees Fahrenheit): 59° F (9 Dec); 64° F (10 Dec)
- c. Relative Humidity: 59%
- d. Cloud Cover: Clear
- e. Source: Aircraft/ground measurements

#### **7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: Visual observation of aircraft course (GPS)
  - (2) Results: Pending analysis by USDA (CMAVE)
- b. Effectiveness: Pending analysis by USDA (CMAVE)

#### **8. TESTING:**

A collaborative testing effort has been ongoing between the USAFR aerial spray group and the USDA Center for Medical and Veterinary Entomology (CMAVE). The objectives of this test were to determine the efficacy of aerially applied etofenprox (a synthetic pyrethroid) on vector mosquitos closely associated with human dwellings. Previous work at this location had used naled (an organophosphate). For the tests, caged mosquitoes were placed both inside and outside dwellings simulated by 2 locations at the urban warfare training center at Camp Blanding. Pesticide was aerially applied at 150' AGL in a flight line 250 feet upwind (Dec 9), and with no offset (Dec 10) perpendicular to the direction of the winds recorded at the target areas. Results from these trials should be available after data analysis from the laboratories of CMAVE (USDA), and should contribute greatly to our knowledge of vector mosquito control with respect to aerial applications. We hope to continue these collaborative efforts with the USDA in the near future.

#### **9. NIGHT VISION GOGGLE (NVG) AERIAL SPRAY TRAINING PROGRAM:**

Earlier in 2014, the aerial spray unit was tasked by HQ AFRC/A3 to develop a nighttime application capability. Therefore after the completion of testing on each day, NVG aerial spray cadre aircrew members conducted a NVG training flight at Avon Park Bombing Range in FL. Two

successful training sorties were flown at 300' AGL to refine and validate the unit's newly developed NVG Aerial Spray training program.

**10. REMARKS:**

No significant technical issues were encountered during the operational aspects of this mission. We thank the personnel at CMAVE for designing this test, the many folks participating from the Navy Entomology Center of Excellence, and the personnel at both Camp Blanding and NAS Jacksonville for providing outstanding logistical support towards these efforts.

**AIR FORCE RESERVE COMMAND**

2 Mar 2015

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna, Ohio 44473-0910

**SUBJECT:** Concept of Operations for Aerial Spray at the Utah Test and Training Range

1. Aerial spray flight proficiency training will be accomplished on Targets 21, 23, 24, and Nord LZ at the Utah Test and Training Range (UTTR). Spray sorties will apply Krovar to control vegetation (i.e., *Halogeton*) growth aiding bombing mission test evaluations and unexploded ordnance recovery. Two aerial spray-configured C-130s will be available from 9 - 20 Mar 15 for the requested spray mission. One support C-130 (15-16 Mar and 19-20 Mar) will be utilized to swap crew and maintenance personnel to maximize training.

2. Concept of Operations:

- a. 9 March (Mon)
  - 1000 1st Spray aircraft depart KYNG
  - 1015 2nd Spray aircraft depart KYNG
  - 1300 1st Spray aircraft land KHIF
  - 1315 2nd Spray aircraft land KHIF
- b. 10 -13 March (Tues-Fri)
  - 0800 Spray aircraft depart KHIF
  - 1230 Spray aircraft land KHIF
  - 2 Sorties planned for each day per aircraft
- c. 16-19 Mar (Mon-Thurs)
  - 0800 Spray aircraft depart KHIF
  - 1230 Spray aircraft land KHIF
  - 2 sorties planned each day per aircraft
- d. 20 March (Fri)
  - 0800 1st Spray aircraft depart KHIF
  - 0815 2nd Spray aircraft depart KHIF
  - 1300 1st Spray aircraft land KYNG
  - 1315 2nd Spray aircraft land KYNG

3. Spray parameters:

Herbicide: Krovar 1DF®

Application rate: 22.5 gal/acre (10 lbs Krovar in 22.4 gal of water)

Acreage: 1,700 acres (Targets 21, 23+24)

Ground speed: 200 knots (337.55 ft/sec)

Spray altitude: 100 feet AGL

Swath width: 35 feet

Flow rate: 366.1 gal/min

4. Lt Col (b) (6) will serve as the mission commander.
5. Lt Col (b) (6) and Maj (b) (6) are the aircraft commanders.
6. Support required at both Hill AFB and the UTTR has been coordinated.

**3. PESTICIDE:**

- a. Trade Name: Krovar® IDF
- b. EPA Registration Number: 352-505
- c. Formulation Sprayed: 9.9 lbs Krovar® per 20.7 gallons formulation
- d. Gallons Pesticide Mix Loaded: 32,053
- e. Gallons Pesticide Mix Applied: 32,053
- f. Formulation Used: 450 lbs Krovar®, 4.0 gal StaPut®, ½ gal Foam Fighter®, 200 ounces Hi-Light® Dye, remainder water per 1000 gal of spray mix. 15,350 lbs of Krovar used.
- g. Gallons and Name of Flush Used: 900 gal water
- h. Other Additives Used: 158 gal Clasp®; 51.6 gal Hi-Light® dye; 7.1 gal No Foam
- i. Application Rate: 22.5 gal/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105, 99108
- b. Spray System (Modules Used) and System ID #: 3 and 5
- c. Spray System Configuration: 3-Module System/UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 2 oriented straight back
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 366 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 35'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. See Attachment 2

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: Blue dye pattern on targets and observations from ground markers
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: Monitoring of weed emergence in spring
  - (2) Results: Will be determined this spring by range personnel

- 8. REMARKS:** The spray area was increased by approximately 400 acres in 2013 but ordering and contracting difficulties delayed the treatment of the entire expanded area until this year. This larger area increased the number of treatment sorties by two from previous years, but the project was completed in the same time period (2 weeks) through disciplined sortie scheduling coupled with “out of the box” thinking to get the aircraft repaired and flying again. No spraying was conducted on 14-15 March because the UTTR was closed. It appears that environmental paperwork should be completed for a separate but related aerial spray project to control cheat grass along firebreaks in September or October using an herbicide with the active ingredient of imazipac. Many thanks for the various agencies supporting this mission and special thanks to SMSgt (b) (6) for acting as our sponsor again this year.

**DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND**

3 Sep 2015

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Capability and Concept of Operations for NVG (Night Vision Goggle) Aerial Spray at Joint Base Charleston, SC.

1. One C-130 will deploy to JB Charleston from 10-13 Sep 2015 in response to a requested aerial spray to control adult mosquitoes at JB Charleston, SC. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of JB Charleston. Operations for this mission will be conducted from JB Charleston.

2. Concept of Operations (All times are local)

- a. 10 Sep (Thursday)  
1600 – Depart KYNG  
1800 – Land KCHS
- b. 11 Sep (Friday)  
1930 – Depart KCHS  
2130 – Land KCHS
- c. 12 Sep (Saturday)  
2000 – Depart KCHS  
2130 – Land KCHS
- d. 13 Sep (Sunday)  
1200 – Depart KCHS  
1400 – Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 18,000 acres
- b. Altitude: 300 feet for adulticide application
- c. Swath Width: 2,000 feet

d. Groundspeed: 200 KIAS

e. Application Rate: .85 oz/acre of Trumpet EC

4. Lt Col (b) (6)(b) (6) will serve as the Mission Commander.

5. Lt Col (b) (6) will be the Aircraft Commander.

6. Required support at JB Charleston has been coordinated.

\\Signed\\

(b) (6), Lt Col, USAFR  
Chief, 757<sup>th</sup> Aerial Spray

- a. Aircraft Tail Number:** 99108
- b. Spray System (Modules Used) and System ID #:** SP2G

- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 27 Total; 13 left, 14 right
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 6.3 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind: 200° at 3.5 knots (average) ground observation.  
Temp: 80 degrees F, Humidity 74 percent.

**7. SPRAY MONITORING:** Pre- and post-spray mosquito collections were taken at 4 locations using CO<sub>2</sub>-baited CDC mosquito traps. Landing rates were used to monitor populations at the various location on JB Charleston.

**Traps:**

4 Trap average 226 mosquitoes pre spray; 5 mosquito average post-spray: 98.7% control

**Landing count (per minute):**

14 Average at GC Bridge pre-spray; 0 at GC Bridge post-spray: 100% control

24 Average at Spoil Site pre-spray; 0 at Spoil site post-spray: 100% control

14 Average at Charleston Co. Mosquito District pre-spray; 0 at District post-spray: 100% control

**8. REMARKS:** This application is the second night spray conducted at this location. System calibration was conducted on the ground prior to application. No significant problems were encountered and results appear to be excellent. Post application mosquito landing counts were zero. Pre and Post-Spray trap data indicate 97.8% reduction in mosquito populations. These data appear to validate the effectiveness of night-time aerial application. We appreciate the support we received from ALL sections at JB Charleston, with special thanks going to (b) (6) for his thorough coordination at all levels.

DEPARTMENT OF THE AIR FORCE

Aerial Spray Unit  
Youngstown ARS, Ohio

**Pest Management Professional's Post-mission Report**  
**Minot AFB, Cities of Minot, & Williston ND - Adult Mosquito Control**  
**13-16 July 2015**

**1. MISSION BASICS:**

- a. Installation/Community Sprayed: Minot AFB, City of Minot, Watford City, Williston and surrounding areas, North Dakota
- b. Mission Duration: 13-16 July 2015
- c. Purpose of Application: Adult Mosquito Control
- d. Application Date/s: 13&14 July
- e. Time/s of Application (Local): 2105-2205 (13 Jul); 2020-2130; 2140-2200
- f. Acres Treated: 5,366 (13 Jul); 7, 837 (14 Jul); 13,203 acres
- g. Project Coordinator/s (Name/Rank, Title, Phone #): TSgt (b) (6) (Minot AFB); (b) (6) (City of Minot); (b) (6) (Williston)
- h. Date Spray Map Last Approved: 13 Jul 2015
- i. Date of Waste Generation Letter: 28 July 2013
- j. Installation In-Briefing: (When/Where/Briefer/s): 13 Jul, via telephone with LtCol (b) (6) (Mission Commander) and 5CES Deputy Civil Engineer, Ms. (b) (6) Pearson and other base representatives; 14 Jul with (b) (6) via telephone

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Certified PMP/Entomologists (Category 11): Lt Col (b) (6) (safety briefer), Maj (b) (6) (certified applicator state ND)
- c. Aircrew:
  - (1) Pilots: Lt Col (b) (6), Maj (b) (6)
  - (2) Navigators: Maj (b) (6)
  - (3) Flight Engineers: MSgt (b) (6), TSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6), MSgt (b) (6), MSgt (b) (6), TSgt (b) (6)
- d. Maintenance:
  - (1) Spray Maintenance: MSgt (b) (6) (b) (6), TSgt (b) (6), TSgt (b) (6) (lead), TSgt (b) (6) (b) (6), SrA (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6), TSgt (b) (6)
  - (3) Avionics: TSgt (b) (6)

**Flying Data:**

- (1) Spray Sorties/Hours: 3 sorties (1.0 + 1.2 + 0.3) = 2.5 hrs
- (2) Ferry Sorties/Hours: 2 sorties (4.0 + 3.3) = 7.3 hrs

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet<sup>®</sup> EC Concentrate (78% naled)
- b. EPA Registration Number: 59639-90-5481
- c. Formulation Sprayed: Emulsified Concentrate (Trumpet)
- d. Gallons Pesticide Loaded: 40 gal Trumpet (13 Jul); 105 gal Trumpet (14 Jul)
- e. Gallons Pesticide Applied: 30 gal (13 Jul) & 45 gal (14 Jul)
- f. Gallons downloaded: 60 gal of Trumpet downloaded
- g. Gallons and Name Diluent Used: none
- h. Gallons and Name of Flush Used: 8 gal aromatic naptha
- i. Other Additives Used: None
- j. Application Rate: 0.72 oz/acre (14 Jul); 0.75 oz/acre (14 Jul)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99108
- b. Spray System (Modules Used) and System ID #: 1
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet<sup>®</sup> 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 19-8003s total (13 Jul); oriented straight down
- f. Pressure: 42-45 psi
- g. Flow Rate: 5.2 gallons per minute (13 Jul); 5.4 gallons per minute (14 Jul)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2,000 ft (13-14 Jul)
- b. Spray offset: 2,000 ft (13-14 Jul)
- c. Spray Release Altitude: 150 ft'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 270°@2 kts (13 Jul) & 210°3-5 kts (14 Jul)
  - (2) Release Altitude: 300°@7 kts (13 Jul) & 170-220°@4-8 kts (14 Jul)
- b. Temperature (Degrees Fahrenheit): 74° dropping to 71° F (13 Jul); 87-82° F (14 Jul)
- c. Relative humidity: 86-89% (13 Jul) & 49-74% (14 Jul)
- d. Cloud Cover: partly cloudy
- e. Source: Ground observations and aircraft

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Monitoring is done with New Jersey light traps in the City of Minot by the North Dakota Department of Health. Mosquito Magnets are used as traps by Minot AFB Public Health. Pre-application mosquito counts from 2 traps collected the week ending 3 July were 182 and 262 in Minot and over 150 female mosquitoes on the base.
- b. Minot AFB Pest Control Shop (5 CES/CEOUE) reported they collected 13 mosquitoes per trap the night following the application, a significant reduction of mosquito activity. No data was available from the North Dakota Department of Health because the state only reports weekly data. That information will be added to this report when available. However, because less than half the area was treated, reductions may be less than desired.

**8. REMARKS AND RECOMMENDATIONS:** This was the second mosquito adulticide application for Minot AFB in 2015, and the first for the City of Minot. Both the AFB and the City reported moderate numbers of mosquitoes and decided to treat at a relatively low rate (0.75 oz/acres – note 0.6 oz/acre is minimum label rate). The MASS displayed some unusual readings during the calibration on 13 July, namely the recirculation rate was lower than the flow rate (normally the opposite is observed). Nonetheless, the MASS delivered the desired flow rate ( $\pm 3\%$ ) and was deemed calibrated by the certified applicator. The application over the AFB was a textbook operation and good results were reported. As mentioned during the inbrief, the size of the spray area is rather small to expect any relief for a substantial period of time. Nonetheless, It is worthwhile to continue to spray Minot AFB because it gives the 5CES Pest Management a break from truck sprays and aerial applications complete the entire base perimeter in about an hour. Doubling the spray block size and spraying after dark should significantly improve the results of this program for Minot AFB.

During the application on 14 July, the MASS digital pressure display suddenly stopping working. Because there was no way to determine the pressure in the spray booms without the display, the crew decided to terminate spray operations and land. Spray maintenance rapidly replaced the pressure transducer at the spray booms and the crew took the plane out again. Unfortunately, it was quickly determined that the problem had not been resolved. At this point, there was no more daylight left and operations were suspended for the night. The next morning (15 July) a different model of pressure transducer was installed and a calibration was attempted. It was then apparent that repairs to the MASS were beyond the scope of the supplies and replacement parts on hand. These maintenance issues left the City of Minot's area incomplete and with 60 gallons of unused Trumpet insecticide. Without a functioning MASS, Spray 08 could not plan for a spray over Williston either. The decision was made to redeploy to Youngstown ARS to make the necessary repairs to MASS#1 the following day (16 July). The Air Force Spray Unit will attempt to complete these spray areas at the earliest feasible calendar date acceptable for all parties and pending continued mosquito problems.

A special thanks to MSgt (b) (6) for his consistent communication and support of the aerial spray operation.

//signed//

(b) (6), Lt Col, USAFR  
Entomologist/DoD Certified Applicator

Attachment 1. Shows the areas treated 13 & 14 July over Minot AFB and City of Minot, respectively. The black dots are the track of the aircraft and the light green lines are the track of the aircraft while spraying. Red represents the outline of the spray treatment areas. Some tracks flown outside the spray block were treated so that the pesticide would drift back into the target area with the prevailing wind direction.

DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND

14 April 2015

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Capability and Concept of Operations for Aerial Spray at Joint Base Charleston, SC.

1. One C-130 will deploy to JB Charleston from 17-18 April, 2015. This is an out of cycle response to decade high mosquito counts affecting the health and welfare of the personnel at JB Charleston. In addition, training of aerial spray aircrew, entomologists, and maintenance members will be accomplished while providing a beneficial reduction in mosquito populations. Operations for this mission will be conducted from JB Charleston.

2. Concept of Operations (All times are local)

- a. 17 Apr (Friday)
  - 1130 – Depart KYNG
  - 1330 – Land KCHS
  - 1800 – Depart KCHS (spray JB Charleston)
  - 2000 – Land KCHS
- b. 18 Apr (Saturday)
  - 1000 – Depart KCHS
  - 1200 – Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 18,000 acres
- b. Altitude: 150 feet for adulticide application
- c. Swath Width: 2,000 feet
- d. Groundspeed: 200 KIAS
- e. Application Rate: 1.0-1.2 oz/acre of Trumpet EC

4. Lt Col (b) (6) will serve as the Mission Commander.

5. Lt Col (b) (6) will be the Aircraft Commander.

6. Required support at JB Charleston has been coordinated.

\\Signed\\

(b) (6), Capt, USAFR  
Assistant Chief of Aerial Spray

**910 AW AERIAL SPRAY UNIT -- POST-MISSION REPORT FOR**  
**Minot, Watford City, Trenton & Williston ND Adult Mosquito**  
**Control 17-20 August 2015**

**1. MISSION BASICS:**

- a. Installation Sprayed: City of Minot, ND and the cities of Williston, Trenton, and Watford City, North Dakota
- b. Mission Duration: 17-21 August 2015
- c. Purpose of Application: Control adult nuisance and vector mosquitoes
- d. Application Date: 18 and 19 August 2015
- e. Time of Application (Z): 0039-0200 (18 August); 2308-0152 (19 August);
- f. Acres Treated: 15,517 (Minot), 30,225 Williston/Trenton/Watford City
- g. Project Coordinator/s (Name/Rank, Title, Phone #): Mr. (b) (6) City of Minot Public Works (b) (6) ; Williston Vector Control, (b) (6) (b) (6)
- h. Date Spray Map Last Approved: 18 August 2015
- i. Date of Waste Generation Letter: 28 July 2013
- j. Installation In-Briefing: (When/Where/Briefer/s): City of Minot Public Works Bldg, Lt Col (b) (6) , Lt Col (b) (6) , Lt Col (b) (6) , Maj (b) (6) Maj (b) (6) (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: LtCol (b) (6)
- b. Entomologist (Category 8 & 11): Maj (b) (6)
- c. Aircrew:
  - 1) Pilots: Lt Col (b) (6) , Major (b) (6)
  - 2) Navigators: Lt Col (b) (6)
  - 3) Flight Engineer: MSgt (b) (6)
  - 4) Spray Operators: SMSgt (b) (6) , TSgt (b) (6) , SSgt (b) (6)
- b. Maintenance:
  - 1) Spray Maintenance: TSgt (b) (6) (lead); MSgt (b) (6) TSgt (b) (6) (b) (6) TSgt (b) (6) , TSgt (b) (6) , TSgt (b) (6)
  - Crew Chief(s): MSgt (b) (6) TSgt (b) (6)
  - Avionics: TSgt (b) (6)

**Flying Data:**

- (1) Spray Sorties/Hours: 2/4.2
- (2) Ferry Sorties/Hours: 2/6.8
- (3) Mission ID: QENRK3531229

**3. PESTICIDES:**

**Minot**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 90 gal Trumpet®
- d. Gallons and Name of Flush Used: 5 Gal HAN
- e. Other Additives Used: none
- f. Application Rate: 0.75 oz/acre Trumpet®

**Williston et al.**

- g. Trade Name: Duet
- h. EPA Registration Number: 1021-1795-8329
- i. Gallons Pesticide Loaded: 275Gal Duet
- j. Gallons and Name of Flush Used: 7 gal HAN
- k. Other Additives Used: none
- l. Application Rate: 1.2 oz/acre Duet

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 89106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 26 straight down for Minot & 24 for Williston
- f. Pressure (PSI): 41-52 PSI
- g. Flow Rate: 5.45 GPM for Minot and 8.7 GPM for Williston

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000' (Williston Area and City of Minot)
- b. Spray Off Set: none
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 18 August 300° @ 5 knots (ground);  
19 August 170° @ 4 knots (ground)
- b. Temperature (Degrees Fahrenheit): 70 °F (18 Aug); 73 °F (19 Aug)
- c. Relative Humidity: 64% (18 Aug); 57% (19 Aug)
- d. Cloud Cover: scattered clouds
- e. Source: Ground observations and onboard aircraft readings

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Minot City pest management and Williston Mosquito control conducts adult mosquito trapping to monitor mosquito densities.
- b. Effectiveness:
  - (1) Technique/s Used: CDC light traps
  - (2) Results: Mosquitoes counts pre and post spray for the Williston area and for Minot are in Attachment

**8. REMARKS:** Continued high numbers of mosquitoes in both the City of Minot and Williston ND areas prompted each location to participate in an aerial spray application. Spray operations were conducted on the evenings of 18-19 August. Weather conditions were excellent each day. Operations proceeded smoothly and no equipment malfunctions were encountered. Only 2 swaths were applied in the Watford City area due to time constraints. Spray efficacy in the Williston/Trenton/Watford City area in terms of mosquito numbers was disappointing as mosquito populations actually increased according to the trap data. The synthetic pyrethroid insecticide in this case did not perform satisfactorily. Trap information from the City of Minot is pending and will be added upon receipt. Many thanks to the city of Minot, Minot AFB pest management personnel, and Minot AFB OSS and Transient Alert for supporting this mission.

**JB CHARLESTON, SC 18-21 June 2015**

**1. MISSION BASICS:**

- a. Installation Sprayed: JB Charleston, South Carolina
- b. Mission Duration: 18-21 June 2015
- c. Purpose of Application: Control vector and nuisance control of salt marsh mosquitoes on the Naval Weapons Station area of JB Charleston
- d. Application Date: 19 Jun 2015
- e. Times of Application: 2100-2217 local
- f. Acres Treated: 17,924
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) , Environmental/Spray Coordinator, DSN (b) (6)
- h. Date Spray Map Last Approved: 19 June 2015
- i. Date of Waste Generation acceptance: 6 July 2012
- j. Installation In-Briefing: (When/Where/Briefer/s): Lt Col (b) (6) Lt Col (b) (6) Maj (b) (6) Lt Col (b) (6) Lt Col (b) (6) Lt Col (b) (6) (b) (6) (b) (6) and the 628 CES @ 1400 hrs on 19 June 2015
- k. Mission Identifier: QENRK351169

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) Lt Col (b) (6) (b) (6)
  - (2) Navigators: Lt Col (b) (6) , Lt Col (b) (6)
  - (3) Flight Engineer: MSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) rby, SMSgt (b) (6) , MSgt (b) (6) , MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) SSgt (b) (6) MSgt (b) (6) ; TSgt (b) (6) TSgt (b) (6) SrA (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) , SSgt (b) (6)
  - (3) Avionics: MSgt (b) (6)
- d. **Entomologists:** Lt Col (b) (6) , Lt Col (b) (6) , Maj (b) (6)
- e. **Flying Data:**
  - (1) Training Sorties/Hours: 1/2.0
  - (2) Ferry Sorties/Hours: 2/4.0

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 120 gallons
- d. Gallons Pesticide Applied: 120 gallons
- e. Gallons and Name Diluent Used: N/A
- f. Gallons and Name of Flush Used: 6 Gallons aromatic naptha
- g. Other Additives Used: None
- h. Application Rate: 0.86 oz/acre

**APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99103

- b. Spray System (Modules Used) and System ID #: SP2G
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 27 Total; 13 left, 14 right
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 6.2 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind: 180° at 3.5 knots (average) ground observation.  
Temp: 85 degrees F, Humidity 74 percent.

**7. SPRAY MONITORING:** Pre- and post-spray mosquito collections were taken at 5 locations using CO<sub>2</sub>-baited CDC mosquito traps. Landing rates were used to monitor populations at the spoil site and a New Jersey trap was used to monitor populations at GC bridge.

Trap 1: DTP	Average 61.5 females (10 Jun, 11 Jun); 0 females (23 Jun) 100% reduction
Trap 2: SPAWAR:	Average 35.5 females (10 Jun, 11 Jun, 12 Jun, 16 Jun); 0 females (23 Jun) 100% reduction
Trap 3: Golf Course	Average 1,225 females (10 Jun, 11 Jun, 12 Jun, 16 Jun); 0 females (23 Jun) 100% reduction
Trap 4: NPTU	Average 84 females (16 Jun); 0 females (23 Jun) 100% reduction
Trap 5: Wharf A	Average 508 females (10 Jun, 11 Jun, 12 Jun, 16 Jun); 0 females (23 Jun) 95% reduction
Landing count (per minute):	
Spoil site	Average 5.2 females (3 Jun, 4 Jun, 5 Jun, 15 Jun, 16 Jun, 17 Jun); Average 0.5 (19 Jun, 20 Jun) 90% reduction
New Jersey Trap:	
GC Bridge	Average 301.7 females (3 Jun, 4 Jun, 5 Jun, 10-17 Jun); Average 1.5 females (19 Jun, 20 Jun) 99.5% reduction

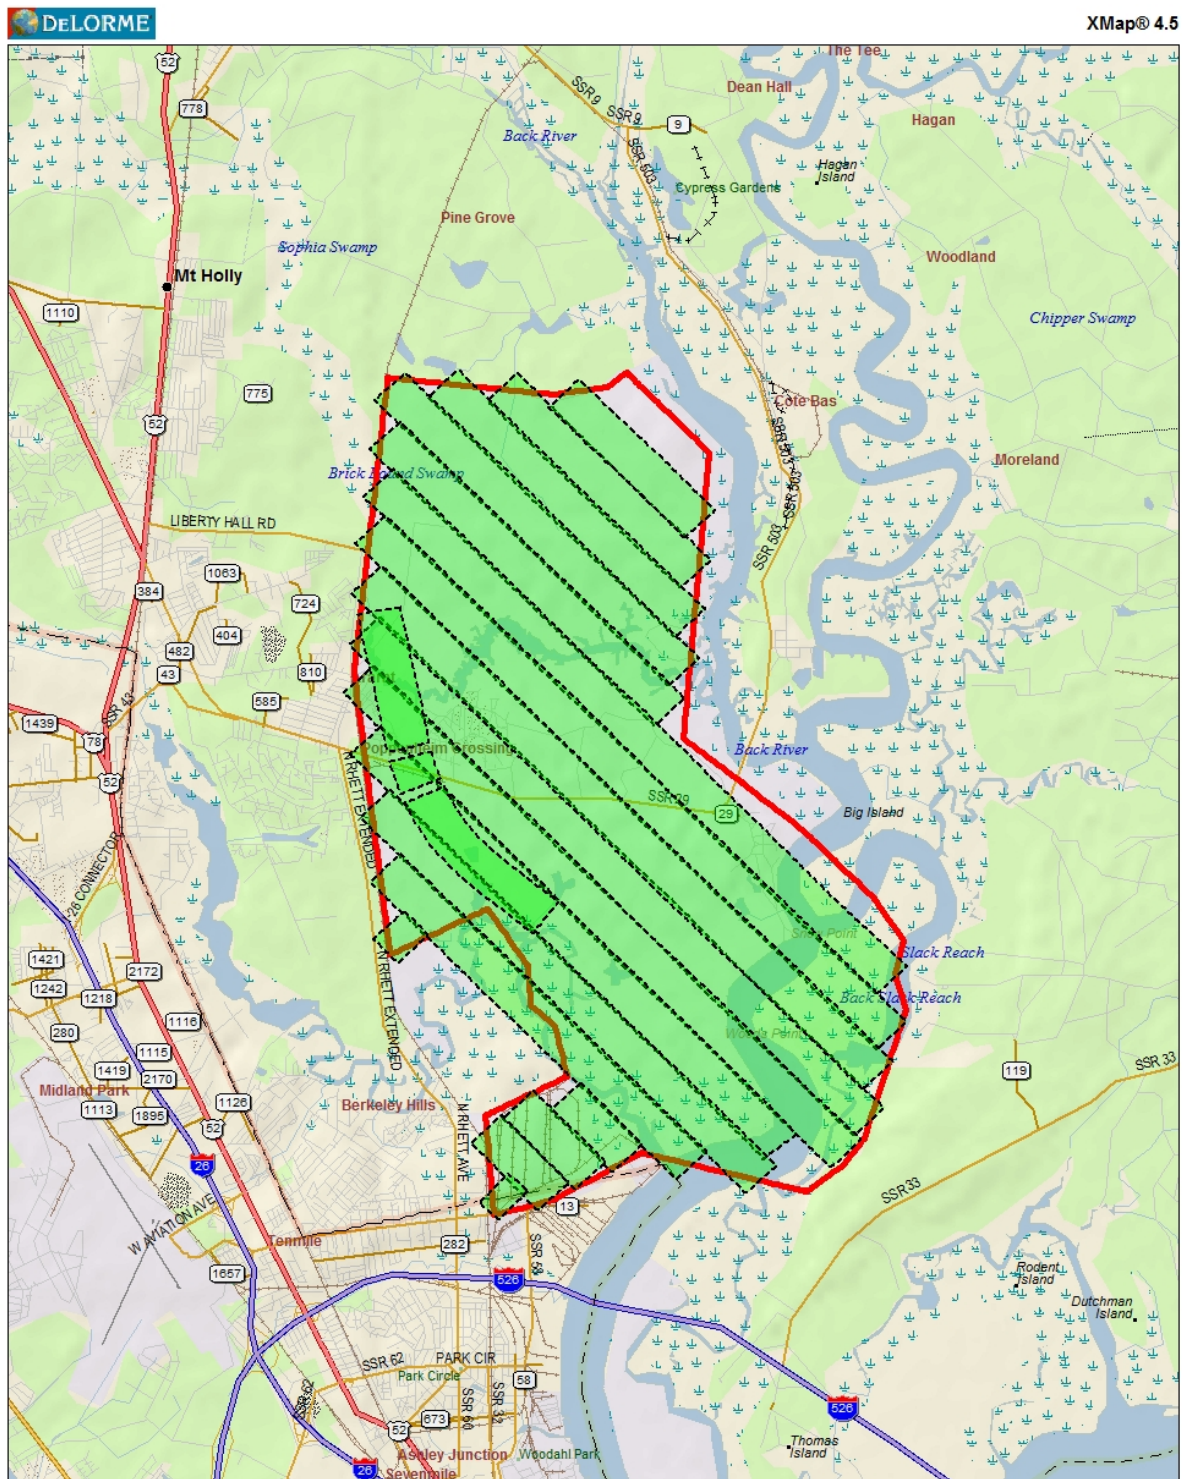

**8. REMARKS:** This application is the first adulticide application conducted for FY 15, and the first night spray conducted at this location. System calibration was conducted on the ground prior to application. No significant problems were encountered during this application, and results appear to be excellent. Because of the large dredge spoil and marshlands associated with the Naval Weapons Station, larvicide operations are of significant interest. Berkeley County, with dredge spoil areas adjacent to JB Charleston, has previously expressed interest in participating in an IRT program to spray acreage outside the boundaries of the Weapons Station. The county mosquito control district has recently conducted aerial larvicide application to this area, the first in three years. We appreciate the support we received from ALL sections at JB Charleston, with special thanks going to (b) (6) for his thorough coordination at all levels.

14 April 2015

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Parris Island MCRD, SC

1. Aerial Spray deployment of one C-130 during 20-23 April 2015 to Beaufort MCAS, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards to recruits at Parris Island MCRD.

2. Concept of Operations (All times are local):

- a. 20 April (Monday)
  - 1600 – Depart KYNG
  - 1800 – Land KNBC
- b. 21 April (Tuesday)
  - 1400 – Installation Brief
  - 1500 – Show/WX Decision
  - 1500 – Calibration
  - 1800 – Depart KNBC (spray sortie)
  - 2000 – Land KNBC
- c. 22 April (Wednesday)
  - 1500 – Show/WX Decision
  - 1800 – Depart KNBC (WX backup sortie/training sortie)
  - 2000 – Land KNBC
- d. 23 April (Thursday)
  - 1100 – Depart KNBC
  - 1300 – Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 7,500 acres
  - b. Altitude: 150 feet AGL
  - c. Swath Width: 1,000 feet
  - d. Groundspeed: 200 KIAS
  - e. Application Rate: 0.75 oz/acre of Dibrom-Naled Organophosphate insecticide
- 4. Lt Col (b) (6) will serve as the mission commander
  - 5. Major (b) (6) will serve as the aircraft commander.
  - 6. Support at Parris Island MCRD and Beaufort MCAS has been completed.

- h. Other Additives Used: None
- i. Application Rate: 2.7 Gallons per Minute (0.76 oz/acre)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9107
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 13 Total; 6 left, 7 right
- f. Pressure: 38-43 PSI
- g. Flow Rate: 2.7 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 kts

**6. WEATHER OBSERVATIONS:** Wind; 280°/3-7 knots (ground); 280°/12 knots (release height)  
Temperature 79.5 degrees F; humidity 75 percent.

**7. SPRAY MONITORING:** 3 mosquito magnets were used to collect insects before and after sprays. See attachment 2 for pre- and post-spray values. Light traps are also used to monitor insect populations but are identified by Navy Preventive Medicine and the results are not immediately available.

**8. REMARKS:** This was a standard evening application (2 hrs prior to sunset). Insect activity had increased following a night spray 2 weeks earlier, to the point that control of midges and mosquitoes was again requested. Environmental conditions were good for aerial spraying. A marked reduction in midge activity was noted by personnel working on the Depot and in trap collections, which were visibly reduced in light traps (actual counts pending from Navy Preventive Medicine) and also in the Mosquito Magnets (see Attachment 2). Midges collected in Mosquito magnets were reduced in numbers on average by 89% following the sprays. The primary pest mosquito, *Culex salinarius* was reduced by only 50% on average at two locations and actually increased in numbers at the Rifle Range location. This species is evening and night active and, thus, may be more susceptible to night sprays. Two eagles' nests on the island are considered to be in use, and as usual a ½ mile no-spray/no-fly buffer was maintained around the nests. No adverse effects on area wildlife were noted by ground observers. The next projected opportunity for an application at the Parris Island MCRD will be in October.

**910 AW AERIAL SPRAY UNIT -- POST-MISSION REPORT FOR  
Minot AFB, Watford City, Trenton & Williston ND Adult Mosquito  
Control 22-26 June 2015**

## 1. MISSION BASICS:

- a. Installation Sprayed: Minot AFB and the cities of Williston, Trenton, and Watford City, North Dakota
- b. Mission Duration: 22-26 June 2015
- c. Purpose of Application: Control adult nuisance and vector mosquitoes
- d. Application Date: 23, 24, and 25 June 2015
- e. Time of Application (Z): 0135-0215 (23 June); 0030-0325 (24 Jun); 0115-0200 (24 Jun)
- f. Acres Treated: 5,000 (Minot AFB), 26,000 Williston/Trenton/Watford City
- g. Project Coordinator/s (Name/Rank, Title, Phone #): Mr. (b) (6) , Supervisor - Pest Management Shop, DSN (b) (6) , Williston Vector Control, (b) (6) , (b) (6)
- h. Date Spray Map Last Approved: 23 June 2015
- i. Date of Waste Generation Letter: 28 July 2013
- j. Installation In-Briefing: (When/Where/Briefer/s): Minot AFB CE Conference Room, Lt Col (b) (6) , Maj (b) (6) , Lt Col (b) (6) Capt (b) (6) ; Maj (b) (6)

## 2. OPERATIONAL:

- a. Mission Commander: LtCol (b) (6)
- b. Entomologist (Category 8 & 11): Maj (b) (6)
- c. Aircrew:
- 1) Pilots: Maj (b) (6), Capt (b) (6)
- 2) Navigators: Lt Col (b) (6)
- 3) Flight Engineer: SMSgt (b) (6); SSgt (b) (6)

(2) Ferry Sorties/Hours: 2/7.2  
(3) Mission ID: QENRK3531173

### 3. PESTICIDES:

**Minot  
AFB.**

- Trade Name (% Active Ingredient): Trumpet<sup>®</sup> EC (78% AI naled)
- EPA Registration Number: Trumpet<sup>®</sup> EC 59639-90-5481
- Gallons Pesticide Loaded: 30 gal Trumpet<sup>®</sup>
- Gallons and Name of Flush Used: 7 Gal HAN
- Other Additives Used: none
- Application Rate: 0.77 oz/acre Trumpet<sup>®</sup>

**Williston et al.**

- g. Trade Name: Duet
- h. EPA Registration Number: 1021-1795-8329
- i. Gallons Pesticide Loaded: 165 Gal Duet
- j. Gallons and Name of Flush Used: 7 gal HAN
- k. Other Additives Used: none
- l. Application Rate: 0.8/acre Duet

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 89105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 14 straight down for Minot & 19 for Williston
- f. Pressure (PSI): 41-52 PSI
- g. Flow Rate: 2.79 GPM for Minot and 5.8 GPM for Williston

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000' (Williston Area); 1000' (Minot AFB)
- b. Spray Off Set: 1000-2000' depending on wind speed
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 23 Jun 170° @ 5 knots (ground);  
24 Jun 110° @ 5 knots (ground); 25 Jun 230° @ 6 knots  
(ground)
- b. Temperature (Degrees Fahrenheit): 62-66 °F (23-25 Jun)
- c. Relative Humidity: 62-66% (23-25 Jun)
- d. Cloud Cover: scattered clouds
- e. Source: Ground observations and onboard aircraft readings

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The Minot AFB CES pest management and Williston Mosquito control conducts adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: CDC light traps
  - (2) Results: Mosquitoes counts pre and post spray for the Williston area and for Minot AFB are in Attachment

**8. REMARKS:** Continued high numbers of mosquitoes in both the Minot and Williston ND areas along with Minot AFB prompted each location to participate in an aerial spray application. Spray operations were conducted on the evenings of 23-25 June. Weather conditions were marginal early each day, with a window of opportunity opening up 1-2 hrs before scheduled take off time. Minor malfunctions in the pressure indicator of the spray system was the only interruption to spray operations, and required that the first sortie to spray the base be terminated prematurely. Marginal forecasts prompted the target priority to be the Williston area the following day, so as to attempt to complete as much of the mission as possible if the mission was weathered out later in the week. Trap reductions were 75% at Minot AFB, however it must be noted that post-spray trap collections were not conducted until the following week, possibly allowing a significant emigration of insect populations into the target area. Trap reductions were approximately 69% pre vs post spray in the Williston area. While these reductions are significant, the sheer numbers of mosquitos in the area indicated this spray probably only provided marginal relief. Many thanks to the Minot AFB pest management personnel, the CE flight, and Minot AFB OSS for supporting this mission.

Sortie information can be found in Attachments 2-3.

**MEMORANDUM FOR HQ AFRC/A300**

**FROM:** 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

**SUBJECT:** Concept of Operations for Aerial Spray Static Display at Jacksonville NAS, FL

1. The 910AW will provide a single C-130 aerial spray platform as a static display for the upcoming Tri-Service Pest Management Conference taking place at NAS Jacksonville, FL the week of 23-27 March 2015. The trip will serve an excellent opportunity to educate DoD Pest Management professionals on the 910 AW's aerial spray unique capability.
2. Concept of Operations (All times are local):
  - a. 24 March (Tues)  
1600 Depart KYNG  
1900 Land KNIP
  - b. 25 March (Weds)  
1300-1630 Static display at KNIP  
1730 Depart KNIP  
2030 Land KYNG
3. Spray Parameters: N/A (no flying, static display only)
4. Lt Col (b) (6) will be the aircraft commander. Support at Jacksonville NAS has been completed.

**3. PESTICIDE:**

- a. Trade Name: Vectobac® 12AS (1200 ITU/mg)
- b. EPA Registration Number: 73049-38
- c. Formulation Sprayed: 1.5 pints of Vectobac in 5 gallons water per acre
- d. Gallons Pesticide Mix Loaded: 5,407
- e. Gallons Pesticide Mix Applied: 5,407 (222 gallons of VectoBac12AS)
- f. Gallons and Name of Flush Used: 900 gal water
- g. Other Additives Used: 1 gallon Poly Control 2
- h. Application Rate: 5 gal/acre (water with 1.5 pints Vectobac® + 0.05 oz of Poly Control 2)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 909108
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 12 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 233 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 35'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. See Attachment 2.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: water sensitive dye cards
  - (2) Results: 100 ft swath confirmed. See remarks for details
- b. Effectiveness:
  - (1) Techniques Used: floating bioassay cages (FBCs) with wild-collected larvae; pre/post larval dips
  - (2) Results: 61 – 91% mortality in FBCs and similar results in wild populations sampled by dips. See Attachment 2A-C

**8. REMARKS:** The annual hatch of the primary pest mosquito in this operation, *Aedes vexans*, is initiated by the rising meltwaters of the undammed Yellowstone River. However, the rise of the river is dependent on environmental conditions 250 miles away. In May of 2015, the river began to rise but this initial upsurge was followed by cool temperatures and, consequently, the anticipated larval hatch did not occur until after the start of the mission. In fact, larval sampling occurring just days prior to the departure from Youngstown found very little insect activity. Therefore, it was

decided the day of the mission's departure to shrink the footprint to a single aircraft. This added quite a bit of confusion to the deployment but was the responsible course of action as it was impossible to justify two aircraft sitting at Minot AFB with no areas to treat in Williston. A significant larval hatch occurred during the second week of the mission and several sorties were flown at maximum capacity. Additionally, specific training requirements were completed for several crew members. The paucity of larval targets wasn't a complete negative, the lack of large areas to treat allowed for the project to shift focus to testing the efficacy of these sprays in different habitats found in the Williston Confluence. Three locations were chosen: (1) Hell's Canyon (see Attachment 2A) – a wet meadow with snowmelt pools showing heavy mosquito breeding. This location also functioned as a source of wild larvae used in the other testing locations; (2) Corps Ponds (Attachment 2B) – Emergent vegetation south of the Army Corps of Engineers' ponds. This site was along a channel section of the confluence area, a historical mosquito producing area; (3) Trenton South (Attachment 2C) – This site tends to flood at the early flood- level stage and is forested with 80 ft tall cottonwoods with a significant canopy created by the newly budding leaves. Complete trial results are listed in Attachment 2A-C, but to summarize, the overall findings showed a higher efficacy in open areas with minimal water movement in contrast to increased canopy and fluctuating water levels. In general, a greater droplet density on water sensitive cards could be easily correlated with greater larval mortality. Larval dips (see Attachment 3) tracked well with the mortality determined from the floating bioassay cages (FBCs). **Conclusions from these studies:** mortality was measured to be between 61- 91% using FBCs and larval dips. The application rate was 1.5 pints/acre of VectoBac12AS, this is equivalent to 75% of the maximum allowed label rate (2 pints/acre). Mortality above 90% should probably be considered successful when using a fast-moving fixed-wing aircraft, especially when considering the variation in terrain on the Army Corps property. In some cases an even lower percent mortality may be considered worthwhile, especially when larval densities are high. Considering the effort involved in getting 2 C-130 aircraft and 40+ people to North Dakota, not to mention the funds allocated to this mosquito control project, it seems prudent to spray at the higher label rate. The additional cost of the pesticide is minor compared to the cost of re-treating the area because of poor results. **Recommendation:** Repeat study at the maximum label rate of 2 pints/acre in 2016.

**27 May- 4 June 2105****SPRAY OPERATIONS SUMMARY FOR WILLISTON ARMY CORPS OF ENGINEERS AREAS**

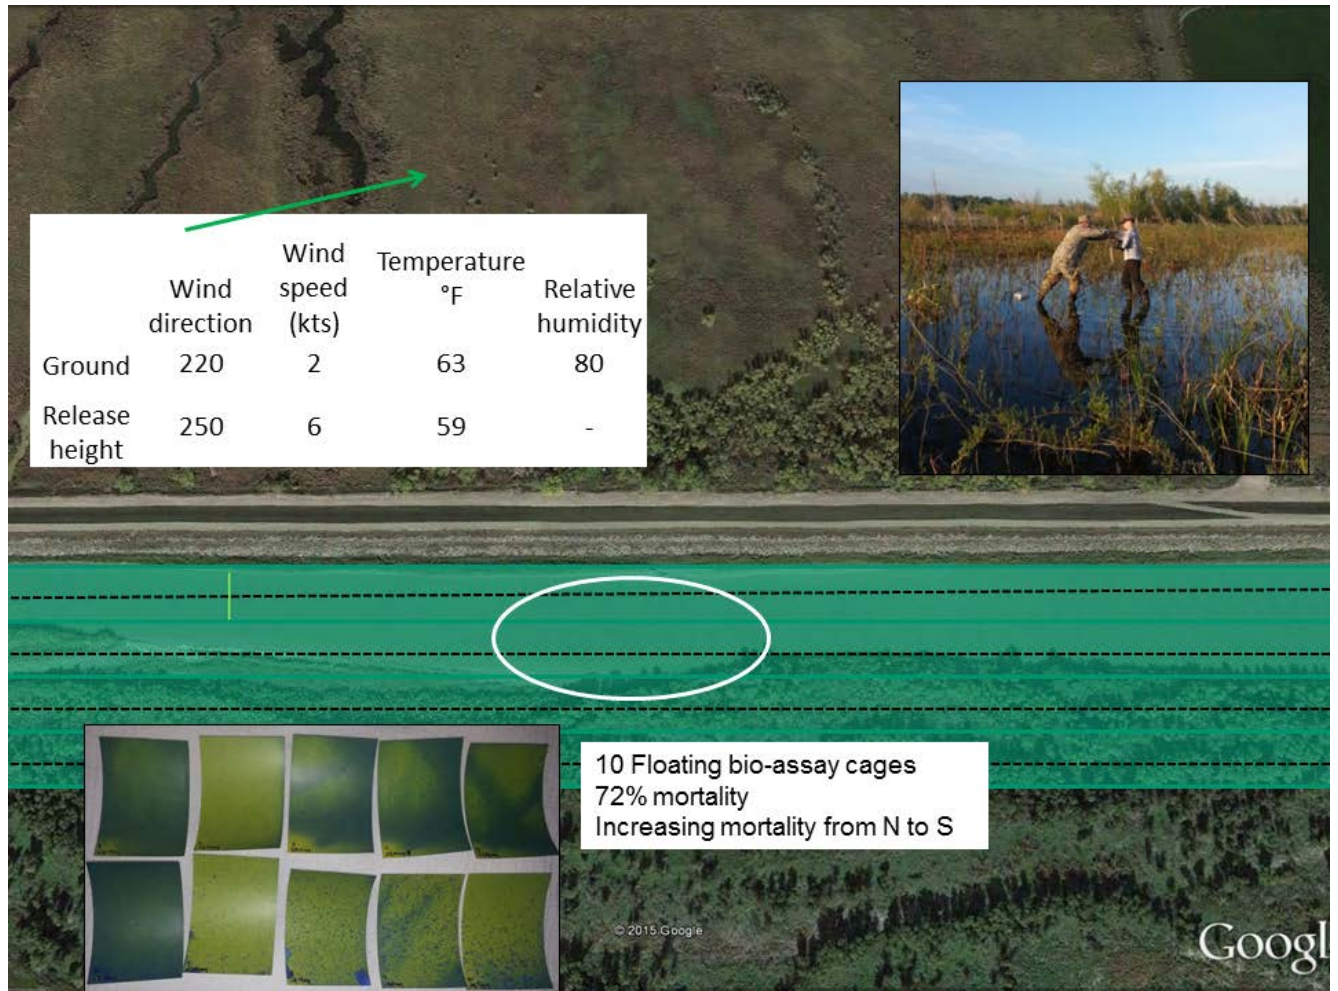

DATE May/June	SORTIE #	TIMES	GALLONS OF VECTOBAC	GALLONS SPRAYED (water+VectoBac)	ACRES	FLYING HOURS
27	1	0914-1114	15	375	75	2.0
28	2	0825-1020	13.5	343	68	1.9
1	3	0745-1015	15	375	74	2.5
3	4	1320-1550	15	375	74	2.5
4	5	0618-0850	81	1,940	388	2.5
4	6	0950-1200	82.5	1,999	400	2.2
Totals			222	5,407	1,079	13.6

**Attachment 2:**

**A. 27May15 larvicide application at “Hell’s Canyon” site. Wet meadow habitat or snowmelt pools. Black dotted lines represent path of aircraft; green blocks are 100 foot swath showing “spray-on”. Yellow cards are water sensitive and represent amount of product by drop size and density. White circle is approximate area of 10 floating bioassay cages and dip samples. Black arrow shows wind direction.**

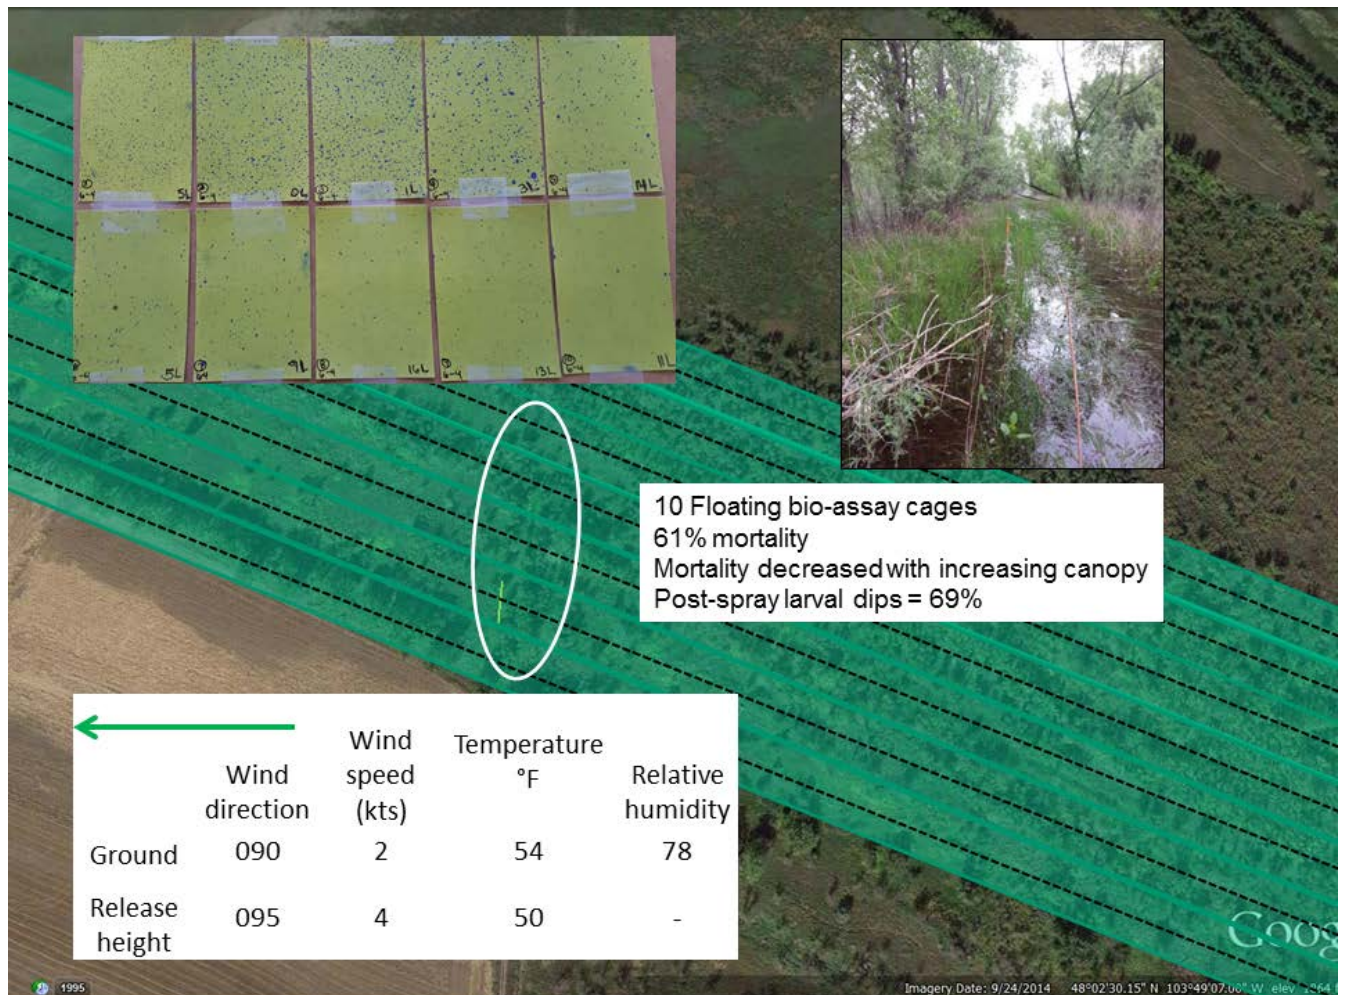

B. 28May15 larvicide application at the “Corps Pond” site. Flooded side channel of river with some minor emergent vegetation. North is up. Black dotted lines represent path of aircraft; green blocks are 100 foot swath showing “spray-on”. Yellow cards are water sensitive and represent amount of product by drop size and density. In this case, the darkening seen on the cards was caused by excessive humidity, which is a drawback to this particular media. White circle is approximate area of 10 floating bioassay cages. Green arrow shows wind direction.

C. 4June15. Trenton South location with some canopy from cottonwood trees with leaves. Black dotted lines represent path of aircraft; green blocks are 100 foot swath showing “spray-on”. Yellow cards are water sensitive and represent amount of product by drop size and density. White circle is approximate area of 10 floating bioassay cages and dip samples. Green arrow shows wind direction.

**Attachment 3.** Sampling stations consisted of (left to right): water sensitive cards; floating bioassay cages which are screened to allow water to mix with contents, but lids were placed on cage after application. Each cage contained 20 mosquito larvae; and dip samples. Larval dips were made before and after the larvicide application and larval mortality was read at 24 hours.

  - (1) Pilots: Lt Col (b) (6), Capt (b) (6)
  - (2) Navigator: Lt Col (b) (6)
  - (3) Flight Engineer: SMSgt (b) (6) MSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6), MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (lead), MSgt (b) (6), TSgt (b) (6), TSgt (b) (6) wanger
  - (2) Crew Chiefs: MSgt (b) (6), SrA (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6)
- e. **Flying Data:**
  - (1) Application Sorties/Hours: 1/2.0
  - (2) Training Sorties/Hours: 1/1.4
  - (3) Ferry Sorties/Hours: 2/4.3

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 49 Gallons
- e. Gallons Pesticide Applied: 49 Gallons
- f. Gallons and Name Diluent Used: N/A
- g. Gallons and Name of Flush Used: 7 Gallons HAN
- h. Other Additives Used: None
- i. Application Rate: 0.78 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 3003
- e. Nozzle Orientation & Number Used: 13 Total; 6 left, 7 right
- f. Pressure: 40 PSI
- g. Flow Rate: 2.8 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind; 130 at 5.5 KTS (average) Ground observation.  
Temp; 68-72 degrees F. Humidity; 76 percent.

**7. SPRAY MONITORING:** Pre and post spray landing counts were made at 2 locations (see section 8). During the application, the treatment site was monitored on the ground. There was no evidence of adverse effects of application on non-target species. Several species of Lepidoptera, Diptera, and Odonata were noted during the insect survey the day following the spray application.

**8. REMARKS:** This was the last spray conducted by the Air Force Aerial Spray Unit at Parris Island for calendar year 2014. Both eagles' nests on the island were active, and as usual a ½ mile no-spray/no-fly buffer was maintained around the nests (See attachment 1). This spray appeared to be highly effective. Pre-spray biting fly (mosquitoes and midges) landing counts conducted in the weapons area and the causeway yielded counts of 22 and 30 respectively. Post-spray landing counts at the weapons area, Elliot Beach and Page Field resulted in counts of 4, 0, and 0 respectively. Reduced nuisance pest populations will undoubtedly improve the quality of training, morale, and the productivity of base personnel and recruits. There were no significant problems encountered in this mission. Calibration of the system was relatively straightforward. The "k" factor on the flow meter had to be adjusted slightly to reflect actual measured flow. The "k" factor used was 0.250. Thanks to (b) (6) and (b) (6) for once again facilitating these activities, and thanks to TSgt (b) (6) for an excellent job with spray maintenance communication and coordination.

- a. Mission Commander: Maj (b) (6)(b) (6)
- b. Entomologist (Category 11): Lt Col (b) (6)
- c. Aircrew:
  - 1) Pilots: Lt Col (b) (6) Lt Col (b) (6)
  - 2) Navigators: Lt Col (b) (6) Lt Col (b) (6)
  - 3) Flight Engineer: SMSgt (b) (6) MSgt (b) (6)
  - 4) Spray Operators: SMSgt (b) (6) MSgt (b) (6) MSgt (b) (6)
- d. Maintenance:
  - 1) Spray Maintenance: TSgt (b) (6) (Lead), TSgt (b) (6), TSgt (b) (6)  
Robitaille, SSgt (b) (6) SrA (b) (6)  
Crew Chief(s): MSgt (b) (6) A1C (b) (6)
  - 2) Avionics: MSgt (b) (6)
- e. Flying Data:
  - 1) Spray Sorties/Hours: 1/1.7
  - 2) Ferry Sorties/Hours: 2/6.3
  - 3) Mission ID: QENRK3531180

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 45 gal Trumpet®
- d. Gallons Sprayed: 45 gal Trumpet®
- e. Gallons and Name of Flush Used: 8 gal aromatic naptha (Atsol-150)
- f. Other Additives Used: none
- g. Application Rate: 1.2 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99103
- b. Spray System (Modules Used) and System ID #: SP2/#1
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 17 straight down
- f. Pressure (PSI): 41-43
- g. Flow Rate: 3.4 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Offset: 500'
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): winds were light and variable to calm at altitude (300 ft) and on the ground
- b. Temperature (Degrees Fahrenheit): 69 dropping to 64 °F
- c. Relative Humidity: 87 increasing to 94%
- d. Cloud Cover: scattered clouds
- e. Source: Ground observations and onboard aircraft readings

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. The 319 CES pest management conducts adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:

- (1) Technique/s Used: Mosquito magnet traps
- (2) Results: numbers of mosquitoes in one night trapping

<u>Location</u>	<u>Pre-spray</u>	<u>Post-spray</u>
Gate 1	350	6
Gate 1b	150	0
Gate 2	78	20
Dogwood	255	1
Beech	85	0

GFAFB pest management trapping (shown above) shows a reduction of 97% of all mosquitoes the day after sprays.

**8. REMARKS:** Continued moderate numbers (183 average) of mosquitoes collected in traps prompted Grand Forks AFB (GFAFB) to make the decision to receive an aerial spray application (see 7b). This was the first night spray for GFAFB. After sunset sprays potentially target the flight activity pattern of the target mosquitoes, resulting in greater efficacy, while reducing pesticide exposure to honeybees (which are day active). The target pest was *Aedes vexans* and *Aedes dorsalis* which are aggressive evening and early night biting species. Night spraying is a new and developing capability for the 910AW's Aerial Spray Unit (this was the 3<sup>rd</sup> operational application) and, therefore, may likely not be available for all spray requests until additional aircrews have been trained.

The environmental parameters on night of 30 June were somewhat less than desirable conditions for aerial spraying: very light and variable winds were encountered, whereas moderate, consistent winds are preferred. Therefore, a 1,000 ft. swath was used to allow for complete swath coverage even with low wind.

The spray area was 4,800 acres (down from 11,500 acres in 2014) and it is recommended that GFAFB consider increasing the size of the treatment area beyond the base perimeter in order to create a buffer area to discourage the immediate immigration of mosquitoes from outside the spray area. Post-spray trap count data showed an exciting 97% mosquito reduction following the application. Special thanks to TSgt (b) (6) and other 319th Pest Management staff for excellent support through great communication, insect trapping, equipment, etc., it was sincerely appreciated. There are no scheduled potential aerial spray opportunities left in this calendar year. However, the Spray Unit will contact GFAFB if any other spray projects cancel.

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Aerial application of insecticide to control populations of adult nuisance and disease carrying mosquitoes at Langley AFB and Craney Island Army Corps of Engineers, VA.

1. Aerial spray deployment of one C-130 to Langley AFB, VA. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of Langley AFB. Operations will be conducted out of Langley AFB, VA.

2. Concept of Operations: All times local

- a. 31 Aug (Monday)  
1600 Depart KYNG  
1700 Land KLFI
- b. 1-3 Sep (Tuesday-Thursday)  
1800 Depart KLFI  
2030 Land KLFI
- c. 4 Sep (Friday)  
1300 Depart KLFI  
1400 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Location: Langley AFB and Craney Island, VA
- b. Altitude: 150 ft for adulticide application
- c. Swath Width: 2,000 feet
- d. Airspeed: 200 KGS
- e. Application Rate: 1.0 oz/acre Trumpet

4. Lt Col (b) (6) will serve as the Mission Commander. Support required at Langley AFB, VA is completed.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: MSgt. (b) (6) (b) (6) - Luke AFB, AZ - 23-27 Feb 2015

**Aircraft Tail Number:** 89009105

**MASS Number:** MASS 3

**Configuration:** LV/HV

**Boom & Nozzle Type:** Fuselage,  
Raindrop

**Chemical in Main Tank:** Cornerstone,  
Clasp, Blue Dye

**Chemical in Flush Tank:** H2O

**Total Chemical Loads:** 3

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:**  
0

## 1. From a maintenance aspect, what training was accomplished on this mission?

On Wed we did do a hot upload that went very well. We had no problems. We all (Loads and AS Maintenance) talked about the hot upload and how it was going to happen. Only issue was when the plane taxied in, they parked one spot to far away for the fill hose to reach. They Taxied around and parked in the right one and everything went as planned.

## 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.

Communication was established with LT Col (b) (6) a week prior to the mission. Spray MXS coordinated well with each other. The Luke Fire Dept. was more than helpful with getting to the plane when called.

## 3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.

The trip was a success and don't believe anything could have been done better. The only suggestion that I would make is that we find a way to not have to rely on the fire department for getting water on the system. We did have an issue that could have potentially been a mission impact. If the base has a 911 call or IFE all of their other operations stop so they can handle it. If we are doing a hot turn and they get a call, we would have to stop all ops and wait for Fire Dept. to return

which could affect our mission. We did need the aircraft rinsed off after the last sortie due to a overboard vent of the system. We called the fire dept. to coordinate it and was told it wouldn't be a problem. After waiting 1.5 hours I called again and was told that they had a couple of 911 calls and no one was in the shop. I told them to cancel the call and ended up doing the rinse the next day. Had we needed them for a hot upload at the time, we would have had to wait or cancel the mission for the day due to lack of range time. We need a plan B incase this happens again.

**4. How was host base and TA support? Please include details.**

Everything was great. I would like to Highlight Luke Fire Dept. for their outstanding support. Their flexibility and willingness to work with us on getting the system filled or getting the aircraft sprayed off was greatly appreciated and key to our mission success.

**5. Where there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

For the 1st two loads we loaded 4.5 gal of Cornerstone, 5 1/2 gal of Clasp and one bottle of blue dye. The last load was a partial load because there was 400 gal left from the previous sortie. We added 50 gal of water, 2.5 gal of Cornerstone and 1 gal of Clasp.

**6. Where there any notable observations from a maintenance perspective inflight?**

N/A                      Spray MXS did not go on flight

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Yes good communication around.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

The mission went very well. The only issues would be that we were not all roomed in the same place. Some were on the Billeting side of the base, while others were on the Base housing side. Also the TLF houses we stayed in were nice, however, only one room had a Queen size bed, all others were Singles. This made for a very uncomfortable sleep condition the entire week.

**4. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Panoramic® 2SL and Plateau® (23% AI, imazapic ammonium); (Plateau® used until stores were depleted; Panoramic® used primarily for the mission)
- b. EPA Registration Number: Panoramic® 2SL: 81927-19, Plateau®: 241-365
- c. Gallons Pesticide Loaded: See attachment 1
- d. Gallons Pesticide Applied: See attachment 1
- e. Gallons and Name Diluent Used: See attachment 1 (total spray – gallons of pesticide = gallons)

- water)
- f. Gallons and Name of Flush Used: 1775 gallons water
- g. Other Additives Used: 4.5 gallons Control per sortie; 3.6 quarts of Clasp<sup>®</sup> per sortie
- h. Application Rate: 7 gal/acre (4 oz/acre AI)

**APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99103
- b. Spray System (Modules Used) and System ID #: SP-3G MASS 3
- c. Nozzle Type/Orientation: Raindrop/Straight back
- d. Number of Nozzles: 18 Total; 9 left, 9 right
- e. Pressure: 40 p.s.i.
- f. Flow Rate: 326 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: Weather dependent. No off-set when flown into the wind
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** See attachment 3

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

**a. Deposition Pattern:**

- (1) Techniques Used: Visual observation from PMP on range
- (2) Results: See remarks

**b. Effectiveness**

- (1) Techniques Used: Vegetation measurement, visual observations
- (2) Results: Will be determined in the spring of 2016

**8. REMARKS:**

This mission continues the mitigation of the invasive weed, cheat grass, in order to suppress range fires and promote the reestablishment of healthy native flora, particularly native bunch grasses and sagebrush.

The majority of the sorties were flown with a headwind or tailwind with less than a 45% crosswind component and all applications were observed from the target by a certified applicator, verifying proper deposition. It is of note that due to extremely high winds, one sortie out of 11 that were planned was unable to be completed. The untreated area, which constitutes approximately five swaths, is visible on the spray map in attachment 2. Efficacy of the 2015 application of Plateau<sup>®</sup>/Panoramic<sup>®</sup> will be determined by Mountain Home AFB Office of Natural Resources during the spring season 2016.

MUO Airfield operations, fire department, POL, RAPCON, and TA support was outstanding during the entire mission. This continues to be an excellent training/real world mission and we would like to thank the personnel at Mountain Home AFB for the excellent support we received.

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Aerial insecticide efficacy test in high temperatures in partnership with USDA and US Navy using Dibrom and caged mosquitoes at the Naval Air Facility, El Centro, CA

1. Aerial spray deployment of one C-130 to NAS El Centro, CA to conduct USDA testing in a controlled environment. The testing is to provide efficacy to improve the risk of vector-borne illness to individuals. Aerial spraying performed on DOD installation property will be conducted under USDA and US Navy guidance.

2. Concept of Operations: All times local

- a. 24 July (Friday)  
1100 Depart KYNG  
1330 Land KNJK
- b. 25, 27-28 July (Saturday, Monday-Tuesday)  
1930 Depart KNJK  
2100 Land KNJK
- c. 29 July (Friday)  
1030 Depart KNJK  
1900 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Location: El Centro Naval Air Facility, CA
- b. Altitude: 150 ft for adulticide application
- c. Swath Width: 1,000 feet
- d. Airspeed: 200 KGS
- e. Application Rate: 1.0 oz/acre Dibrom

4. Lt Col (b) (6) will serve as the Mission Commander. Support required at NAS El Centro has been completed.

\\SIGNED\\

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

**SUBJECT:** Concept of Operations of Larvacide Application for Aerial Spray in and around the Army Corps of Engineers' property, Williston, ND.

1. Aerial spray deployment of two C130's to Minot, ND from 26 May-5 June 2015 for the requested larvacide spray in and around the Army Corps of Engineers' property near Williston, ND. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel working on the Army Corps' property, and by extension, the citizens of Williston. Mission objectives provide training for aerial spray aircrew, entomologists, and maintenance personnel in all aspects of the aerial spray mission.

2. Concept of Operations: All times local

- a. 26 May (Tuesday)
  - 1100 Depart KYNG (Support Aircraft)
  - 1200 Depart KYNG (Spray Aircraft 1)
  - 1215 Depart KYNG (Spray Aircraft 2)
  - 1330 Land KMIB (Support Aircraft)
  - 1430 Land KMIB (Spray Aircraft 1)
  - 1445 Land KMIB (Spray Aircraft 2)
  - 1500 Depart KMIB (Support Aircraft)
  - 1930 Land KYNG (Support Aircraft)
- b. 27 May-29 May (Wednesday-Friday)
  - 0600 Show KMIB
  - 0730 Depart KMIB
  - (Multiple 1.5 hr sorties each day depending on weather)
- c. 30 May (Saturday)
  - 0800 Depart KYNG (O/B support aircraft)
  - 1030 Land KMOT
  - 1100 Depart KMOT
  - 1430 Land KYNG
- d. 1 June-4 June (Monday-Thursday)
  - 0600 Show KMIB
  - 0730 Depart KMIB

(Multiple 1.5 hr sorties each day depending on weather)

- e. 5 June (Friday)
  - 0830 Depart KYNG (O/B support aircraft)
  - 1100 Land KMIB
  - 1200 Depart KMIB
  - 1630 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 10,000 acres
- b. Altitude: 100 ft for larvaicide application
- c. Swath Width: 100 ft
- d. Groundspeed: 200 KIAS
- e. Flow Rate: 233 gals/min
- f. Application Rate: 5 gal/acre (water with 1.5 pints of Vectobac® + 0.45 oz of Poly Control 2)

4. Lt Col (b) (6) will serve as the Mission Commander the first week and Lt Col (b) (6) (b) (6) will serve as Mission Commander the second week. Support required at Minot AFB and Minot International Airport has been completed.

**POST-MISSION REPORT (replaces AFRC Form 55)**  
**JB CHARLESTON, SC 4-7 May, 2016**

**1. MISSION BASICS:**

- a. Installation Sprayed: JB Charleston, South Carolina
- b. Mission Duration: 4-7 May 2016
- c. Purpose of Application: Control vector and nuisance control of salt marsh mosquitoes on the Naval Weapons Station area of JB Charleston
- d. Application Date: 5 May 2016
- e. Times of Application: 2340-0200 Zulu
- f. Acres Treated: 17,614
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) , Environmental/Spray Coordinator, DSN (b) (6)
- h. Date Spray Map Last Approved: 5 May 2016
- i. Date of Waste Generation acceptance: 6 July 2012
- j. Installation In-Briefing: (When/Where/Briefer/s): Lt Col (b) (6) Maj (b) (6) , and (b) (6) at the 628 CES @ 1030 hrs on 5 May 2016
- k. Mission Identifier: QENRK3531125

**2. OPERATIONAL:**

- a. **Mission Commander:** Major (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) , Lt Col (b) (6) , Capt (b) (6)
  - (2) Navigators: Major (b) (6) , Capt (b) (6)
  - (3) Flight Engineer: MSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) , TSgt (b) (6) , TSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (lead), SMSgt (b) (6) ; TSgt (b) (6) , TSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) , SSgt (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6)
- e. **Flying Data:**
  - (1) Training Sorties/Hours: 2/3.8
  - (2) Ferry Sorties/Hours: 2/4.2

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet<sup>®</sup> EC (78% AI naled)
- b. EPA Registration Number: 5481-481
- c. Gallons Pesticide Loaded: 120 gallons
- d. Gallons Pesticide Applied: 117 gallons
- e. Gallons and Name Diluent Used: N/A
- f. Gallons and Name of Flush Used: 10 Gallons aromatic naptha
- g. Other Additives Used: None
- h. Application Rate: 0.85 oz/acre

**APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99107
- b. Spray System (Modules Used) and System ID #: SP2G

- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 8003
- e. Nozzle Orientation & Number Used: 27 Total; 13 left, 14 right
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 6.2 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: None
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 KTS

**WEATHER OBSERVATIONS:** Wind: 300° at 9.0 knots at altitude; 300 at 4.5 knots (average) ground observation. Temp: 68 degrees F, Humidity 76 percent.

**6. SPRAY MONITORING:** Pre- and post-spray mosquito collections or landing counts were taken at various locations on JB Charleston. Pre- and post-spray numbers are presented in Attachment 1. In summary, there was 100% reduction in landing counts and 99.9% reduction in trap counts. These results must be interpreted with caution however, as some pre-spray trap counts were taken almost 2 weeks prior to the spray. In addition, the evening of the spray and subsequent days after were relatively cool and mosquito activity may have been depressed. However, based on the pre- and post-spray landing counts, we are reasonably sure the spray had the desired effect.

**7. REMARKS:** This application is the second night spray conducted at this location this fiscal year. System calibration was conducted on the ground prior to application. No significant problems were encountered and results appear to be good. No problems were reported in flight. Unfortunately, the GPS flight data was overwritten. Thus, we only have flight data from the subsequent training flight and not the actual spray flight. We will correct this problem in future by immediately downloading the data after every actual spray mission. We appreciate the support we received from ALL sections at JB Charleston, with special thanks going to (b) (6) for his thorough coordination at all levels.

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

**SUBJECT:** Capability and Concept of Operations for NVG (Night Vision Goggle) Aerial Spray at Joint Base Charleston, SC.

1. One C-130 will deploy to JB Charleston from 4-7 May, 2016 in response to a requested aerial spray to control adult mosquitoes at JB Charleston, SC. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of JB Charleston. Operations for this mission will be conducted from JB Charleston.

2. Concept of Operations (All times are local)

- a. 4 May (Wednesday)  
1700 – Depart KYNG  
1900 – Land KCHS
- b. 5 May (Thursday)  
1930 – Depart KCHS  
2200 – Land KCHS
- c. 6 May (Friday)  
1930 – Depart KCHS  
2200 – Land KCHS
- d. 7 May (Saturday)  
1200 – Depart KCHS  
1400 – Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 18,000 acres

- b. Altitude: 300 feet for adulticide application
- c. Swath Width: 2,000 feet
- d. Groundspeed: 200 KIAS
- e. Application Rate: .85 oz/acre of Trumpet EC

- 4. Maj (b) (6) will serve as the Mission Commander.
- 5. Lt Col (b) (6) will be the Aircraft Commander.
- 6. Required support at JB Charleston has been coordinated.

  - (3) Avionics: MSgt (b) (6)
- d. Entomologist: Lt Col (b) (6)
- e. Flying Data:
  - (1) Application Sorties/Hours: 1/2.5
  - (2) Training Sorties/Hours: n/a
  - (3) Ferry Sorties/Hours: 2/3.8

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 35 gallons
- e. Gallons Pesticide Applied: 35 gallons
- f. Gallons and Name Diluent Used: N/A
- g. Gallons and Name of Flush Used: 5 gal of HAN
- h. Other Additives Used: None
- i. Application Rate: 0.78 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99106
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 3003

- e. Nozzle Orientation & Number Used: 18 nozzles; straight down
- f. Pressure: 40 PSI
- g. Flow Rate: 2.8 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 1000'
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind; 160@17 kts at 300 ft; 170@3-5 kts (ground observation). Temp; 65-59 degrees F. Humidity; 88 percent.

**7. SPRAY MONITORING:** Pre and post-spray collections were made by Navy Preventative Medicine (Naval Hospital) with CDC traps baited with dry ice, EVS traps in storm drains, and New Jersey light traps at several locations (see below). Note that only one of the New Jersey trap locations is reported here because the other 5 locations had very low numbers. During the application, the treatment site was monitored by staff on the ground. Biting midges (sand fleas) were present in high numbers during the first hour of the application.

New Jersey*	Horse Island 68				New Jersey*	Horse Island 12				82		

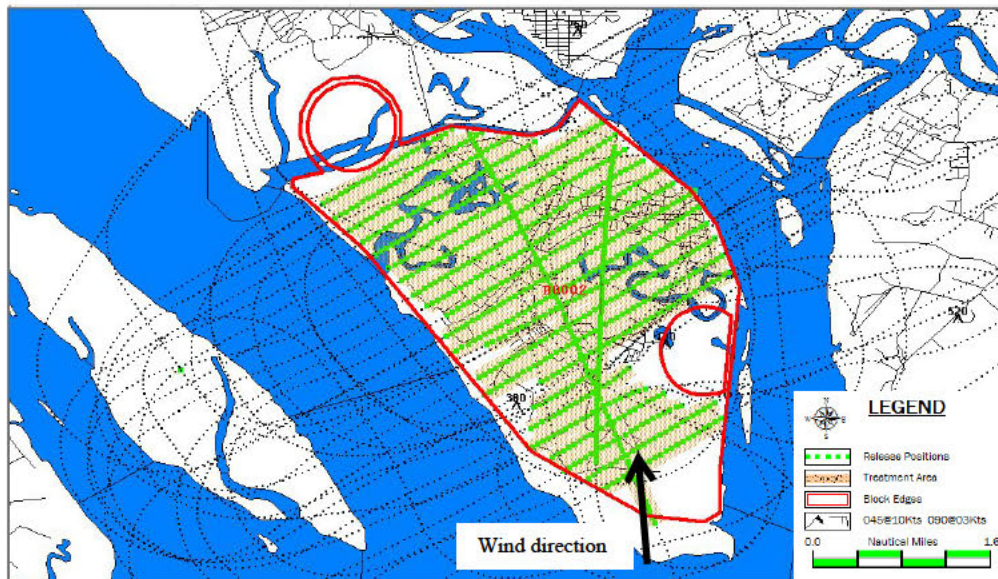

**8. REMARKS:** Despite cool temperature and moderate winds, there were plenty of midges present during this night application. In fact, the midges were present in such numbers at the beginning of the spray period that it was difficult to take wind readings without subjecting oneself to hundreds of midge bites. An hour into the spray period on the northeast side of the spray block, there were windy conditions and no midges were noted at that location. It was completely dark by then and with no moon, some of the published literature suggests less midge and mosquito activity under such conditions. Monitors on the ground reported a moderate and consistent wind from the south and the application lasted about 2 hours (See attachment 1). No adverse effects on wildlife were noted by ground observers using night vision enhancing equipment. This spray was less effective than most sprays based on the information presented in the chart on item 7. The best control was a 65% reduction relative to insect densities recorded prior to the spray. Some factors leading to poor results may be attributed to cold and breezy conditions on the night of the spray effort, less than maximum label rate application, and low light conditions noted above. In this particular case, 6 April was the only opportunity to make an application and certainly there were plenty of midges present; thus, it was decided to make the application. Calibration of the modular aerial spray system was straightforward. The "k" factor used was 0.250 which matches previous work. Thanks to LT (b) (6) PO1(b) (6) PO3 (b) (6), and Mr. (b) (6) from Naval Hospital, Preventive Medicine for supporting the spray effort with insect surveillance.

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757AS/DOS  
3976 King Graves Rd  
Vienna, Ohio 44473-0910

SUBJECT: Concept of Operations for Aerial Spray at the Utah Test and Training Range

1. Aerial spray flight proficiency training will be accomplished on Targets 21, 23, 24, and Nord LZ at the Utah Test and Training Range (UTTR). Spray sorties will apply Krovar to control vegetation (i.e., *Halogeton*) growth aiding bombing mission test evaluations and unexploded ordnance recovery. Three aerial spray-configured C-130s will be available from 7 - 18 March 2016 for the requested spray mission. On 12 March one C-130 will fly to Youngstown to swap crew and maintenance personnel to maximize training.

2. Concept of Operations:

a. 7 March (Monday)

0900 Vader 01 departs KYNG  
1000 Vader 02 departs KYNG  
1100 Vader 03 departs KYNG  
1200 Vader 01 lands KHIF  
1300 Vader 02 lands KHIF  
1400 Vader 03 lands KHIF

b. 8 -11 March (Tuesday – Friday)

0800 Spray 01 departs KHIF  
0830 Spray 02 departs KHIF  
0930 Spray 01 lands KHIF  
0930 Spray 03 departs KHIF  
1000 Spray 02 lands KHIF  
1030 Spray 01 departs KHIF  
1100 Spray 02 departs KHIF  
1100 Spray 03 lands KHIF  
1200 Spray 01 lands KHIF  
1230 Spray 02 lands KHIF

c. 12 March (Saturday)

0900 Spray 03 departs KHIF  
1500 Spray 03 lands KYNG  
1000 Spray 04 departs KYNG  
1300 Spray 04 lands KHIF

d. 14 -17 March (Monday – Thursday)  
Same timeline as the first week

e. 18 March (Friday)  
0730 Spray 01 departs KHIF  
0745 Spray 02 departs KHIF  
0800 Spray 03 departs KHIF  
1330 Spray 01 lands KHIF  
1345 Spray 02 lands KHIF  
1400 Spray 03 lands KHIF

3. Spray parameters:

Herbicide: Krovar 1DF®

Application rate: 22.5 gal/acre (10 lbs Krovar in 22.4 gal of water)

Acreage: 1,700 acres (Targets 21, 23+24)

Ground speed: 200 knots (337.55 ft/sec)

Spray altitude: 100 feet AGL

Swath width: 35 feet

Flow rate: 366.1 gal/min

4. Maj Steven Stroney will serve as the mission commander.

5. Aircraft Commanders:

(b) (6)

6. Support required at both Hill AFB and the UTTR has been coordinated.

### 3. PESTICIDE:

- a. Trade Name: Krovar® IDF
- b. EPA Registration Number: 352-505
- c. Formulation Sprayed: 10 lbs Krovar® per 22.5 gallons formulation.
- d. Gallons Pesticide Mix Loaded: 31,834
- e. Gallons Pesticide Mix Applied: 31,834
- f. Formulation Used: 450 lbs Krovar®, 4.0 gal StaPut®, ½ gal Foam Fighter®, 200 ounces Hi-Light® Dye, remainder water per 1000 gal of spray mix. 15,300 lbs of Krovar used.
- g. Gallons and Name of Flush Used: 4,000 gal water
- h. Other Additives Used: 170 gal Clasp®; 87.5 gal Hi-Light® dye; 5.3 gal No Foam.
- i. Application Rate: 22.5 gal/acre

### 4. APPLICATION EQUIPMENT:

- a. Aircraft Tail Number: 99106, 99108
- b. Spray System (Modules Used) and System ID #: 3 and 5.
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 2 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 366 gallons per minute.

### 5. APPLICATION PARAMETERS:

- a. Swath Width Flown: 35'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

### 6. WEATHER OBSERVATIONS:

- a. See Attachment 2.

### 7. SPRAY MONITORING (Pre- and Post-Treatment):

- a. Deposition Pattern:
  - (1) Technique Used: blue dye pattern on targets and observations from ground markers.
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring.
  - (2) Results: will be determined this spring by range personnel.

8. **REMARKS:** This mission was another successful spring application of Krovar to control vegetation on Targets 21, 23, and 24. In addition, with good weather (single cancellation on 14 March) and efficient flying, there was enough time to also send one sortie to Wildcat Target (Attachment 1). The flight paths of the aircraft are shown in Attachment 3a and b.
- a. This year's spray also included an additional aircraft (9103) flown without a MASS for aircrew training on the UTTR. This procedure was successful for a variety of reasons including the benefit of moving trainees from the no-release flights to actual sprays within short periods of time. As a bonus, the extra aircraft allowed for the use of a spare to keep the actual mission running. This last aspect worked particularly well insomuch that several aircraft maintenance issues which could have resulted in lost sorties, were quickly remedied utilizing resources from the extra aircraft.
  - b. A revised environmental assessment regarding herbicide sprays for vegetation management on the UTTR was signed with a finding of no significant impact on 2 November 2015. The main change in this new assessment was to consider the use of any appropriate Air Force approved herbicide to manage firebreaks, with the aforementioned approval to be implemented as early as the fall of 2016, granted all parties are able to agree on the exact nature and scope of the project. The spray mission is requested by UTTR/HQ and we appreciate the opportunity to make these applications on their behalf. Mr. Frank "Bass" Sharrett replaced Mr. Matt Bolduc as the directing range officer for the mission and Ms. Bonnie Stevenson remains as the cornerstone of the operation. Many thanks to the various agencies at Hill AFB supporting this mission: 75CES Pest Management, 75<sup>th</sup> Air Base Wing - Base Operations, and a special thanks to SMSgt (b) (6) (b) (6) (514 FLTS/DOC) for acting as our sponsor again this year.

1 Dec 2015

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Capability and Concept of Operations for NAS Jacksonville, FL

1. One C-130 will be available 8-12 Dec 15 for exploring the efficacy of ultra-low volume larviciding on the Florida Army National Guard's Camp Blanding Joint Training Center. The aircraft will operate from Mayport NS, FL and use the SP2 configuration with VectoBacWDG larvicide. This mission will also provide real-world training for aerial spray air crew, entomologists and maintenance personnel.

2. Concept of Operations:

a. 8 December (Tuesday)  
1045 Show KYNG  
1300 Depart KYNG  
1515 Land KNRB

b. 9-11 December (Wed-Fri)  
1500 Depart KNRB  
1730 Land KNRB

c. 12 December (Saturday)  
0900 Show KNIP  
1100 Depart KNIP  
1315 Land KYNG

3. Aircraft will be SP2G configured with ULV booms.

4. Lt. Col. (b) (6) will serve as mission commander.

5. Lt. Col. (b) (6) will act as aircraft commander.

6. Support required at Mayport Naval Station, FL is completed.

(b) (6), Lt. Col., USAFR  
757AS Chief Aerial Spray

**AIR FORCE RESERVE COMMAND (AFRC)**

1 Dec 2015

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Concept of Operations for Aerial Spray at Smoky Hill ANG Range, Salina, KS.

1. Control musk thistle at the Smoky Hill ANGR, to improve grazing areas, to eliminate the Range as a source of infestation to neighboring farms from wind-blown musk thistle seeds and to support state and local noxious weed control efforts. This mission will also provide real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations:

- a. 8 November (Tuesday)  
1300 Depart KYNG  
1500 Land KSLN  
1600 Installation Brief
- b. 9-11 November (Wednesday-Friday)  
1500 Depart KSLN  
1730 Land KSLN
- c. 12 November (Saturday)  
0900 Show Time KSLN  
1000 Depart KSLN  
1300 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 50 Acres for testing
- b. Altitude: 300' AGL
- c. Swath Width: 1000 ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 7 Gal finish spray/Acre (water with 0.35 Oz of AirexDC® & 0.71 Oz of Milestone®/gallon)

4. Lt. Col (b) (6) will serve as the mission commander with Lt. Col. (b) (6) as the aircraft commander (8-12 Dec 15) Support at NAS Jacksonville is completed.

17-22 July 2016**

**1. MISSION BASICS:**

- a. Installation/Community Sprayed: Minot AFB, Cities of Minot, Burlington, Williston, and Watford City, ND
- b. Mission Duration: 17-22 July 2016
- c. Purpose of Application: Adult Mosquito Control
- d. Application Date/s: 18 July 2016 (Minot AFB), 19 July 2016 (Williston and Watford City), 21 July 2016 (Minot City and Burlington)
- e. Time/s of Application (Local): 2020-2120 (18 July) Sunset 2137L, 1855-1925 + 1955-2125 (19 July) Sunset 2137L, 1915-2135 (21 July) Sunset 2137L
- f. Acres Treated: 4,454 (18 July – Minot AFB) 5,835 (19 July - Watford City), 24,132 (19 July – Williston), 20,626 (21 July – Minot City and Burlington)
- g. Project Coordinator/s: (b) (6) (Minot AFB), Fran Bosch (Williston/Watford), (b) (6) (Minot City/Burlington)
- h. Date Spray Map Last Approved: 18 July 2016 (Minot AFB, Minot/Burlington), 19 July 2016 (Williston/Watford)
- i. Date of Waste Generation Letter: 28 July 2013
- j. Installation In-Briefing: Maj (b) (6), Maj (b) (6), Maj (b) (6), Maj (b) (6), and Capt (b) (6) briefed personnel from Civil Engineering, Public Health, Pest Management, and Weather @ 1300 on 18 July 2016.
- k. Mission Identifier: QENRK3531199

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6)
- b. Certified PMP/Entomologists (Category 11): Maj (b) (6) (safety briefer), Maj (b) (6) (certified applicator, state ND)
- c. Aircrew:
  - (1) Pilots: Maj (b) (6), Maj (b) (6)
  - (2) Navigator: Capt (b) (6)
  - (3) Flight Engineer: MSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6), SMSgt (b) (6)
- d. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6), (lead), MSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6), SrA (b) (6)
  - (3) Avionics: TSgt (b) (6)
- e. Flying Data:
  - (1) Spray Sorties/Hours: 3 sorties (1.3 + 3.5 + 2.5) = 7.3 hrs

(2) Ferry Sorties/Hours: 2 sorties (4.2 + 3.2) = 7.4 hrs

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® EC Concentrate (78% naled)
- b. EPA Registration Number: 5481-481
- c. Formulation Sprayed: Emulsified Concentrate (Trumpet)
- d. Gallons Pesticide Loaded: 210 gal (18 July), 120 gal (22 July)
- e. Gallons Pesticide Applied: 210 gal (18-19 July), 120 gal (22 July)
- f. Gallons downloaded: 0
- g. Gallons and Name Diluent Used: none
- h. Gallons and Name of Flush Used: 10 gal aromatic naptha
- i. Other Additives Used: None
- j. Application Rate: 0.78 oz/acre (18-19 July), 0.74 oz/acre (21 July)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99108
- b. Spray System (Modules Used) and System ID #: 1
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 22 total, oriented straight down
- f. Pressure: 38-42 psi
- g. Flow Rate: 5.7 gallons per minute (18-19 July), 5.4 gallons per minute (21 July)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2,000 ft
- b. Spray offset: 2,000 ft
- c. Spray Release Altitude: 150 feet
- d. Ground Speed: 200 knots

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 114°@5 kts (18 July); 040°@8 kts (19 July); 210°@4 kts (21 July)
- b. Temperature (Degrees Fahrenheit): 83°F (18 July); 88° F (19 July); 88° F (21 July)
- c. Relative humidity: 55% (18 July); 57% (19 July); 47% (21 July)
- d. Cloud Cover: Clear (18-19 July, 21 July)
- e. Source: Ground observations

**7. SPRAY MONITORING (Pre- and Post-Treatment):** Mosquito monitoring on Minot AFB is done with Mosquito Magnets and CDC light traps by Minot AFB Public Health. Unfortunately, only one CDC trap site and one Mosquito Magnet trap location were consistent before and after the treatment. The CDC trap located at the softball fields collected 121, 150, and 60 mosquitoes prior to the spray on 14 June, 28 June, and 29 June, respectively. This is an average of 110.3 mosquitoes per trap night. This trap collected 56 and 292 mosquitoes after the spray on 19 July and 21 July, respectively. This is an average of 174 mosquitoes per trap night.

The Mosquito Magnet located at Combat Arms Training and Management (CATM) collected 300, over 900, and 250 mosquitoes prior to the spray on 27 June, 6 July, and 13 July, respectively. This is an average of over 483 mosquitoes per trap night prior to treatment. This trap collected 600 mosquitoes after the spray on 19 July. The CDC trap counts indicate an increase in mosquito population of 58%. The Mosquito Magnet collection was 24% decreased following treatment.

In the City of Williston, prior to application seven CDC traps collected a total of 235 and 161 mosquitoes on 18 July and 19 July, respectively. This represents an average of 28.3 mosquitoes per trap night. Post-application collection yielded 21, 28, and 15 total mosquitoes on 20 July, 21 July, and 22 July, respectively. This represents an average of 3 mosquitoes per trap night. These numbers indicate a 72.8% reduction in mosquito populations.

In the City of Minot, three New Jersey traps are used to monitor mosquito populations. Through the week of 11 through 17 July, prior to treatment, these traps collected 22, 0, and 20 female mosquitoes representing an average of 14 mosquitoes per trap. Through the week of 25 through 31 July, following treatment, these traps collected 216, 23, and 73 female mosquitoes representing an average of 104 mosquitoes per trap. This represents a significant increase of 743%.

**8. REMARKS AND RECOMMENDATIONS:** The system was calibrated on the ground prior to application, and all applications went well with no adverse effects noted. The CDC trap on Minot AFB indicates an increase in population following the spray, however with only one consistent trap site this may not be indicative of the actual effect on the mosquito population. The city of Minot also observed an increase in population. The cause of this increase is unknown, but could be due to a number of factors. All locations decided to treat at a relatively low rate (0.75 oz/acres), which could have minimized the effectiveness of the spray.

Due to a malfunction with the Wingman navigation system, a map of the Minot AFB spray is not available. Maps of the cities of Minot, Burlington, Williston, and Watford are included as attachments 1 and 2.

We sincerely appreciate the efforts of Mr. (b) (6) , Mr. (b) (6) , and Mr. (b) (6) in their support of the aerial spray operation.

14 April 2016

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Parris Island MCRD, SC

1. Aerial spray deployment of one C-130 from 19-22 April 2016 to Beaufort MCAS, SC to train aerial spray aircrew, entomologists, and maintenance members in the control of mosquitoes and biting midges. These pests negatively impact outdoor training activities and create health hazards to recruits at Parris Island MCRD, SC. NVG aerial spray sorties are planned at 300' AGL.

2. Concept of Operations (All times are local):

- a. 19 April (Tuesday)  
1700 Depart KYNG  
1900 Land KNBC (Safety Brief Immediately Upon Landing)
- b. 20 April (Wednesday)  
1030 Installation Brief  
1630 Weather call/Calibration of MASS, Chemical Load/Training sortie and/or actual  
1930 Depart KNBC  
2145 Land KNBC
- c. 21 April (Thursday)  
1630 Weather call/Chemical load/calibration  
1930 Depart KNBC  
2130 Land KNBC
- d. 22 April (Friday)  
1200 Depart KNBC  
1400 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 7500 acres
  - b. Altitude: 300' AGL
  - c. Swath Width: 1000 ft
  - d. Groundspeed: 200 KIAS
  - e. Application Rate: 0.75-1.0 oz/acre of Dibrom-Naled an organophosphate insecticide
4. Lt Col (b) (6) will serve as the mission commander with Lt Col (b) (6) as the aircraft commander. Support at Parris Island MCRD and Beaufort MCAS has been completed.

- b. Aircrew:
  - (1) Pilots: Lt Col (b) (6) , Lt Col (b) (6)
  - (2) Navigator: Lt Col (b) (6) , Capt (b) (6)
  - (3) Flight Engineer: MSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) , TSgt (b) (6) , SrA (b) (6)
- c. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6) (lead), TSgt (b) (6) , TSgt  
Tom Kocis, TSgt (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6) , SSgt (b) (6) , SSgt (b) (6)  
(b) (6)
  - (3) Avionics: MSgt (b) (6)
- d. Entomologists: Lt Col (b) (6) , Lt Col (b) (6)
- e. Flying Data:
  - (1) Application Sorties/Hours: 1/1.4
  - (2) Training Sorties/Hours: 1/0.8
  - (3) Ferry Sorties/Hours: 2/3.5

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom® Concentrate
- b. EPA Registration Number: 59639-16-2A
- c. Formulation Sprayed: Concentrate (87.4 % AI)
- d. Gallons Pesticide Loaded: 60 Gallons
- e. Gallons Pesticide Applied: 51 Gallons
- f. Gallons and Name Diluent Used: N/A
- g. Gallons and Name of Flush Used: 7 Gallons HAN
- h. Other Additives Used: None
- i. Application Rate: 0.88 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: 3003
- e. Nozzle Orientation & Number Used: 13 Total; 6 left, 7 right
- f. Pressure: 40 PSI
- g. Flow Rate: 2.8 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: 0'
- c. Spray Release Altitude: 150'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Wind; 230 @ 8kts; temps 74 at 300ft observation at altitude.  
Ground observation: 070@2-3. 77 degrees F (2000 hrs).

**7. SPRAY MONITORING:** We were fortunate to have the assistance of LT (b) (6) PO1 Pullen, PO3 Salinas, and Mr. (b) (6) from Naval Hospital, Preventive Medicine and Dr. (b) (6) (b) (6) and Captain (b) (6) (USAFSAM) with pre and post spray insect trapping and analysis. Pre and post spray trap counts are in attachment 1. Overall, there was an approximate 90% apparent reduction in mosquito populations and approximately 80% reduction in biting midge populations. Overall, we would consider this application to be a success, although the relative efficiency of night application vs. crepuscular application of pesticide to control biting midges remains to be determined as night applications are a relatively new procedure for our group. Ground monitoring of non-target species was conducted during the time of spray using Night Vision Goggles, and further monitoring was conducted by Captain (b) (6) the following day. There did not appear to be any evidence of adverse effects of application on non-targets.

**8. REMARKS:** Both eagle nests on the island were active, and as usual a ½ mile no-spray/no-fly buffer was maintained around the nests (See attachment 2). Again, this spray appeared to be effective. Reduced nuisance pest populations will undoubtedly improve the quality of training, morale, and the productivity of base personnel and recruits. There were no significant problems encountered in this mission. Calibration of the system was relatively straightforward. The “k” factor used was 0.250. Beaufort MCRD Weather Shop predicted the potential for an atmospheric temperature inversion during the spray timeframe. Aircrew and groundcrew monitored temperature during the application and no inversions were encountered (see 6.0). Thanks to (b) (6) and (b) (6), as well as our aforementioned colleagues at Parris Island MCRD PrevMed and USAFSAM for facilitating these activities. We also wish to thank the personnel at Beaufort County Mosquito Control District for graciously allowing access to their facilities for insect identification.

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

**SUBJECT:** Concept of Operations for Aerial Spray at Smoky Hill ANG Range, Salina, KS.

1. Control musk thistle at the Smoky Hill ANGR, to improve grazing areas, to eliminate the Range as a source of infestation to neighboring farms from wind-blown musk thistle seeds and to support state and local noxious weed control efforts. This mission will also provide real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations:

- a. 24 October (Monday)  
1100 Depart KYNG  
1300 Land KSLN  
1500 Installation Brief
- b. 25-28 October (Tuesday-Friday)  
0645 Depart KSLN  
0915 Land KSLN
- c. 29 October (Saturday)  
0645 Depart KSLN  
1130 Land KSLN  
1300 Depart KSLN  
1700 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 3,000 acres
- b. Altitude: 100' AGL
- c. Swath Width: 100 ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 7 Gal finish spray/Acre (water with 0.35 oz of AirexDC® & 0.71 oz of Milestone®/gallon)

4. Lt Col (b) (6) will serve as the mission commander with Maj (b) (6) as the aircraft commander (24-29 Oct 16) Support at Smoky Hill ANG Range, Salina, KS is completed.

### **4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99107
- b. Spray System (Modules Used) and System ID #: 1
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV Wing Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 23 total (27-29 Jun); oriented straight down
- f. Pressure: 38-42 psi
- g. Flow Rate: 5.45 gallons per minute (27-29 Jun)

### **5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2,000 ft (27-29 Jun)
- b. Spray offset: 2,000 ft (27-29 Jun)
- c. Spray Release Altitude: 300 ft (NVG)
- d. Ground Speed: 200 Knots (338 Feet/Second)

### **6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 90°@3.5 kts (27 Jun); 360°@6 kts (28 Jun); 30°@7 kts (29 Jun)
- b. Temperature (Degrees Fahrenheit): 68°F (27 Jun); 70° F (28 Jun); 70° F (29 Jun)
- c. Relative humidity: 73% (27 Jun); 61% (28 Jun); 64% (29 Jun)
- d. Cloud Cover: Clear (27-28 Jun); partly cloudy (29 Jun)
- e. Source: Ground observations

**7. SPRAY MONITORING (Pre- and Post-Treatment):** Mosquito monitoring on Minot AFB is done with Mosquito Magnets and CDC light traps by Minot AFB Public Health. Mosquito magnets collected over 300 mosquitoes per night prior to treatment. Pre-application mosquito counts on 28 June from two CDC traps collected 150 and 200 mosquitoes per night on base. Post-application counts dropped to 60 and 75 mosquitoes on 29 June, a reduction of 62.5%.

Mosquito trap counts for the City of Williston were somewhat misleading. Pre-application mosquito counts from CDC traps collected 636 mosquitoes (28 June). Post-application counts taken the following night dropped to 416 mosquitoes on 29 June, a reduction of 34.6%. It is unclear when traps were collected following application. Williston was sprayed the following night with Zenivex by a local applicator. Mosquito populations dropped to 112 on June 30, a reduction of 73% from the night before and 82% below pre-spray trap counts.

**8. REMARKS AND RECOMMENDATIONS:** This was the first mosquito NVG adulticide application for Minot AFB in 2016, and the first for the City of Williston and Watford City. Both Minot AFB and the City of Williston reported moderate numbers of mosquitoes and decided to treat at a relatively low rate (0.75 oz/acre). The application over the Minot AFB went well and good results were reported. As mentioned during the in-brief, the size of the spray area is rather small to expect any relief for a substantial period of time. Nonetheless, no mosquitoes were observed on the flight line the following night after spraying.

A small leak in the flow control valve on 28 June caused the aircrew to return to base to replace a gasket. The mission commander decided to finish treating the City of Williston before the airfield closed at 0200. The aircrew took the plane out again and completed treatment of the City of Williston. Watford City was completed on 29 June.

The 757 AS completed operations at Minot AFB on 30 Jun and proceeded to Charleston AFB, SC. Rain prevented aerial spray operations at Charleston AFB.

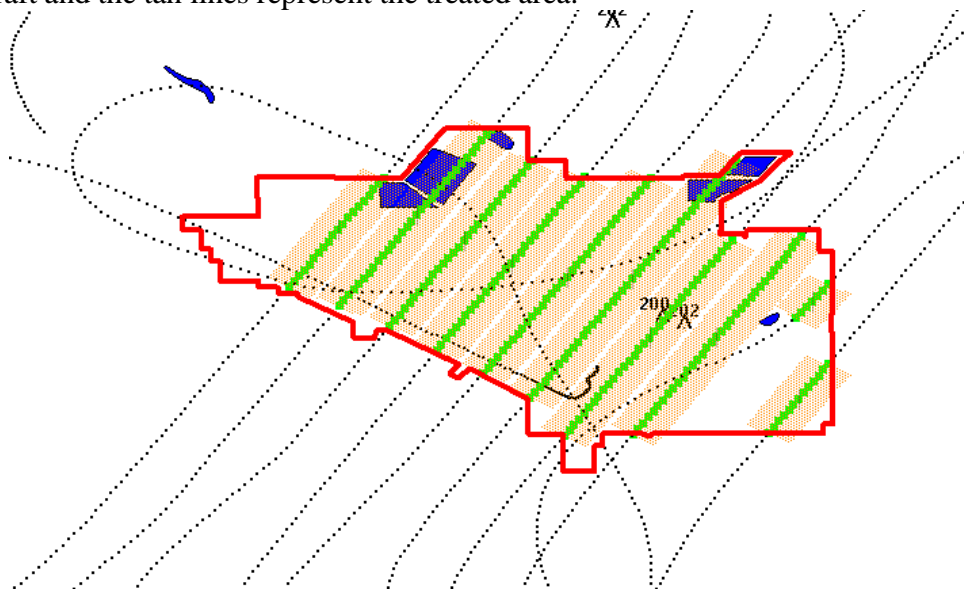

A special thanks to Mr. (b) (6) (b) (6) and Mr. (b) (6) (b) (6) for their support of the aerial spray operation.

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Grand Forks AFB, ND.

1. Aerial spray deployment of one C-130 during 11-15 July 2016 in response to a requested aerial spray to control adult mosquitoes at Grand Forks AFB, ND. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of Grand Forks AFB. Operations will be conducted out of Grand Forks AFB. AFRC 16-14-MASS1 (Grand Forks): Aerial Spray.

2. Concept of Operations: All times local

- a. 11 July (Monday)  
1100 Depart KYNG  
1300 Land KRDR
- b. 12-14 July (Tuesday – Thursday)  
2130 Depart KRDR  
2300 Land KRDR
- c. 15 July (Friday)  
1500 Depart KRDR  
1900 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: GFAFB approximately 12,000 acres
- b. Altitude: 300 feet for NVG adulticide application
- c. Swath Width: 2,000 feet
- d. Airspeed: 200 KTS
- e. Application Rate: 1.0 oz/zcre of Trumpet EC

4. **Maj(b) (6)** will serve as the Mission Commander. Support required at Grand Forks AFB has been completed.

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

**SUBJECT:** Concept of Operations for Aerial Spray at Homestead AFB and surrounding Miami-Dade County

1. Aerial spray deployment of one C-130 from 5-8 Jul 2016 for the requested adulticide spray mission. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the citizens of Homestead ARB and surrounding Miami-Dade County. Aerial spraying performed off DOD installation property will be conducted IAW Innovative Readiness Training (IRT) Program criteria. This mission will also provide real-world training for aerial spray entomologists and maintenance personnel. Operations will be conducted out of Homestead ARB, FL.

2. Concept of Operations (All times are local)

a. 5 July (Tuesday)  
1700 Depart KYNG  
2030 Land KHST

b. 6-7 July (Wed-Thurs)  
1930 Depart KHST  
2100 Land KHST

c. 8 July (Friday)  
1230 Depart KHST  
1600 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

a. Area to be treated: 10,000 -110,000 acres; final acreage TBD

- b. Altitude: 150 ft for adulticide application
- c. Swath Width: 2000 ft
- d. Groundspeed: 200 Kts
- e. Chemical: Dibrom<sup>®</sup> Concentrate
- f. Application Rate: 0.5 oz/acre or as determined by entomologist

4. Lt Col (b) (6) will serve as the mission commander (MC). Maj (b) (6) will be the aircraft commander. Required support at Homestead AFB, FL has been completed.

**910 AW AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S**  
**POST-MISSION REPORT (replaces AFRC Form 55)**  
**MOUNTAIN HOME AFB, SAYLOR CREEK RANGE, ID**  
**12-23 September 2016**

**1. MISSION BASICS:**

- a. Installation Sprayed: Mountain Home AFB, Saylor Creek Range, ID
- b. Mission Duration: 12-23 Sep 2016
- c. Purpose of Application: Herbicide application to control cheat grass to suppress range fires and promote native flora
- d. Application Dates and Times (Local): See attachment 1
- e. Acres Treated: 2,711
- f. Flying Data:
  - (1) Spray Sorties/Hours: 10 sorties; 8.2 hours
  - (2) Ferry Sorties/Hours:
    - (a) Spray aircraft 99103: 4 ferries; 12.6 hours (2 ferries for LOX from BOI)
    - (b) Support aircraft: 4 ferries; 22.3 hours
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) (b) (6) - (b) (6) Natural Resource Manager, (b) (6)
- h. Date Spray Map Last Approved: 6 August 2015
- i. Installation In-Briefing: (When/ Briefer/s): Maj (b) (6) and (b) (6), 13 Sep 2016 (informal)
- j. Mission Identifier: QENRK3531256

**3. OPERATIONAL:**

- a. **Mission Commander:** Maj (b) (6) (12-17), Lt Col (b) (6) (18-23)
- b. **Aircrew:**
  - (1) Pilots: Maj (b) (6), Lt Col (b) (6) (12-16), Maj (b) (6) (17-23)
  - (2) Navigator: Maj (b) (6)
  - (3) Flight Engineers: SMSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6), CMSgt (b) (6) (12-17), TSgt (b) (6) (b) (6) (17-23)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (lead), MSgt (b) (6), TSgt (b) (6) (b) (6) SSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6), SSgt (b) (6)
  - (3) Hydro/Prop/EE/Avi/Com/ARMS/Age: SMSgt (b) (6), MSgt (b) (6) (b) (6) MSgt (b) (6), MSgt (b) (6), SSgt (b) (6), SSgt (b) (6), SSgt (b) (6), TSgt (b) (6), TSgt (b) (6) (b) (6) TSgt (b) (6), TSgt (b) (6)
- d. **Entomologists:** Maj (b) (6), Maj (b) (6) (b) (6)

**4. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Panoramic® 2SL and Plateau® (23% AI, imazapic ammonium); (Plateau® used until stores were depleted; Panoramic® used primarily for the mission)
- b. EPA Registration Number: Panoramic® 2SL: 81927-19, Plateau®: 241-365
- c. Gallons Pesticide Loaded: See attachment 1
- d. Gallons Pesticide Applied: See attachment 1
- e. Gallons and Name Diluent Used: See attachment 1 (total spray – gallons of pesticide = gallons water)
- f. Other Additives Used: 1 gallon Control per sortie; 3.6 quarts of Clasp® per sortie

**g.** Application Rate: 6.33 gal/acre (3.5 oz/acre AI)

**APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99103
- b. Spray System (Modules Used) and System ID #: SP-3G MASS 3
- c. Nozzle Type/Orientation: Raindrop/Straight back
- d. Number of Nozzles: 18 Total; 9 left, 9 right
- e. Pressure: 40 p.s.i.
- f. Flow Rate: 295 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: Weather dependent. No off-set when flown into the wind
- c. Spray Release Altitude: 100' (150' on 23 Sep)
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** See attachment 3

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

**a. Deposition Pattern:**

- (1) Techniques Used: Visual observation from PMP on range
- (2) Results: See remarks

**b. Effectiveness**

- (1) Techniques Used: Vegetation measurement, visual observations
- (2) Results: Will be determined in the spring of 2017

**8. REMARKS:**

This mission continues the mitigation of the invasive weed, cheat grass, in order to suppress range fires and promote the reestablishment of healthy native flora, particularly native bunch grasses and sagebrush.

The majority of the sorties were flown with a headwind or tailwind with less than a 45% crosswind component and all applications were observed from the target by a certified applicator, verifying proper deposition. It is of note that on 13 September only one sortie was completed and spray could not be accomplished on 14 September due to a mechanical malfunction that had to be repaired. No application was completed on 19 September per orders from 910 AW chain of command. Additionally, due to fog and a low cloud ceiling, no application was conducted on 22 September. A final sortie was completed on 23 September, but this left a small area of the spray block untreated, which can be seen in attachment 2. Efficacy of the 2016 application of Plateau®/Panoramic® will be determined by Mountain Home AFB Office of Natural Resources during the spring season 2017.

MUO Airfield operations, fire department, POL, RAPCON, and TA support was outstanding during the entire mission. This continues to be an excellent training/real world mission and we would like to thank the personnel at Mountain Home AFB for the excellent support we received.

- (3) Avionics: MSgt (b) (6)

**c. Entomologists:** Lt Col (b) (6) Lt Col (b) (6) (b) (6)

**d. Mission Commander:** Lt Col (b) (6)

**3. Spray Configuration:**

- a. Mass:** #1 SP-2G (2-Module System)
- b. Booms:** Stainless steel fuselage ULV booms, LV configuration
- c. Nozzles:** size = 8020 TeeJet; 26 open oriented straight down.
- d. Differential GPS:** Wingman installed
- e. Aircraft:** 90-9103
- f. Mission Identifier:** QENRK3532342

**4. Spray Parameters:**

- a. Pesticide:** VectoBac® WDG (*Bacillus thuringiensis israelensis*)  
EPA Reg. No. 73049-56, Biological larvicide  
Signal Word: Caution  
Amount of Pesticide Used: 100 lbs of VectoBac® WDG  
Adjuvant: FD&C Red #40 Granular Dye (2% by Weight)  
Flushing Agent: Water, then air purge

- b. **Application:** 0.25 Gallons per acre target rate
- c. **Spray Altitude:** Variable; 100, 150, and 200 feet AGL (attachment 1)
- d. **Swath Width:** 500 feet
- e. **Ground Speed:** 200 knots
- f. **Acreage:** 201 acres
- g. **Spray-On Time:** 52 sec
- h. **Flow Rate:** 58 gallons/minute

**5. Sequence of events:**

- a. **8 Dec (Tuesday)**  
1340 Depart KYNG  
1640 Land KNRB
- b. **9 Dec (Wednesday)**  
1000 Site set-up by entomologists  
1530 Load VectoBac<sup>®</sup>; calibrated flow rate with 8020 nozzles
- c. **10 Dec (Thursday)**  
0700 Show KNRB and weather decision  
0845 Depart KNRB  
1200 Land KNRB
- d. **11 Dec (Friday)**  
0730 Show KNRB  
1000 Depart KNRB  
1230 Land KYNG

**6. Operational Details:**

- a. **Flying Data:**
  - (1) Spray Sorties/hours: 1/3
  - (2) Ferry Sorties/hours: 3/6
- b. **Pesticide Applied:**
  - (1) 50.2 gal (10 December) covering 201 acres
  - (2) Applications conformed to label; maximum label rate was not exceeded.

**7. Comments:** This testing seeks to determine the feasibility of using a Modular Aerial Spray System (MASS) equipped C-130 for the application of VectoBac<sup>®</sup> WDG to control immature mosquitoes over large areas. The product examined contains the active ingredient, *Bacillus thuringiensis israelensis* (Bti), which is a species of bacterium that is highly specific to insects; as a result, negative impacts on non-target species are highly limited with its use. Additionally, this product does not persist in the environment and is of extremely low risk for use in water.

Dengue and chikungunya virus continue to be a public health threat to Americans as cases of these mosquito-borne illnesses are occurring in large numbers in the Caribbean and Central America. Additionally, these illnesses can impact our deployed warfighters in such locations

as Africa and Asia. With these concerns in mind, trials at Camp Blanding looked at applying Bti as an ultra-low-volume larvicide to impact container breeding mosquitoes with an emphasis on *Aedes aegypti* and *Ae. albopictus*. We mixed the VectoBac® at a 20% by weight solution and sprayed with 8020 flat fan nozzles attempting to produce a droplet size of approximately 100 microns and a swath width of 500 ft. Dyed material was collected using kromekote cards and empty containers collected drops that will be rinsed at a contracted laboratory to determine larval mortality via bioassay trials.

VectoBac® WDG mixed well in the MASS with a small amount of clumping seen during mixing and an equal amount of clumped material left in the bottom of the tank after spraying. Valent BioSciences suggested the use of a Venturi inductor to promote mixing but the small amount of material needed for this mission and the lack of a water source led us to mix by hand. However, for a large-scale contingency mission, the use of external mixing containers would be imperative and should involve a Venturi inductor. Additional pesticides and/or formulations may be examined in future evaluations.

Reasonable spray conditions were present on the Weinburg Drop Zone on the test day, although very little air movement was encountered at release altitude (Attachment 1). This application needed 3-5 knots of wind to create the 500 ft swath for each pass with a relative humidity as high as 81% when operations began. Later, the RH dropped to below 60% (Attachment 2). Attachment 3 details the path of the aircraft on the drop zone and Attachment 4 shows the general setup of the collection stations.

Preliminary results from observations of large drops on cards indicate a less than 500 ft swath. However, we are interested in the biological activity of small drops collected in the sample containers. Those data are still pending laboratory analysis.

This project represents a return to working with Valent BioSciences on larviciding techniques. Previous work was conducted at Cherry Point MCAS in August 2000. We thank the technical staff at Valent BioSciences ((b) (6) and (b) (6)), as well as (b) (6) and (b) (6) for their expertise in experimental design and droplet analysis. We hope to continue this work in an actual urban setting, perhaps in the Florida Keys or Cayman Island, UK where other aircraft have used this technique with some success. A special thanks to (b) (6), CPT (b) (6), and (b) (6) (b) (6) for their continued support of these tests and Camp Blanding. These individuals worked in a superior capacity to make sure these tests were a success!

Attachment 1. Data recorded during the evaluations from the spray aircraft (10 Dec 2015). Winds aloft were light.

Pass #	Time	Release height (ft)	Flt line	Spray-on time (s)	Wind direction (degrees)	Wind speed (kts)
1	0906	150	305	8	049	1
2	0929	200	305	12	210	1.5
3	0955	150	305	12	150	1
4	1017	100	305	12	255	1
5	1042	150	215	8	088	1

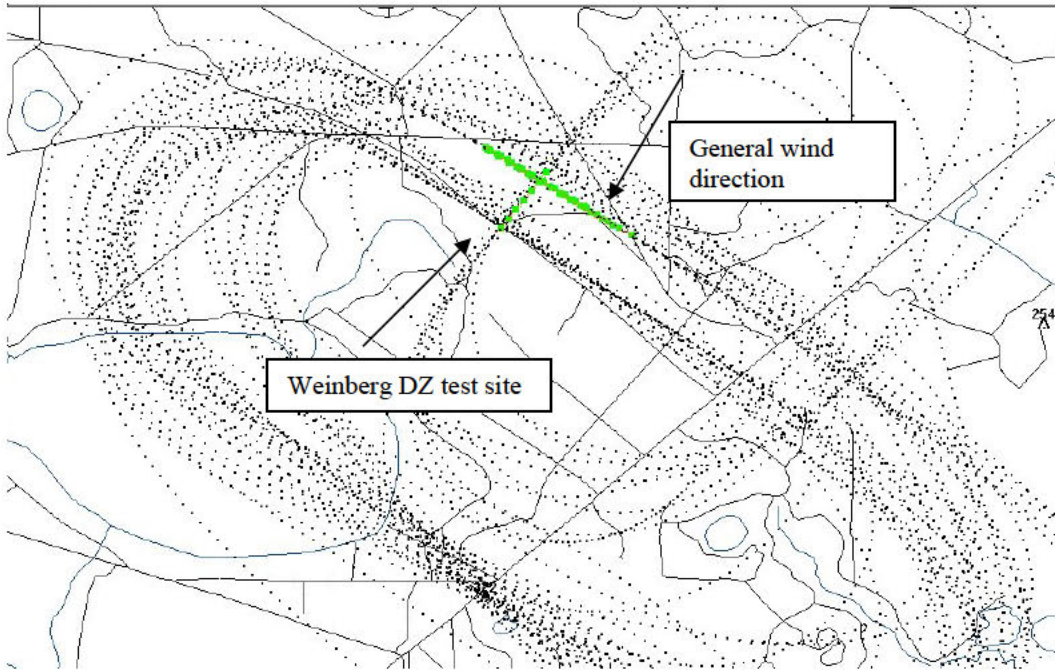

Attachment 2. Ground observations of meteorological data recorded during the evaluations (10 Dec 2015).

Date: December-10-15

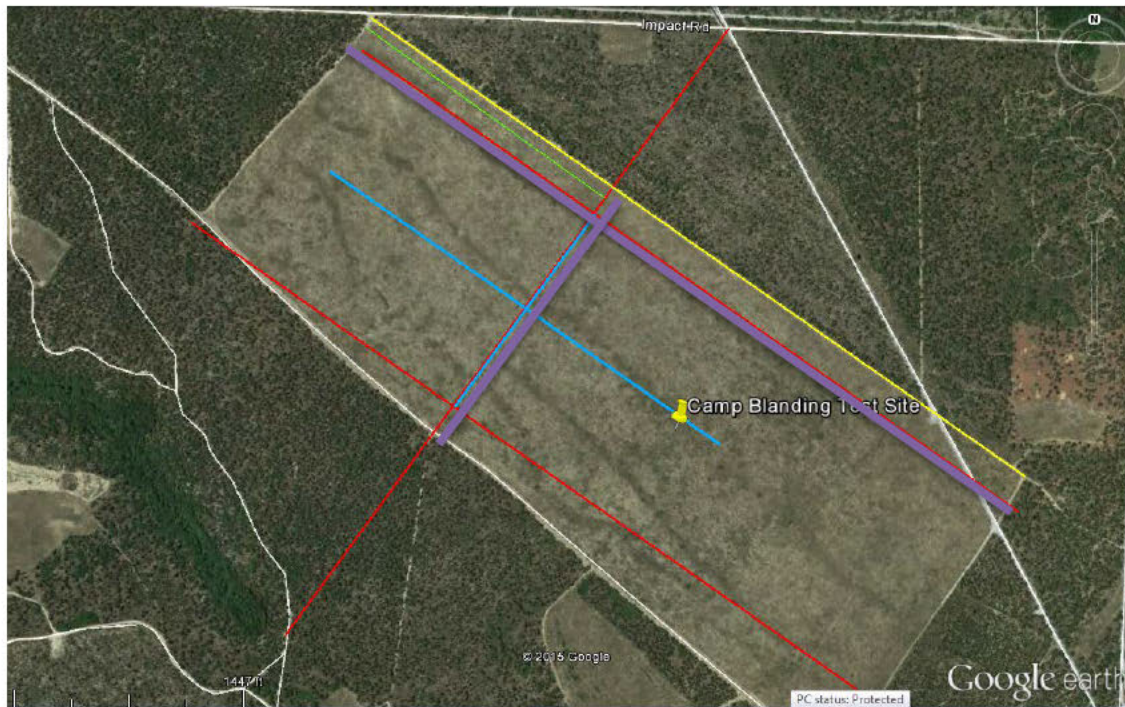

Trial	Time	Ht	Flt Line	Spray Trial	Ground Met			
				Comments	Ta(F)	RH	Wind(kt)	Drn
	8:30				58	81	2	30+-
1	9:07	150	305	sprayed water until sample line, then dye afterwards....trial scrubbed				
	9:24				65	63	3.4	30+-
2	9:29	200	305	flew over -100ft...dye OK				
	9:48				68	60	2.6	30+-
3	9:54	150	305	flew over -50ft...winds shifted southerly after pass				
	10:10				69	57	2.5	30+-
4	10:17	100	305					
5	10:40	150	215	flew with wind...winds had southerly tendency				

Attachment 3. Flight patterns recorded on 10 Dec 2015. Green dots represent the path of the aircraft while spraying occurred. Black dots are the path of the aircraft.

Attachment 4. Area of Weinberg Drop Zone where testing was conducted. Blue lines represent placement of card lines and bioassay jars. Purple lines represent the approximate flight path of the aircraft while spraying occurred.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead : MSgt. (b) (6) , 31 May-10 June Minot AFB, ND

**Aircraft Tail Number:** 9105 & 9108

**MASS Number:** MASS-3 & 5

**Configuration:** Fuselage

**Boom & Nozzle Type:** Fuselage,  
Raindrop

**Chemical in Main Tank:** VectobaBac  
12AS

**Chemical in Flush Tank:** H2O

**Total Chemical Loads:** 17

**Total Flush Loads:** 16

**Amount of Liquid Waste Generated:**  
0gal

**Amount of Solid Waste Generated:**  
100LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

Training was not accomplish from a maintenance standpoint

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Flushing at the end of the day helped in keeping the tanks clean after each day of spraying and will in turn make home station cleanup of the system a lot easier.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

Although we had a minor off ACFT incident which was classified as a leak, and it got handled properly, some areas could use some attention. See item 9 for details of incident.

**4. How was host base and TA support? Please include details.**

T.A. got all equipment needed in a timely manner. Had no problems at all. Had to go to the active duty phase doc to borrow a borescope. The let us use it along with a SSgt. A big thanks goes out to them for the help.

**5. Where there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

**6. No issues with the chemical or chemical load**

## **7. Where there any notable observations from a maintenance perspective inflight?**

On one of the 1st end of day flush runs, the loads flushed the tanks but did not spray out what they flushed. Not that big of a deal but not the practice we want to happen. If you flush, spray out what you flush, then purge.

## **8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination and communication was great. After each sortie Aircrew and I debriefed to ensure any problems were addressed and show times for the next day were also discussed. However, after the swap out, we had some loads informed us of a possible problem with the system and explained it to us. Come to find out the next day, the problem they described was completely different than what the actual problem was. This needs to be clear when conveyed and we need to know all of the information because if some information is left out, that could change a lot with the system and how Spray maintenance goes about fixing the problem. Both Mission Commanders did a awesome job communicating with me about any changes or needed information.

## **9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

On June 2 (Thursday) morning we (Aerial Spray Maintenance) were getting ready to load for the morning sorties. The chemical for the mission was on a flat bed trailer. In the process of getting ready to back the trailer to the ACFT for loading, we couldn't get the tractor trailer to start. We then called out mobile maintenance. Per their request, we were going to take the tractor trailer to MOPO to get looked at and swap it out with one of motorpools. After TSgt. (b) (6) put the landing gear down for the trailer and disconnected the air hoses, he then went to pull out. As soon as all of the weight was on the landing gear, the right side landing gear gave out and tilted the trailer which made one of the 250 gallon vats of VectoBac fall off the trailer and puncture causing a leak in two places. Noticing this, TSgt. (b) (6) stopped the tractor trailer and shut it off. TSgt. (b) (6) and TSgt. (b) (6) then exited the vehicle to assess what had just happened. Aerial Spray immediately got the spill kits out and contained the leak. We then tried to put some PIG PUTTY on the leaks which helped significantly. TSgt. (b) (6) then got in the fork lift to try and tilt the vat back to its upright position. Noticing that all of this is happening rather quickly, the loads from one of the ACFT came over to assist. This is the part that needs attention. Although their help is greatly appreciated, we are fully capable to handle these types of situations as it is our job. I had to tell them to please step back and let us handle it, which at that point I had everyone handling the leak (TSgt. (b) (6) TSgt. (b) (6) and Sra. (b) (6) stop what they were doing to go and get into PPE. After getting direction from Maj. Mundel as to the classification, it was decided that is would be classified as a LEAK and WAS NOT reportable. All we needed to do was to clean up the chemical as much as possible and then to wash off the area with the fire hose. As we were in the process of hosing off the concrete, the base fire chiefs along with their commander came out and wanted to know what was going on. He wasn't happy. After explaining what had happened and that we

were handling it according to proper procedures, he seemed to calm down but still wanted his Bio Env. to come out to make sure we were doing everything right. After they came out and in fact told him that we were handling it correctly, he then left. We then continued to finish cleaning up and then continued to go swap out the flatbed and tractor trailer to move the chemical vats over to. Once that was all done we had no problems the rest of the trip.

My suggestion would be to coordinate with motorpool to have a flatbed trailer with the tractor trailer for the two weeks we are there. CE's equipment isn't taken care of and is to blame for this incident. This is a way to make sure this doesn't happen again.

7 July 2016

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Grand Forks AFB, ND and JB Charleston SC.

1. Aerial spray deployment of one C-130 during 11-15 July 2016 in response to a requested aerial spray to control adult mosquitoes at Grand Forks AFB, ND and JB Charleston, SC. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of Grand Forks AFB and JB Charleston, SC. Operations will be conducted out of Grand Forks AFB, ND 11-13 July and redeploy to continue operations out of JB Charleston, SC from 13-15 July.

2. Concept of Operations: All times local

- a. 11 July (Monday)  
1700 Depart KYNG  
1900 Land KRDR
- b. 12 July (Tuesday)  
2130 Depart KRDR  
2230 Land KRDR
- c. 13 July (Wednesday)  
1200 Depart KRDR  
1600 Land KYNG  
1630 Depart KYNG  
1830 Land KCHS
- d. 14 July (Thursday)  
2000 Depart KCHS  
2200 Land KCHS
- e. 15 July (Friday)  
1100 Depart KCHS  
1300 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: Grand Forks AFB approximately 12,000 acres
- b. Altitude: 300 feet for NVG adulticide application
- c. Swath Width: 2,000 feet
- d. Air Speed: 200 KTS
- e. Application Rate: 1.0 oz/acre of Trumpet EC

- a. Area to be treated: JB Charleston approximately 18,000 acres
- b. Altitude: 300 feet for NVG adulticide application
- c. Swath Width: 2,000 feet
- d. Air Speed: 200 KTS
- e. Application Rate: 0.85 oz/acre of Trumpet EC

4. Maj (b) (6) will serve as the Mission Commander at Grand Forks AFB, ND. Maj. Jennifer Remmers will serve as the Mission Commander at JB Charleston, SC. Support required at both Grand Forks AFB, ND and JB Charleston, SC has been completed.

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations of Larvacide Application for Aerial Spray in and around the Army Corps of Engineers' property, Williston, ND.

1. Aerial spray deployment of two C130's to Minot, ND from 31 May-10 June 2016 for the requested larvacide spray in and around the Army Corps of Engineers' property near Williston, ND. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel working on the Army Corps' property, and by extension, the citizens of Williston. Mission objectives provide training for aerial spray aircrew, entomologists, and maintenance personnel in all aspects of the aerial spray mission.

2. Concept of Operations: All times local

- a. 31 May (Tuesday)
  - 1100 Depart KYNG (Support Aircraft)
  - 1200 Depart KYNG (Spray Aircraft 1)
  - 1215 Depart KYNG (Spray Aircraft 2)
  - 1330 Land KMIB (Support Aircraft)
  - 1430 Land KMIB (Spray Aircraft 1)
  - 1445 Land KMIB (Spray Aircraft 2)
  - 1500 Depart KMIB (Support Aircraft)
  - 1930 Land KYNG (Support Aircraft)
- b. 1-3 June (Wednesday-Friday)
  - 0600 Show KMIB
  - 0730 Depart KMIB
  - (Multiple 1.5 hr sorties each day depending on weather)
- c. 4 June (Saturday)
  - 0800 Depart KMOT(O/B support aircraft)
  - 1230 Land KYNG
  - 1330 Depart KYNG
  - 1800 Land KMOT
- d. 6-9 June (Monday-Thursday)
  - 0600 Show KMIB
  - 0730 Depart KMIB

(Multiple 1.5 hr sorties each day depending on weather)

- e. 10 June (Friday)  
0830 Depart KYNG (O/B support aircraft)  
1100 Land KMIB  
1200 Depart KMIB  
1630 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 10,000 acres
- b. Altitude: 100 ft for larvicide application
- c. Swath Width: 100 ft
- d. Groundspeed: 200 KIAS
- e. Flow Rate: 233 gals/min
- f. Application Rate: 5 gal/acre (water with 2.0 pints of Vectobac® + 0.45 oz of Poly Control 2)

4. Lt Col (b) (6) will serve as the Mission Commander. Support required at Minot AFB and Minot International Airport has been completed.

**PARRIS ISLAND MCRD, SC 2-5 May 2017**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island MCRD, SC
- b. Mission Duration: 2-5 May 2017
- c. Purpose of Application: Mosquito and biting midge (*Culicoides* spp.) control
- d. Application Date: 3 May 2017
- e. Time/s of Application (Zulu): 0025-0145 hrs (Zulu)
- f. Acres Treated: 5610 acres
- g. Project Coordinator: (b) (6) Environmental, DSN (b) (6)
- h. Date Spray Map Last Approved: 19 April 2017
- i. Date of Waste Generation Letter: 30 October 2007
- j. Installation In-Briefing: (When/Where/Briefer/s): Mr. (b) (6) and Ms. (b) (6) were briefed at NEARO 3 May 2017, by Lt Col (b) (6) and Maj (b) (6)

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6), Lt Col (b) (6)
  - (2) Navigators: Maj (b) (6), 1 Lt (b) (6)
  - (3) Flight Engineers: MSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6)(b) (6), MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (lead), MSgt (b) (6), MSgt (b) (6) (b) (6) TSgt (b) (6), TSgt (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6), SSgt (b) (6), SrA (b) (6)
  - (3) Avionics: MSgt (b) (6)
- d. **Entomologist:** Maj (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom® Concentrate
- b. EPA Registration Number: 5481-480
- c. Formulation Sprayed: Concentrate (87.4% AI naled)
- d. Gallons Pesticide Loaded: 41 Gallons Dibrom®
- e. Gallons Pesticide Applied: 41 Gallons Dibrom®
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 10 gallons HAN
- h. Other Additives Used: None
- i. Application Rate: 0.94 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 15 nozzles oriented straight down
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 3.3 gallons per minute
- h. Sorties: 1/1.8 hrs (application); 2/4.4 hrs (ferry)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: none
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 130@3 knots
  - (2) Release Altitude: 180@15 knots
- b. Temperature (Degrees Fahrenheit):
  - (1) Ground: 73°F
  - (2) Release Altitude: 75°F
- c. Cloud Cover: Broken
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations (Maj Remmers)
  - (2) Results: Adequate coverage through sprayed area
- b. Effectiveness:
  - (1) Technique/s Used: CDC light trap and gravid traps
  - (2) Results: Parris Island (3 locations)

Location	Trap Type	Pre-Spray (1 May)	Post-Spray (9 May)	% Reduction
Bldg 102	CDC	17 Females	0 Mosquitoes	99.9%
Crucible Aid Station	Gravid	1 Female 3 Males	0 Mosquitoes	99.9%
Golf Course	Gravid	1 Female	8 Females 4 Males	No reduction

8. **REMARKS:** The spray system was calibrated on the ground prior to pesticide application. Application proceeded without any significant problems, and no negative effect on wildlife was observed. An area of ¼ mile surrounding each of three eagles' nests was not treated. At the golf course a marginal increase in mosquito numbers was observed following the spray. This is likely due to the trap location coinciding with an untreated area (see attachment 1). Overall, however, results indicate that this application was effective. An inspection on the day following the spray found a hole in the rear oil transmitter on engine #1. Youngstown coordinated dropping off parts and a Mobile Repair Team. The aircraft was repaired that same day, allowing the spray team to return to Youngstown the following day. Excellent support by the 910 MX. Thanks to (b) (6) (b) (6) and (b) (6) (b) (6) as well as Parris Island MCRD PrevMed for facilitating these activities.

- a. Trade Name: Krovar® IDF
- b. EPA Registration Number: 352-505
- c. Formulation Sprayed: 10 lbs Krovar® per 22.5 gallons/acre application rate.
- d. Gallons Pesticide Mix Loaded: 31,690
- e. Gallons Pesticide Mix Applied: 31,690
- f. Formulation Used: 450 lbs Krovar®, 4.0 gal StaPut®, ½ gal Foam Fighter®, 200 ounces Hi-Light® Dye, remainder water per 1000 gal of spray mix.
- g. Krovar applied: 15,775 lbs
- h. Gallons and Name of Flush Used: 4,000 gal water
- i. Other Additives Used: 185 gal Clasp®; 92.5 gal Hi-Light® dye; 11 gal Foam-buster.

### 4. APPLICATION EQUIPMENT:

- a. Aircraft Tail Number: 99108, 99106, 99103 (1<sup>st</sup> week), 99105 (2<sup>nd</sup> week)
- b. Spray System (Modules Used) and System ID #: 3 and 5.
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 2 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 366 gallons per minute.

### 5. APPLICATION PARAMETERS:

- a. Swath Width Flown: 35'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. See Attachment 2.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: blue dye pattern on targets and observations from ground markers.
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring.
  - (2) Results: will be determined this spring by range personnel.

**8. REMARKS:** A wet spring, some areas receiving 200% greater than normal precipitation, made the prospect of successful aerial herbicide applications somewhat dubious in the weeks prior to this year's start date. Nonetheless, as the actual dates approached, the targets had dried enough to make the applications and, in fact, the moist soil on the targets should promote absorption of the herbicide and aid the herbicide's mode of action. In the end, this year's project had no weather cancellations. Krovar was again applied to control vegetation on Targets 21, 23, and 24. In addition, efficient flying created enough time to also send 2 sorties to NORD LZ and Target 22 (Attachment 3b). The flight paths of the aircraft are shown in Attachment 3a and b.

- a. This year's spray also included the "Aerial Spray Refresher" with an additional aircraft flown without a MASS for aircrew training on the UTTR. This procedure was successful for a variety of reasons including the benefit of moving trainees from no-release flights to actual sprays within short periods of time.
- b. Visitors from AMC and 22<sup>nd</sup> AF received familiarization with the spray mission, flew sorties, and provided constructive feedback.
- c. We received and conducted a survey of the new spray areas provided by 75CES Natural Resources for a potential fire suppression and habitat restoration mission. These blocks are appropriate for herbicide applications against cheat grass and should be conducted as a separate mission from the target treatments. A September or October timeframe is suggested for cheat grass control.
- d. Many thanks to the various agencies at Hill AFB supporting this mission: 75CES Pest Management, 75<sup>th</sup> Air Base Wing - Base Operations, and a special thanks to SMSgt (b) (6) (b) (6) (514 FLTS/DOC) for acting as our sponsor again this year.

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

**SUBJECT:** Capability and Concept of Operations for NVG (Night Vision Goggle) Aerial Spray at Langley AFB, VA.

1. One C-130 will deploy to Langley AFB, VA from 7-10 September 2017 in response to requested aerial sprays to control adult mosquitoes at Langley AFB and Craney Island Army Corps of Engineers in VA, and JB Charleston in SC. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of Langley AFB, Craney Island Army Corps of Engineers, and JB Charleston. Operations for this mission will be conducted from Langley AFB, VA.

2. Concept of Operations (All times are local)

- a. 7 September (Thursday)  
1600 – Depart KYNG  
1730 – Land KLFI
- b. 8 September (Friday)  
1530 – Depart KLFI  
1700 – Land KCHS  
1930 – Depart KCHS  
2200 – Land KCHS  
2215 – Depart KCHS  
2345 – Land KLFI
- c. 9 September (Saturday)  
1900 – Depart KLFI  
2200 – Land KLFI
- d. 10 September (Sunday)  
1200 – Depart KLFI  
1330 – Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 30,700 acres (18,000 JB Charleston; 12,700 Langley AFB/Craney Island)
  - b. Altitude: 300 feet for adulticide application
  - c. Swath Width: 2,000 feet
  - d. Groundspeed: 200 KIAS
  - e. Application Rate: .85 oz/acre of Trumpet EC (18,000 acres JB Charleston); .9 oz/acre of Dibrom (12,700 acres Langley AFB/Craney Island)
4. Maj (b) (6) will serve as the Mission Commander.
  5. Lt Col (b) (6) will be the Aircraft Commander.
  6. Required support at Langley AFB and JB Charleston has been coordinated.

\\Signed\\  
(b) (6), Major, USAF  
Chief of Aerial Spray

AERIAL SPRAY UNIT  
YOUNGSTOWN AIR RESERVE STATION**

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
NAF EL CENTRO, 14 – 18 AUGUST 2017**

**1. MISSION BASICS:**

- a. Installation: The mission operated from the Naval Air Facility, El Centro, CA
- b. Mission Duration: 14-18 August 2017
- c. Purpose of Application: Conduct an aerial insecticide efficacy evaluation in a high temperature, desert environment in partnership with USDA-CMAVE and U.S. Navy, using Aqua Zenivex™ E20 and Altosid® SR
- d. Application Dates: 15-16 August 2017
- e. Times of Application (Local):
  - (1) 15 August: 0916-1004, 1800-1848
  - (2) 16 August: 0900-0955, 1200-1245
- f. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) Range Complex  
Sustainment Coordinator, DSN (b) (6)
- g. Mission Identifier: QENRK3531226

**2. PARTICIPANTS:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) (A/C), Lt Col (b) (6)
  - (2) Navigator: Lt Col (b) (6)
  - (3) Flight Engineer: TSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6) MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: MSgt (b) (6) (Lead), MSgt (b) (6), TSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) TSgt (b) (6)
  - (3) Avionics: TSgt (b) (6)

**3. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-9105
- b. Spray System (Modules Used) and System ID #: SP2G, MASS #2
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8005 Tee Jet
- e. Nozzle Orientation & Number Used: 34 nozzles oriented straight down

**4. APPLICATION PARAMETERS:**

- a. Pesticides:

- (1) Aqua Zenivex™ E20  
Etofenprox 20%  
Signal Word: Warning
- (2) Altosid® SR  
(S)-Methoprene 20%  
Signal Word: Caution
- b. Application
  - (1) Trial 1: 0.59 oz/acre Aqua Zenivex™ E20 (sorties 1&2)
  - (2) Trial 2: 0.53 oz/acre Aqua Zenivex™ E20 + 1.0 oz/acre Altosid® SR
  - (3) Trial 3: 0.89 oz/acre Altosid® SR
- c. Swath Width Flown: 500'
- d. Spray Release Altitude: 150' AGL
- e. Ground Speed: 200 Knots (338 Feet/Second)
- f. Acreage: Single pass sprays
- g. Flow Rate:
  - (1) Trial 1: 18.2 GPM
  - (2) Trial 2: 19.8 GPM
  - (3) Trial 3: 18.0 GPM
- h. Gallons and Name of Flush Used: 200 gallons water

**5. SEQUENCE OF EVENTS (ALL TIMES LOCAL):**

- a. 14 August (Monday)  
0900 Show KYNG  
1105 Depart KYNG

1255 Land KNJK
- d. 17 August (Thursday)  
Applications complete, sorties cancelled; data processing; MASS cleaning
- e. 18 August (Friday)  
0600 Show  
0700 Depart KNJK  
1555 Arrive KYNG

**7. OPERATIONAL DETAILS:**

- a. Flying Data:
  - (1) Spray sorties/hours:  $1.0 + 1.0 + 1.6 + 1.0 = 4.6$
  - (2) Ferry sorties/hours: 3/14.6
- b. Pesticide Applied: spray mix = pesticide and water
  - (1) 37 gallons of spray mix (2.1 gal Aqua Zenivex™ E20) covering 465 acres (15 Aug)
  - (2) 50 gallons of spray mix (2.4 gal Aqua Zenivex™ E20 + 4.6 gal Altosid® SR) covering 584 acres (16 Aug)
  - (3) 30 gallons of spray mix (2.7 gal Altosid® SR) covering 391 acres (16 Aug)
- c. Environmental Conditions (wind direction/speed; temp) at spray altitude (150 ft):
  - (1) Sortie 1, 15 Aug  
Pass 1: 09:53:52L; 219-229°/18 knots; 89.8°F
  - (2) Sortie 2, 15 Aug  
Pass 1: 18:09:18L; 222-250°/31 knots; 93.2°F  
Pass 2: 18:19:15L; 221-226°/30 knots; 93.2°F  
Pass 3: 18:29:05L; 222-227°/29 knots; 93.2°F
  - (4) Sortie 3, 16 Aug  
Pass 1: 09:16:18L; 190-218°/5 knots; 84.2°F  
Pass 2: 09:25:57L; 176-230°/5 knots; 87.8°F  
Pass 3: 09:36:18L; 232-235°/4 knots; 91.4°F  
Pass 4: 09:46:17L; 164-248°/3 knots; 91.4°F  
Pass 5: 09:55:33L; 033-239°/2 knots; 91.4°F
  - (4) Sortie 4, 16 Aug  
Pass 1: 12:04:57L; 022-126°/1 knot; 95.0°F  
Pass 2: 12:14:35L; 086-118°/3 knots; 95.0°F  
Pass 3: 12:19:01L; 100-130°/2 knots; 95.0°F  
Pass 4: 12:23:59L; 105-110°/3 knots; 95.0°F

**COMMENTS:** These spray sorties were flown in support of the Deployed Warfighter Protection Program in conjunction with scientists from the Center for Medical and Veterinary Entomology (CMAVE) and the Navy Environmental and Preventive Medicine Unit 5 (NEPMU5). Specifically, we are interested in the efficacy of aerial pesticide applications against indoor-resting adult and larval mosquitoes in hot and arid environments (e.g., *Aedes aegypti*). Additionally, we are looking at the possibility of combining adulticide and larvicide pesticide products to potentially increase aerial spray capabilities. Naval Air Facility (NAF), El Centro and associated El Centro Bomb Range provide the perfect environment for these evaluations, with temperatures reaching above 100°F and sometimes as high as 114°F. These spray trials differed from work in 2015 by examining effects on both larval and adult mosquitoes, and by evaluating water-based products as opposed to oil-based products such as those tested previously. Attachment 1 shows the flight path of the C130 over the bomb range. Live caged mosquitoes served as bioassays to determine pesticide efficacy against adult mosquitoes. Cups were placed in the test area and, in the laboratory, will be used to measure efficacy against larval mosquitoes. The experimental setup is shown in Attachment 2, with a variety of tents deployed under the C130 while spraying. Both cups and caged mosquitoes were placed inside and outside of the tents. A detailed analysis of the project will be generated by USDA-CMAVE in the near future. Results and recommendations will be reported at scientific meetings and published in scientific journals. These measures will be utilized to better control disease vectors with the end goal of protecting the health of our deployed troops. We want to extend a special thank you to the staff of the Coachella Valley Mosquito and Vector Control District and NEPMU5 for their critical support of the project. In addition, we thank the NAF El Centro staff, in particular, Mr.

(b) (6) (b) (6) for their continued support of these trials. We hope to continue with aerial spray collaborations in FY18 with the USDA and the Navy.

1 April 2017

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Parris Island MCRD, SC and Kings Bay Naval Submarine Base, GA

1. Aerial spray deployment of one C-130 from 17-21 April 2017 to Beaufort MCAS, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards to recruits at Parris Island MCRD and to provide the same for members operating at Kings Bay Naval Submarine Base. NVG aerial spray sorties are conducted at 300' AGL.

2. Concept of Operations (All times are local):

- a. 17 Apr (Monday)  
1700 Depart KYNG  
1900 Land KCHS (RON due to KNBC field closed)
- b. 18 Apr (Tuesday)  
1200 Depart KCHS  
1230 Arrive KNBC  
1400 Brief at Parris Island and via phone for Kings Bay  
1630 Weather call/Calibration of MASS, Chemical Load/actual application planned for Submarine Base Kings Bay  
1845 Depart KNBC  
2220 Land KNBC
- c. 19 Apr (Wednesday)  
1630 Weather call/Calibration of MASS, Chemical Load/actual application planned for Parris Island MCRD  
1900 Depart KNBC  
2130 Land KNBC
- d. 20 Apr (Thursday)  
1630 Weather call/Calibration of MASS, Chemical Load/actual application planned for Parris Island MCRD  
1900 Depart KNBC  
2130 Land KNBC
- e. 21 Apr (Friday)

1000 Depart KNBC  
1200 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc.  
All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 7500 acres on Parris Island and 15,000 on Kings Bay.
  - b. Altitude: 300' AGL NVG operations
  - c. Swath Width: 1000-2,000 ft
  - d. Groundspeed: 200 KIAS
  - e. Application Rate: 0.75-1 oz/acre of Dibrom- an organophosphate insecticide
4. Lt Col (b) (6) (b) (6) will serve as the Mission Commander with Maj (b) (6) (b) (6) as the Aircraft Commander. Support at Parris Island MCRD and Beaufort MCAS has been completed.

19 October 2017

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Joint Base Charleston and Parris Island, SC

1. Aerial spray deployment of one C-130 from 22-27 October 2017 to Hill AFB, UT to train aerial spray aircrew, entomologists, and maintenance members to reduce the risk of range fires by controlling cheat grass (*Bromus tectorum*) and other invasive weed species while promoting reestablishment and success of native flora on the Utah Test and Training Range (UTTR).

2. Concept of Operations (All times are local):

- a. 22 October (Sunday)
  - 1200 Depart KYNG (Support aircraft)
  - 1215 Depart KYNG (Spray aircraft)
  - 1500 Land KHIF
  - 1515 Land KHIF
- b. 23-26 October (Monday-Thursday)
  - 0800 Depart KHIF for the UTTR
  - 1000 Land KHIF (planned two sorties per day)
- c. 27 October (Friday)
  - 0900 Depart KHIF
  - 1500 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

Locations:	Utah Test and Training Range (UTTR)
Acres:	1,448
Chemical:	Plateau (Herbicide)
Gallons loaded:	67
Flow Rate:	326 GPM
Application Rate:	7 gallons per acre
Flush:	Water
Altitude:	100'
Airspeed:	200 KTS
Swath Width:	100 feet
Nozzle/Orientation:	Raindrop
Number of Nozzles:	18

4. Lt Col (b) (6) will serve as the Mission Commander with Lt Col (b) (6) as the Aircraft Commander. Support at Hill AFB and the UTTR has been completed.

(b) (6), MAJOR, USAF  
Chief of Aerial Spray

**910 AW AERIAL SPRAY  
PMP'S POST-MISSION REPORT  
SMOKY HILL ANGR, KS 24-29 October 2016**

**1. MISSION BASICS:**

- a. **Installation Sprayed:** Smoky Hill ANGR, Salina KS
- b. **Mission Duration:** 24-29 October 2016
- c. **Purpose of Application:** Control of Musk Thistle (*Cardus nutans*) on Smoky Hill, ANGR.
- d. **Application Date/s:** 25-27 October 2016  
**Time/s of Application (Local):** See attachment 2
- e. **Acres Treated:** 1963 acres
- f. **Project Coordinator/s (Name/Rank, Title, Phone #):** (b) (6) , Aerial Spray Coordinator, Smoky Hill ANGR, DSN (b) (6)
- g. **Date Spray Map Last Approved:** 24 October 2016
- h. **Date of Waste Generation Letter:** N/A

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Certified PMP (Category 11):** Lt Col (b) (6) , Lt Col (b) (6)
- c. **Aircrew:**
  - (1) Aircraft Pilots: Lt Col (b) (6) , Major (b) (6)
  - (2) Navigators: Lt Col (b) (6)
  - (3) Flight Engineer: SMSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) , SMSgt (b) (6)
- d. **Safety Briefer:** Lt Col (b) (6)
- e. **Spray Maintenance/Pesticide Loaders:** SMSgt (b) (6) (Pro Super), MSgt (b) (6) (Lead), TSgt (b) (6) , TSgt (b) (6) , SrA (b) (6)
- f. **Spray Ground Monitors:** Lt Col (b) (6) (b) (6) Lt Col (b) (6)
- g. **Crew Chief(s):** TSgt (b) (6) (b) (6) TSgt (b) (6)
- h. **AGE:** SrA (b) (6)
- i. **Ele/Env:** TSgt (b) (6)
- j. **Prop:** TSgt (b) (6)
- k. **Com/Nav:** TSgt (b) (6)
- l. **Inst/Cntl:** TSgt (b) (6)
- m. **Flying Data:**
  - 1. Spray Sorties/Hours: 8 Actual + 1 Flush Sortie (5.3 hours spray-on time)

**3. PESTICIDE:**

- a. **Trade Name (% Active Ingredient):** Milestone®
- b. **EPA Registration Number:** 62719-6
- c. **Formulation Sprayed:** Milestone® mixed with water and AirexDC® Drift Control
- d. **Gallons Pesticide Loaded:** 76.2 Gallons Milestone Concentrate/ 38.1 Gallons AirexDC®
- e. **Gallons Pesticide Applied:** 76.2 Gallons Milestone Concentrate
- f. **Gallons and Name Diluent Used:** Approx. 13440 gallons water
- g. **Gallons and Name of Flush Used:** Approx 1800 gallons water
- h. **Other Additives Used:** 5 gallons of AirexDC® per load
- i. **Application Rate:** 6.85 gallons finish spray/acre

**4. APPLICATION EQUIPMENT:**

- a. **Aircraft Type (Tail Number):** 909104
- b. **Spray System (Modules Used) and System ID #:** 3-Module system
- c. **Spray System Configuration:** Fuselage Booms
- d. **Nozzle Type/Size:** R-20 Raindrop Nozzles
- e. **Nozzle Orientation & Number Used:** 18 Total, straight back
- f. **Pressure:** 50-55
- g. **Flow Rate:** 326 GPM

**5. APPLICATION PARAMETERS:**

- a. **Swath Width Flown:** 100'
- b. **Spray Off Set:** As needed
- c. **Spray Release Altitude:** 100' AGL
- d. **Ground Speed:** 200 Knots

**6. WEATHER OBSERVATIONS:**

- a. **Winds (Direction/Speed):**  
Ground: 170°@8 knots (25 Oct), 250°@6 knots (26 Oct), 310°@5 knots (26 Oct), 340°@8 knots (26 Oct), 210°@4 knots (27 Oct), 210°@5 knots (27 Oct), 210°@5 knots (27 Oct), 210°@5 knots (27 Oct)
- b. **Temperature Range During Application (°F):** 53°- 72°
- c. **Source:** Ground observations

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. **Deposition Pattern:**  
(1) Monitors observed/confirmed swath width from ground positions
- b. **Effectiveness:**  
(1) Technique/s Used: Visual field observations will be carried out in the spring by the Smoky Hill Staff. Good control is expected due to excellent coverage and application timing

**10. REMARKS:** Aerial herbicide operations were conducted in 2015 with excellent results. In 2016, the 757 AS returned to the Smoky Hill Bombing Range to continue spraying for Musk Thistle. Spray blocks for 2016 were concentrated on the Southern end of the Smoky Hill Range with one block on the Western edge. A total of 8 aerial spray sorties were conducted on the range, however the weather was generally uncooperative for efficient completion, with high winds (15-30 mph) prohibiting the 757 AS from completing all spray blocks. On the day of departure from Salina, one sortie was conducted to flush the spray system prior to leaving Smoky Hill Range. Range Management was very helpful with deconflicting airspace due to bomber and fighter training activities. Aircraft 104 and the MASS system operated well, without mechanical incident. The support aircraft broke down upon arrival in Salina and did not return to Youngstown for 2 days while awaiting parts for repairs. This mission was shortened by one week and approximately 46% of the acreage planned for aerial application was completed. As usual, we thank Smoky Hill Range Management for providing outstanding support and a great training opportunity for our airmen.

Total Reduction		98.8%		97.7%		41.0%

**REMARKS:** This application was the first adulticide spray mission conducted at Langley AFB and Craney Island Army Corps of Engineers during 2017. It was also the first-ever USAF night spray at these locations. Prior to application, the spray system was calibrated to ensure proper

flow rate. No significant problems were encountered during this application, and no negative effects were observed.

Overall, this aerial spray application had excellent results based on trap data. At Craney Island, trap data indicated approximately 98% mosquito population reduction in the north and central areas. However, in the southern area *Culiseta melanura* trap counts increased. The reason for this is uncertain. It is possible that the mosquitoes that were trapped were newly emerged and had not been exposed to the pesticide treatment. Additionally, each area had one single trap which may fail to give an overall picture of the effect on the area's mosquito population. It should be noted that trap numbers indicate that all other species were controlled in the south.

We sincerely appreciate the support received from all sections of Langley AFB and Craney Island Army Corps of Engineers. In particular, special thanks go to (b) (6) and (b) (6) for their coordination and their assistance during spray operations.

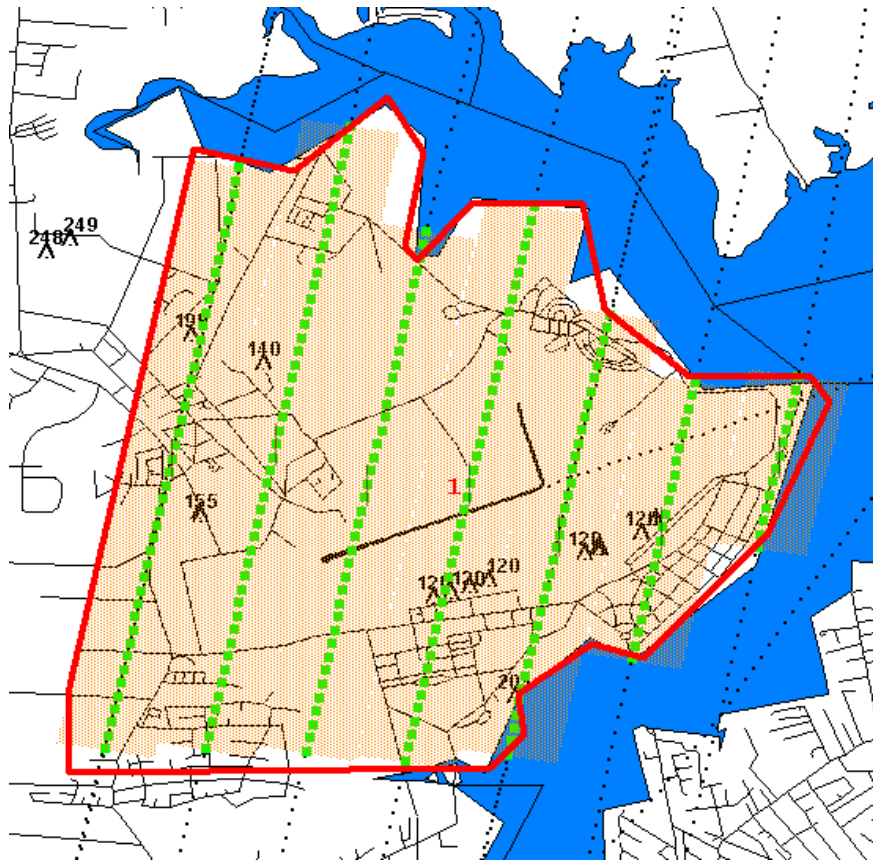

//signed//

(b) (6)

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

**SUBJECT:** Capability and Concept of Operations for NVG (Night Vision Goggle) Aerial Spray at Joint Base Charleston, SC.

1. One C-130 will deploy to JB Charleston from 7-10 September 2017 in response to a requested aerial spray to control adult mosquitoes at JB Charleston, SC. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of JB Charleston. Operations for this mission will be conducted from JB Charleston.

2. Concept of Operations (All times are local)

- a. 7 September (Thursday)  
1700 – Depart KYNG  
1900 – Land KCHS
- b. 8 September (Friday)  
1900 – Depart KCHS  
2200 – Land KCHS
- c. 9 September (Saturday)  
1900 – Depart KCHS  
2200 – Land KCHS
- d. 10 September (Sunday)  
1200 – Depart KCHS  
1400 – Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 18,000 acres
- b. Altitude: 300 feet for adulticide application
- c. Swath Width: 2,000 feet
- d. Groundspeed: 200 KIAS
- e. Application Rate: .85 oz/acre of Trumpet EC

4. Maj (b) (6) will serve as the Mission Commander.

5. Lt Col (b) (6) will be the Aircraft Commander.

6. Required support at JB Charleston has been coordinated.

01 October 2017

MEMORANDUM FOR 757AS/DO

FROM: 757AS/DOS (Lt Col Breidenbaugh)

SUBJECT: Pest Management Professional's Post Mission Report – Hurricane Harvey Support

**1. SUMMARY:**

On 8 September 2017, the 910<sup>th</sup> AW, the United States Air Force's (USAF) Aerial Spray Unit arrived in San Antonio, Texas to conduct large-area aerial spray night operations for mosquito control in support of the Federal Emergency Management Agency (FEMA) and Texas Department of State Health Services (DSHS) Hurricane Harvey relief effort. Two C-130 aircraft equipped with Modified Aerial Spray Systems (MASS) and three crews were initially placed at Joint Base Kelly, Kelly Annex, Texas and flew the first mosquito control aerial spray sortie on 9 September. On 12 September, an additional spray aircraft arrived with a fourth aircrew and beginning 13 September, three aircraft were available. A total of 92 personnel from the 910<sup>th</sup> Airlift Wing were involved with flying, entomology, maintenance, administrative support, communication support, and life support for this mission. The mission was complete on 21 September 2017 and the team returned to Youngstown ARS, Ohio on 23 September after treating a total of 2.7 million acres.

**2. BACKGROUND:**

Hurricane Harvey made landfall on 25 August 2017 between Port Aransas and Port O'Connor, Texas as a category 4 hurricane. The destructive nature of this hurricane was well-covered in the U.S. by the national news as the system slowed down over eastern Texas and caused catastrophic flooding.

**3. RESULTS:**

A total of 2,701,071 acres were treated with 14,570 gallons of Dibrom (Naled) during the 13 day period. Flying hours totalled 138.6 hours over the 28 sorties necessary to complete the mission. Additional details are documented in attachment 1. Attachment 2 shows the areas treated. Results of the spray were reported from local mosquito control personnel and were consistently above 90% reduction in mosquito counts for all areas sprayed. In many cases, 99% reductions in mosquito landing rates were recorded. Additionally, no negative environmental effects (i.e., honey bee mortality) were reported to DSHS or USAF.

**4. OPERATIONAL LOCATION:**

Kelly Annex was approximately an 1-hour ferry flight from most areas that were treated by the Air Force. While this distance was far from ideal, considering the additional flying time required to reach the spray areas, it was chosen as a base of operation because of the availability of ramp space and lodging. Closer and ostensibly more desired locations, such as Ellington Field did not have the ramp space or the hotel rooms to support the large footprint associated with the USAF spray operation. Joint Base Lackland and Kelly Annex support capabilities included: lodging, fuel, vehicles, physical working facilities, and maintenance support. The FSS commander was extremely supportive, as were all local staff members.

## 5. ENTOMOLOGICAL FACTORS:

a. Pesticide: Dibrom<sup>®</sup> Concentrate (EPA registration no. 5481-480) was the pesticide chosen by the DSHS. The Department of Defense (DoD) did not influence product choice and only served as the pesticide applicator. This product, which contains 87.4% naled, is widely used throughout the United States for adult mosquito control operations. It has a historical precedent for use following mosquito outbreak emergencies and has shown outstanding results when used for aerial spray with the MASS system. However, this product is extremely heavy which limited each pesticide load to 540 gallons. As such, spray time and acreage treated per sortie were limited.

b. Spray areas: All spray boundaries were established by the State Entomologist with advisement from CDC entomologists and, where appropriate, from Air Force entomologists. Priority areas included those without other means of mosquito control (damaged or compromised capability or those areas without organized mosquito control) and areas with high human populations densities and/or high mosquito biting pressure. Spray areas were received electronically in \*.shp file format from DSHS and transferred to the USAF Wingman GPS system. The Wingman system functions with geographical information systems (GIS) to ensure exact boundaries of areas treated.

c. Insect surveillance & efficacy: The effected areas were located at a distances that did not allow for Air Force entomology resources to conduct insect surveillance. Therefore, mosquito species and their densities had to be determined by local mosquito abatement districts (MADs). By the time these flights began, most local mosquito control operations had at least a skeleton staff back at work and were able to determine the areas within their responsibility that required mosquito control. Furthermore, MADs in the Houston area (e.g., Harris County MCD) as well as in Orange, Jefferson, etc. Counties were able to conduct landing rates before and after sprays. These are shown in Attachment 3a-b. Overall the results were impressive. In fact, the Harris County MCD Director, stated that he had only previously heard how effective large area mosquito control could be but now he had witnessed it first-hand.

d. Spray monitoring: All spray operations were directed by an onboard AF entomologist, certified through the DoD in EPA category 11 for aerial pesticide application. Texas recognized DoD pesticide applicator certification through a reciprocity agreement and confirmed such in writing (Attachment 4). Weather conditions were monitored throughout each flight and onboard spray operators verified adequate flow through visible observation.

e. Spray timing: Insecticide applications were conducted beginning at approximately sunset following a day-time aerial survey to identify potential obstacles or environmental considerations. Spraying was completed each night at approximately midnight. By timing pesticide application in this manner, non-target insects such as honeybees and butterflies are at significantly less risk for potential detrimental effects from the spray. Beekeepers were notified of the spray times for each area, and no negative feedback was received from them.

f. Spray configuration: Fueselage booms with stainless steel flat fan (Tee Jet) nozzles were used. For each aircraft 29 size 8003 nozzles were used with 40 psi pressure in the spray lines.

g. Pesticide application: A swath width of 2,500 feet was used for all applications. The amount of pesticide applied was determined by representatives from the state of Texas after consultation with Air Force and CDC entomologists. An application rate of 0.69 ounces per acre was used throughout the mission. All spray systems were calibrated on the ground at Kelly Annex prior to the onset of aerial spray activities.

h. Spray maintenance: Personnel from Spray Maintenance loaded and physically configured the aircraft on a daily basis. With almost 40 hours of spray-on time during this mission, the spray systems were used for more time during a two-week period than they are generally used over an entire year. Despite this extensive usage, the systems functioned well throughout the mission and only required upkeep and minimal repairs. There were no incidents of pesticide spills or personnel exposure, which can be largely attributed to the professionalism and attention to detail demonstrated by the Aerial Spray Maintenance Flight.

## 6. MAPS:

Combat Flight Planning Software (CFPS) was utilized to create charts for each day's insecticide application.

## 7. FLYING ACTIVITIES:

a. Developing a plan for unfamiliar areas: Throughout each year, the aerial spray flight conducts training missions throughout the United States. These missions are critical to crew preparation for operating in a variety of locations and conditions. All areas have hazards including towers, power lines, birds, and other aircraft. Multiple chart sources are utilized, but cannot be completely relied upon for hazard identification. As such, prior to each night sortie, thorough surveys were conducted during daylight to identify both charted and un-charted potential hazards. Any un-charted hazards were marked for reference. Additionally, during the spray flights an additional navigator served as a safety observer, watching for potential hazards using Night Vision Goggles.

b. Weather decisions: Spray operations depend upon adequate weather conditions. A light wind of approximately 3-8 knots in at least a 45 degree crosswind is most desirable. Prior to aircraft take-off, weather was evaluated each day. Additionally, weather was re-evaluated upon reaching each spray area and spray operations did not commence until the onboard pesticide applicator (entomologist) gave approval. Throughout each spray sortie, wind conditions at altitude were measured and documented. During this mission, weather conditions were excellent

on most nights (attachment 1). A total of four sorties were cancelled due to inclement weather, three of which were on the same night due to a large thunderstorm.

#### 8. PUBLIC AFFAIRS:

a. Public notification procedure: The responsibility for notifying the public about aerial spray operations was assumed at the state level and coordinated with FEMA. Sample new releases are included in attachments 3 and 4. A blanket statement which covers a given area for a given amount of time allows for the most flexibility in completing mission assignments.

b. Daily reports: The Mission Commander issued a situation report (SITREP) immediately upon completion of each evening's sorties. Additionally, a USAF entomologist was onsite in Austin, TX throughout the mission to serve as a liaison. Each evening, this entomologist collected the data related to the areas treated and reported this information to the Texas Department of Agriculture, FEMA, CDC, and military leadership.

c. New conferences and news articles: A 910<sup>th</sup> Public Affairs representative was onsite at Kelly Annex to coordinate requests from news agencies for information concerning military mosquito sprays. The representative provided a "talking points" document for all personnel involved in the mission and organized a media day that allowed new agencies to report USAF operations.

#### 9. LESSONS LEARNED:

a. Many of the 910<sup>th</sup> AW personnel have previously been involved responding with FEMA to control insects after hurricanes. However, the field is constantly changing and each geographical location yields new challenges. Operation from Lackland Annex was an excellent location from a maintenance and lodging perspective. Being well-outside of the area of impact, the group was free of the issues associated with competing with displaced persons for hotel rooms and ramp space with other responding aircraft. Nonetheless, the distance that Air Force aircraft flew into the "area of operations" was significant and impacted the fitness of the crews when sorties were over 5 hours. The distance also eliminated the option of making a second sortie in a given night. Therefore, the option to work at a location closer to the treatment areas is worth giving a few hours of study, prior to making the easy decision to move farther afield to a location without constraints. Of course, time is of the essence when responding to an emergency but taking a good long look at the options on the front side can relieve hundreds of hours ferrying material into the area. In this case, Elliot Ellington Field was the most likely option but lodging was not immediately identified and ramp space had reached a "maximum on ground – mogged out", thus the decision was made to locate elsewhere. However, the research may not have been as thorough as may have been justified, given the ferry distance to the spray areas. One other factor was that application areas had not been assigned at the time the question of operation location needed a decision. It follows then that insuring that the host state handing out the assignments understands that the response efforts will be impacted by the assignments is another important factor in these decision-making processes. Sending an aerial spray liaison to work with the State Health Department and the military proved to be an important aspect of the smooth running of the operation.

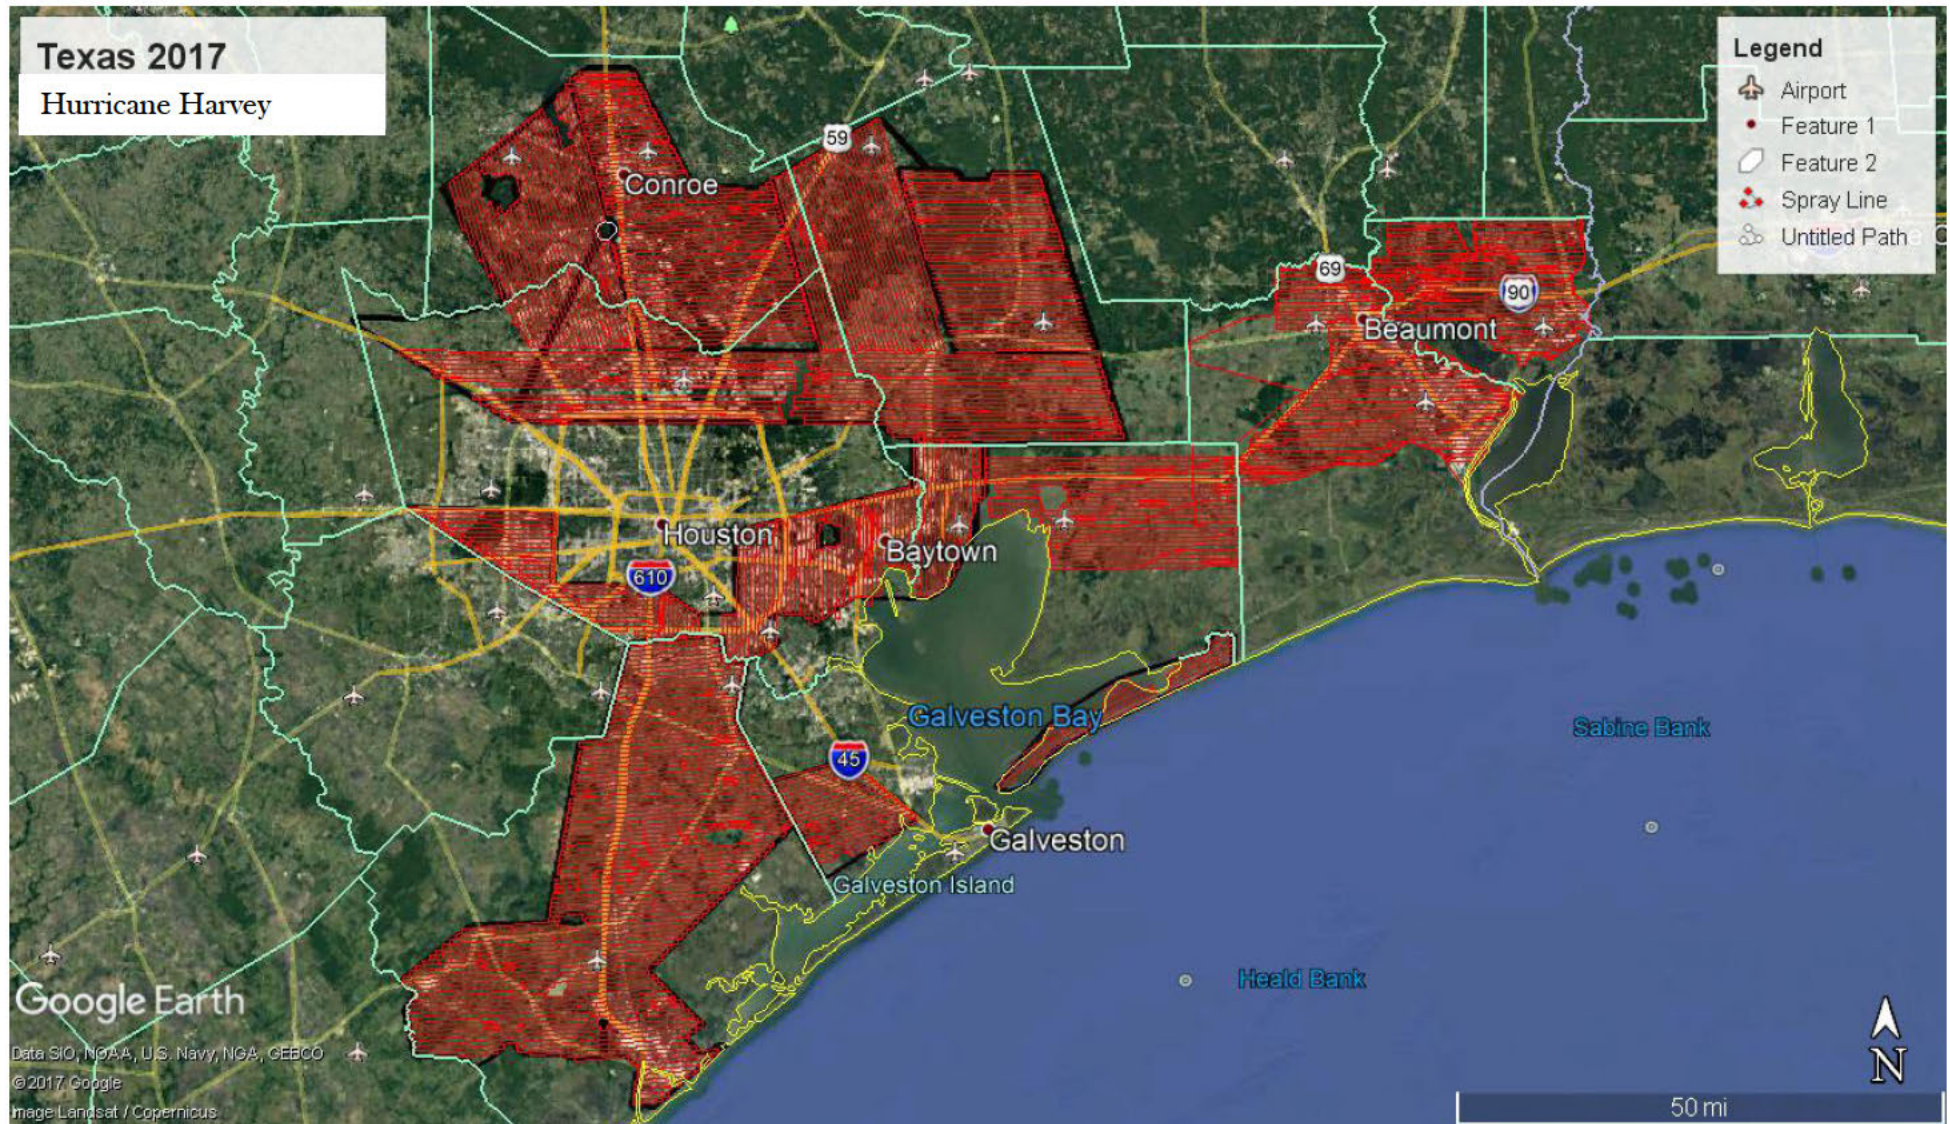

10. ACKNOWLEDGEMENTS:

a. The Air Force Aerial Spray Unit would like to thank Lackland AFB and Kelly Annex personnel for being such gracious hosts. The hanger and base operations physical work areas were superior in function and directly supported our operational success. Key players working issues with the “one team” approach included but are not limited to: DCE staffers Mr. (b) (6) LTC (b) (6) and Maj (b) (6) FEMA: Mr. (b) (6) Mr. (b) (6) and Ms. (b) (6) Texas DSHS Vector Control Task Force: Ms. (b) (6) Dr. (b) (6) Ms. (b) (6) and the State Medical Entomologist, Dr. (b) (6) CDC: Dr. (b) (6) Finally, a letter of thanks from the Texas DSHS to the 910<sup>th</sup> AW Commander was received and appreciated (attachment X).

Re: TDA Reciprocity Authorization: TDA Pesticide Licensure Certification  
Reciprocity for Department of Defense Pesticide Certificate Holders Providing  
Aerial Pesticide Support of DR-4332-TX

Dear Lt Col (b) (6) Air Force Reserve Command Entomologist:

The purpose of this letter is to provide pesticide applicator licensure certification reciprocity to qualified United States Department of Defense (DoD) personnel to purchase or acquire and to use and supervise the use of restricted use pesticides and state-limited-use pesticides for Aerial Application and Vector Pest Control in all eligible communities in the State of Texas identified in the United States Federal Emergency Management Agency (FEMA) disaster declaration for the Texas Hurricane Harvey, DR-4332-TX, declared on August 25, 2017, and for all subsequent declarations and continuations of said disaster declaration. The State of Texas has established a public health concern exists due to the extraordinary amount of rainfall that fell as a result of Hurricane Harvey, which has increased levels of standing water and has resulted in a significant increase in the mosquito population in the affected communities.

The Texas Department of Agriculture is authorized by law to grant licensure certification reciprocity with a federal agency. Accordingly, TDA is granting licensure certification reciprocity to any DoD personnel holding a valid DoD certificate permitting the purchase and use of restricted use pesticides and state-limited-use pesticides and any so qualified DoD personnel shall be considered certified by TDA for the purpose of purchasing or acquiring, using or supervising the use of, restricted use or state-limited-use pesticides for Aerial Application and Vector Pest Control in all eligible communities identified in DR-4332-TX, including all subsequent declarations and continuations thereof.

The Texas Department of Agriculture is the lead agency in the regulation of pesticide use, application, inspection and enforcement in Texas. For compliance assurance, TDA is requesting DoD to provide TDA a copy of the valid DoD certificate(s) for any DoD personnel relying on this TDA Reciprocity Authorization letter.

TDA Reciprocity Authorization, pg. 1

Pursuant to the Memorandum of Agreement between the Texas Department of Agriculture and The Department of Defense, executed May 5, 1986, and remaining in effect, TDA may enter DoD premises as mutually arranged:

- (1) To inspect any equipment used in the application of the restricted use pesticides or state-limited-use pesticides, and to inspect the immediate premises on which that equipment is stored;
- (2) To inspect or sample land exposed or reported to be exposed to restricted use pesticides or state-limited-use pesticides.
- (3) To inspect or areas where restricted use pesticides or state-limited-use pesticides are disposed or stored Inspect or sample land exposed or reported to be exposed to restricted use pesticides or state-limited-use pesticides; and
- (4) Observe the use and application of restricted use or state-limited use pesticides.

This TDA Reciprocity Authorization terminates upon the expiration of DR-4332-TX, and shall remain in effect until so terminated.

Very Truly Yours,

  
Mr. Jason Fearnleyhough  
Deputy Commissioner

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Aerial application of insecticide to control populations of adult nuisance and disease carrying mosquitoes at Langley AFB and Craney Island Army Corps of Engineers, VA.

1. Aerial spray deployment of one C-130 to Langley AFB, VA. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of Langley AFB. Operations will be conducted out of Langley AFB, VA.

2. Concept of Operations: All times local

- a. 28 August (Monday)  
1700 Depart KYNG  
1815 Land KLFI
- b. 29-30 August (Tuesday-Wednesday)  
2015 Depart KLFI  
2230 Land KLFI
- c. 31 Aug (Thursday)  
1200 Depart KLFI  
1315 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Location: Langley AFB and Craney Island, VA
- b. Altitude: 300ft AGL for NVG adulticide application
- c. Swath Width: 2,000 feet
- d. Airspeed: 200 KTS
- e. Application Rate: 0.9 oz/acre Dibrom

4. Lt Col **(b) (6)** will serve as the Mission Commander. Support required at Langley AFB, VA is completed.

\\SIGNED\\

MEMORANDUM FOR 757 AS/DO

30 January 2017

FROM: 757 AS/DOS

**SUBJECT:** Post-mission report Camp Blanding Joint Training Center Spray Trials with Valent BioSciences Corporation 23-27 January 2017.

**1. Purpose:** Aerial pesticide efficacy evaluation in partnership with Valent BioSciences Corporation using VectoBac<sup>®</sup> WDG at Weinberg Drop Zone, Camp Blanding Joint Training Center, Florida. The test aimed to evaluate the functional swath width for this technique of ULV larviciding. These methods are the same that would be employed to control Zika virus vectors.

**2. Participants:**

**a. Aircrew:**

- (1) Pilots: Lt Col (b) (6), Lt Col (b) (6), Col (b) (6)(b) (6)
- (2) Navigator: Lt Col (b) (6)
- (3) Flight Engineer: SMSgt (b) (6)
- (4) Spray Operators: SMSgt (b) (6), MSgt (b) (6), MSgt (b) (6), TSgt (b) (6)

**b. Maintenance:**

- (1) Spray Maintenance: MSgt (b) (6), TSgt (b) (6), TSgt (b) (6), SSgt (b) (6)
- (2) Crew Chiefs: MSgt (b) (6), SSgt (b) (6)
- (3) Avionics: MSgt (b) (6)

**c. Entomologists:** Lt Col (b) (6), Lt Col (b) (6), Lt Col (b) (6)  
(b) (6) Maj (b) (6), Maj (b) (6)

**d. Mission Commander:** Major (b) (6)

**3. Spray Configuration:**

- a. Mass:** #1 SP-2G (2-Module System)
- b. Booms:** Wing Booms (full set) and Stainless steel fuselage ULV booms, LV configuration
- c. Nozzles:** size = 8020 TeeJet; 28 open oriented straight down. 8 each side wing booms, 6 each side fuselage booms
- d. Differential GPS:** Wingman installed
- e. Aircraft:** 90-9106
- f. Mission Identifier:** QENRK3531022

**4. Spray Parameters:**

- a. Pesticide:** VectoBac<sup>®</sup> WDG (*Bacillus thuringiensis israelensis*)  
EPA Reg. No. 73049-56, Biological larvicide  
Signal Word: Caution  
Amount of Pesticide Used: 100 lbs of VectoBac<sup>®</sup> WDG  
Adjuvant: FD&C Red #40 Granular Dye (2% by Weight)

Flushing Agent: Water, then air purge

- b. **Application:** 0.24 Gallons per acre target rate (finish spray)
- c. **Spray Altitude:** Variable; 100, 200, and 300 feet AGL (attachment 1)
- d. **Swath Width:** 500 feet nominal
- e. **Ground Speed:** 200 knots
- f. **Acreage:** 286 acres
- g. **Spray-On Time:** 74 seconds before purge
- h. **Flow Rate:** 58 gallons/minute

## 5. Operational Details:

- a. **Flying Data:**
  - (1) Spray Sorties/hours: 2/6.4
  - (2) Ferry Sorties/hours: 2/5.0
- b. **Pesticide Applied:**
  - (1) 71 gal (25 Jan) covering 286 acres
  - (2) Applications conformed to label; maximum label rate was not exceeded.

**6. Comments:** This testing seeks to determine the feasibility of using a C-130 equipped with the Modular Aerial Spray System (MASS) using wing and fuselage booms for the application of VectoBac<sup>®</sup> WDG to control immature mosquitoes over large areas with increased swath widths over traditional methods. The product examined contains the active ingredient, *Bacillus thuringiensis israelensis* (Bti), which is a species of bacterium that produces an endotoxin that is highly specific to insects; as a result, negative impacts on non-target species are highly limited with its use. Additionally, this product does not persist in the environment and is of extremely low to no risk for use in water.

Zika, dengue and Chikungunya virus continue to be a public health threat to Americans as cases of these mosquito-borne illnesses are occurring in large numbers in the Caribbean and Central America, to date, 220 cases of Zika have been acquired on the US mainland and 4,752 travel-associated cases. These illnesses can impact our deployed warfighters in such locations as Africa and Asia. With these concerns in mind, trials at Camp Blanding looked at applying Bti as an ultra-low-volume larvicide to impact container breeding mosquitoes with an emphasis on *Aedes aegypti* and *Ae. albopictus*. We mixed the VectoBac<sup>®</sup> at a 20% by weight solution and sprayed with 8020 flat fan nozzles attempting to produce a droplet size of approximately 100 microns and an effective swath width of 500 ft or greater. Dyed material was collected using kromekote cards and empty containers collected drops that will be rinsed at a contracted laboratory to determine larval mortality via bioassay trials.

VectoBac<sup>®</sup> WDG mixed well in the MASS with a small amount of clumping seen during mixing and an equal amount of clumped material left in the bottom of the tank after spraying. Valent BioSciences suggested the use of a Venturi inductor to promote mixing but the small amount of material needed for this mission and the lack of a water source led us to mix by hand. However, for a large-scale contingency mission, the use of external mixing containers would be imperative and should involve a Venturi inductor. Additional pesticides and/or formulations may be examined in future evaluations.

Reasonable spray conditions were present on the Weinburg Drop Zone on the test day, with moderate crosswinds at altitude facilitating downrange movement of material (Attachment 1). Attachment 2 details the path of the aircraft over the drop zone.

Preliminary results from observations of large drops on cards indicate a greater than 500'

swath width, though as stated previously, additional laboratory bioassays will be conducted to confirm effective swath.

This project represents a return to working with Valent BioSciences on larviciding techniques. We thank the technical staff at Valent BioSciences (b) (6) and (b) (6) (b) (6) as well as (b) (6) and (b) (6), of REMSPC, for their expertise in experimental design and droplet analysis. We hope to continue this work in an actual urban setting, where other aircraft have used this technique with some success. A special thanks to (b) (6) (b) (6) and CPT (b) (6) for their continued support of these tests at Camp Blanding. These individuals worked in a superior capacity to make sure these tests were a success!

//signed//

**MEMORANDUM FOR HQ AFRC/A3O**

**FROM:** 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

**SUBJECT:** Concept of Operations of Larvacide Application for Aerial Spray in and around the Army Corps of Engineers' property, Williston, ND.

1. Aerial spray deployment of one C130 to Minot, ND from 12 June-21 June 2017 for the requested larvacide spray in and around the Army Corps of Engineers' property near Williston, ND. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel working on the Army Corps' property, and by extension, the citizens of Williston. Mission objectives provide training for aerial spray aircrew, entomologists, and maintenance personnel in all aspects of the aerial spray mission.

2. Concept of Operations: All times local

- a. 12 June (Monday)
  - 1200 Depart KYNG (Support Aircraft)
  - 1200 Depart KYNG (Spray Aircraft)
  - 1430 Land KMIB (Support Aircraft)
  - 1430 Land KMIB (Spray Aircraft)
- b. 13-20 June (Tuesday-Tuesday)
  - 0530 Show KMIB
  - 0700 Depart KMIB
  - 0900 Land KMIB
  - (Multiple 2.0 hr sorties each day depending on weather)

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6)
- b. Certified PMP/s (Category 11): Lt Col (b) (6) (Spray Ground Monitor – Williston), Lt Col (b) (6)
- c. Aircrew:
  - 1) Pilots: Lt Col (b) (6) , Capt (b) (6)
  - 2) Navigators: Lt Col (b) (6)
  - 3) Flight Engineers: SMSgt (b) (6)
  - 4) Spray Operators: SMSgt (b) (6) , MSgt (b) (6) , SSgt (b) (6)
- d. Safety Briefer: Lt Col (b) (6)
- e. Spray Maintenance: MSgt (b) (6) (lead), MSgt (b) (6) , TSgt (b) (6) (b) (6) TSgt (b) (6)
- f. Crew Chiefs: TSgt (b) (6) , SSgt (b) (6) , SrA (b) (6)
- g. MX Specialists: SMSgt (b) (6) (MX Supervisor), MSgt (b) (6) , SSgt (b) (6) , SSgt (b) (6) , SSgt (b) (6) , SrA (b) (6) , SrA (b) (6)

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Vectobac 12AS (1200 ITU/mg)
- b. EPA Registration Number: 73049-38
- c. Gallons pesticide loaded: 679 gallons
- d. Gallons finished tank mix applied: 13,336
- e. Gallons and Name of Flush Used: 800 gallons of water flush
- f. Other Additives Used: PolyControl drift reduction agent: 3 gallons
- g. Application Rate: 5 gal per acre of water mixed with 32 oz/acre Vectobac 12AS®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99103
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 3-Module System/Fuselage Booms
- d. Nozzle Type/Size: R-20 Raindrop
- e. Nozzle Orientation & Number Used: 12 Straight back
- f. Pressure (PSI): 40 PSI
- g. Flow Rate: 232 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off Set: None
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. see attachment 3

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Three locations/populations were sampled pre- and posttreatment with following results:

Location	# dips	Pre-application/dip	Post-application/dip
Corps 1	5	10	0
Dike	5	4	0
Carp Trail	5	5	0
Corps Pond 6	5	1	0
The Delta	5	20	0

- b. Floating bioassay cages were used with field-collected larvae to estimate efficacy. Two tests were conducted with uncorrected mortality overall of 99.5%. On both days, environmental conditions were excellent for aerial sprays.

**8. REMARKS:** In the previous 2 years, the Air Force arrived in western North Dakota before much of the local mosquito habitat had been subjected to the annual river confluence flooding, and subsequently, there were few areas that needed control. In response to this, the application was moved to dates later in June (12-21 June). Of course, Mother Nature can be difficult to predict and temperatures were warmer earlier in 2017 and the Air Force arrival was later than optimal for larval mosquito control. In fact, many locations already had adult mosquitoes. Therefore, it is recommended that we move the arrival time back to the first week in June as the earlier instars of mosquitoes are easier to control with larvicide. Weather was also a significant factor this year, as the first 2 days of the operation were grounded because of high winds and only a single sortie was flown on the third day for the same reason. The post-treatment samples from Williston Vector Control staff and the results from bioassay monitoring are quite encouraging, as it appears that nearly complete control may have been achieved in areas that were sprayed (see 7a&b). We thank the board and staff of the Williston Vector Control District for supporting these sprays with their resources. Many thanks to (b) (6) at the Army Corps of Engineers, Williston Office for his continued support of the project.

**910 AW -- AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**PARRIS ISLAND MCRD, SC AND JB CHARLESTON, SC 3-7 OCTOBER 2017**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island MCRD, SC; JB Charleston, SC
- b. Mission Duration: 3-7 October 2017
- c. Purpose of Application: To control pestiferous populations of mosquitoes (specifically *Aedes taeniorhynchus*) and biting midges (*Culicoides* spp.)
- d. Application Date: 4 Oct 2017 (Parris Island); 5 Oct 2017 (JB Charleston)
- e. Time/s of Application (Zulu): 2235-0042 hrs (Zulu) (Parris Island); 2305-0041 hrs (Zulu) (JB Charleston)
- f. Acres Treated: 8,083 acres (Parris Island); 18,507 acres (JB Charleston)
- g. Project Coordinator: (b) (6), Environmental, DSN (b) (6) (Parris Island); (b) (6), Spray Coordinator JB Charleston DSN (b) (6)
- h. Date Spray Map Last Approved: 4 Oct 2017 (Parris Island); 5 Oct 2017 (JB Charleston)
- i. Date of Waste Generation Letter: 30 October 2007
- j. Installation In-Briefing: (When/Where/Briefer/s): Telecom with (b) (6) (Parris Island). 4 Oct 2017, briefed by Lt Col (b) (6) and Maj (b) (6); 5 Oct 2017, JB Charleston CE, briefed by (b) (6), Lt Col (b) (6) Lt Col (b) (6), and Maj (b) (6)

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) (A/C), Major (b) (6)
  - (2) Navigators: Lt Col (b) (6); Maj (b) (6)
  - (3) Flight Engineers: CMSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (lead), MSgt (b) (6), TSgt (b) (6), TSgt (b) (6), SSgt (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6), SrA (b) (6)
  - (3) Avionics: MSgt (b) (6)
- d. **Entomologist:** Maj (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate (Parris Island); Trumpet<sup>®</sup> (JB Charleston)
- b. EPA Registration Number: 5481-480 (Dibrom); 5481-481 (Trumpet)
- c. Formulation Sprayed: Dibrom Concentrate (87.4% AI naled) (Parris Island); Trumpet (78% naled) (JB Charleston)
- d. Gallons Pesticide Loaded: 4 Oct; 45 Gallons Dibrom<sup>®</sup> (Parris Island); 5 Oct; 120 Gallons Trumpet<sup>®</sup> (JB Charleston)
- e. Gallons Pesticide Applied: 45 Gallons Dibrom<sup>®</sup> (Parris Island); 120 Gallons Trumpet<sup>®</sup> (Parris Island)
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 10 gallons HAN
- h. Other Additives Used: None
- i. Application Rate: 0.71 oz/acre (Parris Island); 0.83 oz/acre (JB Charleston)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 14 (Parris Island); 28 (JB Charleston) oriented straight down
- f. Pressure: 40 p.s.i. (Parris Island); 40 p.s.i. (JB Charleston)
- g. Flow Rate: 2.6 gallons per minute (Parris Island); 6.0 gallons per minute (JB Charleston)
- h. Sorties: 2/3.7 hrs (application); 2/4.1 hrs (ferry)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000' (Parris Island); 2000' (JB Charleston)
- b. Spray Off-set: 2000' (Parris Island); none (JB Charleston)
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 070@3 knots (Parris Island); 050@3 knots (JB Charleston)
  - (2) Release Altitude: 075@8 knots (Parris Island) and 050@7 knots (JB Charleston)
- b. Temperature (Degrees Fahrenheit): 73°F (Parris Island); 75°F (JB Charleston)
- c. Cloud Cover: Clear (both locations)
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations (Maj (b) (6) )
  - (2) Results: Good coverage throughout both sprayed areas
- b. Effectiveness:
  - (1) Technique/s Used: Light traps deploy before and after spray application
  - (2) Results: Parris Island (3 locations)

Youth Center: 0 before; 0 after; 0% reduction in mosquito species

CAS: 100 before; 6 after; 94% reduction in mosquito species

4 BN: 114 before; 13 after; 89% reduction in mosquito species

Navy PrevMed comments: Substantial reduction of biting midge and mosquito populations after spray mission. PI environmental reported no adverse environmental effects of spray.

- (3) Results: JB Charleston (5 locations)

Spill Way: 1344 before; 62 after; 95% reduction in mosquito species

Golf Course: 88 before; 16 after; 82% reduction in mosquito species

Marrington Trail: 864 before; 9 after; 99% reduction in mosquito species

Horse Stables: 664 before; 56 after; 92% reduction in mosquito species

Spawar: 604 before; 56 after; 91% reduction in mosquito species

No adverse environment effects of spray were noted

**8. REMARKS:** Excellent coordination amongst all involved parties made this mission remarkably smooth. Good control of mosquito and midge populations in both locations was observed both observationally and anecdotally. Biting insect populations at Parris Island were not as heavy as on some previous missions, but were substantial enough to justify the need for application.

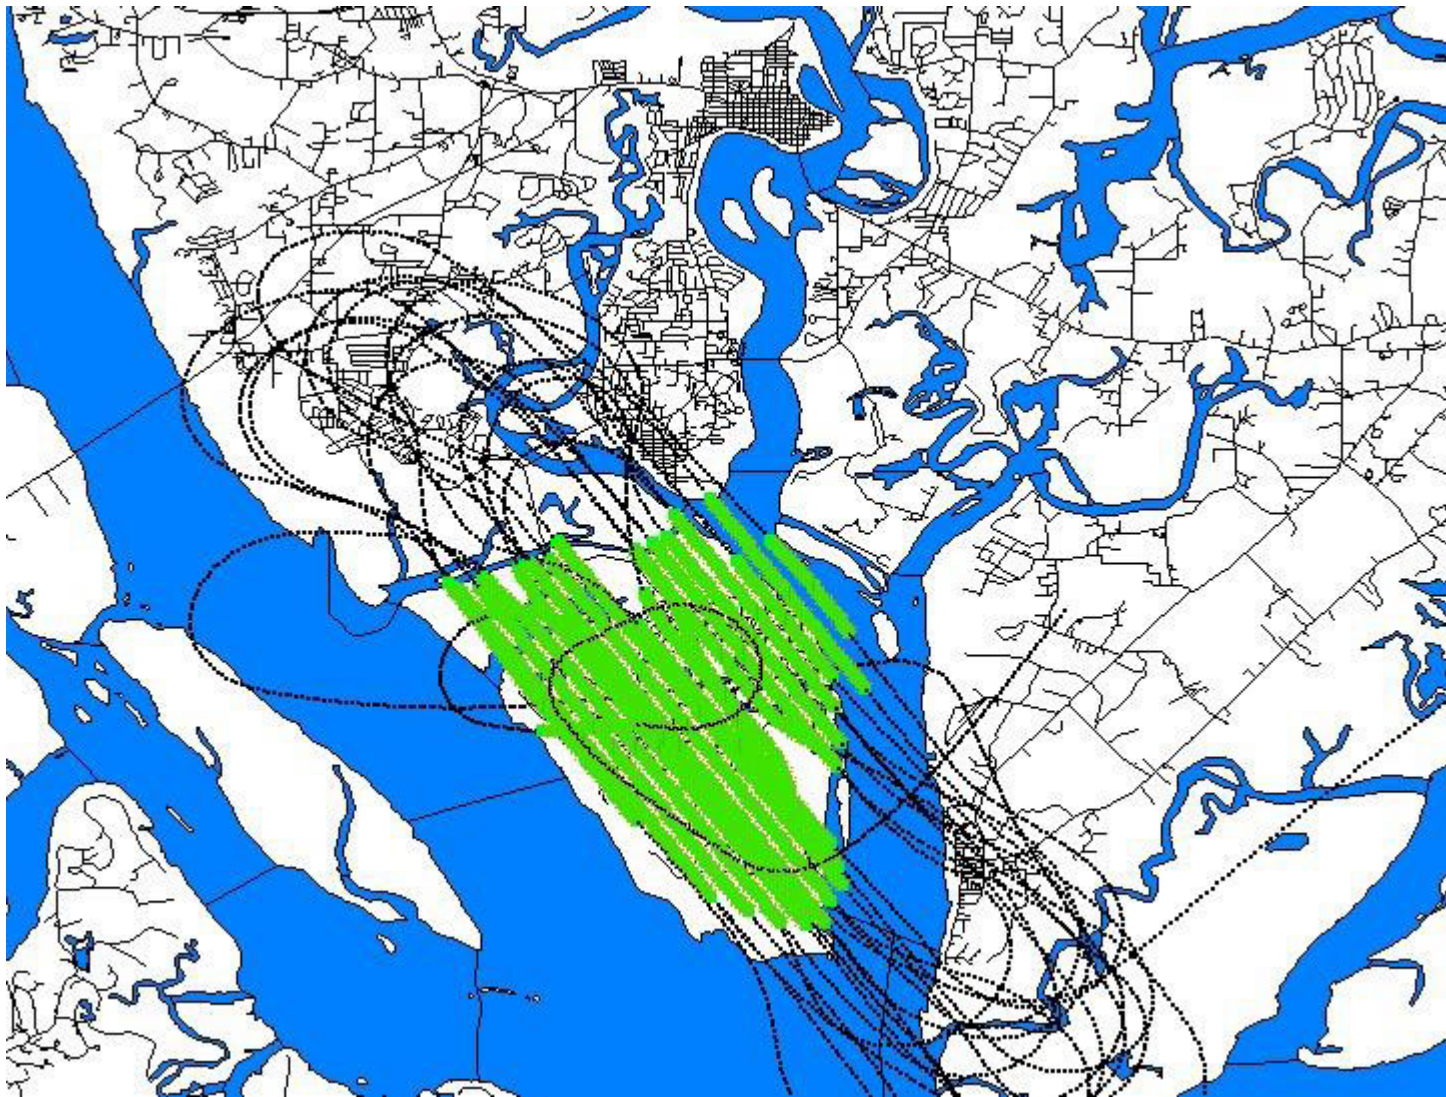

Actual applications at both locations proceeded without any significant functional problem or mishap, and no negative effect on wildlife was observed. Due to the presence of a newly found eagle's nest, a third no-fly area was added to the Parris Island locale. Many thanks to (b) (6) and (b) (6) (Parris Island), and (b) (6) (JB Charleston) for their help and alacrity in accomplishing this mission.

# **AERIAL SPRAY OPERATIONAL SCHEDULE**

## **JB CHARLESTON, SC**

### **3-7 October 2017**

### **QENRK3531276**

**Purpose/Objectives/Benefits:** One C-130 will deploy to JB Charleston, SC from 3-7 October 2017. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of JB Charleston and Parris Island MCRD. Operations for this mission will be conducted from JB Charleston utilizing Night Vision Goggles (NVGs).

#### **1. 910 AW PARTICIPANTS:**

Msn Commander:	Lt Col (b) (6)	(b) (6)
Entomologists:	Maj (b) (6)	
Pilots:	Lt Col (b) (6)	, Maj (b) (6)
Navigators:	Lt Col (b) (6)	, Capt (b) (6)
Flight Engineer:	CMSgt (b) (6)	
Spray Operators:	CMSgt (b) (6)	, TSgt (b) (6)
Spray Maintenance:	TSgt (b) (6)	(Lead) (b) (6)
	MSgt (b) (6)	, TSgt (b) (6), TSgt (b) (6), SSgt (b) (6)
		, TSgt (b) (6)
Crew Chiefs:	MSgt (b) (6)	, SrA (b) (6)
Comm/Nav:	MSgt (b) (6)	

#### **2. REQUIRED ITEMS:**

Msn Commander:	MC Laptop Computer
Entomologist:	Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer
Navigator:	Maps/Map Bag, Validation Map
Spray Operators:	PPE, laptop/Spray datasheet, O <sub>2</sub> hose extensions, NVGs
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand-held radios; Wingman system cards

### **3. SCHEDULE: (All Local Time)**

#### **3 October (Tues)**

1500 Showtime  
1700 Depart KYNG  
1900 Land KCHS

#### **4 October (Wed) Sunset: 1905L (PI) 1902L (CHS); Civil Twi: 1929L (PI) 1926L (CHS)**

1600 Weather call/Chemical Load at Charleston AFB  
1630 Calibration  
1800 Depart KCHS  
2000 Land KCHS

#### **5 October (Thurs) Sunset: 1903L (PI) 1900L (CHS); Civil Twi: 1928L (PI) 1925L (CHS)**

1800 Depart KCHS  
2000 Land KCHS

#### **6 October (Fri) Sunset: 1902L (PI) 1859L (CHS); Civil Twi: 1926L (PI) 1924L (CHS)**

1600 Weather call/Chemical Load at Charleston AFB  
1730 Calibration (if necessary)  
1800 Depart KCHS  
2000 Land KCHS

#### **7 October (Sat)**

1000 Showtime  
1200 Depart KCHS  
1400 Arrive KYNG

### **4. SPRAY CONFIGURATION AND PARAMETERS:**

Locations:	Parris Island MCRD and JB Charleston
Acres:	7,500 (Parris Island); 18,000 (JB Charleston)
Chemical:	Parris Island: Dibrom <sup>®</sup> (EPA Reg. No. 5481-480) Charleston: Trumpet <sup>®</sup> EC (EPA Reg. No. 5481-481) Signal word: Danger
Gallons loaded:	45 gallons (Parris Island); 120 gallons (Charleston)
Flow Rate:	2.7 GPM (Parris Island); 6.2 GPM (Charleston)
Application Rate:	0.75 oz/ac (Parris Island); 0.85 oz/acre (Charleston)
Flush:	Highly Aromatic Naptha (HAN)
Altitude:	300'
Airspeed:	200 KNTS
Swath Width:	1,000 feet (Parris Island); 2,000 feet (Charleston)
Nozzle/Orientation:	ULV 8003 Tee Jet Flat Fan / Straight Down
Number of Nozzles:	13 (Parris Island); 27 (Charleston)

## 5. AIR TO GROUND RADIO FREQUENCIES:

**Charleston AFB:** Tower – 843-414-2808  
Tower – 126.0 or 239.0  
Ground – 121.9 or 348.6  
Clearance – 127.325 or 291.65  
ATIS – 124.75  
Palmetto Ops – 134.1 or 349.4  
**Charleston Approach:** 135.8 or 379.925  
**Mt Pleasant Regional:** CTAF 122.8  
**Charleston Executive:** CTAF 122.8  
**Beaufort MCAS:** Tower - 119.05/340.2 MCAS TWR  
Approach - 123.7  
**Hilton Head Airport:** 118.975 Tower, 123.0 CTAF (tower open until 0100 hrs Z)  
**Beaufort Co Airport:** 122.7 UNI  
**Spray Ground (CHS):** 392.2 UHF; 123.45 VHF

## 6. TRANSPORTATION:

**JB Charleston:** Will provide (4) vehicles for transportation to and from quarters and for messing. Vehicles will be at JB Charleston Transpo/Vehicle Ops. Confirmation #27754192.

**1x U Drive** – Officer Aircrew

**1x U Drive** - Enlisted Aircrew

**1x U Drive** - Maintenance

26 February 2018

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757AS/DOS  
3976 King Graves Rd  
Vienna, Ohio 44473-0910

SUBJECT: Concept of Operations for Aerial Spray at the Utah Test and Training Range

1. Aerial spray flight proficiency training will be accomplished on Targets 21, 23, 24, and Nord LZ at the Utah Test and Training Range (UTTR). Spray sorties will apply Krovar to control vegetation (i.e., *Halogeton*) growth aiding bombing mission test evaluations and unexploded ordnance recovery. Two aerial spray-configured C-130s will be available from 5 - 16 March 2018 for the requested spray mission. A swap out Mission is scheduled over the weekend to maximize aircrew training over the two week period.

2. Concept of Operations:

- a. 5 March (Monday)
  - 0930 Vader 24 departs (Support) KYNG
  - 1000 Vader 04 departs KYNG
  - 1015 Vader 07 departs KYNG
  - 1230 Vader 23 lands KHIF
  - 1300 Vader 04 lands KHIF
  - 1315 Vader 07 lands KHIF
- b. 6 March (Tuesday)
  - 0930 Vader 23 departs KHIF
  - 1430 Vader 23 lands KYNG
- c. 6 – 9 March (Tuesday - Friday)
  - 0800 Spray 04 departs KHIF
  - 0810 Spray 07 departs KHIF
  - 1200 Spray 04 lands KHIF
  - 1210 Spray 07 lands KHIF
- d. 10 March (Saturday)
  - 1000 Vader 24 departs KYNG
  - 1300 Vader 24 lands KHIF
- e. 11 March (Sunday)
  - 0930 Vader 24 departs KHIF

1430 Vader 24 lands KYNG

f. 12 – 15 March (Monday – Thursday)

0800 Spray 04 departs KHIF

0810 Spray 07 departs KHIF

1200 Spray 04 lands KHIF

1210 Spray 07 lands KHIF

g. 15 March (Thursday)

1000 Vader 24 departs KYNG

1300 Vader 24 lands KHIF

h. 16 March (Friday)

0800 Vader 24 departs KHIF

0810 Vader 04 departs KHIF

0820 Vader 07 departs KHIF

1500 Vader 23 lands KYNG

1510 Vader 04 lands KYNG

1520 Vader 07 lands KYNG

3. Spray parameters:

Herbicide: Krovar 1DF®

Application rate: 22.5 gal/acre (10 lbs Krovar in 22.4 gal of water)

Acreage: 1,700 acres (Targets 21, 23+24)

Ground speed: 200 knots (337.55 ft/sec)

Spray altitude: 100 feet AGL

Swath width: 35 feet

4. Lt Col (b) (6) will serve as the mission commander.

5. Aircraft Commanders:

Maj (b) (6)

Lt Col (b) (6)

Lt Col (b) (6)

Maj (b) (6)

Lt Col (b) (6)

6. Support required at both Hill AFB and the UTTR has been coordinated.

## **2. REQUIRED ITEMS:**

Msn Commander:	MC Laptop Computer
Entomologist:	Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer
Navigator:	Maps/Map Bag, Validation Map
Spray Operators:	PPE, Calibration Tables/Laptop and or Spray datasheet, O <sub>2</sub> hose extensions
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand-held radios; Wingman system cards

## **3. IN-BRIEFING at Hill:**

1400 or as soon as clear at HQ UTTR (for entomologists and MC)

## **4. SCHEDULE: (All Local Time)**

### **PLANNED SEQUENCE OF EVENTS:** Hill AFB Tower Control and Runway Hours

Tower Opens at 0800L (Engine start typical at 0745 make engine start call in the blind)

### **NOTES:**

1. Scheduling reflects no weather or maintenance delays. In the event of weather or maintenance delays, the missions will be adjusted as required. ALL TIMES SUBJECT TO ADJUSTMENT BY MISSION COMMANDER
2. DUTY DAY FOR CIVILIANS WILL BE AS REQUIRED WITHIN CREW REST CONSTRAINTS.
3. ALL MX & A/C PERSONNEL WILL REMAIN ON DUTY UNTIL AIRCRAFT IS PRE-FLIGHT COMPLETE AND RELEASED BY THE MISSION COMMANDER.

### **5 March (Monday)**

0700 Bag Drop for Chalk 1 at Aerial Port.

0730 Show Chalk 1 All personal stay for safety and arrival brief. MC will release you.

0800 Show Chalk 2 & 3, Safety and Arrival brief in conjunction with the SOF brief for Chalks 2 & 3

0930 Depart KYNG Support (P-1) **Vader 24 MI: QENRK3531064 PPR: MS0501**

1000 Depart KYNG Spray (SP3G) **Vader 04 MI: QENRK3501064 PPR: MS0502**

1015 Depart KYNG Spray (SP3G) **Vader 07 MI: QENRK3502064 PPR: MS0503**

1300 Land KHIF first aircraft

### **6 – 9 March (Tuesday-Friday) Range Time 0600-1300L**

**Each aircraft will generally plan on 2 sorties per day.**

0630 Aircraft Released by MX

0700 Chemical Load first Aircraft

0745 Engine Start

0800 Takeoff

Second Aircraft will be loaded as soon as possible to Takeoff at 0845

**\*\*Weekend flying is currently unavailable.**

### **10 March Swap out departs KYNG to KHIF**

1000 Depart YNG

1300 Land HIF (**Vader XX, MI: QENRK3531069, PPR: TBD**)

**11 March (Swap out departs KHIF to KYNG)**

1000 Depart KHIF

1600 Land KYNG (Vader XX, MI: QENRK3531069, PPR: N/A)

**12 - 15 March (Monday-Thursday) Range time 0600-1300L**

**Each aircraft will plan on 2 sorties per day.**

0600 Show KHIF

0630 Weather call and mixing begin

0800 Depart KHIF

1300 Land KHIF

**16 March (Friday) All personnel**

0630 Checked out of billeting

0700 Bus from Hotels to Hill

0700 Return Rental vehicles to Enterprise

0730 Bus from Enterprise to Hill

0900 Depart KHIF

1600 Land KYNG

**\*\*All times are approximated. Actual times and mission details will be by the Mission Commander.**

**5. SPRAY CONFIGURATION: SP3G**

Spray 04 - MASS #3 / Spray 07 - MASS#5

MASS Modules SP3 configurations

UHV Fuselage booms oriented straight back

**6. SPRAY LOADING:**

**Sequence for Loading 1,000 Gallon Mixing Tank:**

Fill with water up to 750 Gallon Mark, and then add:

450 Pounds of Krovar I DF<sup>®</sup> (18 bags, 25 # each)

4.0 Gallons (15,140 ml) of Clasp<sup>®</sup>

15 oz of FTF Defomer<sup>®</sup>

400 Ounces Hi-Light<sup>®</sup> Dye

Add Water to 1,000 Gallon Mark and Agitate for 30 Minutes

**7. SPRAY PARAMETERS:**

Location: UTTR

Chemical: Krovar I DF<sup>®</sup>

Area to be treated: 1,700 Acres (Targets 21, 23+24); Target 22 =60 acres; NORD LZ = 16 acres

Swath Width: 35 Feet

Flow Rate: 366 Gallons/Minute

Altitude: 100 Feet AGL

Ground Speed: 200 Knots (337.55 ft/sec)

Flush: Air purge after last sortie

Formulas: Flow Rate = Gal/Time in Minutes

Acreage Sprayed = Total Sec x 338 x Swath Width / 43,560

**8. PARKING PLAN:**

Forestry Ramp and Building

## **9. AIR TO GROUND RADIO FREQUENCIES:**

<b>Clover Range:</b>	Provided after In-Brief
<b>Eagle Tower:</b>	Provided after In-Brief
<b>Diddle Knoll:</b>	Provided after In-Brief
<b>Spray Inter plane:</b>	Provided after In-Brief
<b>Base OPS:</b>	Provided after In-Brief
<b>Spray Ground:</b>	Provided after In-Brief

### Transportation to and from Hill:

Bags (Arr): Hill Transportation to provide (1) stake bed truck. Bags will be delivered to hotels.

Personnel (Arr): Rental vehicles pre-positioned on forestry ramp. All personnel to be transferred to hotels via rental vehicle.

Bags (Dep): Bag drop Thurs by 1200 for all personnel at forestry ramp.

Personnel (Dep): 0700 on Fri - Pickup for non-drivers via 44-PAX bus at hotels  
0730 on Fri – Pickup for rental car drivers at Enterprise

Hill Transportation confirmation numbers are as follow:  
28268539/ 28268553/ 28268561

**11. LODGING: 45 Rooms**

**HYATT PLACE SALT LAKE CITY/FARMINGTON/STATION PARK**

**T:** 801-451-7999 **M:** 912-323-2160 **F:** 912-549-1065

**12. GENERAL TARGET INFORMATION:**

**Target 21:**

**Dimensions:** 4,980' X 7,770'

**Acreage:** 888

**Aircraft Loads:** 19,980 gal

**Sorties:** 11

**Passes (35' Swath):** 142

**Spray-On Time/Pass:** 23 Seconds

**Spray Heading:** 00/180

**Target 23 / 24:**

**Dimensions:** 16,675' X 1,657

**Acreage:** 635

**Aircraft Loads:** 14,265 gal

**Sorties:** 8

**Passes (35' Swath):** 47

**Spray-On Time/Pass:** 49 Seconds

**Spray Heading:** 004/184

**Note:** total acreage sprayed in 2017= 1,522

**SEQUENCING:**

**Target sequencing is determined by UTTR personnel based upon EOD clearance schedule and airspace scheduling.**

**Spray ops aircraft must stay south of Base Leg Knoll during turns on north run on Target 21. Coordination with range control is essential to assure that this portion of the range is released for air operations.**

**Spraying Priorities:**

**Target 21**

**Target modified target 23/24**

**Once the above areas are complete: northeast side of Target 22**

**13. CONTACTS:** The commercial area code for listings below is 801-777-XXXX unless otherwise indicated. DSN is 777-XXXX, 775-XXXX, and 586-XXXX.

"Say . . . What's a mountain goat doing way up here in a cloud bank?"

1. Q: What has one head, one foot, and four legs?
2. Q: I travel all over the world, but always stay in my corner. What am I?
3. Q: What kind of coat is always wet when you put it on?

1. Bed 2. Stamp 3. A coat of paint

**DEPARTMENT OF THE AIR FORCE  
757AS/AERIAL SPRAY UNIT  
YOUNGSTOWN AIR RESERVE STATION**

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
UTAH TEST AND TRAINING RANGE, 5-16 MARCH 2018**

**1. MISSION BASICS:**

- a. Installation Sprayed: Utah Test and Training Range (UTTR)
- b. Mission Duration: 5-16 March 2018
- c. Purpose of Application: Weed control on UTTR Targets 21, 22, 23 and 24 to facilitate UXO recovery
- d. Application Dates: See Attachment 1
- e. Times of Application (Local): See Attachment 1
- f. Acres Treated: 1,518
- g. Flying Data:
  - (1) Spray sorties/hours: 19/27.9
  - (2) Flush sorties/hours: 5/5.7
  - (2) Ferry sorties/hours: 4/20.1
- h. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) Range Specialist/DSN (b) (6)  
(b) (6) Environmental Coordinator, (b) (6) DSN (b) (6)
- i. Date Spray Map Last Approved: 7 March 2016
- j. Installation In-Briefing: (When/Where/Briefer/s): Lt Col (b) (6) , Lt Col (b) (6)  
Maj (b) (6) Mr. (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Entomologists (certified applicators): Lt Col (b) (6) , Maj (b) (6) ; First Week:  
Lt Col (b) (6) , Lt Col (b) (6) , Second Week: Lt Col (b) (6)
- c. ARMS: SMSgt (b) (6) , SSgt (b) (6)
- d. 1<sup>st</sup> Half Aircrew:

 g. Comm: TSgt (b) (6) , 1<sup>st</sup> week: Maj (b) (6) , SSgt (b) (6) ; 2<sup>nd</sup> week: MSgt (b) (6)  
 h. Command Post: SrA (b) (6) , 1<sup>st</sup> week; SMSgt (b) (6) , 2<sup>nd</sup> week

### 3. PESTICIDE:

- a. Trade Name: Krovar<sup>®</sup> IDF
- b. EPA Registration Number: 352-505
- c. Formulation Sprayed: 10 lbs Krovar<sup>®</sup> per 22.5 gallons formulation.
- d. Gallons Pesticide Mix Loaded: 31,834
- e. Gallons Pesticide Mix Applied: 31,834
- f. Formulation Used: 450 lbs Krovar<sup>®</sup>, 4.0 gal StaPut<sup>®</sup>, ½ gal Foam Fighter<sup>®</sup>, 200 ounces Hi-Light<sup>®</sup> Dye, remainder water per 1000 gal of spray mix. 15,250 lbs of Krovar used and 34,150 gallons of water
- g. Gallons and Name of Flush Used: 4,000 gal water
- h. Other Additives Used: 175 gal Clasp<sup>®</sup>; 90.5 gal Hi-Light<sup>®</sup> dye; 5.3 gal foam buster
- i. Application Rate: 22.5 gal/acre

### 4. APPLICATION EQUIPMENT:

- a. Aircraft Tail Number: 899104, 909107
- b. Spray System (Modules Used) and System ID #: 3 and 5.
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: UHV Fuselage
- e. Nozzle Orientation & Number Used: 2 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 366 gallons per minute.

### 5. APPLICATION PARAMETERS:

- a. Swath Width Flown: 35'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

### 6. WEATHER OBSERVATIONS:

- a. See Attachment 3.

### 7. SPRAY MONITORING (Pre- and Post-Treatment):

- a. Deposition Pattern:
  - (1) Technique Used: blue dye pattern on targets and observations from ground observers.
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring.
  - (2) Results: will be determined this spring by range personnel.

8. **REMARKS:** Another successful spring application of Krovar to control vegetation on Targets 21, 23, and 24. Cold temperatures were encountered upon arrival and it was decided to weather cancel spray applications the first day because of concerns with damage from ice in the MASS overnight. However, training flights were still accomplished. This was our only weather day and with no significant aircraft maintenance issues, we were able to easily finish the prescribed areas (Attachment 1 and 2).
- a. The spray mission is requested by UTTR/HQ and we appreciate the opportunity to make these applications on their behalf. Mr. (b) (6) replaced Mr. (b) (6) as the directing range officer. Many thanks to the various agencies at Hill AFB supporting this mission: 75CES Pest Management, 75<sup>th</sup> Air Base Wing - Base Operations, and a special thanks to SMSgt (b) (6) (514 FLTS/DOC) for acting as our sponsor again this year.

//signed//

(b) (6), Lt Col, USAF

**910 AW -- AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**JB CHARLESTON, SC 6-9 SEPTEMBER 2018**

**1. MISSION BASICS:**

- a. Installation Sprayed: JB Charleston, SC
- b. Mission Duration: 6-9 September 2018
- c. Purpose of Application: To control pestiferous populations of mosquitoes (specifically *Aedes taeniorhynchus*) and biting midges (*Culicoides* spp.)
- d. Application Date: 7 Sept 2018
- e. Time/s of Application: 2002-2150 hrs
- f. Acres Treated: 3,615 acres
- g. Project Coordinator: (b) (6), Spray Coordinator JB Charleston DSN (b) (6)
- h. Date Spray Map Last Approved: 7 Sept 2018
- i. Date of Waste Generation Letter: 30 October 2007
- j. Installation In-Briefing: (When/Where/Briefer/s): 7 Sept 2018, JB Charleston CE, briefed by MSgt (b) (6) (Pest Control NCOIC), (b) (6), Lt Col (b) (6) Lt Col (b) (6) and Maj (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Maj (b) (6)
- b. Aircrew:
  - (1) Pilots: Lt Col (b) (6) (A/C), Capt (b) (6)
  - (2) Navigators: Lt Col (b) (6), Maj (b) (6)
  - (3) Flight Engineer: MSgt (b) (6)
  - (4) Spray Operators: TSgt (b) (6), SSgt (b) (6)
- c. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6) (lead), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6), AMN (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6), SrA (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. Entomologist:
  - (1) Lt Col (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® EC
- b. EPA Registration Number: 5481-481
- c. Formulation Sprayed: Trumpet EC (78% naled)
- d. Gallons Pesticide Loaded: 7 Sept 2018, 30 Gallons Trumpet® EC
- e. Gallons Pesticide Applied: 7 Sept 2018 28 Gallons Trumpet® EC
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 8 gallons HAN
- h. Other Additives Used: None
- i. Application Rate: 1.0 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99104
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 30 oriented straight down
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 7.3 gallons per minute
- h. Sorties: 1/1.5 hrs (application); 2/4.2 hrs (ferry)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 500'
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 050@2 knots
  - (2) Release Altitude: 120@11 knots
- b. Temperature (Degrees Fahrenheit): 78°F
- c. Cloud Cover: partly cloudy
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations (Maj (b) (6) )
  - (2) Results: Good coverage throughout both sprayed areas
- b. Effectiveness:
  - (1) Technique/s Used: Light traps deploy before and after spray application
  - (2) Results: JB Charleston (5 locations)

Trap data not available due to evacuation of JB Charleston with oncoming Hurricane Florence.

**8. REMARKS:** Excellent coordination and communication amongst all involved parties enabled this mission to proceed efficiently. Due to low mosquito pre-spray trap counts it was decided to spray only the section surrounding trap site (see attached spray map). Pre-spray surveillance passes were conducted at the targeted spray zone to confirm presence of obstacles, such as cranes and towers, that may affect designated spray path.

Applications proceeded without any significant functional problem or mishap, and no negative effect on wildlife was observed. Many thanks to MSgt (b) (6) (Pest Control NCOIC) and (b) (6) at JB Charleston for their help and alacrity in accomplishing this mission.

//signed//

(b) (6) , Lt Col, USAF  
**DOD CERTIFIED PEST MANAGEMENT PROFESSIONAL**

**Attachment 1. Spray Block and aerial spray paths.** Solid lines indicate when spray was 'on'. Thin lines indicate paths of spray plane. Surveillance of the spray block was conducted prior to mission.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## SMOKY HILL ANG RANGE, SALINA, KS

### 6-17 Nov 2017

**Purpose/Objectives/Benefits:** Control musk thistle (*Carduus nutans*) at the Smoky Hill ANGR, to improve grazing areas, to reduce the potential of the ANG Range as a source of infestation to neighboring farms from wind-blown musk thistle seeds and to support state and local noxious weed control efforts.

#### 1. 910 AW PARTICIPANTS:

Msn Commander:	Lt Col (b) (6)	(b) (6) (b) (6) (b) (6)
	Lt Col (b) (6)	(b) (6) (b) (6) (b) (6)
Entomologists:	Lt Col (b) (6)	(in place), Lt Col (b) (6)
Pilots:	Lt Col (b) (6)	, Maj (b) (6)
	Maj (b) (6)	, Maj (b) (6)
Navigators:	Capt (b) (6)	, Lt (b) (6), Lt Col (b) (6)
	Lt Col (b) (6)	, Lt (b) (6)
Flight Engineer:	CMSgt (b) (6)	, MSgt (b) (6), MSgt (b) (6)
Spray Operators:	CMSgt (b) (6)	, MSgt (b) (6), MSgt (b) (6)
	TSgt (b) (6)	, SSgt (b) (6)
Pro Super:	SMSgt (b) (6)	(b) (6)
Spray Maintenance:	TSgt (b) (6) (Lead)	(b) (6)
	MSgt (b) (6)	, MSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
	, TSgt (b) (6)	
Crew Chiefs:	TSgt (b) (6)	, SrA (b) (6)
Ele/Env:	TSgt (b) (6)	
Prop:	TSgt (b) (6)	
GAC:	TSgt (b) (6)	
GAC:	TSgt (b) (6)	
Com/Nav:	TSgt (b) (6)	, SSgt (b) (6)
AGE:	SMSgt (b) (6)	
Hydraulics	MSgt (b) (6)	

#### 2. REQUIRED ITEMS:

Msn Commander:	MC Laptop Computer
Entomologist:	Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer
Navigator:	Maps/Map Bag, Validation Map
Spray Operators:	PPE, Calibration Tables/Laptop/Tablet and or Spray datasheet, O <sub>2</sub> hose extensions, Wireless Headsets (If desired)
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand-held radios; Wingman system cards

### **3. SCHEDULE: (All Local Time)**

#### **6 Nov (Mon)**

0800 Showtime

1000 Support A/C Departs KYNG **MI: QENRK3532310 PPR: Not Required**

1000 Spray A/C Departs KYNG **MI: QENRK3531310 PPR: Not Required**

1200 Land KSLN x2 (Safety Brief Immediately upon Landing) and AOA training with Airfield

1400 In-brief at the Range (Galen Weins' office)

1400 Support A/C departs KSLN for KYNG

#### **7-10 Nov (Tuesday-Friday) Sunrise 0704 +1 min later each day**

0500 Show time \*as needed

0645: Depart KSLN (Multiple Sorties)

#### **11 Nov (Saturday) Swap out**

0800 Depart for Youngstown

1100 Arrive at Youngstown

#### **12 Nov (Sunday) Swap out **MI: QENRK3531310 PPR: Not Required****

1200 Depart KYNG

1400 Land KSLN

#### **13- 16 Nov (Monday-Thursday)**

0500 Show time \*as needed

0645: Depart KSLN (Multiple Sorties)

#### **17 Nov (Friday) Redeploy**

1100 Support Aircraft arrives at KSLN

1200 Spray Aircraft departs for KYNG

1200 Support Aircraft departs for KYNG

#### **RANGE SCHEDULE: (All Times Local)**

7-8 Nov 0700-0940

9 Nov 0700-1140

10-16 Nov 0700-1200

### **4. AIRCRAFT & SPRAY CONFIGURATION:**

**Aircraft:** AF89-9107

**System:** MASS: #3 SP3G (3-Module System) with Fuselage Booms

**Nozzle/Orientation:** Raindrop Nozzles; Pointed Back (R-20)

**Number of Nozzles:** 17 Total (8 left 9 right)

## 5. **SPRAY LOADING:**

Entomologist will determine quantity to load and work with the local pest managers to determine the application rate. Please see entomologist for final flow spray parameters as these numbers are subject to change depending on user requirements.

### **Furnished by Installation:**

177 gallons of Milestone is required to treat the proposed area  
Hazardous Waste Disposal

### **Mixing (each gallon of mix contains):**

0.71 Ounces of Milestone®  
0.35 Ounces of AirexDC® drift retardant  
126.9 Ounces of Water

### **First load (1800 + Sump of 75 gallons for total mix of 1875)**

Fill to 1800 gal water as shown on quantity indicator

Total Water Added = 1,875 gallons

Upload 10.5 gal/Milestone® + 5 gal of AirexDC®

Agitate by recirculating each mix for approximately 15 minutes. All tanks should be as close to empty as possible after each sortie

**Additional loads:** use “each gallon” values given above to determine proper mix (sump is full of good mix and not included in calculation)

## 6. **SPRAY PARAMETERS:**

Location:	All prescribed areas
Herbicide:	Milestone (active ingredient: “Aminopyralid” as Triisopropanolammonium salt of 2-pyridine carboxylic acid, 4-amino-3,6-dichloro-, 40.6%); EPA Registration Number 62719-519
Area to be treated:	4,522 Acres
Swath Width:	100 feet
Flow Rate:	326 GPM or TBD
Application Rate:	5 oz of Milestone in 7 gal of finished spray/acre (water with 0.71 oz of Milestone® and 0.35 oz of AirexDC®)
Altitude:	100’ AGL
Ground Speed:	200 Knots
Formulas:	Flow Rate = Gal/Time in Minutes Acreage Sprayed = Total Sec x 338 x Swath Width / 43560

## 7. **AIR TO GROUND RADIO FREQUENCIES:**

ATIS	120.15
Salina Ground	121.9
Salina Tower:	119.3/257.7
Unicom	122.95
NG Ops	49.95/304.6
Smokey Range	139.7/316.9/304.9
KCC	134.9/363.2 Expect IFR clearance, advise them you are departing R3601

8. **TRANSPORTATION:** Hertz Rental Agency (785)-827-7237; Fax (785)-827-3160  
Vehicles will be at Avflight FBO 1200L 6 NOV 17.  
Hertz will pick up vehicles at FBO on 17 NOV at 0900.

**3. PESTICIDE:**

- a. Trade Name: Milestone® (active ingredient: “Aminopyralid” as Triisopropanolammonium salt of 2-pyridine carboxylic acid, 4-amino-3,6-dichloro-, 40.6%)
- b. EPA Registration Number: 62719-519
- c. Formulation Sprayed: 5 oz/acre Milestone + 2.5 oz/acre of AirexDC in 7 gallons of water
- d. Gallons Pesticide Mix Loaded: 22,402
- e. Gallons Pesticide Mix Applied: 22,402
- d. Gallons of pesticide used: 134 Milestone
- g. Gallons and Name of Flush Used: 400 gal water
- h. Other Additives Used: 65.5 gal of AirexDC

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99107
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: LV Fuselage
- e. Nozzle Orientation & Number Used: 18 – raindrop nozzles, oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 326 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. See Attachment 2.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: Visual observations by ground party of approximate 100 ft swath on all passes
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: Monitoring of weed emergence in spring
  - (2) Results: Will be determined this spring by range personnel

**8. REMARKS:**

- a. A total of 4,522 acres were targeted for this 2017 musk thistle management project. However, weather conditions were often not favorable during this year's mission, and at the end of the 12-day work period, only a single block was treated (see Attachment 3). Treated areas made up 72% of the entire area as originally submitted. Weather problems included frost on the wings, high winds, and low ceilings. With no external ice removal resources available at Salina Regional Airport, the only course of action is to wait until the frost disappears naturally; subsequently, the first sorties were delayed on 8-10 November. The following week, low ceilings (spray minimums are 1,500 ft ceiling and 5 miles visibility)

forced weather cancellations on 13-14 November. Range times were excellent this year with plenty of time to have completed the mission had the weather cooperated. Spray missions at other installations prevent us from shifting this project to earlier in the year. Thus, we will plan to be available in early November 2018, to continue this important project.

- b. We received anecdotal positive feedback regarding the efficacy of last year's application. When scouting for this year's treatment area, it was reported that it was quite clear where infestations began. That is, they began at the edge of the previous year's application. Milestone, therefore, appears to be working well as part of the Range's integrated pest management plan for musk thistle control.
- c. Many thanks to the Smoky Hill Range personnel that supported this project, we had excellent support all-around and, in particular, great vehicles. A special thanks to Mr. (b) (6) for his superb planning and sound decision-making regarding acceptable environmental parameters during sprays. The 757<sup>th</sup> anticipates availability for continuing this project in 2018.

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
GRAND FORKS AFB, ND, 11-15 JUNE 2018**

**1. MISSION BASICS:**

- a. Installation Sprayed: Grand Forks AFB, ND
- b. Mission Duration: 11-15 June 2018
- c. Purpose of Application: Control of nuisance and vector mosquito species through application of larvicide
- d. Application Dates: 12-13 June 2018
- e. Times of Application (Local):
  - (1) Sortie 1 (12 Jun): 0925-1020
  - (2) Sortie 2 (12 Jun): 1120-1215
  - (3) Sortie 3 (13 Jun): 0630-0740
  - (4) Sortie 4 (13 Jun): 0830-0940
- f. Acres Treated: 1,607
- g. Flying Data:
  - (1) Spray sorties/hours: 4/5.2
  - (2) Flush sorties/hours: 0/0
  - (2) Ferry sorties/hours: 2/6.1
- h. Project Coordinator (Name/Rank, Title, Phone #): MSgt (b) (6), Pest Management, DSN (b) (6)
- i. Date Spray Map Last Approved: 11 June 2018
- j. Installation In-Briefing: (When/Where/Briefer/s): 11 June 2017 at 319 CE, briefed by Lt Col (b) (6)

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Maj (b) (6) (A/C), Capt (b) (6)
  - (2) Navigator: Lt Col (b) (6)
  - (3) Flight Engineer: MSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6), SSgt (b) (6), TSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: MSgt (b) (6) (lead), TSgt (b) (6), TSgt (b) (6), (b) (6) TSgt (b) (6), Amn (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6), TSgt (b) (6)
  - (3) Avionics: SSgt (b) (6), TSgt (b) (6)
- d. **Entomologist:** Maj (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Altosid® Liquid Larvicide Concentrate (SR20)
- b. EPA Registration Number: 2724-446
- c. Formulation Sprayed: 0.35 ounces Altosid® per gallon with water
- d. Other Additives Used: 0.25 ounces AirexDC™ per gallon
- e. Gallons Pesticide Mix Loaded: 3,645
- f. Gallons Pesticide Mix Applied: 3,645
- g. Gallons and Name of Flush Used: 130 gal water
- h. Application Rate: 2.3 gal/acre mixed formulation, 0.80 oz/acre active ingredient (Altosid®)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-9104
- b. Spray System (Modules Used) and System ID #: MASS 5 SP2G
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: R-20 raindrop nozzles
- e. Nozzle Orientation & Number Used: 12 nozzles oriented straight back
- f. Flow Rate: 211 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 200'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. See Attachments 1 and 2.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations.
  - (2) Results: Adequate coverage through sprayed area (Attachment 3)
- b. Effectiveness:
  - (1) Technique/s Used: Larval sampling for treatment justification. Average 12 larvae/dip (MSgt Baksh, personal communication).
  - (2) Results: Because of the nature of the pesticide used (insect growth hormone), larvae are not immediately killed but instead die in the pupal stage. Therefore, post-treatment sampling must occur after the treated larvae have pupated. Pupae are then collected and observed for emergence of adults. This generally will take a week or more; as such, results cannot be determined at this time.

**8. REMARKS:**

- a. We would like to thank the Air Wing for a very nice reception at Grand Forks. MSgt (b) (6) met the spray team upon arrival and had arranged for vehicles and billeting.
- b. There was an excellent inbrief at the MSG conference room where we had a good discussion about the larvicide project and began a separate discussion on increasing the adult mosquito control spray area (conducted later in the summer) to include a buffer area outside of the base fence line. The buffer area will provide a longer period of biting relief to the base population and better justify the use of a C130 which is intended to be used for larger areas. The current proposed area is approximately 5,000 acres. Ideally, an appropriate size spray block for a C130 spray would be double that. A smaller area (e.g. 8,000 acres) may also be discussed. According to our historical information, July 2014 was the last time an area outside the base boundary was sprayed (11,500 acres).
- c. Weather initially appeared to be of concern but winds began from the west and then shifted to the east allowing the sprayers to target the spray blocks that were appropriately aligned for into the wind applications. There were no significant issues observed during this treatment for control of larval mosquitoes. Light winds on the second day allowed for the mission to be completed without using the weather day. During future inbriefs, it would be prudent to discuss what the policy will be for situations where buildings or parking lots are included in the spray block. In this case, the team decided not to spray such areas. Additionally, one area that was initially planned to be sprayed was not treated in its entirety as it was observed that the area was open water where mosquitoes typically do not breed. Instead, the northern and southern borders of the area were treated where larvae may have been present. During future inbriefs, it would also be worthwhile to question the Minot AFB planners about miscellaneous issues that they may not have initially considered. For example, there was runway/taxiway maintenance where people and vehicles were in the spray area. Another situation was

that the Fire Department was training with the aircraft hull generating flame and smoke. These things should be delayed or discussed prior to sprays for next year.

**AERIAL SPRAY OPERATIONAL SCHEDULE**  
**CAMP BLANDING MASS CONFIGURATION TRAINING**  
**JACKSONVILLE NAS, FL**  
**13-17 Aug 2018**  
**QENRK3531225/PPR: 081301**

**OBJECTIVE/PURPOSE/BENEFIT:** The 910<sup>th</sup> Aerial Spray Unit will be analyzing efficacy of aerial sprays to control *Aedes aegypti* (vector mosquito for Zika virus, dengue, and yellow fever) at Florida National Guard's Camp Blanding, Joint Training Center on the MOUT South Range utilizing the mock urban setting. The trials will be conducted at with collaborators from U.S. Department of Agriculture's Center for Medical and Veterinary Entomology, Navy's Entomology Center of Excellence, Manatee County Mosquito Control District, and AMVAC. This mission will provide real-world training for aerial spray air crew, entomologists, and maintenance personnel with the goal of mission readiness for interrupting Zika virus transmission. Investigate the Flying will be done by the U.S. Air Force Reserve's Aerial Spray Unit.

**1. 910 AW PARTICIPANTS:**

Msn Commander:	Maj (b) (6)	(in place/no lodging)
Entomologists:	Lt Col (b) (6)	(Test Director, in place),
	Lt Col (b) (6)	(in place)
Pilot:	Lt Col (b) (6)	, Capt (b) (6)
Navigator:	1Lt (b) (6)	
Flight Engineer:	MSgt (b) (6)	
Spray Operators:	SMSgt (b) (6)	(IL), MSgt (b) (6), SSgt (b) (6)
Spray Maintenance:	MSgt (b) (6)	(LEAD), MSgt (b) (6), TSgt (b) (6), TSgt
	(b) (6)	, AMN (b) (6)
Crew Chiefs:	MSgt (b) (6)	, SrA (b) (6)

757AS/AERIAL SPRAY UNIT  
YOUNGSTOWN AIR RESERVE STATION

CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
JB CHARLESTON, 15-19 May 2018

1. MISSION BASICS:

- a. Installation Sprayed: JB Charleston, SC
- b. Mission Duration: 15-19 May 2018
- c. Purpose of Application: Control of nuisance and vector salt marsh mosquito species on the Naval Weapons Station area of JB Charleston
- d. Application Dates: 16 May 2018
- e. Times of Application (Local): 1940-2150(Zulu)
- f. Acres Treated: 17,856
- g. Flying Data:
  - (1) Spray sorties/hours: 1/2.2
  - (2) Ferry sorties/hours: 4/4.1
- h. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) , Environmental/Spray Coordinator, DSN (b) (6)
- i. Date Spray Map Last Approved: 16 May 2018
- j. Installation In-Briefing: (When/Where/Briefer/s): 16 May 2018 at CE, briefed by (b) (6) (b) (6) , Maj (b) (6) and Lt Col (b) (6)
- k. Mission Identifier: QENRK3531135

2. OPERATIONAL:

- a. **Mission Commander:** Maj (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Capt (b) (6) (A/C), Lt Col (b) (6)
  - (2) Navigators: Lt Col (b) (6) , Lt Col (b) (6)
  - (3) Flight Engineers: SMSgt (b) (6) , MSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6) , SMSgt (b) (6) , MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (Lead), TSgt (b) (6) , TSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6) , SSgt (b) (6)
  - (3) Avionics: SSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6)

3. PESTICIDE:

- a. Trade Name: Trumpet® EC (78% a.i. naled)
- b. EPA Registration Number: 5481-481
- c. Additives Used: None
- d. Gallons Pesticide Loaded: 120
- e. Gallons Pesticide Applied: 120
- f. Gallons and Name of Flush Used: 10 gallons H.A.N. (Highly Aromatic Naphtha)
- g. Application Rate: 0.85 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9108
- b. Spray System (Modules Used) and System ID #: SP2G
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet
- e. Nozzle Orientation & Number Used: 27 nozzles oriented straight down
- f. Flow Rate: 6.2 gal/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: none'
- c. Spray Release Altitude: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:** Wind (ground) 170° @ 3.9 kts, Wind (at altitude) 170° @ 8 kts, Temperature 75° F, 69% RH

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations.
  - (2) Results: Adequate coverage through sprayed area
- b. Effectiveness:
  - (1) Technique/s Used: Pre- and post-spray surveillance was conducted using CDC light traps.
  - (2) Results:

Location	Trap Type	Pre-Spray (15 May)	Post-Spray (18 May)	% Reduction
Spillway	CDC	465	696	-32.0%
Golf Course	CDC	210	48	77.1%
Horse Stable	CDC	312	28	91.0%
Hooker Lake	CDC	61	N/D	N/A

**REMARKS:** This application is the first adulticide spray mission conducted at the Naval Weapons Station at JB Charleston during 2018. Prior to application, the spray system was calibrated to ensure proper flow rate. No significant technical problems were encountered

during this application, however poor mosquito control was evidenced at the dredge spoil location, which is on the south end of the block. We speculate that control was poor at this location because prevailing winds were from the south and no offset was used, despite being requested. In essence, it is apparent that we basically missed the target. While “painting the box”, i.e. not spraying outside of target area to account for meteorological conditions may seem intuitive, in future we must stress to aircrew the need for proper offsets. Reasonable levels of control were obtained elsewhere on station. Because of the large dredge spoil and marshlands associated with the Naval Weapons Station, future larvicide operations are being considered. While we appreciate the sincere support we encountered from ALL sections at JB Charleston, special thanks goes to Tony Mincey and MSgt Winter for their thorough coordination at all levels.

MINOT AFB AND CITY OF MINOT, N.D. – ADULT MOSQUITO  
CONTROL 16-20 July, 2018**

**1. MISSION BASICS:**

- a. Installation Sprayed: Minot AFB and Cities of Minot and Burlington, ND
- b. Mission Duration: 16-20 July 2018
- c. Purpose of Application: Control adult nuisance and vector mosquitoes
- d. Application Date: 17 July 2018
- e. Time of Application (Local): 2145-0015 (17 July)
- f. Acres Treated: 12,183
- g. Project Coordinator/s (Name/Rank, Title, Phone #): (b) (6) , Minot AFB Pest Management Shop, DSN (b) (6) ; (b) (6) , City of Minot Public Works
- h. Date Spray Map Last Approved: 17 July 2018
- i. Date of Waste Generation Letter: 22 June 2004
- j. Installation In-Briefing: (When/Where/Briefer/s): Minot AFB CE, Lt Col (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Certified PMP/s (Category 11): Lt Col (b) (6) , Lt Col (b) (6)
- c. Aircrew:
  - 1) Pilots: Lt Col (b) (6) , Capt (b) (6)
  - 2) Navigators: Lt Col (b) (6) , Maj (b) (6)
  - 3) Flight Engineers: MSgt (b) (6)
  - 4) Spray Operators: SMSgt (b) (6) , MSgt (b) (6) TSgt (b) (6)
- d. Safety Briefer: Lt Col (b) (6)
- e. Spray Maintenance: TSgt (b) (6) (lead), TSgt (b) (6) , TSgt (b) (6) , TSgt (b) (6) , SSgt (b) (6)
- f. Spray Ground Monitors: Lt Col (b) (6)
- g. Crew Chief: TSgt (b) (6) , SSgt (b) (6)
- h. Avionics: MSgt (b) (6)
- i. Flying Data:
  - (1) Spray Sorties/Hours: 1/1.6
  - (2) Ferry Sorties/Hours: 2/6.4

**3. PESTICIDES:**

- a. Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
- b. EPA Registration Number: Trumpet® EC 59639-90-5481
- c. Gallons Pesticide Loaded: 210 gal Trumpet® (17 July)
- d. Gallons Pesticide Applied: 210 gal Trumpet® (17 July)
- e. Gallons and Name of Flush Used: 3 Gallon HAN
- f. Other Additives Used: none
- g. Application Rate: 0.98 oz/acre Trumpet®

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99107
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 31 straight down
- f. Pressure (PSI): 41 PSI
- g. Flow Rate: 7.2 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: None
- c. Spray Release Altitude: 300 feet
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 127-141° @ 11-14 knots (aerial observation) (17 July)
- b. Temperature: 69-76 °F (17 June)
- c. Relative Humidity: 58%
- d. Cloud Cover: Clear
- e. Source: Aerial observations and National Weather Service

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Minot AFB and City of Minot conduct adult mosquito trapping to monitor mosquito densities on base.
- b. Effectiveness:
  - (1) Technique/s Used: Mosquito traps, Mosquito Magnet
  - (2) Results: Minot AFB: Prespray trap count (2 traps): 870; 1800. Post-spray counts 120; 270. Reductions of 86 and 85% respectively.

**8. REMARKS:** Meteorological conditions were good during the City of Minot and Minot AFB applications, with a moderate unidirectional wind assuring good coverage. Preliminary post-spray observations at Minot AFB indicate good control of mosquitoes. Pending trap count data from City of Minot will undoubtedly confirm this. Originally the City of Williston was also scheduled for application during this mission but mechanical difficulties prevented completion. Many thanks to (b) (6) (Minot AFB) and (b) (6) (City of Minot) for their support.

**16 -20 July 2018**  
**MI: QENRK3531197**

**PURPOSE/BENEFIT/OBJECTIVE:** One C-130 will deploy to Minot AFB from 16-20 July, 2018. Aerial Spray flight proficiency training will be accomplished on (NVG's) Night Vision Goggles while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel working and living in and around Minot AFB, Williston, and Watford city. Aerial spraying of the cities will be in accordance with the Individual Readiness Training (IRT) program.

**1. 910 AW PARTICIPANTS:**

**Mission Commander:** Lt Col (b) (6) (b) (6)  
**Entomologist:** Lt Col (b) (6) , Lt Col (b) (6) (in Williston)

**AIRCREW:**

**Pilots:** Lt Col (b) (6) , Capt (b) (6)  
**Navigators:** Maj (b) (6) , Lt Col (b) (6)  
**Flight Engineers:** MSgt (b) (6)  
**Spray Operators:** SMSgt (b) (6) , TSgt (b) (6) , MSgt (b) (6)

**MAINTENANCE:**

**Spray MX:** TSgt (b) (6) (Lead), TSgt (b) (6) , TSgt (b) (6) ,  
TSgt (b) (6) , SSgt (b) (6)  
**Avionics:** MSgt (b) (6)  
**Crew Chiefs:** TSgt (b) (6) , SSgt (b) (6) (Share Room)

**2. REQUIRED ITEMS:**

Msn Commander: MC Laptop Computer  
Entomologist: Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer  
Navigator: Maps/Map Bag, Validation Map  
Spray Operators: PPE, Calibration, Laptop and or Spray datasheet, O2 hose extensions, NVG's, wireless headsets.  
Spray Maintenance: Deployment Kit, Support Equipment  
Avionics: 2 Multi-band hand-held radios; Wingman system cards

### **3. SCHEDULE: (All Local Times)**

**16 July (Monday) Pesticide/Safety brief will be conducted at the aircraft prior to departing for KMIB**

1500 – Showtime

1700 – Depart KYNG

1935 – Land KMIB **PPR: 0116AW**

**17-19 July (Tuesday-Thursday) Sunset 2139L – Civil Twilight 2218L (Minot); Sunset 2148L – Civil Twilight 2227L (Williston)**

1500 – (Tuesday only) – In brief at 5 CES Commanders Conference Room in Bldg. 445

1830 – Weather Call/Pesticide Load/Calibration

2115 – Depart KMIB (daytime survey Minot AFB/Minot 1<sup>st</sup> night & Williston 2<sup>nd</sup> night)

0030 – Land KMIB

**20 July (Friday)**

1200 – Depart KMIB

1600 – Land KYNG

### **4. SPRAY CONFIGURATION AND PARAMETERS:**

<b>Location:</b>	<b>Minot AFB</b>
Acres:	5,170
Chemical:	Trumpet <sup>®</sup> EC (78% AI Naled)
Gallons loaded:	30
Flow Rate:	7.1 GPM
Application Rate:	0.98 oz/acre
Flush:	Highly Aromatic Naptha (HAN)
Altitude:	300 feet AGL
Airspeed:	200 KGS
Swath Width:	2,000 feet
Nozzle/Orientation:	ULV 8003 Tee Jet oriented straight down
Number of Nozzles:	(15 left – 16 right) 31 Total

<b>Location:</b>	<b>Minot City/Burlington</b>

**910 AW -- AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**PARRIS ISLAND MCRD, SC 17 – 20 April 2018**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island MCRD, SC
- b. Mission Duration: 17-20 April 2018
- c. Purpose of Application: Mosquito and biting midge (*Culicoides* spp.) control
- d. Application Date: 18 April 2018
- e. Time/s of Application (Zulu): 0030-0155 hrs (Zulu)
- f. Acres Treated: 6750 acres
- g. Project Coordinator: (b) (6), Environmental, DSN (b) (6)
- h. Date Spray Map Last Approved: 18 April 2018
- i. Date of Waste Generation Letter: 30 October 2007
- j. Installation In-Briefing: (When/Where/Briefer/s): Capt (b) (6) was briefed April 18, 2018, by Lt Col (b) (6).

**2. OPERATIONAL:**

- a. **Mission Commander:** Maj (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6), Capt (b) (6)
  - (2) Navigators: Lt Col (b) (6), Lt Col (b) (6)
  - (3) Flight Engineers: MSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6), TSgt (b) (6), SSgt J<sup>(b)</sup> (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (lead), MSgt (b) (6), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6), SrA (b) (6)
  - (3) Avionics: SSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate
- b. EPA Registration Number: 5481-480
- c. Formulation Sprayed: Concentrate (87.4% AI naled)
- d. Gallons Pesticide Loaded: 40 Gallons Dibrom<sup>®</sup>
- e. Gallons Pesticide Applied: 40 Gallons Dibrom<sup>®</sup>
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 8 gallons HAN
- h. Other Additives Used: None
- i. Application Rate: 0.76 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 909108
- b. Spray System (Modules Used) and System ID #: 4
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 13 nozzles oriented straight down
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 2.7 gallons per minute
- h. Sorties: 1/2.5 hrs (application); 2/4.0 hrs (ferry)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000'
- b. Spray Off-set: none
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 175@ 6-8 knots
  - (2) Release Altitude: 190@15 knots
- b. Temperature (Degrees Fahrenheit):
  - (1) Ground: 68°F
  - (2) Release Altitude: 68°F
- c. Cloud Cover: Clear
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations (Lt Col Haagsma)
  - (2) Results: Adequate coverage through sprayed area
- b. Effectiveness:
  - (1) Technique/s Used: Field observation (landing and biting)

- 8. REMARKS:** The spray system was calibrated on the ground prior to pesticide application. Initially, there were problems with the aircraft GPS system, but those problems were resolved in flight. An area of ¼ mile surrounding each of three eagles' nests was not treated (see attachment 1). Midge populations were moderate to heavy, especially in the areas around the rifle ranges and the golf course. Initial reports post-spray indicate good control. Pre-spray mosquito populations (as determined by PrevMed trapping) were almost non-existent, and thus, effects of spray on mosquito populations are not quantifiable. As always, many thanks to (b) (6), (b) (6), and Capt (b) (6), as well as Parris Island MCRD PrevMed for facilitating these activities.

**21-22 August (Tuesday-Wednesday) Sunset 2048L – Civil Twilight 2122L (Williston)**

1600 – (Tuesday only) – In brief at 5 CES Commanders Conference Room in Bldg. 445

1730 – Weather Call/Pesticide Load/Calibration

2025 – Depart KMIB (daytime survey Williston)

2330 – Land KMIB

**23 August (Thursday)**

1200 – Depart KMIB

1600 – Land KYNG

### **4. SPRAY CONFIGURATION AND PARAMETERS:**

<b>Location:</b>	<b>Williston/Watford/Minot AFB</b>
Acres:	28,795
Chemical:	Trumpet
Gallons loaded:	210
Flow Rate:	6.74 GPM
Application Rate:	0.93 oz/acre
Flush:	Highly Aromatic Naptha (HAN)
Altitude:	300 feet AGL
Airspeed:	200 KGS
Swath Width:	2,000 feet
Nozzle/Orientation:	ULV 8003 Tee Jet oriented straight down
Number of Nozzles:	(15 left – 16 right) 31 Total

**Flush and Purge procedures per day will be furnished by the Mission Commander**

#### 4. RADIO FREQUENCIES:

<b>Spray Ground:</b>	UHF 392.2; VHF 123.45
<b>Minot AFB:</b>	Tower – 120.65 VHF or 253.5 UHF Ground – 134.0 VHF or 257.8 UHF Approach – 119.6 VHF or 363.8 UHF ATIS – 278.8 UHF Command Post – 321.0 “Raymond 12” PTD – 372.2

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
UTAH TEST AND TRAINING RANGE, 22-27 OCT 2017**

**1. MISSION BASICS:**

- a. Installation Sprayed: Utah Test and Training Range (UTTR)
- b. Mission Duration: 22-27 October 2017
- c. Purpose of Application: Habitat restoration and development of firebreaks with a focus on cheat grass management and native species recovery on the UTTR
- d. Application Dates: See Attachment 1
- e. Times of Application (Local): See Attachment 1
- f. Acres Treated: 1,540
- g. Flying Data:
  - (1) Spray sorties/hours: 6/7.5
  - (2) Ferry sorties/hours: 2/10.4
  - (3) Support sorties/hours: 4/20.8
- h. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) Natural Resources Manager/DSN (b) (6) Environmental Coordinator, (b) (6) DSN (b) (6)
- i. Date Spray Map Last Approved: 22 Oct 2018
- j. Installation In-Briefing: (When/Where/Briefer/s): 22Oct 2018/Zulu Ops, Forestry Ramp/Lt Col (b) (6) Lt Col (b) (6), Lt Col (b) (6), Maj (b) (6), Mr. (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Entomologists (certified applicators): Maj (b) (6), Lt Col (b) (6) c.
  - Aircrew:
    - Pilots: Lt Col (b) (6), Lt Col (b) (6)
    - Navigators: Lt Col (b) (6), 1Lt (b) (6), 1Lt (b) (6)
    - Flight Engineer: Lt Col SMSgt (b) (6)
    - Spray Operators: SMSgt (b) (6), SSgt (b) (6)
- d. Maintenance:
  - Spray Maintenance: MSgt (b) (6) (lead), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
  - Crew Chiefs: TSgt (b) (6), SrA (b) (6)
  - Avionics: MSgt (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Plateau Herbicide (active ingredient: 23.6% Ammonium salt of imazapic)
- b. EPA Registration Number: 241-365
- c. Formulation Sprayed: 6 oz/acre Plateau + 5 oz/acre of Clasp or MSO in 7 gallons of water
- d. Gallons Pesticide Mix Loaded and applied: 10,677 / 10,677
- e. Gallons of pesticide used: 72.5 gal of Plateau
- f. Gallons and Name of Flush Used: 500 gal water
- g. Other Additives Used: 61 gal of Clasp/MSO

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99106
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: LV Fuselage
- e. Nozzle Orientation & Number Used: 18 – raindrop nozzles, oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 326 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. See Attachment 2.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: Visual observations by ground party of approximate 100 ft swath on all passes
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring
  - (2) Results: will be determined this spring by range personnel

**8. REMARKS:** This is the first time we have worked specifically on controlling cheat grass on the Utah Test and Training Range (UTTR). This initiative follows 16 years of successful fire suppression and habitat restoration on the Saylor Creek Range, ID. Thus, these methods are now standard operating procedures and we expect our results here to be highly successful in achieving the goals of this project for both the Natural Resources office and for the UTTR.

- a. The overall scope of this year's project is shown in Attachment 3 along with the post-spray flight patterns. Natural Resources will use these flight paths to pinpoint the daily applications and monitor the effectiveness in the spring. Some of the spray areas were chosen to serve specifically as firebreaks while others will be seeded with native plants. Native plants are typically more resistant to fire. Often, fires started elsewhere, can be more easily controlled in areas with more native vegetation. Therefore, we hope that this important project will be funded for several seasons, in order to increase the overall size of treatment areas and, consequently, provide the full-benefit of invasive species control and habitat restoration. In support of this end, the Air Force Aerial Spray Unit will plan to open their schedule to participate in this project for October 2018 and beyond.

- b. We had excellent support from Hill Air Force Base and specifically want to thank the 75<sup>th</sup> Air Base Wing/CC, Col (b) (6), for her letter of invitation and support. We also had excellent support from 75<sup>th</sup> CEG/CEI (Natural Resources), 75<sup>th</sup> OSS/OSAM (Base Operations), 75<sup>th</sup> LRS/LGRDDO (Transportation), UTTR DOO, and others.

//signed//

YOUNGSTOWN AIR RESERVE STATION**

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
MINOT AFB, MINOT, WILLISTON, AND WATFORD CITY, 25-29 JUNE 2018**

**1. MISSION BASICS:**

- a. Areas Sprayed: Minot AFB; Minot, Williston, and Watford City
- b. Mission Duration: 25-29 June 2018
- c. Purpose of Application: Control of adult nuisance and vector mosquitoes
- d. Application Date: 27 June 2018
- e. Times of Application (Local): 2155 27 June – 0255 28 June
- f. Acres Treated: 48,923
- g. Flying Data:
  - (1) Spray sorties/hours: 2/6.2
  - (2) Ferry sorties/hours: 2/6.8
- h. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) (Minot AFB); (b) (6) (b) (6) (City of Minot); (b) (6) (City of Williston)
- i. Date Spray Map Last Approved: 26 June 2018
- j. Installation In-Briefing: (When/Where/Briefer/s): 26 June 2018 at CE, briefed by Lt Col (b) (6), (b) (6), Deputy Base CE
- k. Mission Identifier: QENRK3531176

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6), Capt (b) (6)
  - (2) Navigators: Lt Col (b) (6), Lt Col (b) (6)
  - (3) Flight Engineer: MSgt (b) (6)
  - (4) Spray Operators: SSgt (b) (6), TSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (Lead), TSgt (b) (6), TSgt (b) (6), (b) (6), TSgt (b) (6), Amn (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6), SrA (b) (6)
  - (3) Avionics: MSgt (b) (6)
- d. **Entomologist:** Maj (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Trumpet® EC (78% A.I. naled)
- b. EPA Registration Number: 5481-481
- c. Additives Used: None
- d. Gallons Pesticide Loaded: 394 gallons Trumpet®

- e. Gallons Pesticide Applied: 394 gallons Trumpet®
- f. Gallons and Name of Flush Used: 20 gallons H.A.N. (Highly Aromatic Naphtha)
- g. Application Rate: 1.0 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-9104
- b. Spray System (Modules Used) and System ID #: SP2G, System #1
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet
- e. Nozzle Orientation & Number Used: 31 nozzles oriented straight down
- f. Nozzle pressure: 38-41 psi
- g. Flow Rate: 7.1 gal/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: none
- c. Spray Release Altitude: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 220@3 knots
  - (2) Release Altitude: 150@6 knots
- b. Temperature (Degrees Fahrenheit): 66°F
- c. Cloud Cover: Clear
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Application Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations. See Attachment 1 and 2 for areas treated.
  - (2) Results: Adequate coverage throughout the sprayed area
- b. Effectiveness:
  - (1) Technique/s Used: Pre- and post-spray surveillance was conducted using CDC light traps and New Jersey traps.
  - (2) Results: The environmental conditions were favorable for effective mosquito control on 27 June. It is clear from the mosquito trapping data out by the ND State Health Department (NDSHD), numbers of *Aedes vexans* were high (see table below and traps marked with \*). Unfortunately, NDSHD collections are completed weekly so post-spray numbers are not available at this time. These reductions will be mentioned in the next report when the area is treated again mid-July. Trapping is a significant part of these integrated pest management projects and efforts to effectively monitor mosquito populations during aerial spray operations are the responsibility of the requesting agency.

Location	Trap Type	Pre-Spray (25 Jun)	Post-Spray (28 Jun)	% Reduction
Minot AFB	Light	15	3	-80%

Minot	Trap Type	Pre-Spray (25 Jun)	Post-Spray (28 Jun)	% Reduction
Trap #1*	light	3003	pending	n/a
Trap #2	Light	3288	pending	n/a
Williston Traps	Trap Type	Pre-Spray (25 Jun)	Post-Spray (28 Jun)	% Reduction
Combined traps	New Jersey	194	70	-64%
Williston #1*	Light	924	pending	n/a
Williston #2*	Light	1825	pending	n/a

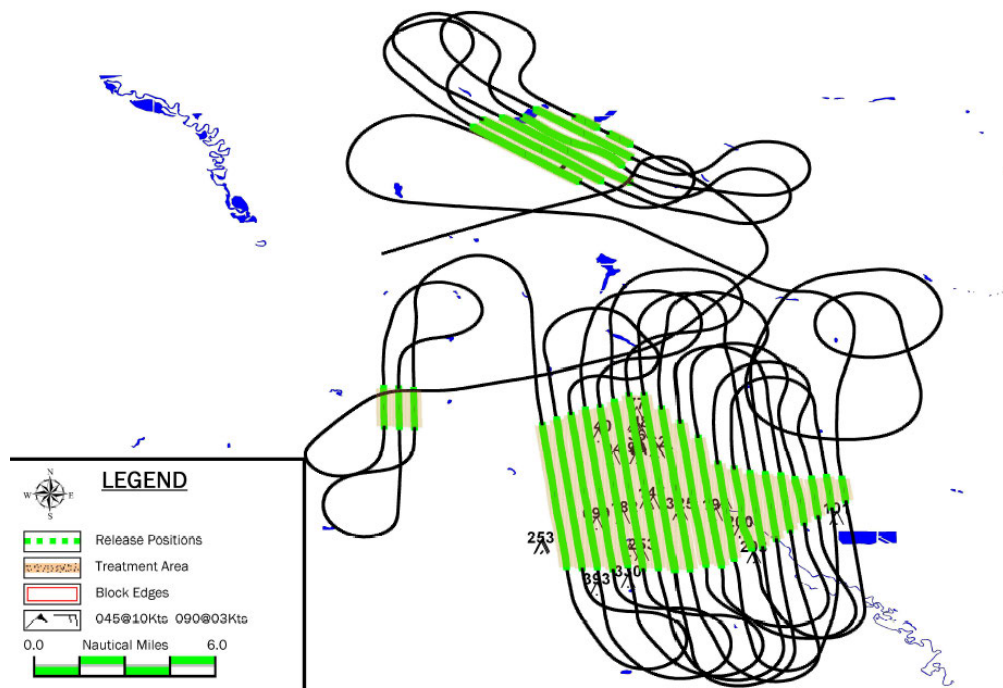

#### 8. REMARKS:

A fine "thank you" goes out to the 5LRS Vehicle Operations for providing us with government vehicles, we had great interactions with the staff but will want to coordinate vehicle placement better in the future. Leaving the vehicles at Base Operations is currently the best practice and will eliminate the need for a bus. At the inbrief on 26 June, we had good participation from most groups, but a representative from the Weather Shop was absent. We also reviewed the pre-spray mosquito density data from Minot AFB, Minot, and Williston. Pre and post- mosquito trapping numbers are a requirement for aerial spray operations and trap type, location, date set and retrieved, along with total number of mosquitoes collected are the minimum data requested. Another big help was from SMSgt (b) (6) 5OSS/OSAA), the time deviation on the airfield schedule to 24 hour operations on 27-28 June was directly responsible for mission success. Evening thunderstorms on Tuesday kept crews off the flightline during the chemical loading time. As a result, we ran out of daylight to load and conduct an aerial survey. The decision was made to stop the process and fly the daylight aerial survey without any spraying. This allowed us greater flexibility the following night and we were able to complete the entire area (but needed the extended airfield hours). This is not the preferred method but the last night's weather was predicted to be poor again, so we used the window of opportunity to ensure mission success. Feedback from Minot AFB personnel, grass cutting crews in Minot, and Williston area residents reported noticeable drops in mosquito attacks. In many cases, they spoke of a mosquito-free weekend. The next opportunity for a spray will be 16-20 July for these same areas.

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
LANGLEY AFB/CRANEY ISLAND, 29-30 AUGUST 2018**

**1. MISSION BASICS:**

- a. Installations Sprayed: Langley AFB, VA; Craney Island Army Corps of Engineers, Portsmouth, VA
- b. Mission Duration: 29-30 August 2018
- c. Purpose of Application: Control of nuisance and vector mosquito species at Langley AFB and Craney Island Army Corps of Engineers
- d. Application Date: 29 August 2018
- e. Times of Application (Zulu): 2330-0130
- f. Acres Treated: 12,010
- g. Flying Data:
  - (1) Spray sorties/hours: 1/2.0
  - (2) Ferry sorties/hours: 2/2.8
  - (3) Training sorties/hours: 1/0.5
- h. Project Coordinator (Name/Rank, Title, Phone #):
  - (1) Langley: (b) (6), CES Pest Control, DSN (b) (6)
  - (2) Craney Island: (b) (6), Army Corps of Engineers, (b) (6)  
(b) (6) and (b) (6) City of Portsmouth, (b) (6)
- i. Date Spray Map Last Approved: 29 August 2018
- j. Installation In-Briefing: (When/Where/Briefer/s): 29 August 2018 at CE, briefed by Lt Col (b) (6)
- k. Mission Identifier: QENRK3531239

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6), Maj (b) (6)
  - (2) Navigators: Maj (b) (6), Capt (b) (6)
  - (3) Flight Engineer: CMSgt (b) (6), SMSgt (b) (6), TSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6), MSgt (b) (6), TSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (Lead), MSgt (b) (6), TSgt (b) (6), Amn (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6), SRA (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. **Entomologist (Cat. 11 PMP):** Maj (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Trumpet® (a.i. naled)
- b. EPA Registration Number: 5481-481
- c. Additives Used: None
- d. Gallons Pesticide Loaded: 90 total
- e. Gallons Pesticide Applied: 90
- f. Gallons and Name of Flush Used: 15 gallons H.A.N. (Highly Aromatic Naphtha)
- g. Application Rate: 0.96 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9104
- b. Spray System (Modules Used) and System ID #: SP2G
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet
- e. Nozzle Orientation & Number Used: 29 nozzles oriented straight down
- f. Flow Rate: 6.7 gal/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Craney Island: Wind (at altitude) 210-240° @ 14 kts, Temperature 85°F, Relative Humidity 79%
- b. Langley: Wind (at altitude) 202-204° @ 10 kts, Temperature 84°F, Relative Humidity 78%

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations.
  - (2) Results: Adequate coverage through sprayed area. See Attachment 1.
- b. Effectiveness:
  - (1) Technique/s Used: Pre- and post-spray surveillance was conducted using CDC light traps with CO<sub>2</sub>.

(1) Pre and post spray trap counts from Langley AFB. Average reduction 84 %

(3) Trap locations at Craney Island

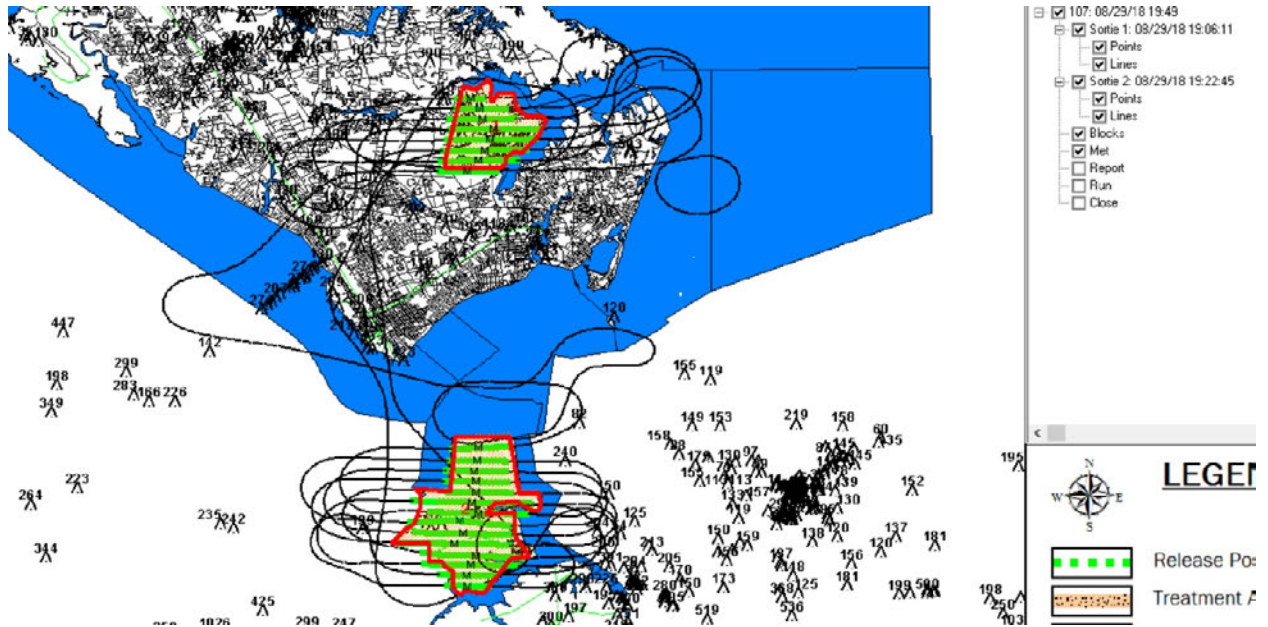

8. **REMARKS:** Relatively high mosquito counts made this night application a needed intervention to help protect the quality of life for local residents.

The Portsmouth Mosquito Control Division monitors insect populations and reported excellent control where mosquito populations were most numerous. Reductions in mosquito populations ranged from 71-100 %. Langley AFB also reported good control overall, with population reductions of about 85%. No significant problems were encountered during the actual application. This mission was originally planned for 4 days, but aircraft maintenance problems at home station prevented arrival on-site until the day of the planned spray. Thus, the timeline was by necessity, rushed. However, the professionalism and good attitude of crew allowed for safe and effective mission completion.

We sincerely appreciate the support received from all sections of Langley AFB and Craney Island Army Corps of Engineers. In particular, special thanks go to (b) (6) and (b) (6) for their coordination and their assistance during spray operations.

- a. Trade Name: Vectobac® 12AS (1200 ITU/mg)
- b. EPA Registration Number: 73049-38
- c. Formulation Sprayed: 1.8 pints of Vectobac in 4.5 gallons water per acre
- d. Gallons Pesticide Mix Loaded: 1,903 (Sortie 1); 1,900 (Sortie 2)

- e. Gallons Pesticide Mix Applied: 1,880 (Sortie 1); 1,880 (Sortie 2); (TOTAL 185 gallons of VectoBac12AS)
- f. Gallons and Name of Flush Used: None
- g. Other Additives Used: None
- h. Application Rate: 4.7 gal/acre (water with 1.8 pints Vectobac®)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 909108
- b. Spray System (Modules Used) and System ID #: 5
- c. Spray System Configuration: 3-Module System
- d. Nozzle Type/Size: LV/HV (Raindrop) Fuselage
- e. Nozzle Orientation & Number Used: 12 oriented straight back.
- f. Pressure: 40 p.s.i.
- g. Flow Rate: 220 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WATER LEVEL OBSERVATIONS:**

- a. See Attachment 1.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: water sensitive dye cards
  - (2) Results: 100 ft swath confirmed.
- b. Effectiveness:
  - (1) Techniques Used: pre/post larval dips
  - (2) Results: Pending

- 8. REMARKS:** The annual hatch of the primary pest mosquito in this operation, *Aedes vexans*, is initiated by the rising meltwaters of the undammed Yellowstone River. However, the rise of the confluence of the Yellowstone, Missouri, and Little Muddy rivers at Williston is dependent on environmental conditions 250 miles away and can make long-range predictions of the rising waters difficult. To combat large mosquito populations resulting from floodwaters in the Williston area, a large-scale larvicide mission was planned and started in the floodplain area. Unfortunately, only 2 sorties (Attachment 2) were completed, due to poor weather (thunderstorms and high winds) and a bird strike which rendered the aircraft inoperable for remaining spray activities.

- a. Craney Island: Wind (at altitude) 190°@11 kts, Temperature 79°F, Relative Humidity 89%
- b. Langley: Wind (at altitude) 193° @ 12 kts, Temperature 80°F, Relative Humidity 88%

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations.
  - (2) Results: Adequate coverage through sprayed area. See Attachment 1.
- b. Effectiveness:
  - (1) Technique/s Used: Pre- and post-spray surveillance was conducted using CDC light traps with CO<sub>2</sub>.

(2) Craney Island and Portsmouth Results:

8. **REMARKS:** Relatively high mosquito counts made this night application against largely the unbanded saltmarsh mosquito *Culex salinarius* a needed intervention to help protect the quality of life for local residents, especially when they are involved with outdoor activities. The area has received near record rainfalls in July and more mosquito development is in the future. However, for now we had a relatively successful application. In this particular event, the pesticide was loaded with a favorable forecast but lightning forced closure of the flightline before the calibration was complete. With sunset approaching and the day survey incomplete, it was suggested (by Mr. (b) (6) - 633CES), that we could calibrate after the day survey. This worked out quite well, since the Langley airfield is well-lit and the calibration was supported by additional light carts. In the end, the mission successfully followed the suggested pattern, a daytime obstacle safety survey, calibration, and the operational flight.

The Portsmouth Mosquito Control Division, monitors insect populations and reported 88% reductions overall (see section 7.b.2). These are slightly lower than the target reduction of 95% and could be the result of a variety of factors. We will continue to monitor the efficacy of these sprays carefully and adjust accordingly. No significant problems were encountered during this application, and no negative effects were observed.

In addition, we held a meeting with local communities interested in hearing about the Innovative Readiness Training (IRT) Program. Representatives from York, Poquoson, Hampton, Chesapeake, and Suffolk were present. Communities were advised to update the local environmental assessment and put together an application. There was definite interest and we may see a new series of IRT applications this year. Thank you to Ms. (b) (6) (York County Public Works, Mosquito Control Division) for hosting the community discussions.

We sincerely appreciate the support received from all sections of Langley AFB and Craney Island Army Corps of Engineers. In particular, special thanks go to (b) (6) and (b) (6) for their coordination and their assistance during spray operations.

Subj: APRIL AERIAL SPRAY TO CONTROL SANDFLIES AND MOSQUITOES

1. In an effort to control sand flea and mosquito populations, MCRD Parris Island is scheduled to undergo aerial spray activities during the nights of 18 and 19 April 2018. In order to meet public service announcement requirements and to warn beekeepers within a five-mile radius of Parris Island, please release the following announcement to the local media including local radio stations between 13 and 19 April 2018.

"In an effort to control sand flea and mosquito populations and depending on weather conditions, MCRD Parris Island is scheduled to undergo aerial spray activities during the night of 18 and 19 April 2018. If weather permits, spray activities will occur approximately an hour after sundown.

The insecticides used present no threat to humans, plants or animals in the area and are approved by the Environmental Protection Agency; however, beekeepers within a five-mile radius are urged to keep hives covered."

2. Should you have any questions, please contact Captain (b) (6) at  
(b) (6) the Natural Resources and Environmental Affairs Office.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: MSGT (b) (6) , Minot 20-23 AUG 2018

**Aircraft Tail Number:** 89009104

**MASS Number:** 1

**Configuration:** SPG 2

**Boom & Nozzle Type:** Fuselage, 8003's

**Chemical in Main Tank:** Trumpet

**Chemical in Flush Tank:** Aromatic  
Naptha

**Total Chemical Loads:** 1

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0 Gals

**Amount of Solid Waste Generated:**  
10 LBS

## 1. From a maintenance aspect, what training was accomplished on this mission?

We had great training for our new reservist, AMn (b) (6) . He was able to get signed off operating the barrels during the chemical upload and during the calibration worked the right side of the aircraft booms, buckets.

## 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.

Worked great with the crew chiefs on this trip & TA was on the spot. Loadmasters did a great job flushing a purging the system. Saved lots of man hours on the ground for spray MXS!!

## 3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.

Calibration took longer than usual, finally opened up a few more sites and was able to get the system calibrated.

## 4. How was host base and TA support? Please include details.

Excellent as always.

## 5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.

No issues

**6. Were there any notable observations from a maintenance perspective inflight?**

Spray MXS didn't fly

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Yes.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Trip was all around a good trip, no issues with the aircraft, system or weather.

**DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND**

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at JB Charleston and Parris Island, SC

1. Aerial spray deployment of one C-130 from 3-6 October 2018 to JB Charleston, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards to recruits at MCRD Parris Island and health and welfare of the personnel of JB Charleston. Operations for this mission will be conducted from JB Charleston.

2. Concept of Operations (All times are local):

- a. 3 October  
1700 Depart KYNG  
1900 Land KCHS
- b. 4 October  
1800 Depart KCHS for Aerial Spray of Parris Island  
2030 Land KCHS
- c. 5 October  
1800 Depart KCHS for Aerial Spray of JB Charleston  
2030 Land KCHS
- d. 6 October  
1000 Depart KCHS  
1200 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 6500 acres on Parris Island
- b. Altitude: 300' AGL NVG operations, 150' AGL Day operations
- c. Swath Width: 1000ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 0.75 oz/acre of Dibrom- an organophosphate insecticide

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at JB Charleston and Parris Island, SC

1. Aerial spray deployment of one C-130 from 15-19 May 2018 to JB Charleston, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards to recruits at MCRD Parris Island and health and welfare of the personnel of JB Charleston. Operations for this mission will be conducted from JB Charleston.

2. Concept of Operations (All times are local):

- a. 15 May (Tuesday)  
1700 Depart KYNG  
1900 Land KCHS
- b. 16 May (Wednesday)  
2000 Depart KCHS for Aerial Spray of JB Charleston  
2230 Land KCHS
- c. 17 May (Thursday)  
2000 Depart KCHS for Aerial Spray of Parris Island  
2230 Land KCHS
- d. 18 May (Friday)  
2000 Depart KCHS (Weather backup)  
2200 Land KCHS
- e. 19 May (Saturday)  
1000 Depart KCHS  
1200 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 6500 acres on Parris Island
- b. Altitude: 300' AGL NVG operations, 150' AGL Day operations
- c. Swath Width: 1000ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 0.75 oz/acre of Dibrom- an organophosphate insecticide

- a. Area to be treated: 18000 acres over JB Charleston

Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand-held radios; Wingman system cards

#### **3. SCHEDULE: (All Local Time)**

##### **11 June (Mon) PPR JM 1101**

0800 Showtime  
1000 Depart KYNG  
1200 Land KRDR  
1500 Installation Brief

##### **12-14 June (Tuesday-Thursday) Sunrise: 0528L**

0530 Showtime  
0700 Depart KRDR  
1100 Land KRDR (multiple lifts planned)

##### **15 June (Friday)**

0800 Showtime  
1000 Depart KRDR  
1400 Land KYNG

#### **4. AIRCRAFT & SPRAY CONFIGURATION:**

**Aircraft:** AF89-9104

**System:** MASS: #5 SP2G (2-Module System) with Fuselage Booms

**Nozzle/Orientation:** Larvicide: R-20 Raindrop nozzles oriented straight back  
Number of Nozzles: 12 nozzles

#### **5. SPRAY MIXING AND LOADING:**

##### **Composition of Each Gallon:**

- (1) 0.375 ounces of Altosid® Liquid Larvicide Concentrate (SR20)
- (2) 0.25 ounces of AirexDC™ drift retardant
- (3) Water

##### **Typical Load:**

- (1) Fill with 450 gallons of water per tank; total water in tanks = 900 gallons
- (2) Add 1.33 gallons of Altosid® per tank (2.66 gallons total)
- (3) Add 0.88 gallons AirexDC™ per tank (1.76 gallons total) while agitating approximately 15 min
- (4) Total quantity mixed = 904.4 gallons

**Final Load for Complete Flush:** Fill tanks with the amount of water necessary for a proper system flush

##### **Mixing Instructions:**

SHAKE WELL BEFORE USING. Altosid® may separate on standing and must be thoroughly agitated prior to dilution.

PRECAUTIONARY STATEMENT: Spray solution should be used within 48 hours; always agitate before spraying.

#### **6. SPRAY PARAMETERS:**

Location:	All prescribed areas
Chemical:	Altosid®
Area to be treated:	Approximately 2,100 acres
Swath Width:	200 feet
Flow Rate:	233 gallons/minute
Application Rate:	2.5 gallons/acre (water with 0.94 oz of Altosid®)
Altitude:	100' AGL
Ground Speed:	200 Knots
Flush:	Water
Formulas:	Flow Rate = Gal/Time in Minutes Acreage Sprayed = Total Sec x 338 x Swath Width / 43,560

#### **7. AIR TO GROUND RADIO FREQUENCIES:**

KRDR Tower:	124.9 V
Grand Forks International:	118.4 V
Spray Ground:	392.2 UHF; 123.45 VHF

# **AERIAL SPRAY OPERATIONAL SCHEDULE**

## **PARRIS ISLAND MCRD, SC**

### **17-20 APRIL 2018**

### **QENRK3592107**

**Purpose/Objectives/Benefits:** Aerial spray deployment of one C-130 during 17-20 April to Charleston AFB Intl, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards to recruits at Parris Island MCRD. NVG sorties will be flown at 300' AGL.

#### **1. 910 AW PARTICIPANTS:**

Msn Commander:	Maj (b) (6)	(b) (6)
Entomologists:	Lt Col (b) (6)	
Pilots:	Lt Col (b) (6)	, Capt (b) (6)
Navigators:	Lt Col (b) (6)	, Lt Col (b) (6)
Flight Engineer:	MSgt (b) (6)	
Spray Operators:	MSgt (b) (6)	, TSgt (b) (6), SSgt (b) (6)
Spray Maintenance:	TSgt (b) (6)	(330) 853-1311
	MSgt (b) (6)	, TSgt (b) (6), TSgt (b) (6)
	TSgt (b) (6)	, TSgt (b) (6)
Crew Chiefs:	TSgt (b) (6)	, SrA (b) (6)
Comm/Nav:	SSgt (b) (6)	

#### **2. REQUIRED ITEMS:**

Msn Commander:	MC Laptop Computer
Entomologist:	Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer
Navigator:	Maps/Map Bag, Validation Map
Spray Operators:	PPE, laptop/Spray datasheet, O <sub>2</sub> hose extensions, NVG's
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand-held radios; Wingman system cards

### **3. SCHEDULE: (All Local Time)**

#### **17 APR (Tues) PPR: Via GDSS2**

1500 Showtime  
1700 Depart KYNG  
1900 Land KCHS

#### **18 APR (Wed) Sunset: 1952L; Civil Twi: 2017L**

1630 Installation brief at Parris Island Bldg 151  
1700 Weather call/Chemical Load  
1730 Calibration  
1930 Depart KCHS  
2200 Land KCHS

#### **19 APR (Thurs) Sunset at Parris Island: 1952L; Civil Twi: 2018L weather backup**

1600 Weather call/Chemical Load  
1630 Calibration (if needed)  
1800 Depart KCHS  
2100 Land KCHS

#### **20 APR (Fri)**

1000 Depart KCHS  
1200 Land KYNG

### **4. AIRCRAFT & SPRAY CONFIGURATION:**

**Aircraft:** AF90-9108

**System:** MASS: #4 SP2G (2-Module System) with Fuselage Booms

**Nozzle/Orientation:** ULV 8003 Tee Jet orientated straight down

**Number of Nozzles:** 13 nozzles; may be adjusted during calibration

### **5. SPRAY LOADING:**

Entomologist will determine quantity to load and work with the local pest managers to determine the application rate. System will be calibrated after the chemical is loaded. Please see entomologist for final flow spray parameters as these numbers are subject to change depending on user requirements.

**How Much Pesticide:** approx. 40 gallons for Parris Island

**Where:** Taxi Location

**When:** 1600 after wx call. \*\*Calibration will be performed prior to spraying

**Furnished by Installation:**

Pesticide

Hazardous Waste Disposal

**6. SPRAY PARAMETERS: (PARRIS ISLAND MCRD SC)**

Location: All prescribed areas  
Chemical: Dibrom - insecticide  
Area to be treated: approx. 6,500 acres Parris Island  
Swath Width: 1,000 feet Parris Island  
Flow Rate: 2.72 GPM, TBD based on pest densities  
Application Rate: 0.75-1.0 oz/acre or as determined by entomologist  
Altitude: 300' AGL NVG operations, 150' AGL Day Operations  
Ground Speed: 200 Knots Ground Speed  
Flush: H.A.N. (Highly Aromatic Naphtha), flush and air purge  
Formulas: Flow Rate = Gal/Time in Minutes  
Acreage Sprayed = Total Sec x 338 x Swath Width / 43560

**RADIO FREQUENCIES:**

**Charleston AFB:** Tower - 843-414-2808  
Tower 126.0 or 239.0  
Ground 121.9 or 348.6

3009 S Broadway, Minot, ND 5807  
POC: Nicole Carter (701)852-0852 ext. 504

**6. PESTICIDE:**

Trade Name: Vectobac® 12AS (1200 ITU/mg)  
EPA Registration Number: 73049-38  
Formula Sprayed: 2.0 pints of Vectobac in 5 gallons water per acre  
Flush: Water  
Other Additives: 1 gallon Poly Control 2  
Application Rate: 5 gal/acre mix (water with 2.0 pints Vectobac® + 0.05 oz of Poly Control 2)

**7. SPRAY PARAMETERS:**

Aircraft Tail Number: 909108  
Spray System Module and System ID: MASS #5  
Spray System Configuration: SP-3  
Nozzle Type/Size: Rain Drop (LV)  
Nozzle Orientation and Number Used: 12 (6 each side) straight back  
Pressure: 40 psi  
Flow Rate: 233 gallons per minute

**SPRAY MIXING AND LOADING:** Plan on ~1,900 gallons in the tanks per lift. A full load will consist of 1,800 gal of water in MASS tanks + 75 gal of water in the sump + 90 gal of Vectobac + 0.7 gal of Poly Control 2.

Subsequent loads can be calculated by the following formula:  
Determine the volume remaining in MASS. Add water to 1,800 gallons total. Add Vectobac at 6.4 oz per gallon of water added (e.g., the difference between 1800 and the amount remaining from the previous sortie; Poly Control 2 is added at 0.05 oz per gallon of water added.

**8. APPLICATION PARAMETERS:**

Swath Width: 100 feet  
Spray Release Altitude: 100 feet AGL  
Ground Speed: 200 knots (338 feet per second)

**9. PARKING PLAN:**

Sierra Ramp (Adjacent to taxiway Alpha and Bravo), just East of Base Ops

**10. AIR TO GROUND RADIO FREQUENCIES:**

Primary: UHF 392.2; VHF 123.45

APPLICATION FOR AERIAL APPLICATION FOR PESTICIDE OVER A CITY  
North Dakota Department of Health  
Division of Air Quality  
SFN 14493 (9-09)

Scanned: ☒

Added to AQDB: ☐

PERMISSION IS REQUESTED TO CONTRACT FOR AERIAL APPLICATION OF PESTICIDE:

NAME OF CITY Minot Air Force Base	TO SPRAY FOR CONTROL OF Mosquitoes	REQUEST DATE April 11, 2018
NAME OF CITY CONTACT (b) (6)	TITLE Deputy Base Civil Engineer	TELEPHONE # (b) (6)
MAILING ADDRESS 5 CES/CD, 445 Peacekeeper Place	CITY Minot AFB	STATE/ZIP CODE ND / 58705-5006
E-MAIL ADDRESS (b) (6)		

AERIAL APPLICATOR SERVICE INFORMATION:

NAME OF APPLICATOR SERVICE Youngstown Air Reserve Station	NAME OF PILOT To Be Determined	TELEPHONE # (b) (6)
MAILING ADDRESS 3976 King Graves Road Unit 26	CITY Vienna	STATE/ZIP CODE OH / 44473-5932

PESTICIDE INFORMATION:

CHEMICAL NAME Trumpet EC	% CONCENTRATION 78.0% Naled	RATE OF APPLICATION 1.0 ounces/acre
METHOD [ULV, SPRAYER, OTHER (SPECIFY)] C-130 aircraft with a modular aerial spray system		DATE OF APPLICATION May 1 - Oct 31, 2018
METHOD PUBLIC NOTICE (check all that apply) <input checked="" type="checkbox"/> Radio <input type="checkbox"/> Newspaper <input checked="" type="checkbox"/> Television <input checked="" type="checkbox"/> Website <input type="checkbox"/> Posted Notification <input type="checkbox"/> Telephone <input checked="" type="checkbox"/> Other (Specify) <u>Base Rolling News Marquee</u>		DATE OF PUBLIC NOTICE one week prior to applications

SIGNATURE OF CITY CONTACT

SUBMIT YOUR APPLICATION TO:

North Dakota Department of Health  
Division of Air Quality  
918 E Divide, 2nd Floor  
Bismarck, ND 58501-1947

Fax Number: 701-328-5185  
Telephone: 701-328-5188

TO BE COMPLETED BY THE NORTH DAKOTA DEPARTMENT OF HEALTH

APPROVAL BY

Signature:

Date: 4/16/18

Approval from the Department of Health is required for aerial spraying of pesticides over a city [NDAC 33-15-10-01]. This application form must be completed before approval will be granted. Aircraft spraying and loading equipment must be dedicated for the use of only those chemical pesticides approved for residential ULV spraying and no other chemical pesticides will be used in the spraying or loading equipment. If a public health emergency exists, these requirements may be waived.

The aerial applicator must also be registered by the State of North Dakota Aeronautics Commission (701-328-9650) and must have Federal Aviation Administration (FAA) approval to conduct a spraying operation over a city congested area. To receive this approval the aerial application can contact the FAA Flight Standards District Office, 1801 - 23<sup>rd</sup> Ave. North, Room 211, Fargo, ND, 58502, 701-232-8949.

The North Dakota Department of Health will not be held liable for any accidents, misapplications, errors in mixing, etc. These are the sole responsibility of the pesticide applicator.

If the application of pesticide is not completed within five days of the date proposed, please contact this office. An extension may be granted.

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Charleston AFB/Parris Island Jun 18- Jun 21

**Aircraft Tail Number:** 89009104

**MASS Number:** 4

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage,

**Chemical in Main Tank:** Trumpet

**Chemical in Flush Tank:** Atsol 150

**Total Chemical Loads:** 1

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 10  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

Amn Kopras new TR in shop. Trained individual on ULV upload/calibration procedures.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication, personnel cohesion. Cooperation between ops, mx and charleston pest mngmt.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

Charleston age equipment, power units were very unreliable numerous trips from charleston age mechanics to repair or swap out.

**4. How was host base and TA support? Please include details.**

TA support was very good, no noted issues.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

Besides the wx cancel for P.I., no noted issues with chemical

**6. Were there any notable observations from a maintenance perspective inflight?**

No noted issues with system in flight, Spray loads were extremely capable on this msn.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was extremely effective in accomplishing this msn.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

No issues with acft, awmas 4 performed well, Parris Island lift was canceled due to WX. Lodging location was excellent choice.

**DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND**

6 June 2017

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations of Larvacide Application for Aerial Spray in and around the Army Corps of Engineers' property, Williston, ND.

1. Aerial spray deployment of one C130 to Minot, ND from 12 June-21 June 2017 for the requested larvacide spray in and around the Army Corps of Engineers' property near Williston, ND. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel working on the Army Corps' property, and by extension, the citizens of Williston. Mission objectives provide training for aerial spray aircrew, entomologists, and maintenance personnel in all aspects of the aerial spray mission.

2. Concept of Operations: All times local

- a. 12 June (Monday)
  - 1200 Depart KYNG (Support Aircraft)
  - 1200 Depart KYNG (Spray Aircraft)
  - 1430 Land KMIB (Support Aircraft)
  - 1430 Land KMIB (Spray Aircraft)
- b. 13-20 June (Tuesday-Tuesday)
  - 0530 Show KMIB
  - 0700 Depart KMIB
  - 0900 Land KMIB
  - (Multiple 2.0 hr sorties each day depending on weather)
- c. 21 June (Wednesday)
  - 1000 Depart KMIB (Spray Aircraft)
  - 1000 Depart KMIB (Support Aircraft)
  - 1400 Land KYNG (Spray Aircraft)
  - 1400 Land KYNG (Support Aircraft)

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 10,000 acres
- b. Altitude: 100 ft for larvicide application
- c. Swath Width: 100 ft
- d. Groundspeed: 200 KIAS
- e. Flow Rate: 233 gals/min
- f. Application Rate: 5 gal/acre (water with 2.0 pints of Vectobac® + 0.45 oz of Poly Control 2)

4. Maj (b) (6) will serve as the Mission Commander. Support required at Minot AFB has been completed.

\\SIGNED\\

(b) (6), Maj, USAF  
Chief of Aerial Spray

**AERIAL SPRAY OPERATIONAL SCHEDULE**  
**FMCA COURSE**  
**FORT MEYERS, FL**  
**6-11 Jan 2019**  
**QENRK3531007/PPR:N/A**

**OBJECTIVE/PURPOSE/BENEFIT:** The 910<sup>th</sup> Aerial Spray Unit will deploy one C-130 to Page Field, FL from 6-11 January 2019 in support of the annual DoD Aerial Spray Applicator (Category 11) Course held in conjunction with Lee County Mosquito Control at Lee County, FL.

**1. 910 AW PARTICIPANTS:**

Entomologists:	Lt Col (b) (6)	, Lt Col (b) (6)	, Lt Col (b) (6)	, Lt
	Col (b) (6)	, Lt Col (b) (6)		
Pilot:	Maj (b) (6)	, Capt (b) (6)

**SPRAY OPERATIONAL SCHEDULE**  
**UTAH TEST AND TRAINING RANGE (UTTR)**  
**14-19 October 2018**  
**Mission # QENRK3501287**

**PURPOSE/BENEFIT/OBJECTIVE:** Aerial spray herbicide mission on the Utah Test and Training Range (UTTR) to reduce the risk of range fires by controlling cheat grass (*Bromus tectorum*) and other invasive weed species while promoting reestablishment and success of native flora.

**1. 910 AW PARTICIPANTS:**

**Mission Commander:** Lt Col (b) (6) (b) (6) (cell phone)

**AIRCREW:**

**Pilots:** Lt Col (b) (6) , Lt Col (b) (6) , Capt (b) (6)

**Navigators:** Maj (b) (6) Capt (b) (6)

**Flight Engineer:** SMSgt (b) (6) , MSgt (b) (6)

**Spray Operators:** MSgt (b) (6) , MSgt (b) (6) , TSgt (b) (6)

**CERTIFIED APPLICATORS:**

**Entomologists:** Lt Col (b) (6) , Lt Col (b) (6)

**MAINTENANCE:**

**Spray MX:** MSgt (b) (6) (lead),  
MSgt (b) (6) , MSgt (b) (6) , TSgt (b) (6) , SSgt (b) (6)

**Crew Chiefs:** MSgt (b) (6) (lead), SSgt (b) (6)

**Avionics:** TSgt (b) (6)

**2. REQUIRED ITEMS:**

Msn Commander: MC Laptop Computer  
Entomologist: Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer  
Navigator: Maps/Map Bag, Validation Map  
Spray Operators: PPE, Calibration Tables/Laptop and or Spray datasheet, O<sub>2</sub> hose extensions  
Spray Maintenance: Deployment Kit, Support Equipment  
Avionics: 2 Multi-band hand-held radios; Wingman system cards

**3. IN-BRIEFING at Hill:**

On arrival on the Forestry Ramp with Mr. (b) (6) and Mr. (b) (6) .  
Required: MC, Entos, pilots, navs, SM lead.

#### **4. SCHEDULE: (All Local Time)**

##### **PLANNED SEQUENCE OF EVENTS: Hill AFB Tower Control and Runway Hours**

Tower Opens at 0800L

##### **14 October (Sunday)**

1000 Show KYNG

1100 Safety and Arrival brief given in the aircrew briefing room

1200 Depart KYNG    Spray (SP3G)    **Vader04    MI: QENRK3501287    PPR: BD-1401**

1200 Depart KYNG    Support    **Vader83    MI: QENRK3531287    PPR: BD-1402**

1500 Land KHIF

1530 Inbrief on the Forestry Ramp: Do not leave until cleared off by MC: see 3. For required party

##### **15 – 18 October (Monday-Thursday) Plan on 2 sorties per day Range time is 0800-1300**

0600 Show KHIF

0630 Weather call and mixing begin

0749 Sunrise

0800 Depart KHIF

1300 Land KHIF

##### **19 October (Friday)**

0700 Checked out of billeting/depart

0900 Spray AC Depart KHIF

1100 Support AC arrives at KHIF

1530 Spray AC Land KYNG

##### **20 October (Saturday) Hill Field opens at 0900**

0700 Checked out of billeting

0730 Return vehicles

0900 Depart KHIF

1530 Land KYNG

**\*\*All times are approximated. Actual times and mission details will be updated as appropriate by the Mission Commander.**

#### **5. SPRAY CONFIGURATION:**

Aircraft:	89-9104
System:	SP-3G MASS: 3
Nozzle /Orientation:	Raindrop/Straight Back
Number of nozzles:	Fuselage – 18 nozzles

## **6. SPRAY LOADING:**

### **a. In each gallon of mix:**

0.857 ounces of Plateau herbicide (0.67 gallons in 100 gallons of water)  
0.71 ounces of Clasp (0.5 gal in 100 gallons)  
0.71 ounces of Methylated Seed Oil (0.5 gal in 100 gallons)  
125.7 ounces of water

### **b. First Load (4 Tanks of 450 gallons each + sump of 75 gallons)**

Fill to 450 gal water/tank. This is done by putting the filler hose into the rear tank with all tanks open to the common sump.  
Total water in tanks = 1,800 gal.  
75 gal/water in sump  
Total water added = 1,875 gallons  
Load 12.5 gallons of Plateau; agitating approximately 5-7 min  
Total quantity mix 1888 gallons

### **c. Subsequent Loads**

Fill with water for a total of 1800 gallons; use “per 100 gallons of water” measurements given above when adding less than 1800 gallons (i.e., residual product in tank when loading). When the MASS is returned empty, load 1800 gallons of water and add: 12.0 gallons Plateau and 10 gallons of Clasp and 10 gallons of MSO.

## **7. SPRAY PARAMETERS:**

Location: UTTR – HAT and GAT ranges plus associated targets  
Herbicide: Plateau Herbicide (active ingredient: 23.6% Ammonium salt of imazapic)  
Area to be treated: 1,745 (see #12 for more information)  
Swath Width: 100 feet  
Flow Rate: 326 gal/min (we are treating at 46.5 acres/minute)  
Application Rate: 7 gal/acre (6 oz of Plateau per acre)  
Altitude: 100' AGL  
Ground Speed: 200 Knots  
Flush: Water; air purge at end of each sortie to minimize dripping upon return  
Formulas: Flow Rate = Gal/Time in Minutes  
Acreage Sprayed = Total Sec x 338 x Swath Width / 43560

## **8. PARKING PLAN:** Forestry Ramp

## **9. AIR TO GROUND RADIO FREQUENCIES:**

**Clover Range:** 285.65 / 275.9 / 361.4 (p)  
**Eagle Tower:** 351.0; Mawk 2  
**Diddle Knoll:** 398.1 (Primary), 383.2 (Back-up); 134.1 / 118.45  
**Spray Inter plane:** 237.05 / 138.375  
**Base OPS:** 139.3  
**Spray Ground:** 292.2 / 123.45

10. **TRANSPORTATION:** 75<sup>TH</sup> Logistics Readiness Squadron  
Vehicle Operations Control Center  
Hill Air Force Base, UT  
POC: SrA (b) (6) / DSN: (b) (6)

**\*\* Call Vehicle Ops for driver pickup at the Forestry Ramp after landing\*\***

**Confirmation Number: 29070763**

**Pickup: 14 OCT 17 / 1500 / FORESTRY RAMP**  
**Dropoff: 20 OCT 17 / 1000/ FORESTRY RAMP**

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
UTAH TEST AND TRAINING RANGE, 14-19 OCT 2018**

**1. MISSION BASICS:**

- a. Installation Sprayed: Utah Test and Training Range (UTTR)
- b. Mission Duration: 14-19 October 2018
- c. Purpose of Application: Habitat restoration and development of firebreaks with a focus on cheat grass management and native species recovery on the UTTR
- d. Application Dates: See Attachment 1
- e. Times of Application (Local): See Attachment 1
- f. Acres Treated: 1,730
- g. Flying Data:
  - (1) Spray sorties/hours: 7/7.8
  - (2) Ferry sorties/hours: 2/10.2
  - (3) Support sorties/hours: 4/20.3
- h. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) /Natural Resources Manager/DSN (b) (6) ; Environmental Coordinator: (b) (6) DSN (b) (6)
- i. Date Spray Map Last Approved: 14 Oct 2018
- j. Installation In-Briefing: (When/Where/Briefer/s): 14 Oct 2018/Zulu Ops, Forestry Ramp/Lt Col (b) (6) /Lt Col (b) (6)/Capt (b) (6), Mr. (b) (6), Mr. (b) (6), Mr. (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Entomologists (certified applicators): Lt Col (b) (6), Lt Col (b) (6)
- c. Aircrew:
  - Pilots: Lt Col (b) (6), Lt Col (b) (6), Capt (b) (6)
  - Navigators: Maj (b) (6), Capt (b) (6)
  - Flight Engineer: SMSgt (b) (6), MSgt (b) (6)
  - Spray Operators: MSgt (b) (6), MSgt (b) (6), TSgt (b) (6)
- d. Maintenance:
  - MSgt (b) (6) (lead), TSgt (b) (6), TSgt (b) (6), SSgt (b) (6)
  - Crew Chiefs: MSgt (b) (6) (lead), SSgt (b) (6)
  - Avionics: TSgt (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Plateau Herbicide (active ingredient: 23.6% Ammonium salt of imazapic)
- b. EPA Registration Number: 241-365
- c. Formulation Sprayed: 6 oz/acre Plateau + 5 oz/acre of Clasp or MSO in 7 gallons of water
- d. Gallons Pesticide Mix Loaded and applied: 11,235 / 11,235
- e. Gallons of pesticide used: 72.5 gal of Plateau

- f. Gallons and Name of Flush Used: 200 gal water
- g. Other Additives Used: 70 gal of methylated seed oil (MSO); 30 gal of Clasp drift reduction adjuvant

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99104
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: LV Fuselage
- e. Nozzle Orientation & Number Used: 18 – raindrop nozzles, oriented straight back.
- f. f. Pressure: 40 p.s.i.
- g. Flow Rate: 326 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Records are available on request from the 757AS/DOS as output data from weather station. 15 Oct – Winds light 360/3knts at altitude. 16 Oct – 310/0 with temps ranging from 28-71F and RH 78-32% on the ground; 130/2, 340/2, 030/5 altitude. 17 Oct – 60 (range 47-100)/1 with temps ranging 48-57F and RH 54-43% on the ground; 059/2, 080/6 altitude. 18 Oct – 125/1.8 with temps 50F-52F and RH 55-51%; 240/3 at altitude.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: Visual observations by ground party of approximate 100 ft swath on all passes (see Attachment 3)
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: monitoring of weed emergence in spring
  - (2) Results: will be determined this spring by range personnel

**8. REMARKS:** This is the second application of Plateau specifically for fire breaks/fire suppression and habitat restoration on the Utah Test and Training Range (UTTR). The application last October (2017) has been highly successful (see Attachment 2).

- a. We had excellent support from Hill Air Force Base and specifically want to thank the 75<sup>th</sup> Air Base Wing/CC, Col (b) (6), for his letter of invitation and support. We also had excellent support from 75<sup>th</sup> CEG/CEI (Natural Resources), 75<sup>th</sup> OSS/OSAM (Base Operations), 75<sup>th</sup> LRS/LGRDDO (Transportation), UTTR DOO, and others.

(b) (6), City of Williston
- h. Date Spray Map Last Approved: 16 July 2019
- i. Date of Waste Generation Letter: 22 June 2004
- j. Installation In-Briefing: (When/Where/Briefer/s): Minot AFB CE, Lt Col (b) (6),  
Lt Col (b) (6) (b) (6) Lt Col (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Certified PMP/s (Category 11): Lt Col (b) (6), Lt Col (b) (6)
- c. Aircrew:
  - 1) Pilots: Lt Col (b) (6), Maj (b) (6)
  - 2) Navigators: Lt Col (b) (6), Lt Col (b) (6)
  - 3) Flight Engineers: MSgt (b) (6)
  - 4) Spray Operators: CMSgt (b) (6), MSgt (b) (6), MSgt (b) (6); TSgt (b) (6)
- d. Safety Briefer: Lt Col (b) (6)
- e. Spray Maintenance: TSgt (b) (6) (lead), TSgt (b) (6), TSgt (b) (6)  
TSgt (b) (6)
- f. Spray Ground Monitors: Lt Col (b) (6)
- g. Crew Chief: (b) (6), SSgt (b) (6)
- h. Avionics: MSgt (b) (6)
- i. Flying Data:
  - (1) Spray Sorties/Hours: 2/4.6
  - (2) Ferry Sorties/Hours: 2/6.4

**3. PESTICIDES:**

- a. Applied at Minot AFB and City of Minot:
  - 1) Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
  - 2) EPA Registration Number: Trumpet® EC 59639-90-5481
  - 3) Gallons Pesticide Loaded: 210 gal Trumpet® (16 July)
  - 4) Gallons Pesticide Applied: 210 gal Trumpet® (16 July)
  - 5) Gallons and Name of Flush Used: 5 Gallon HAN
  - 6) Other Additives Used: none
  - 7) Application Rate: 0.98 oz/acre Trumpet®

b. Applied in Williston:

- 1) Trade Name (% Active Ingredient): Imperium (2% AI deltamethrin)
- 2) EPA Registration Number: 432-1534
- 3) Gallons Pesticide Loaded: 90 gal Imperium (17 July)
- 4) Gallons Pesticide Applied: 90 gal Imperium (17 July)
- 5) Gallons and Name of Flush Used: 5 Gallon HAN
- 6) Other Additives Used: none
- 7) Application Rate: 1.0 oz/acre Imperium

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99105
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 31 straight down (16 July)  
26 straight down (17 July)
- f. Pressure (PSI): 40 PSI
- g. Flow Rate: 7.1 GPM (16 July)  
7.3 GPM (17 July)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: None
- c. Spray Release Altitude: 300 feet
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 248° @ 7-9 knots (16 July)  
180-240° @ 4-7 knots (17 July)
- b. Temperature: 62-65 °F (16 July)  
60-65 °F (17 July)
- c. Relative Humidity: 79% (16 July)  
87% (17 July)
- d. Cloud Cover: Partly Cloudy
- e. Source: National Weather Service

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Minot AFB conducted adult mosquito trapping to monitor mosquito densities on base.
  - 1) Technique/s Used: Mosquito traps
    - A) Results: Minot AFB: Pre-spray trap count (1 trap): 243.  
Post-spray count 4000+.
- b.. City of Minot conducted adult mosquito trapping to monitor mosquito densities.
  - 1) Technique/s Used: Mosquito traps
    - A) Results: Pre-spray trap count (2 traps): 1512; 907. Post-spray counts 803; 778.  
Reductions of 47 and 15% respectively.

c. City of Williston conducted adult mosquito trapping to monitor mosquito densities.

1) Technique Used: Mosquito traps

A) Results: (mosquito numbers)

	<u>Pre spray</u>	<u>Post spray</u>
Trap #2	43	86
Trap #3	4	5
Trap #5	68	397
Trap #6	17	4
Trap #7	11	28

Comment: Weather conditions in Minot affected the flight times for Williston. Therefore only part of Williston was effectively sprayed. It was noted that many of the Williston mosquito traps were on the border of the spray block and may not have been reached because of the limited spray conditions.

2) Technique: Efficacy Field test:

Mosquito cages were placed in a test field and in an untreated site.

A) Results (% mortality)

<u>Treated cages</u>	<u>Untreated cages</u>
97%	3%

Comment: The Imperium mosquito control product was very effective in controlling the mosquitoes placed in test cages. Unofficial pre and post spray landing rates taken at the test site demonstrated high efficacy of the control product. Drift analysis of the spray droplets demonstrated effective droplet density and volume 3500' downwind from the flight path.

**8. REMARKS:** Meteorological conditions were good during the City of Minot and Minot AFB applications, with a moderate winds assuring good coverage. The City of Williston tested Imperium insecticide, a new formulation of deltamethrin developed for aerial mosquito control. The results from the field trial of Imperium in Williston demonstrated good results. Many thanks to (b) (6) (Minot AFB), (b) (6) (City of Minot), and (b) (6) (City of Williston) for their support.

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Maj (b) (6) (A/C), Capt (b) (6)
  - (2) Navigators: Lt Col (b) (6); Maj (b) (6)
  - (3) Flight Engineers: MSgt (b) (6); MSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6), MSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6), SSgt (b) (6)
  - (3) Avionics: MSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Dibrom<sup>®</sup> Concentrate (Parris Island); Trumpet<sup>®</sup> (JB Charleston)
- b. EPA Registration Number: 5481-480 (Dibrom); 5481-481 (Trumpet)
- c. Formulation Sprayed: Dibrom Concentrate (87.4% AI naled) (Parris Island); Trumpet (78% naled) (JB Charleston)
- d. Gallons Pesticide Loaded: 19 Jun; 45 Gallons Dibrom<sup>®</sup> (Parris Island); 18 Jun; 120 Gallons Trumpet<sup>®</sup> (JB Charleston)
- e. Gallons Pesticide Applied: 45 Gallons Dibrom<sup>®</sup> (Parris Island); 120 Gallons Trumpet<sup>®</sup> (JB Charleston)
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 10 gallons HAN
- h. Other Additives Used: None
- i. Application Rate: 0.75 oz/acre (Parris Island); 0.85 oz/acre (JB Charleston)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 13 (Parris Island); 28 (JB Charleston) oriented straight down
- f. Pressure: 40 p.s.i. (Parris Island); 40 p.s.i. (JB Charleston)
- g. Flow Rate: 2.6 gallons per minute (Parris Island); 6.3 gallons per minute (JB Charleston)
- h. Sorties: 2/3.8 hrs (application); 2/4.2 hrs (ferry)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000' (Parris Island); 2000' (JB Charleston)
- b. Spray Off-set: 2000' (Parris Island); none (JB Charleston)
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 220@6 knots (Parris Island); 240@5 knots (JB Charleston)
  - (2) Release Altitude: 220@14 knots (Parris Island) and 240@10 knots (JB Charleston)
- b. Temperature (Degrees Fahrenheit): 73°F (Parris Island); 75°F (JB Charleston)
- c. Cloud Cover: Clear (both locations)
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations (Lt Col Teig)
  - (2) Results: Good coverage throughout both sprayed areas
- b. Effectiveness:
  - (1) Technique/s Used: Light traps deploy before and after spray application
  - (2) Results: Parris Island (4 locations)

Golf course: 540 before; 196 after; 64% reduction  
Elliot's Beach: 8 before; 11 after; 38% increase  
Leatherneck Square: 157 before; 5 after; 97% reduction  
Outdoor pool: 38 before; 6 after; 84% reduction

Navy PrevMed comments: Substantial reduction of biting midge and mosquito populations after spray mission. PI environmental reported no adverse environmental effects of spray.

- (3) Results: JB Charleston (5 locations)

Spill Way: 252 before; 820 after; 69% increase  
Golf Course: 36 before; 5 after; 86% reduction  
Marrington Trail: 600 before; 16 after; 98% reduction  
Hopper Bridge: 684 before; 220 after; 67% reduction  
Spawar: 604 before; 27 after; 97% reduction

No adverse environment effects of spray were noted

8. **REMARKS:** Excellent coordination amongst all involved parties made this mission remarkably smooth. Reasonable control of mosquito and midge populations in both locations was observed both observationally and anecdotally. Biting insect populations at Parris Island were not as heavy as on some previous missions, but were substantial enough to justify the need for application. At spillway location at JB Charleston there was a substantial increase in mosquito numbers after the application. Charleston pest management POC speculated that there might have been a post spray mosquito hatch that had immigrated from outside the spray zone, but this could not be verified.

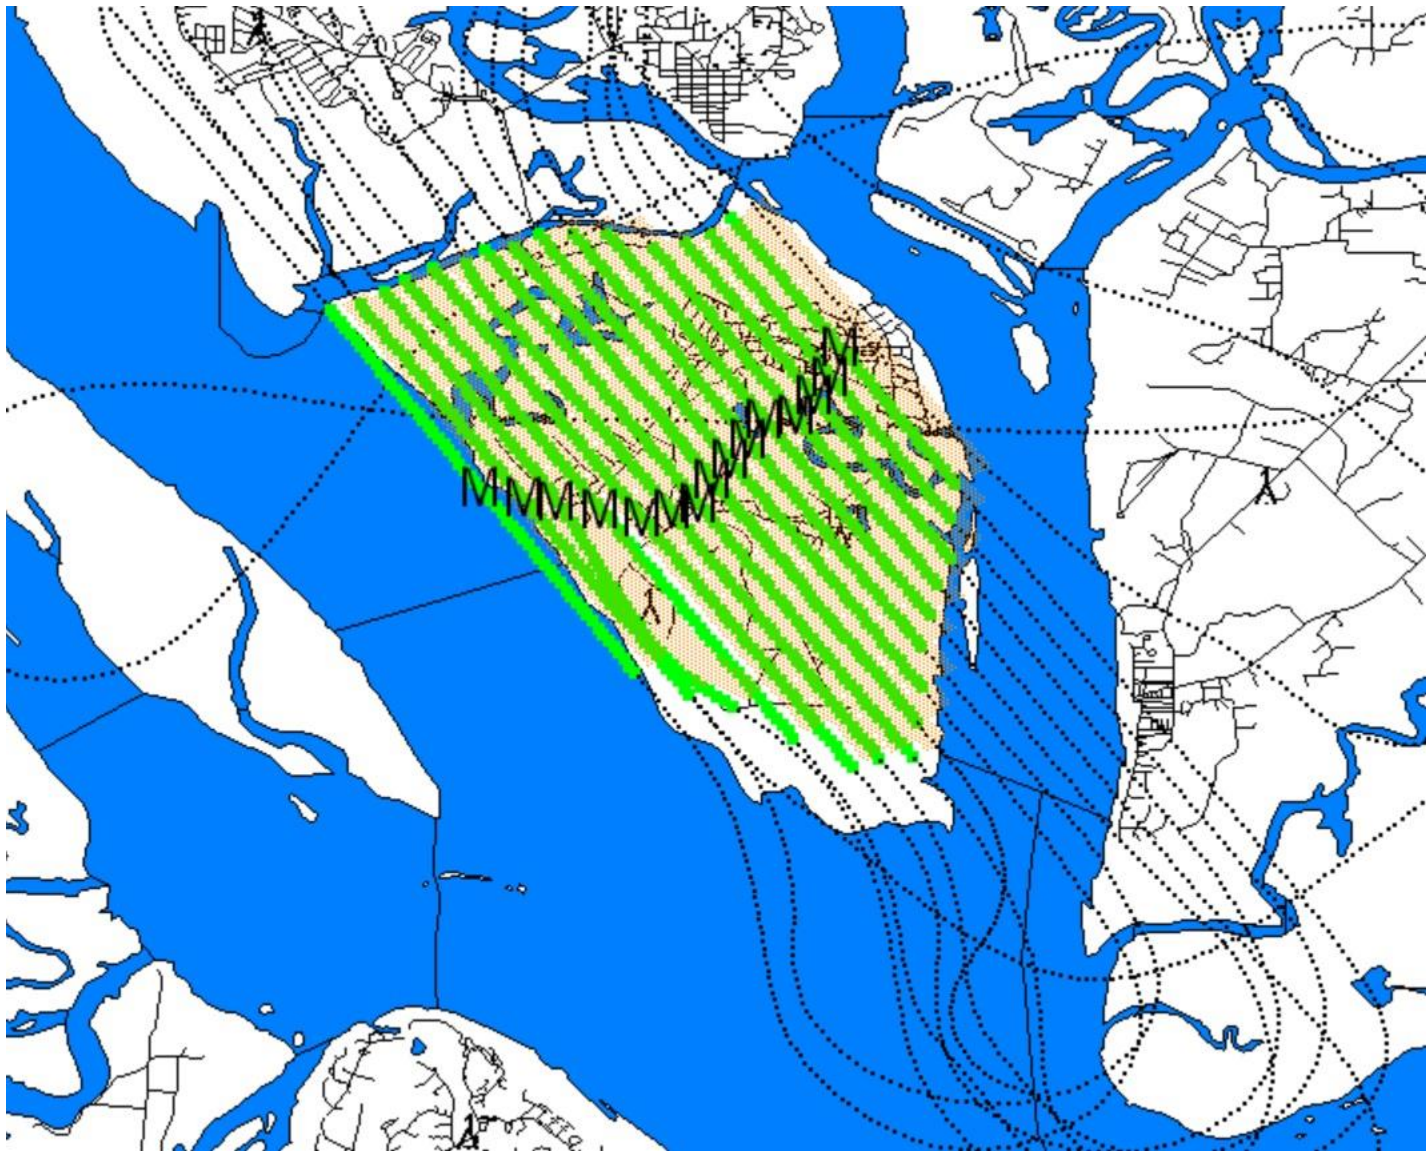

Actual applications at both locations proceeded without any significant functional problem or mishap, and no negative effect on wildlife was observed. On this mission no eagles were present at Parris island, which resulted in complete coverage without buffer zones. Many thanks to Capt (b) (6) and (b) (6) (Parris Island), and MSgt (b) (6) Winter (JB Charleston) for their help and alacrity in accomplishing this mission.

- d. **Entomologist:** Lt Col (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® (78%) Both locations.
- b. EPA Registration Number: 5481-481 (Trumpet)
- c. Formulation Sprayed: Trumpet (78% naled) (JB Charleston and Parris Island)
- d. Gallons Pesticide Loaded: 25 Sept; 120 Gallons (JB Charleston); 26 Sept; 60 Gallons Trumpet® (Parris Island)
- e. Gallons Pesticide Applied: 60 Gallons Dibrom® (Parris Island); 120 Gallons Trumpet® (JB Charleston)
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 20 gallons water
- h. Other Additives Used: None
- i. Application Rate: 1.15 oz/acre (Parris Island); 0.85 oz/acre (JB Charleston)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 18 (Parris Island); 29 (JB Charleston) oriented straight down
- f. Pressure: 40 p.s.i. (Parris Island); 40 p.s.i. (JB Charleston)
- g. Flow Rate: 4.2 gallons per minute (Parris Island); 6.2 gallons per minute (JB Charleston)
- h. Sorties: 2/3.8 hrs (application); 2/4.2 hrs (ferry)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000' (Parris Island); 2000' (JB Charleston)
- b. Spray Off-set: none (Parris Island); 1000' (JB Charleston)
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 220@6 knots (Parris Island); 240@5 knots (JB Charleston)
  - (2) Release Altitude: 220@14 knots (Parris Island) and 240@10 knots (JB Charleston)
- b. Temperature (Degrees Fahrenheit): 73°F (Parris Island); 75°F (JB Charleston)
- c. Cloud Cover: Clear (both locations)
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations (Lt Col Haagsma)
  - (2) Results: Good coverage throughout both sprayed areas
- b. Effectiveness:
  - (1) Technique/s Used: Light traps deploy before and after spray application
  - (2) Results: Parris Island

Post Spray trapping results have not yet been submitted by Parris island. However, Navy PrevMed comments: Substantial reduction of biting midge and mosquito populations after spray mission. PI environmental reported no adverse environmental effects of spray. This report will be updated upon receipt of additional data.

- (3) Results: JB Charleston (5 locations)

Spill Way: 843 before; 412 after; 51% reduction  
Golf Course: 53 before; 8 after; 85% reduction  
Marrington Trail: 443 before; 13 after; 97% reduction  
Hopper Bridge: 2823 before; 520 after; 81% reduction  
Spawar: 463 before; 23 after; 95% reduction

Totals: 4625 before; 976 after; 78% reduction

No adverse environment effects of spray were noted

**8. REMARKS:** Excellent coordination amongst all involved parties made this mission remarkably smooth. Reasonable control of mosquito and midge populations in both locations was observed both observationally and anecdotally. Application direction was less than ideal for JB Charleston application because aircraft was somewhat limited by air traffic operating out of Charleston International, resulting in only a 25 degree crosswind component (ideal is 90 degrees). This perhaps it the reason that although trap results from JB Charleston were not poor, and ideal spray application would result in reductions greater than 90%.

Actual applications at both locations proceeded without any significant functional problem or mishap, and no negative effect on wildlife was observed. On this mission no eagles were present at Parris island, which resulted in complete coverage without buffer zones. Many thanks to Capt (b) (6) and (b) (6) (Parris Island), and MSgt (b) (6) (JB Charleston) for their help in accomplishing this mission.

9 October 2018

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Joint Base Charleston and Parris Island, SC

1. Aerial spray deployment of one C-130 from 14-19 October 2018 to Hill AFB, UT to train aerial spray aircrew, entomologists, and maintenance members to reduce the risk of range fires by controlling cheat grass (*Bromus tectorum*) and other invasive weed species while promoting reestablishment and success of native flora on the Utah Test and Training Range (UTTR).

2. Concept of Operations (All times are local):

- a. 14 October
  - 1200 Depart KYNG (Support aircraft)
  - 1210 Depart KYNG (Spray aircraft)
  - 1500 Land KHIF
  - 1510 Land KHIF
- b. 15-18 October
  - 0800 Depart KHIF for the UTTR
  - 1000 Land KHIF (planned two sorties per day)
- c. 19 October
  - 0800 Depart KHIF
  - 1400 Land KYNG
  - 1500 (Support Aircraft arrives)
- d. 20 October
  - 0800 Depart KHIF (Support Aircraft)
  - 1400 Land KHIF

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

Locations:	Utah Test and Training Range (UTTR)
Acres:	1,448
Chemical:	Plateau (Herbicide)
Gallons loaded:	67
Flow Rate:	326 GPM
Application Rate:	7 gallons per acre
Flush:	Water
Altitude:	100'
Airspeed:	200 KTS
Swath Width:	100 feet
Nozzle/Orientation:	Raindrop
Number of Nozzles:	18

4. Lt Col (b) (6) will serve as the Mission Commander with Lt Col (b) (6) as the Aircraft Commander. Support at Hill AFB and the UTTR has been completed.

- d. 18 April  
1000 Depart KCHS  
1200 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 23,500 acres over Tyndal AFB

- b. Altitude: 300' AGL NVG operations, 150' AGL Day operations
  - c. Swath Width: 2000ft
  - d. Groundspeed: 200 KIAS
  - e. Application Rate: 0.85 oz/acre of Trumpet EC
- 
- a. Area to be treated: 6500 acres on Parris Island
  - b. Altitude: 300' AGL NVG operations, 150' AGL Day operations
  - c. Swath Width: 1000ft
  - d. Groundspeed: 200 KIAS
  - e. Application Rate: 0.75 oz/acre of Dibrom- an organophosphate insecticide
4. Lt Col (b) (6) will serve as the Mission Commander with Maj (b) (6) as the Aircraft Commander. Support at JB Charleston and Tyndall AFB has been completed.

20 May 2019

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations of Larvacide Application for Aerial Spray in and around the Army Corps of Engineers' property, Williston, ND and Grand Forks AFB, ND.

1. Aerial spray deployment of one C130 to Minot International Airport, ND from 28 May – 7 June 2019 for the requested larvacide spray over the Army Corps of Engineers' property near Williston, ND and Grand Forks AFB, ND. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel working on the Army Corps' property, and by extension, the citizens of Williston. While conducting missions out of Minot International Airport, we will also conduct a routine lavarside spray at Grand Forks AFB, ND. Mission objectives provide training for aerial spray aircrew, entomologists, and maintenance personnel in all aspects of the aerial spray mission.

2. Concept of Operations: All times local

- a. 28 May (Tuesday)
  - 1200 Depart KYNG (Support Aircraft)
  - 1200 Depart KYNG (Spray Aircraft)
  - 1430 Land KMOT (Support Aircraft)
  - 1430 Land KMOT (Spray Aircraft)
- b. 29 May - 06 June (Wednesday-Thursday)
  - 0530 Show KMOT
  - 0700 Depart KMOT
  - 0900 Land KMOT
  - (Multiple 2.0 hr sorties each day depending on weather)
- c. 07 June (Friday)
  - 1000 Depart KMOT (Spray Aircraft)
  - 1000 Depart KMOT (Support Aircraft)
  - 1400 Land KYNG (Spray Aircraft)
  - 1400 Land KYNG (Support Aircraft)

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

Williston, ND

- a. Area to be treated: 10,000 acres
- b. Altitude: 100 ft for larvicide application
- c. Swath Width: 100 ft
- d. Groundspeed: 200 KIAS
- e. Flow Rate: 233 gals/min
- f. Application Rate: 5 gal/acre (water with 2.0 pints of Vectobac<sup>®</sup> + 0.45 oz of Poly Control 2)

Grand Forks AFB, ND

- a. Area to be treated: 2,100 acres
- b. Altitude: 100 ft for larvicide application
- c. Swath Width: 200 ft
- d. Groundspeed: 200 KIAS
- e. Flow Rate: 233 gals/min
- f. Application Rate: 2.5 gal/acre (water with 0.94 oz of Altosid<sup>®</sup>)

4. Lt Col (b) (6) will serve as the Mission Commander. Support required at Minot AFB has been coordinated.

\\SIGNED\\

(b) (6), Maj, USAF  
Chief of Aerial Spray

**AERIAL SPRAY PLAN**  
**MINOT AFB, ND**  
**15 -18 July 2019**  
**MI: QZNRK3491196**

**PURPOSE/BENEFIT/OBJECTIVE:** One C-130 will deploy to Minot AFB from 15-18 July, 2019. Aerial Spray flight proficiency training will be accomplished on (NVG's) Night Vision Goggles while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel working and living in and around Minot AFB, Williston, and Watford city. Aerial spraying of the cities will be in accordance with the Individual Readiness Training (IRT) program.

**1. 910 AW PARTICIPANTS:**

**Mission Commander:** Lt Col (b) (6)  
**Entomologist:** Lt Col (b) (6) , Lt Col (b) (6) (in Williston)

**AIRCREW:**

**Pilots:** Lt Col (b) (6) , Maj (b) (6)  
**Navigators:** Lt Col (b) (6) , Lt Col (b) (6)  
**Flight Engineers:** MSgt Rich Lawton  
**Spray Operators:** CMSgt (b) (6) , MSgt (b) (6) , MSgt (b) (6) , TSgt (b) (6)

**MAINTENANCE:**

**Spray MX:** TSgt (b) (6) (Lead), TSgt (b) (6) ,  
TSgt (b) (6) , TSgt (b) (6)  
**Avionics:** MSgt (b) (6)  
**Crew Chiefs:** SSgt (b) (6) , SSgt (b) (6)

**2. REQUIRED ITEMS:**

Msn Commander: MC Laptop Computer  
Entomologist: Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer  
Navigator: Maps/Map Bag, Validation Map  
Spray Operators: PPE, Calibration, Laptop and or Spray datasheet, O<sub>2</sub> hose extensions, NVG's, wireless headsets.  
Spray Maintenance: Deployment Kit, Support Equipment  
Avionics: 2 Multi-band hand-held radios; Wingman system cards

### **3. SCHEDULE: (All Local Times)**

**15 July (Monday) Pesticide/Safety brief will be conducted at the aircraft prior to departing for KMIB**

1500 – Showtime

1700 – Depart KYNG

1935 – Land KMIB **PPR: 01-15-CC**

**16-17 July (Tuesday-Wednesday) Sunset 2140L – Civil Twilight 2220L (Minot); Sunset 2148L – Civil Twilight 2227L (Williston)**

1345 – (Tuesday only) – In brief at 5 CES Commanders Conference Room in Bldg. 445

1830 – Weather Call/Pesticide Load/Calibration

2115 – Depart KMIB (daytime survey Minot AFB/Minot 1<sup>st</sup> night & Williston 2<sup>nd</sup> night)

0030 – Land KMIB

**18 July (Thursday)**

1200 – Depart KMIB

1600 – Land KYNG

### **4. SPRAY CONFIGURATION AND PARAMETERS:**

<b>Location:</b>	<b>Minot AFB</b>
Acres:	5,170
Chemical:	Trumpet <sup>®</sup> EC (78% AI Naled)
Gallons loaded:	30
Flow Rate:	7.1 GPM
Application Rate:	0.98 oz/acre
Flush:	Highly Aromatic Naptha (HAN)
Altitude:	300 feet AGL
Airspeed:	200 KGS
Swath Width:	2,000 feet
Nozzle/Orientation:	ULV 8003 Tee Jet oriented straight down
Number of Nozzles:	(15 left – 16 right) 31 Total

<b>Location:</b>	<b>Minot City/Burlington</b>
Acres:	22,128
Chemical:	Trumpet
Gallons loaded:	180
Flow Rate:	7.1 GPM
Application Rate:	0.98 oz/acre
Flush:	Highly Aromatic Naptha (HAN)
Altitude:	300 feet AGL
Airspeed:	200 KGS
Swath Width:	2,000 feet
Nozzle/Orientation:	ULV 8003 Tee Jet oriented straight down
Number of Nozzles:	(15 left – 16 right) 31 Total

<b>Location:</b>	<b>Williston/Watford</b>
Acres:	23,622
Chemical:	Imperium
Gallons loaded:	180
Flow Rate:	7.3 GPM
Application Rate:	1.0 oz/acre
Flush:	Highly Aromatic Naptha (HAN)
Altitude:	300 feet AGL
Airspeed:	200 KGS
Swath Width:	2,000 feet
Nozzle/Orientation:	ULV 8003 Tee Jet oriented straight down
Number of Nozzles:	(13 left – 13 right) 26 Total

**Flush and Purge procedures per day will be furnished by the Mission Commander**

## **TYNDALL AFB/PARRIS ISLAND, SC**

### **15-18 April 2019**

### **QZNRK3491105**

**Purpose/Objectives/Benefits:** One C-130 will deploy to JB Charleston, SC from 15-18 April 2019. Mosquito and biting midge control will be conducted at Tyndall AFB following an emergency request in response to recent hurricane Michael. Weather permitting, a spray flight will also occur at MCRD Parris Island. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito and biting midge populations affecting the health and welfare of the personnel at both installations. Operations for this mission will be conducted from JB Charleston utilizing Night Vision Goggles (NVGs).

**5. LODGING:**

**OFF BASE** Staybridge Suites  
3009 S Broadway, Minot, ND 5807  
POC: Nicole Carter (701)852-0852 ext. 504

**6. PESTICIDE: Williston**

Trade Name: Vectobac® 12AS (1200 ITU/mg)  
EPA Registration Number: 73049-38  
Formula Sprayed: 2.0 pints of Vectobac in 5 gallons water per acre  
Flush: Water  
Other Additives: 1 gallon Poly Control 2  
Application Rate: 5 gal/acre mix (water with 2.0 pints Vectobac® + 0.05 oz of Poly Control 2)

**7. SPRAY PARAMETERS: Williston**

Aircraft Tail Number: 909105  
Spray System Module and System ID: MASS #5  
Spray System Configuration: SP-3  
Nozzle Type/Size: Rain Drop (LV)  
Nozzle Orientation and Number Used: 12 (6 each side) straight back  
Pressure: 40 psi  
Flow Rate: 233 gallons per minute

**8. APPLICATION PARAMETERS:**

Swath Width: 100 feet  
Spray Release Altitude: 100 feet AGL  
Ground Speed: 200 knots (338 feet per second)

**SPRAY MIXING AND LOADING:** Plan on ~1,900 gallons in the tanks per lift. A full load will consist of 1,800 gal of water in MASS tanks + 75 gal of water in the sump + 90 gal of Vectobac + 0.7 gal of Poly Control 2.

Subsequent loads can be calculated by the following formula:  
Determine the volume remaining in MASS. Add water to 1,800 gallons total. Add Vectobac at 6.4 oz per gallon of water added (e.g., the difference between 1800 and the amount remaining from the previous sortie; Poly Control 2 is added at 0.05 oz per gallon of water added.

**9. SPRAY MIXING AND LOADING: Grand Forks**

**Composition of Each Gallon:**

- (1) 0.375 ounces of Altosid® Liquid Larvicide Concentrate (SR20)
- (2) 0.25 ounces of AirexDC™ drift retardant

(3) Water

**Typical Load:**

- (1) Fill with 450 gallons of water per tank; total water in (4) tanks = 1800 gallons
- (2) Add 1.33 gallons of Altosid<sup>®</sup> per tank (5.32 gallons total)
- (3) Add 0.88 gallons AirexDC<sup>™</sup> per tank (3.52 gallons total) while agitating approximately 15 min
- (4) Total quantity mixed = Approx 1800-1900 gallons

**Final Load for Complete Flush:** Fill tanks with the amount of water necessary for a proper system flush

**Mixing Instructions:**

SHAKE WELL BEFORE USING. Altosid<sup>®</sup> may separate on standing and must be thoroughly agitated prior to dilution.

PRECAUTIONARY STATEMENT: Spray solution should be used within 48 hours; always agitate before spraying.

**10. SPRAY PARAMETERS: Grand Forks**

Location:	All prescribed areas
Chemical:	Altosid <sup>®</sup>
Area to be treated:	Approximately 2,100 acres
Swath Width:	200 feet
Flow Rate:	233 gallons/minute
Application Rate:	2.5 gallons/acre (water with 0.94 oz of Altosid <sup>®</sup> )
Altitude:	100' AGL
Ground Speed:	200 Knots
Flush:	Water
Formulas:	Flow Rate = Gal/Time in Minutes Acreage Sprayed = Total Sec x 338 x Swath Width / 43,560

**11. PARKING PLAN:**

North turn around by guard base at KMOT. 375ft from hydrant to north turn around.

**12. AIR TO GROUND RADIO FREQUENCIES:**

Primary: UHF 392.2; VHF 123.45

**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**Tyndall AFB, FL, Langley AFB, and Army Corps of Engineer's Craney Island 19-25 Aug 2019**

**1. MISSION BASICS:**

- a. Installations Sprayed: Tyndall AFB, FL<sup>1</sup>, Craney Island, VA<sup>2</sup>, and Langley AFB VA<sup>3</sup>
- b. Mission Duration: 19-25 Aug 2019
- c. Purpose of Application: Control of nuisance and vector mosquito and biting midge species
- d. Application Dates: 20 Aug<sup>1</sup> & 21 Aug<sup>2,3</sup> 2019
- e. Times of Application (Local): 1905-2040<sup>1</sup>; 1955-2140<sup>2,3</sup>
- f. Acres Treated: 26,800<sup>1</sup>; 8,308<sup>2</sup>; 3,116<sup>3</sup>
- g. Flying Data:
  - (1) Spray sorties/hours: 2/3.3
  - (2) Ferry sorties/hours: 3/6.8
- h. Project Coordinator (Name/Rank, Title, Phone #):
  - (1) Tyndall: Mr. (b) (6) | AFCEC/COSC, DSN 523-6465
  - (2) Craney Island: (b) (6) | Army Corps of Engineers, 757-201-7186; (b) (6) | City of Portsmouth (b) (6)
  - (3) Langley: (b) (6) | 633 CES Pest Control, DSN (b) (6)
- i. Date Spray Map Last Approved: 20 Aug 2019<sup>1</sup>; 1 Aug 2018<sup>2,3</sup>
- j. Installation In-Briefing: (When/Where/Briefer): 20 Aug 2019 Tyndall AFB/Base Operations/Lt Col (b) (6) | (b) (6) | 21 Aug 2019, with collaborators at 633 CES Conference Room via phone from Tyndall AFB by Lt Col (b) (6) |
- k. Mission Identifier: QZNRK3401231

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6) |
- b. **Entomologist:** Lt Col (b) (6) |
- c. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) | Lt Col (b) (6) |
  - (2) Navigators: Lt Col (b) (6) | Capt (b) (6) |
  - (3) Flight Engineer: TSgt (b) (6) |
  - (4) Spray Operators: MSgt (b) (6) | TSgt (b) (6) |
- d. **Maintenance:**
  - (1) Spray Maintenance: MSgt (b) (6) | TSgt (b) (6) | (lead), TSgt (b) (6) | TSgt (b) (6) |
  - (2) Crew Chiefs: TSgt (b) (6) | SSgt (b) (6) |
  - (3) Avionics: MSgt (b) (6) |

**3. PESTICIDE:**

- a. Trade Name: Trumpet® (78% A.I. naled)
- b. EPA Registration Number: Trumpet 5481-481
- c. Additives Used: None
- d. Gallons Pesticide Loaded: 210<sup>1</sup>; 90<sup>2,3</sup>
- e. Gallons Pesticide Applied: 210<sup>1</sup>; 90<sup>2,3</sup>
- f. Name and Amount of Flush Used: 15 gal of water
- g. Application Rate: 1.0 oz/acre<sup>1</sup>; 1.0 oz/acre<sup>2,3</sup>

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-9106
- b. Spray System (Modules Used) and System ID #: SP2G; MASS #4
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet
- e. Nozzle Orientation & Number Used: 34<sup>1</sup> and 33<sup>2,3</sup> nozzles; oriented straight down
- f. Flow Rate: 7.2 gal/min<sup>1</sup>; 7.1 gal/min<sup>2,3</sup>

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2,000 ft
- b. Spray Off-set: 2,000 ft<sup>1</sup>
- c. Spray Release Altitude: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:** Tyndall wind (ground) light and variable, temperature 81F 85% relative humidity; wind (at altitude) 200° @ 7-10 kts, sky clear. Craney Island 230° @5 ground; 230° @ 10-12 (altitude), sky partly cloudy.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations and mosquito surveillance using traps, including traps baited with CO<sub>2</sub>.
  - (2) Results: Adequate coverage through sprayed areas (see attachments 1&2 for flight paths)
- b. Effectiveness:
  - (1) Technique/s Used: Pre- and post-spray surveillance was conducted using CDC traps.
  - (2) Results:

aa. Tyndall AFB: Lt Col (b) (6) and SSgt (b) (6) provided the pre- and post-spray data in Attachment 3. Trap site 9 collected large numbers of mosquitoes prior to sprays and about half as many after the spray. Looking at the map in Attachment 3, Site 9 is near the edge of the spray block and may not be the best location for making a critical analysis of the efficacy of this application. Other trapping locations had equipment failures or were stymied by bad weather. For future sprays, consistent trapping at locations 8 or 2 would also be helpful in our efficacy evaluations. Nonetheless, members operating at Tyndall reported marked reduction in mosquito and midge activity following aerial spraying.

bb. Mr. (b) (6)  
trapping data:

(Langley 663 CES/CEOI) provided the following mosquito

Location	Trap Type	Pre-Spray (20 Aug)	Post-Spray (24 Aug)	% Reduction
Horse Stables	Light trap	0	0	0
B-52	Light trap	240	53	78
Pest Shop	Light trap	43	18	58
WSA	Light trap	70	112	0

Mr. (b) (6) noted that “*Ae. sollicitans* at the B-52 trap site significantly decreased and down at the Pest Shop site as well. However, the WSA trap was higher after the spray the timing of the spray missed a *Psorophora* sp. emergence by one day.”

cc. Mr. (b) (6) (Representing the Army Corps and City of Portsmouth) provided the following data and trap location (see Attachment 4):

Trap Location	% Reduction
Landfill	98.9
High School	100.0
Morro Blvd.	88.0
Knightsbridge Way	70.6
Greenbrook	77.8
Hatton Point	75.5
<b>Total Reduction</b>	<b>85.1</b>

Trap Location	% Reduction
Mayflower	54.0
DeKalb	46.5
Paradise Creek	46.3
Rotunda	75.5
Williams	87.8
<b>Total Reduction</b>	<b>62.0</b>

These data do not represent the best results ever recorded at these locations and aerial sprays generally aim for a target pest reduction > 95%. However, the number of factors and variables present during an application vary tremendously at each location and even during each event. Nonetheless, many reductions were sizeable and in Portsmouth the lower reductions appear to be in the more densely foliated regions. Moving toward the maximum label rate for the insecticide is an option to improve future results.

## 8. REMARKS:

- This was the second application at Tyndall AFB and the first time operations were conducted from their flightline. Tyndall did a great job hosting this activity, there was an excellent turnout for the inbrief and the base supported the operation effectively. Per the consensus at the inbrief, we have scheduled an aircraft for 13-17 April in 2020. Other applications in CY2020 would be on a “requested” basis but could potentially be combined with activities at JB Charleston.
- We appreciate the excellent support received at both bases. A special thanks goes to Mr. (b) (6) and Mr. (b) (6) for vehicle support and to the Langley LRS vehicle operations for their

support while we managed repairs. Likewise, we thank AFCEC at Tyndall for the use of their van and SSgt (b) (6) at Tyndall Ground Transportation for working with us to provide a vehicle.

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Williston/Grand forks May 29th-June 7th

**Aircraft Tail Number:** 89009105

**MASS Number:** 5

**Configuration:** LV/HV

**Boom & Nozzle Type:** Fuselage R Drop

**Chemical in Main Tank:** vectobac,altosid

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 7

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 15  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

(b) (6) new ART in shop. Trained individual on LV/HV upload procedures w/ load station.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication, personnel cohesion. Cooperation between ops, mx, FBO, Army Guard, Minot Age, Minot Pest Mgmt, Grand Forks Pest Mgmt

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

4. Improved pre/post load communication

**5. How was host base and TA support? Please include details.**

TA support was very good, Army Guard was Excellent for flight line access and forklift availability.

**6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

Due to Acft issues sprayed Grand forks Sunday instead of Saturday.

**7. Were there any notable observations from a maintenance perspective inflight?**

Needed to add 2 more nozzles after first lift, following lifts were spot on for GPM.

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was extremely effective in accomplishing this msn.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Acft had some MX issues, awmas 5 performed well some minor valve solenoid air leaks. Lodging location was excellent choice.

total	10208	2692
	% reduction	73.6

8. **REMARKS:** Excellent coordination amongst all involved parties made this mission fairly smooth. Despite wind been light and variable, Good control of mosquito and midge populations in both locations was observed both observationally and anecdotally. Average reduction in population at Parris Island was approximately 88%. Average reduction at JB Charleston was approximately 74%, despite the fact that post spray trapping was conducted 4 days after the fact. These numbers are quite reasonable, and suggest the aerial spray was effective in both execution and intent.

Initial intended application at JB CHS on 9 September was thwarted by aircraft mechanical difficulties with result that actual takeoff time was delayed until the point that diminishing weather conditions prevented application on that evening. Actual applications at both locations (Sept 10) proceeded without any significant functional problem or mishap, and no negative effect on wildlife or other unintended adverse effect was observed. On this mission no eagles were present at Parris Island, which resulted in relatively complete pesticide coverage. No significant loss of efficacy was noted from using 2000' swath width vice the standard 1000' swath width normally employed. Many thanks to Mr. (b) (6) (Parris Island), and MSgt (b) (6) (JB Charleston) for their help in accomplishing this mission. The 910 AW appreciates the levels of support provided by these installations.

(b) (6), Lt Col, USAFR

YOUNGSTOWN AIR RESERVE STATION

CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
MINOT AFB, MINOT, AND WILLISTON, 13-17 JULY 2020

1. MISSION BASICS:

- a. Areas Sprayed: Minot AFB; Minot, Burlington, Williston, and Watford City
- b. Mission Duration: 13-17 July 2020
- c. Purpose of Application: Control of adult nuisance and vector mosquitoes
- d. Application Dates: 14, 16 July 2020
- e. Times of Application (Local): 2150 hrs 14 July – 0055 hrs 15 July (Minot City, Burlington, Minot AFB; 2105 hrs 16 July – 0030 hrs 17 July (Williston and Watford City)
- f. Acres Treated: 20,165 (Minot City); 1,026 (Burlington); 4,924 (Minot AFB); 5,718 (Watford City); 25,335 (Williston) = 57,168 acres
- g. Flying Data:  
(1) Spray sorties/hours: 2/3.1 (14 July) + 3.5 (16 July) = 6.6 hrs  
(2) Ferry sorties/hours: 2/7.3
- h. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) (Minot AFB); (b) (6) (City of Minot); (b) (6) (City of Williston)
- i. Date Spray Map Last Approved: 14 July 2018
- j. Installation In-Briefing: (When/Where/Briefer/s): 14 July 2020 at CES Conference Rm. briefed by Lt Col (b) (6) Capt (b) (6) and Lt Col (b) (6), 5 CES/CC; (b) (6) 5CES/CD, Mr. (b) (6) (Minot Pest Management). Project coordinators and support staff via telephone
- k. Mission Identifier: QZNRK3431195

2. OPERATIONAL:

- a. Mission Commander: Capt (b) (6)
- b. Aircrew:
  - (1) Pilots: Major (b) (6) Maj (b) (6)
  - (2) Navigators: Lt Col (b) (6) Maj (b) (6)
  - (3) Flight Engineer: SMSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6) TSgt (b) (6) TSgt (b) (6) SrA (b) (6)
- c. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6) (Lead), MSgt (b) (6) TSgt (b) (6) SrA (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6) TSgt (b) (6)
  - (3) Avionics: MSgt (b) (6)
- d. Entomologist: Lt Col (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Trumpet® EC (78% A.I. naled); Zenivex (20% etofenprox)
- b. EPA Registration Number: 5481-481 Trumpet® EC (78% A.I. naled); 2724-791 Zenivex
- c. Additives Used: 60 gallons of BVA oil with Zenivex see below
- d. Gallons Pesticide Loaded: 210 gal Trumpet® (14 Jul); 60 gal Zenivex (16 Jul)
- e. Gallons Pesticide Applied: 210 gal gallons Trumpet® (14 Jul); 60 gal Zenivex (16 Jul)
- f. Gallons and Name of Flush Used: 20 gallons H.A.N. (Highly Aromatic Naphtha)
- g. Application Rate: 0.97 oz/acre (14 Jul with Trumpet); 0.25 oz/acre (16 Jul with Zenivex)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 92-3021
- b. Spray System (Modules Used) and System ID #: SP2G, System #1
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet
- e. Nozzle Orientation & Number Used: 31 nozzles oriented straight down (14 Jul); 15 nozzles (16 Jul)
- f. Nozzle pressure: 38-41 psi
- g. Flow Rate: 7.1 gal/minute (14 Jul); 4.5 gal/min (16 Jul)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 2000 ft for all areas
- c. Spray Release Altitude: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: calm (14 Jul); 110/2.7 mph
  - (2) Release Altitude: 220@16 kts (14 Jul); 110-120/16 kts (16 Jul)
- b. Temperature (Degrees Fahrenheit): 70-60°F (14 Jul); 79-62°F (16 Jul)
- c. Relative humidity: 45% (14 Jul); 35.4% (16 Jul)
- c. Cloud Cover: Clear
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Application Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations. See Attachment 1 and 2 for areas treated.
  - (2) Results: Adequate coverage throughout the sprayed area
- b. Effectiveness:
  - (1) Technique/s Used: Pre- and post-spray surveillance were conducted using CDC light traps. Human landing counts.
  - (2) Results: Environmental conditions were favorable for effective mosquito control during both applications. However, it is clear from the mosquito trapping data shared by Minot AFB, Minot City, and Williston Vector Control (see below) that these aerial

applications were ineffective in affecting the populations of nuisance mosquitoes, which were surging during the timeframe of these operations. Additional comments are given below in Section 8.

### Mosquito Trap Counts: Minot AFB

PRE SPRAY 13 Jul 20 – Trap (1) 521, Trap (2) No data – downed by wind, Trap (3) No data – battery failure

POST SPRAY 15 Jul 20 – Trap (1) 2212, Trap (2) 1,097 (3) 2,707

### 8. REMARKS:

The background to this application was that the Aerial Spray Unit arrived at the end of June (3 weeks prior to this project) to Minot AFB to find low levels of mosquitoes, low enough that an actual application was not flown. The Spray Unit did, however, complete some excellent readiness training not available at home station at that time. Because all travel is currently an “exception to policy” and vector control is considered by most agencies an essential service (the DoD has not issued guidance on vector control), all collaborators considered carefully, the need for mosquito control for this project.

Mosquito trapping data collected in the days leading up to the implementation date of the current project, suggested that mosquito numbers had begun to increase, likely from the significant precipitation which had occurred in the previous two weeks. What was unknown, was that this “mosquito hatch” was merely gaining momentum when the Spray Unit arrived on 13 July. In fact, the data presented above in Section 7.b.(2), shows that mosquitoes even increased in some areas despite the aerial applications. Williston reported better results in some of their areas but over time, those areas also reported large numbers of mosquitoes. With the benefit of hindsight and in a perfect world where staff and aircraft would be available every week, perhaps this application should have been delayed one week or two applications in rapid succession could have been used. In reality, neither of those options are plausible under the current operating structure of the USAF Aerial Spray Program. Since mosquito development is influenced by several factors: including temperature, habitat type, precipitation patterns, etc., it is very difficult to predict the timing of every application for their control. Currently, the recommend course of action is to continue executing effective trapping programs and consult historical data to help predict mosquito abundance and schedule aircraft appropriately.

The Spray Unit would like to thank the 5LRS Vehicle Operations for providing government vehicles to facilitate the spray project. Excellent coordination was experienced between all collaborators with Mr. (b) (6) (5CES) skillfully guiding the interactions between the City of Minot and Williston. It is also worth mentioning that in response to the loss of the ND State Health Department’s trapping program to COVID-19 priorities, the Minot Public Works, with support from Minot AFB (5CES) began trapping and counting mosquitoes daily. This is a significant effort in cooperation between agencies, and also a lot of labor for Minot Public Works! Their results, along with trap data from 5CES, helped support the important science aspects of enumerating the overall mosquito numbers before and after sprays. There are currently no other scheduled aircraft for Minot in FY2020. It is anticipated that the City of Minot and Williston Vector Control will renew their Innovative Readiness Training projects for next year and the Spray Unit has tentatively scheduled visits in late June and mid-July in 2021.

(b) (6) Lt Col, USAF  
DOD Certified Pest Management Professional

**SPRAY OPERATIONAL SCHEDULE**  
**UTAH TEST AND TRAINING RANGE (UTTR)**  
**20-26 October 2019**  
**Mission # QZNRK3431293**

**PURPOSE/BENEFIT/OBJECTIVE:** Aerial spray herbicide mission on the Utah Test and Training Range (UTTR) and Dugway Proving Ground to reduce the risk of range fires by controlling cheat grass (*Bromus tectorum*) and other invasive weed species while promoting reestablishment and success of native flora.

**1. 910 AW PARTICIPANTS:**

**Mission Commander:** Lt (b) (6) (b) (6) (cell phone)

**AIRCREW:**

**Pilots:** Lt Col (b) (6)

**Navigators:** Lt Col (b) (6) r

**Flight Engineer:** CMSgt (b) (6)

**Spray Operators:** CMSgt (b) (6), MSgt (b) (6), MSgt (b) (6)

**CERTIFIED APPLICATORS:**

**Entomologists:** Lt Col (b) (6) (In place)

**MAINTENANCE:**

**Spray MX:** MSgt (b) (6) (lead), MSgt (b) (6), TSgt (b) (6), TSgt (b) (6)

**Crew Chiefs:** MSgt (b) (6) (lead), MSgt (b) (6)

**Avionics:** MSgt (b) (6)

**2. REQUIRED ITEMS:**

Msn Commander: MC Laptop Computer

Entomologist: Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer

Navigator: Maps/Map Bag, Validation Map

Spray Operators: PPE, Calibration Tables/Laptop and or Spray datasheet, O<sub>2</sub> hose extensions

Spray Maintenance: Deployment Kit, Support Equipment

Avionics: 2 Multi-band hand-held radios; Wingman system cards

**3. IN-BRIEFING at Hill:**

On arrival on the Forestry Ramp with Mr. (b) (6) and Mr. (b) (6).

Required: MC, Entos, pilots, navs, SM lead.

#### **4. SCHEDULE: (All Local Time)**

##### **PLANNED SEQUENCE OF EVENTS: Hill AFB Tower Control and Runway Hours**

Tower Opens at 0800L

##### **20 October (Sunday)**

0900 Show KYNG

1000 Safety and Arrival brief given in the aircrew briefing room

1100 Depart KYNG    Spray (SP3G)    **Vader22    MI: QZNRK3431293    PPR: MN-2001**

##### **26 October (Saturday) Hill Field opens at 0900**

0700 Checked out of billeting

0730 Return vehicles

0900 Depart KHIF

1530 Land KYNG

**\*\*All times are approximated. Actual times and mission details will be updated as appropriate by the Mission Commander.**

#### **5. SPRAY CONFIGURATION:**

Aircraft:	92-3022
System:	SP-3G MASS: 3
Nozzle /Orientation:	Raindrop/Straight Back
Number of nozzles:	Fuselage – 18 nozzles

#### **6. SPRAY LOADING:**

##### **a. In each gallon of mix:**

0.857 ounces of Plateau herbicide (0.67 gallons in 100 gallons of water)

0.71 ounces of Clasp (0.5 gal in 100 gallons)

0.71 ounces of Methylated Seed Oil (0.5 gal in 100 gallons)

125.7 ounces of water

**b. First Load (4 Tanks of 450 gallons each + sump of 75 gallons)**

Fill to 450 gal water/tank. This is done by putting the filler hose into the rear tank with all tanks open to the common sump.

Total water in tanks = 1,800 gal.

75 gal/water in sump

Total water added = 1,875 gallons

Load 12.5 gallons of Plateau; 10 Gal Clasp; 10 Gal MSO, agitating approximately 5-7 min

Total quantity mix 1888 gallons

**c. Subsequent Loads**

Fill with water for a total of 1800 gallons; use “per 100 gallons of water” measurements given above when adding less than 1800 gallons (i.e., residual product in tank when loading). When the MASS is returned empty, load 1800 gallons of water and add: 12.0 gallons Plateau and 10 gallons of Clasp and 10 gallons of MSO.

**7. SPRAY PARAMETERS:**

Location: UTTR – HAT and GAT ranges plus associated targets and 1 lift for Dugway firebreak

Herbicide: Plateau Herbicide (active ingredient: 23.6% Ammonium salt of imazapic)

Area to be treated: 1828 (UTTR and Dugway; see #12 for more information)

Swath Width: 100 feet

Flow Rate: 326 gal/min (we are treating at 46.5 acres/minute)

Application Rate: 7 gal/acre (6 oz of Plateau per acre)

Altitude: 100’ AGL

Ground Speed: 200 Knots

Flush: Water; air purge at end of each sortie to minimize dripping upon return

Formulas: Flow Rate = Gal/Time in Minutes

Acreage Sprayed = Total Sec x 338 x Swath Width / 43560

**8. PARKING PLAN:** Forestry Ramp

**9. AIR TO GROUND RADIO FREQUENCIES:**

**Clover Range:** UHF 285.65 / 275.9 / 361.4 (p)

- c. Additives Used: None
- d. Gallons Pesticide Loaded: 90 total
- e. Gallons Pesticide Applied: 90
- f. Gallons and Name of Flush Used: 7 gallons H.A.N. (Highly Aromatic Naphtha)
- g. Application Rate: 0.95 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9107
- b. Spray System (Modules Used) and System ID #: SP2G
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet
- e. Nozzle Orientation & Number Used: 29 nozzles oriented straight down
- f. Flow Rate: 6.7 gal/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 2000' upwind with 3 second offsets to the west
- c. Spray Release Altitude: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Craney Island/Portsmouth: Wind (at altitude) 210° @ 10 kts, Temperature 85°F, Relative Humidity 79%
- b. Langley AFB: Wind (at altitude) 210° @ 10 kts, Temperature 84°F, Relative Humidity 78%

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique(s) Used: GPS system monitoring aircraft flight pattern. Direct field observations.
  - (2) Results: Adequate coverage through sprayed area. See Attachment 1.
- b. Effectiveness:
  - (1) Technique(s) Used: Pre- and post-spray surveillance was conducted using CDC light traps with CO<sub>2</sub>.
  - (2) Pre and post spray trap counts from Langley AFB. Overall average reduction 97.8%

WSA pre spray: 595

WSA post spray: 14

97.6% reduction in trapped mosquitos

Pest Shop pre spray: 430

Pest Shop post spray: 9

98% reduction in trapped mosquitos

(3) Pre and post spray trap counts from Craney Island/Portsmouth (average of 6 traps)

Pre-spray: 2051

Post spray: 20

99% reduction in trapped mosquitos (average)

\*Note that Portsmouth Pest Management Professional was only able to supply overall numbers based on multiple trap locations. Due to recent storm, Portsmouth did not have capacity to separate out species and number from individual traps.

**8. REMARKS:** Relatively high mosquito counts made this night application a needed intervention with respect to local mosquito control. The Portsmouth Mosquito Control Division monitors insect populations and reported excellent control. Mosquito reductions at Craney Island and Portsmouth (average) approached approximately 99%. Langley AFB also reported good control overall, with average population reductions of about 98%. Calibration of the spray system took a significant amount of time, but provided excellent training for spray operators and MXS personnel. No significant problems were encountered during the actual application. Time spent with calibration activities was well spent as there were no discrepancies between pesticide loaded and amount of pesticide applied. The weather for this application was ideal. Good air movement and low wind speed at altitude undoubtedly facilitated success of mission. There were no reports of adverse non-target environmental effects.

We sincerely appreciate the support received from all sections of Langley AFB and Craney Island/City of Portsmouth personnel. Thanks to aforementioned and additional flight operations support from Langley AFB, this mission proceeded smoothly and with excellent results.

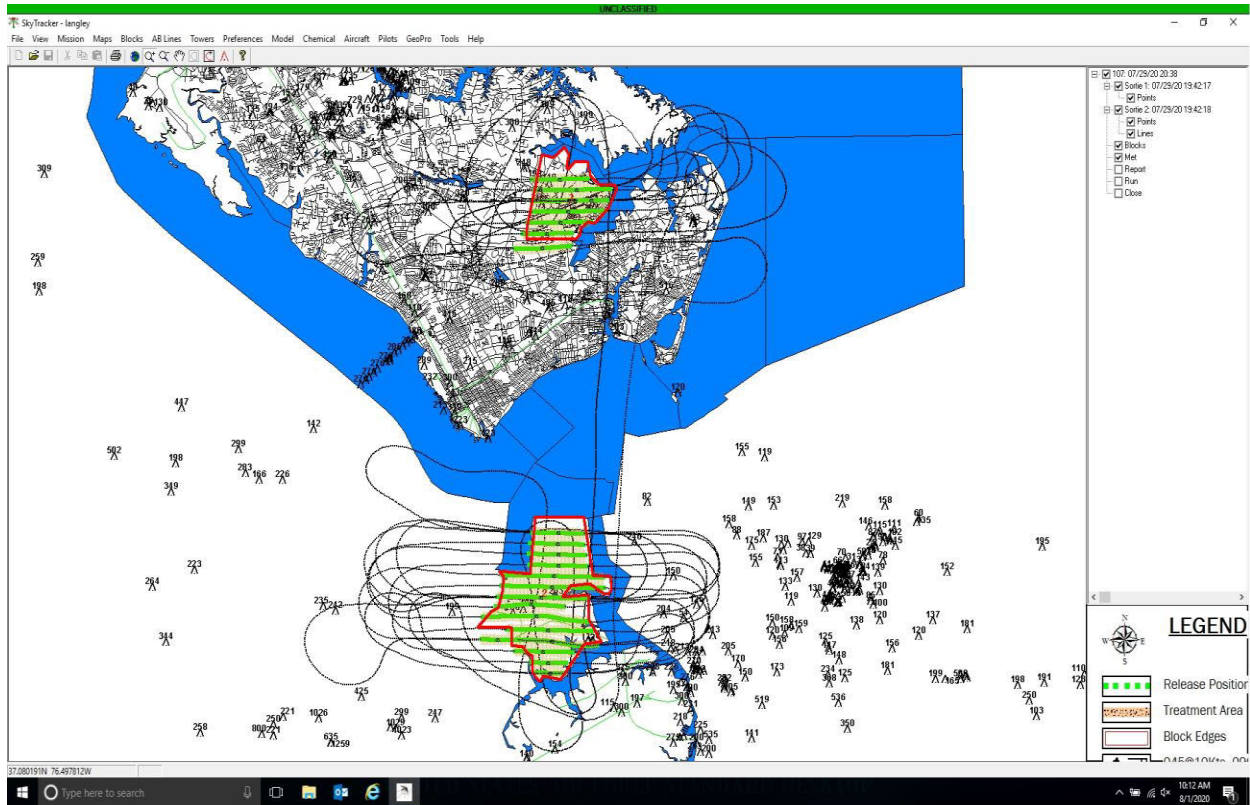

//signed//

14 October 2019

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray on UTTR and Dugway Proving Ground

1. Aerial spray deployment of one C-130 from 20-26 October 2019 to Hill AFB, UT to train aerial spray aircrew, entomologists, and maintenance members to reduce the risk of range fires by controlling cheat grass (*Bromus tectorum*) and other invasive weed species while promoting reestablishment and success of native flora on the Utah Test and Training Range (UTTR) and Dugway Proving Ground.

2. Concept of Operations (All times are local):

- a. 20 October
  - 1100 Depart KYNG (Support aircraft)
  - 1100 Depart KYNG (Spray aircraft)
  - 1400 Land KHIF
  - 1400 Land KHIF
- b. 21-25 October
  - 0800 Depart KHIF for the UTTR
  - 1000 Land KHIF
  - 1100 Depart KHIF for the UTTR
  - 1300 Land KHIF
- c. 25 October
  - 1100 Depart KYNG (Support Aircraft)
  - 1400 Land KHIF (Support Aircraft)
- d. 26 October
  - 0900 Depart KHIF (Support Aircraft)
  - 0900 Depart KHIF (Spray Aircraft)
  - 1500 Land KYNG
  - 1500 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc.  
All changes to the planned itinerary will be coordinated by the mission commander

3. Spray Parameters:

Locations:	Utah Test and Training Range (UTTR) and Dugway
Acres:	1,828
Chemical:	Plateau (Herbicide)
Gallons loaded:	1,800
Flow Rate:	326 GPM
Application Rate:	7 gallons per acre
Flush:	Water
Altitude:	100'
Airspeed:	200 KTS
Swath Width:	100 feet
Nozzle/Orientation:	Raindrop
Number of Nozzles:	18

4. Lt Col (b) (6) will serve as the Mission Commander with Lt Col (b) (6) as the Aircraft Commander. Support at Hill AFB and the UTTR has been completed.

//SIGNED//

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Aerial application of insecticide to control populations of adult nuisance and disease carrying mosquitoes at Langley AFB, and Craney Island Army Corps of Engineers.

1. Aerial spray deployment of one C-130 to Langley AFB, VA. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of Langley AFB and Craney Island Army Corps of Engineers.

2. Concept of Operations: All times local

- a. 25 August (Tuesday)  
1700 Depart KYNG  
1815 Land KLFI
- b. 26-27 August (Wednesday - Thursday)  
1930 Depart KLFI  
2230 Land KLFI
- c. 28 August (Friday)  
1100 Depart KLFI  
1215 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc.

3. Spray Parameters:

- a. Locations: Langley AFB and Craney Island ACE, VA
- b. Acres: 12,718
- c. Altitude: 300ft AGL for NVG adulticide application
- d. Swath Width: 2,000 feet
- e. Airspeed: 200 KTS
- f. Application Rate: 0.9 oz/acre
- g. Product: Trumpet® (Naled) (EPA Reg. No. 5481-481)

4. Maj (b) (6) will serve as the Mission Commander with Lt Col (b) (6) as the Aircraft Commander.

(b) (6), Maj, USAF  
Chief, Aerial Spray

09 July 2020

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Minot AFB, Minot, Burlington, Williston and Watford City, North Dakota.

1. The 910 AW will deploy one C-130s to Minot AFB, ND to train aerial spray aircrew, pest management personnel, and maintenance members in the control of nuisance and vector mosquitoes. This mosquito adulticide application will also improve working conditions and lower the risk of vector-borne illness for individuals working and living in/around Minot AFB, Minot, Burlington, Williston and Watford City. Aerial spraying performed off DOD installation property will be conducted IAW the Innovative Readiness Training (IRT) Program criteria.

2. Concept of Operations: All times local

- a. 13 July (Monday)  
1700 Depart KYNG  
1930 Land KMIB
- b. 14-16 July (Tuesday – Thursday)  
2130 Depart KMIB  
2330 Land KMIB
- c. 17 July (Friday)  
1400 Depart KMIB  
1830 Land KYNG

Times may vary from scheduled depending upon weather, effectiveness of spray, etc. The mission commander will coordinate all changes to the planned itinerary.

### 3. Spray Parameters:

#### Minot AFB:

- a. Area to be treated: 5,170 acres
- b. Altitude: 300 feet
- c. Swath Width: 2,000 feet
- d. Airspeed: 200 KGS
- e. Application Rate: 0.98 oz/acre Trumpet® EC Insecticide

#### Minot City/Burlington:

- f. Area to be treated: 22,128 acres
- g. Altitude: 300 feet
- h. Swath Width: 2,000 feet
- i. Airspeed: 200 KGS
- j. Application Rate: 0.98 oz/acre Trumpet® EC Insecticide

#### Williston/Watford City:

- k. Area to be treated: 23,622 acres
- l. Altitude: 300 feet
- m. Swath Width: 2,000 feet
- n. Airspeed: 200 KGS
- o. Application Rate: 0.98 oz/acre Zenivex® Insecticide

4. Capt (b) (6) will serve as the Mission Commander. Support required at Minot AFB has been coordinated.

(b) (6), Maj, USAF  
Chief of Aerial Spray

**910 AW AERIAL SPRAY UNIT  
CERTIFIED PEST MANAGEMENT PROFESSIONAL'S  
POST-MISSION REPORT  
MOUNTAIN HOME AFB, SAYLOR CREEK RANGE, ID  
14-25 September 2020**

**1. MISSION BASICS:**

- a. Installation Sprayed: Mountain Home AFB, Saylor Creek Range, ID
- b. Mission Duration: 14-25 Sep 2020
- c. Purpose of Application: Herbicide application to control cheat grass to suppress range fires and promote native flora
- d. Application Dates and Times (Local): See attachment 1
- e. Acres Treated: 3060
- f. Flying Data:
  - (1) Spray Sorties/Hours: 13 sorties; 13.2 hours
  - (2) Ferry Sorties/Hours (2) 10.6 hours
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6), Natural Resource Manager, (b) (6)
- h. Date Spray Map Last Approved: 14 Sept 2020
- i. Installation In-Briefing: (When/ Briefer/s): Mr. (b) (6) (Mt Home), Lt Col (b) (6), Lt Col (b) (6), Maj (b) (6); 14 Sep 2020 at CBRNE training center, Mt Home AFB
- j. Mission Identifier: QZNRK3491258

**3. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) (14-20); Lt Col (b) (6) (19-25), Maj (b) (6) (14-20), Capt (b) (6) (14-20), Capt (b) (6) (19-25)
  - (2) Navigator: Lt Col (b) (6) (19-25), Maj (b) (6) (14-20), Maj (b) (6) (19-25), Maj (b) (6) (14-20)
  - (3) Flight Engineers: CMSgt (b) (6) (14-20), SMSgt (b) (6) (19-25)
  - (4) Spray Operators: SMSgt (b) (6) (14-20), SMSgt (b) (6), MSgt (b) (6), TSgt (b) (6), SSgt (b) (6), SrA (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (lead), MSgt (b) (6), MSgt (b) (6) Bryant, TSgt (b) (6), SrA (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6), SrA (b) (6)
  - (3) Specialists: MSgt (b) (6), SSgt (b) (6), TSgt (b) (6), SrA (b) (6) (b) (6) SrA (b) (6), TSgt (b) (6), MSgt (b) (6), SrA (b) (6) (b) (6), TSgt (b) (6), SrA (b) (6)
- d. **Entomologist:** Lt Col (b) (6)

**4. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Panoramic® 2SL (23% AI, imazapic ammonium);
- b. EPA Registration Number: Panoramic® 2SL: 81927-19
- c. Gallons Pesticide Loaded: See attachment 1
- d. Gallons Pesticide Applied: See attachment 1
- e. Gallons and Name Diluent Used: 12.5 Gallons Panoramic diluted to 1800-1900 gallons water
- f. Other Additives Used: 8 - 9 gallons of Clasp® per sortie; average load 1800-1900 gallons; 10 Gallons total Pro-tank used on 2 sorties (18 and 24 Sept, respectively)
- g. Application Rate Averages: 6.67 gal/acre finish spray (5.85 oz/acre AI)

**APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 022
- b. Spray System (Modules Used) and System ID #: SP-3G MASS 3
- c. Nozzle Type/Orientation: Raindrop/Straight back
- d. Number of Nozzles: 18 Total; 9 left, 9 right
- e. Pressure: 40 p.s.i. average
- f. Flow Rate: 306 gallons/minute average

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: Weather dependent. No off-set when flown into the wind
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Overall favorable; Ground wind speed below 6 knots during application; RH above 40%

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

**a. Deposition Pattern:**

- (1) Techniques Used: Visual observation from PMP on range

**b. Effectiveness**

- (1) Techniques Used: Vegetation measurement, visual observations
- (2) Results: Will be determined in the spring of 2021

**8. REMARKS:**

This mission continues the mitigation of the invasive weed, cheat grass, in order to suppress range fires and promote the reestablishment of native flora, particularly native bunch grasses and sagebrush.

Unfortunately, spray activities were last conducted September 2016. Planned operations were hampered by hurricane relief deployment (910 AW) in 2017 for Hurricane Harvey, and were further hampered by operational i.e., exercise activities, at Mt Home AFB in 2018 and 2019.

The majority of the sorties were flown with a headwind or tailwind with less than a 45% crosswind component and all applications were observed as possible from the target by a certified applicator, verifying proper deposition. A significant factor in operations was the prevalence of a remarkable amount of smoke and haze from wildfires along CONUS west coast. Most notably, spray operations from same had to be shut down 18 September due to visibility minimums for spray operations were not met.

Despite limitations, 910 AW was able to complete approximately 95% of target herbicide application goals, while maintaining adequate overall coverage and deposition of Herbicide active ingredient. Original plan was to apply 7 gallons of finish spray/acre, and 6.0 oz of active ingredient diluted in the same volume. Ultimately on average the application rate was 6.67 gallons finish spray per acre and 5.58 oz active ingredient per acre. That's pretty damn good, all things considered. Application area is graphically rendered in Attachment 2.

Obviously, effectiveness of application of herbicide will need to be determined in spring 2021 by Mt Home Natural Resources Management. Expectation is that application will be highly beneficial, especially considering the application rate of herbicide was increased from years prior.

Special thanks to Mr. (b) (6) (NR), MUO Airfield operations, fire department, TA and range support. Coordination was generally great with all parties. Mr. (b) (6) arranged transportation for all aircrew, and TSgt (b) (6) made sure the 910AW was in compliance with MHAFB

requirements. We always appreciate the support. Best suggestion for more efficient application is to open Mt Home airfield and range control on the weekends for aerial spray activities if possible.

This continues to be an excellent training/real world mission, and I expect benefits to Mt Home AFB/Saylor Creek Range will benefit equally. We (910AW) would like to thank the personnel at Mountain Home AFB for the excellent support the 910AW received.

Lt Col (b) (6) , USAFR  
910 AW/757 AS  
Youngstown ARS

# AERIAL SPRAY OPERATIONAL SCHEDULE

## SAYLOR CREEK RANGE / MOUNTAIN HOME AFB, ID

### 14-25 SEPT 2020

### QZNRK3491258

**Purpose/Objectives/Benefits:** One C-130 will deploy to Mountain Home, ID from 14-25 September 2020. Aerial Spray flight proficiency training will be accomplished on Saylor Creek Bombing Range, ID while providing a beneficial herbicide treatment to prevent fire hazards, inhibit annual re-growth of cheat grass, and allow native vegetation to establish and be competitive.

#### 1. 910 AW PARTICIPANTS:

<b>Msn Commander:</b>	Lt Col (b) (6)	(b) (6)
Entomologist:	Lt Col (b) (6)	
Pilots:	Lt Col (b) (6)	(14-20)
	Lt Col (b) (6)	(19-25), Maj (b) (6) (14-20), Capt (b) (6) (14-20), Capt (b) (6) (19-25)
Navigator:	Lt Col (b) (6)	(19-25 Sep), Maj (b) (6) (14-20 Sep), Maj (b) (6) (19-25), Maj (b) (6) (14-20)
Flight Engineer:	CMSgt (b) (6)	(14-20), SMSgt (b) (6) (19-25)
Spray Operators:	SMSgt (b) (6)	(14-20), SMSgt (b) (6), MSgt (b) (6), TSgt (b) (6), SSgt (b) (6)
	SrA (b) (6)

### **4. AIRCRAFT & SPRAY CONFIGURATION:**

System:	SP-3G MASS: 3
Nozzle /Orientation:	Raindrop/Straight Back
Number of nozzles:	Fuselage – 18 nozzles

## **5. SPRAY MIXING AND LOADING:**

Entomologist will determine quantity to load and work with the local pest managers to determine the application rate. System will be calibrated after the chemical is loaded. Please see entomologist for final flow spray parameters as these numbers are subject to change depending on user requirements

### **a. In each gallon of mix:**

0.57 ounces of Panoramic® 2SL herbicide (0.44 gal in 100 gal of water)

0.32 ounces of Pro Tank (2 pints in 100 gal)

0.64 ounces of Clasp® (0.5 gal in 100 gal)

126.5 ounces of water

### **b. First Load (4 Tanks of 450 gal each + sump of 75 gal)**

Fill to 450 gal water/tank using the pump on the water tanker truck. This is done by putting the filler hose into the rear tank with all tanks open to the common sump.

Total water in tanks = 1,800 gal.

75 gal/water in sump

Total water added = 1,875 gal

Load 8.3 gal of Panoramic®; add 4.7 gal of Pro Tank, and 9 gal of Clasp® while agitating approximately 5-7 min

Total quantity mix 1888 gal

### **c. Subsequent Loads**

Fill with water for a total of 1800 gal; use “per 100 gal of water” measurements given above.

When the MASS is returned empty load 1800 gal of water and add: 8.1 gal of Panoramic®; 4.5 gal of Pro Tank, and 9 gal of Clasp®.

## **6. SPRAY PARAMETERS:**

Location:	All prescribed areas
Chemical:	Panoramic® 2SL (active ingredient: 23% imazapic ammonium)
Area to be treated:	3,216 acres
Swath Width:	100 feet
Flow Rate:	326 gal/min (we are treating at 46.5 acres/minute)
Application Rate:	7 gal/acre (4 oz of Panoramic® per acre)
Altitude:	100' AGL
Ground Speed:	200 Knots
Flush:	Water

## **7. RADIO FREQUENCIES: \* Confirm these Freqs at the inbrief.**

**Mt Home AFB:** ACC COMD POST 311.0/321.0

**Saylor Creek Range:**(Cowboy Control): 236.05

If Cowboy Control isn't up, contact MUO APP on 124.8/259.1

**DEPARTMENT OF THE AIR FORCE  
757AS/AERIAL SPRAY UNIT  
YOUNGSTOWN AIR RESERVE STATION**

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
GRAND FORKS AFB, ND, 1 – 4 JUNE 2021**

**1. MISSION BASICS:**

- a. Installation Sprayed: Grand Forks AFB, ND
- b. Mission Duration: 1 – 4 June 2021
- c. Purpose of Application: Control of nuisance and vector mosquito species through application of larvicide
- d. Application Dates: 2 June 2021
- e. Times of Application (Local):
  - (1) Sortie 1: 0715-0810
  - (2) Sortie 2: 0955-1100
  - (3) Sortie 3: 1145-1300
- f. Acres Treated: 1,041
- g. Flying Data:
  - (1) Spray sorties/hours: 3/3.3
  - (2) Flush sorties/hours: 0/0
  - (3) Ferry sorties/hours: 2/6.6
  - (4) Training sorties/hours: 1/1.0
- h. Project Coordinator (Name/Rank, Title, Phone #): SSgt (b) (6) [redacted], Pest Management, DSN (b) (6)
- i. Date Spray Map Last Approved: 1 June 2021
- j. Installation In-Briefing: (When/Where/Briefer/s): 1 June 2021 at 319 CE, briefed by Lt Col (b) (6) [redacted]

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6) [redacted]
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) [redacted] (A/C), Capt (b) (6) [redacted]
  - (2) Navigator: Maj (b) (6) [redacted]
  - (3) Flight Engineer: TSgt (b) (6) [redacted]
  - (4) Spray Operators: SMSgt (b) (6) [redacted], SSgt (b) (6) [redacted]
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) [redacted] (lead), TSgt (b) (6) [redacted], TSgt (b) (6) [redacted], SSgt (b) (6) [redacted], SrA (b) (6) [redacted]
  - (2) Crew Chiefs: TSgt (b) (6) [redacted], SrA (b) (6) [redacted]
  - (3) Comm/Nav: TSgt (b) (6) [redacted]
- d. **Entomologist:** Lt Col (b) (6) [redacted]

**3. PESTICIDE:**

- a. Trade Name: Altosid® Liquid Larvicide Concentrate (SR20)
- b. EPA Registration Number: 2724-446
- c. Formulation Sprayed: 0.41 ounces Altosid® per gallon with water
- d. Other Additives Used: None
- e. Gallons Pesticide Mix Loaded: 2,095
- f. Gallons Pesticide Mix Applied: 2,095
- g. Gallons and Name of Flush Used: 10 gal water
- h. Application Rate: 2.0 gal/acre mixed formulation, 0.82 oz/acre active ingredient (Altosid®)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-9106
- b. Spray System (Modules Used) and System ID #: MASS SP2G
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: R-20 raindrop nozzles
- e. Nozzle Orientation & Number Used: 12 nozzles oriented straight back
- f. Flow Rate: 187 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 200'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. See Attachment 1.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations.
  - (2) Results: Adequate coverage through sprayed area (Attachment 2)
- b. Effectiveness:
  - (1) Technique/s Used: Larval sampling for treatment justification.
  - (2) Results: Because of the nature of the pesticide used (insect growth hormone), larvae are not immediately killed but instead die in the pupal stage. Therefore, post-treatment sampling must occur after the treated larvae have pupated. Pupae are then collected and observed for emergence of adults. This generally will take a week or more; as such, results cannot be determined at this time.

**8. REMARKS:**

- a. Due to recent weather conditions, many of the proposed treatment blocks were found to be lacking water and therefore unsuitable for mosquito breeding. Because treatment of these areas would not result in reduction of mosquito numbers, they were not treated as originally

planned. Additionally, it was determined that the 321 acre pond area in the southeast only required treatment along the drainage ditches on the east, west, and south edges of the block. The rest of the spray block consists of deep water where mosquitoes typically do not breed. Attachment 2 shows the areas originally planned to be treated and those that were actually treated.

- b. Weather conditions during application were ideal for the larvicide application. There were no significant issues observed during this treatment for control of larval mosquitoes.
- c. We would like to thank the Air Wing for a very nice reception at Grand Forks. In particular, we would like to thank SSgt (b) (6) for his support in ensuring items such as available water supply, vehicles, public affairs notification, and the scheduled inbrief were arranged prior to the spray team's arrival. This mission would not have been possible without this support.

(b) (6), Lt Col, USAF

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757AS/DOS  
3976 King Graves Rd  
Vienna, Ohio 44473-0910

SUBJECT: Concept of Operations for Aerial Spray at the Utah Test and Training Range

1. Aerial spray flight proficiency training will be accomplished on Targets 21, 23, 24, and Nord LZ at the Utah Test and Training Range (UTTR). Spray sorties will apply Krovar to control vegetation (i.e., *Halogeton*) growth aiding bombing mission test evaluations and unexploded ordnance recovery. Two aerial spray-configured and one support C-130 will be available from 8-19 March 2021 for the requested spray mission. A swap out Mission is scheduled over the weekend to maximize aircrew training over the two week period.

2. Concept of Operations:

ALL TIMES LOCAL

a. 8 March (Monday)

1000 Vader 24 departs (Support) KYNG  
1015 Vader 07 departs KYNG  
1030 Vader 08 departs KYNG  
1330 Vader 24 lands KHIF  
1345 Vader 07 lands KHIF  
1400 Vader 08 lands KHIF

b. 9-12 March (Tuesday - Friday)

0800 Spray 07 departs KHIF  
0830 Spray 08 departs KHIF  
1200 Spray 07 lands KHIF  
1230 Spray 08 lands KHIF

c. 13 March (Saturday)

0900 Vader 24 departs KHIF  
1530 Vader 24 lands KYNG

d. 14 March (Sunday)

1000 Vader 24 departs KYNG  
1330 Vader 24 lands KHIF

e. 15-18 March (Monday – Thursday)

0800 Spray 07 departs KHIF

0830 Spray 08 departs KHIF

1200 Spray 07 lands KHIF

1230 Spray 08 lands KHIF

f. 18 March (Thursday)

1000 Support aircraft departs KYNG

1330 Support aircraft lands KHIF

g. 19 March (Friday)

0900 Vader 07 departs KHIF

0910 Vader 08 departs KHIF

0920 Vader 24 departs KHIF

0920 Support aircraft departs KHIF

1530 Vader 07 lands KYNG

1540 Vader 08 lands KYNG

1550 Vader 24 lands KYNG

1600 Support aircraft lands KYNG

3. Spray parameters:

Herbicide: Krovar 1DF®

Application rate: 22.5 gal/acre (10 lbs Krovar in 22.4 gal of water)

Acreage: 1,700 acres (Targets 21, 23+24)

Ground speed: 200 knots (337.55 ft/sec)

Spray altitude: 100 feet AGL

Swath width: 35 feet

4. Lt Col (b) (6) (8-13 Mar) and Maj (b) (6) (14-19 Mar) will serve as the mission commanders.

5. Aircraft Commanders:

Lt Col (b) (6)

Lt Col (b) (6)

Lt Col (b) (6)

Lt Col (b) (6)

6. Support required at both Hill AFB and the UTTR has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

**CERTIFIED PEST MANAGEMENT PROFESSIONALS' POST-MISSION REPORT  
MINOT AFB, MINOT, AND WILLISTON, 12-16 JULY 2021**

**1. MISSION BASICS:**

- a. Areas Sprayed: Minot AFB; Minot, Burlington, and Williston ND
- b. Mission Duration: 12-16 July 2021
- c. Purpose of Application: Control of adult nuisance and vector mosquitoes
- d. Application Dates: 14, 15 July 2021
- e. Times of Application (Zulu): 0296-0558 hrs 14 July (Minot City, Burlington, Minot AFB); 0231-0506 hrs 15 July (Williston)
- f. Acres Treated: 26,552 (Minot City, Burlington, Minot AFB); 17,505 (Williston) = 44,057 acres total
- g. Flying Data:
  - (1) Spray sorties/hours: 3.2 (14 July); 2.4 (15 July) = 5.6 hrs
  - (2) Ferry sorties/hours: 2/7.0
- h. Project Coordinator (Name/Rank, Title, Phone #): (b) (6) (Minot AFB); (b) (6) (City of Minot); (b) (6) (City of Williston)
- i. Date Spray Map Last Approved: 13 July 2021
- j. Installation In-Briefing: (When/Where/Briefer/s): 13 July 2021 at CES Ready Rm, briefed by Lt Col (b) (6) /Lt Col (b) (6) (YARS) and 5 CES/CC; Ms. (b) (6) , 5CES/CD, Mr. (b) (6) (Minot Pest Management). (b) (6) , (b) (6) (City of Minot); (b) (6) (Williston) via telephone
- k. Mission Identifier: QZNRK7571193

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
  - (1) Pilots: Lt Col (b) (6) , Maj (b) (6)
  - (2) Navigators: Lt Col (b) (6) , Lt Col (b) (6)
  - (3) Flight Engineer: SMSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6) , SSgt (b) (6) , SSgt (b) (6) (b) (6) SrA (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (Lead), MSgt (b) (6) , MSgt (b) (6) , SrA (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6) , TSgt (b) (6)
  - (3) Avionics: TSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Trumpet® EC (78% A.I. naled) (Minot, Minot AFB, Burlington); Zenivex (20% etofenprox) (Williston)
- b. EPA Registration Number: 5481-481 Trumpet® EC (78% A.I. naled); 2724-791 Zenivex
- c. Additives Used: 45 gallons of BVA oil with Zenivex see below
- d. Gallons Pesticide Loaded: 210 gal Trumpet® (14 Jul); 45 gal Zenivex (15 Jul)
- e. Gallons Pesticide Applied: 210 gal gallons Trumpet® (14 Jul); 45 gal Zenivex + BVA oil (15 Jul)
- f. Gallons and Name of Flush Used: 20 gallons H.A.N. (Highly Aromatic Naphtha)
- g. Application Rate: 0.98 oz/acre (14 Jul with Trumpet); 0.32 oz/acre (15 Jul with Zenivex)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-0106
- b. Spray System (Modules Used) and System ID #: SP2G, System #1
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet
- e. Nozzle Orientation & Number Used: 31 nozzles oriented straight down (14 Jul); 15 nozzles (15 Jul)
- f. Nozzle pressure: 41 psi
- g. Flow Rate: 7.1 gal/minute (14 Jul); 4.5 gal/min (16 Jul)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 2000 ft Minot and Minot AFB; 4000 ft Williston
- c. Spray Release Altitude: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 140@3 (14 Jul); 160@10 (July 15)
  - (2) Release Altitude: 135@8 kts (14 Jul); 160/16 kts (15 Jul)
- b. Temperature (Degrees Fahrenheit): 71°F (14 Jul); 75°F (15 Jul)
- c. Relative humidity: 61% (14 Jul); 50% (15 Jul)
- c. Cloud Cover: Clear
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Application Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations. Note that GPS logs for this series of applications are not available as GPS shutdown procedure failed to record readily viewed data.
  - (2) Results: Adequate coverage throughout the sprayed area
- b. Effectiveness:
  - (1) Technique/s Used: Pre- and post-spray surveillance were conducted using CDC light traps.
  - (2) Results: Environmental conditions were reasonably favorable for effective mosquito control during both applications. Minot AFB and City of Minot reported good control at both locations. Williston reported short-term suppression, followed by significant resurgence in mosquito populations shortly thereafter.

## Mosquito Trap Counts: Minot AFB

Pre spray cumulative trap count: 493 (July 12)

Post spray cumulative trap count: 17 (July 15)

## Williston Mosquito Trap count and ancillary data:

collection_date	average
2021-07-14 (Pre Spray)	16.37500
2021-07-16 (Post Spray)	14.54545
2021-07-21	31.13333

Cumulative reduction: 11.2%

## 8. REMARKS:

Due to initial drought conditions being experienced in 2021 in the greater North Dakota area and subsequent lack of seasonal flooding in the Yellowstone/Missouri basin, the original expectation of this mission going forward was minimal. However, some significant rainfall events occurred approximately 2 weeks prior to scheduled application, and users indicated there was a justifiable need based mosquito trapping data to proceed on planned timetable.

Based on pre and post-spray trapping results, the efforts were tangible for all locations with some caveats. Mosquito reduction at Minot AFB and City of Minot were 96.5 and 96.8% respectively, and seem to have effectively suppressed populations for a significant amount of time, although trap data from City of Minot would definitely suggest that as expected, the mosquito populations were coming back with a vengeance 2 weeks post application. Based on City of Minot's analysis of their historical and current mosquito trap data, they suggest a June application might not be nearly as critical as an August application. This observation has been noted, and the 2022 schedule has been tentatively modified to support those observations.

Application at Williston location was much more ambiguous. Conditions at the time of application were not ideal, but also they were not out of reasonable application limits. Looking at the hard pre/post spray data would suggest that effectiveness based on trap data was 11.2%. Director of Mosquito Control at Williston acknowledged this in personal communication. Dr. (b) (6) (Director) indicated that there was a significant suppression of mosquito populations immediately post-application, but based on his data he thought population resurgence might be due to massive amounts of mosquito immigration from outlying areas or potentially the physical characteristics of pesticide of choice (Zenivex) were perhaps not suitable in that particular situation due to relatively low specific gravity of the compound. Analysis and choice for future activities and material will be investigated by Dr.(b) (6), based on the needs of the Williston Mosquito control division.

We (910AW), very much appreciate coordination between all collaborators on this mission. Thanks to Mr. (b) (6) (5CES) for facilitating the logistics of mission between the City of Minot and Williston. Many thanks to Mr. (b) (6) and Mr. (b) (6) (City of Minot), for instigating a mosquito monitoring program to compensate for the loss of monitoring by the ND state health organization. For our organization that information is hugely important. Finally, thanks to Dr. (b) (6) at Williston for his comprehensive analysis of ongoing needs and subsequent results.

There currently are no other scheduled spray missions for Minot and environs in FY2021. It is anticipated that the City of Minot and Williston Vector Control will renew their Innovative Readiness Training projects for next year. The Spray Unit has tentatively scheduled Minot missions in mid-July and mid-August 2022. These will be confirmed by user input.

- a. Installation Sprayed: Tyndall AFB, FL; JB Charleston, SC
- b. Mission Duration: 14 – 18 June 2021
- c. Purpose of Application: Control of nuisance and vector mosquito species through application of adulticide
- d. Application Dates: 15 June 2021 (Tyndall AFB); 17 June 2021 (JB Charleston)
- e. Times of Application (Zulu):
  - (1) Tyndall AFB; 15 June 2021: 0150 – 0250
  - (2) JB Charleston; 17 June 2021: 2300 – 0018
- f. Acres Treated:
  - (1) Tyndall AFB: 25,854
  - (2) JB Charleston: 18.405
- g. Flying Data:
  - (1) Spray sorties/hours: 2/5.5
  - (2) Flush sorties/hours: 0/0
  - (3) Ferry sorties/hours: 2/4.0
- h. Project Coordinator (Name/Rank, Phone #):
  - (1) Tyndall AFB: TSgt (b) (6), DSN 523-2811
  - (2) JB Charleston: MSgt (b) (6), DSN 673-5266
- i. Date Spray Maps Last Approved: 11 June 2021 (Tyndall AFB); 15 June 2021 (JB Charleston)
- j. Installation In-Briefing: (When/Where/Briefer/s):
  - (1) Tyndall AFB: 15 June 2021 via teleconference, briefed by Lt Col (b) (6) and Lt Col (b) (6)
  - (2) JB Charleston: 15 June 2021 at CE, briefed by Lt Col (b) (6) and Lt Col (b) (6)

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) (A/C), Capt (b) (6)
  - (2) Navigators: Lt Col (b) (6), Capt (b) (6)
  - (3) Flight Engineer: MSgt (b) (6)
  - (4) Spray Operators: MSgt (b) (6), SSgt (b) (6), SrA (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6) (lead), TSgt (b) (6), TSgt (b) (6), SSgt (b) (6), SrA (b) (6)
  - (2) Crew Chiefs: MSgt (b) (6), SrA (b) (6), (b) (6)

- (3) Comm/Nav: MSgt (b) (6)  
d. **Entomologist:** Lt Col (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Trumpet® EC (78% a.i. naled)
- b. EPA Registration Number: 5481-481
- c. Additives Used: None
- e. Gallons Pesticide Loaded: 345
- f. Gallons Pesticide Applied:
  - (1) Tyndall AFB: 225
  - (2) JB Charleston: 120
- g. Gallons and Name of Flush Used: 10 gal highly aromatic naptha (HAN)
- h. Application Rate:
  - (1) Tyndall AFB: 1.1 ounces per acre
  - (2) JB Charleston: 0.83 ounces per acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9108
- b. Spray System (Modules Used) and System ID #: MASS 4, SP2G
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet Flat Fan
- e. Nozzle Orientation & Number Used:
  - (2) Tyndall AFB: 29 nozzles oriented straight down
  - (2) JB Charleston: 25 nozzles oriented straight down
- f. Flow Rate:
  - (1) Tyndall AFB: 8.1 gallons per minute
  - (2) JB Charleston: 6.0 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 200'
- b. Spray Off-set: 2,000'
- c. Spray Release Altitude:
  - (1) JB Charleston: 150' AGL
  - (2) Tyndall AFB: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Tyndall AFB: Wind (ground) 240° @ 10 mph; wind (altitude) 235° @ 12 mph; temperature 85°; relative humidity 72%
- b. JB Charleston: Wind (ground) 190° @ 6 mph; wind (altitude) 180° @ 6 mph; temperature 84°; relative humidity 46%

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations.
  - (2) Results: Adequate coverage through sprayed area (Attachments 2 and 3)
- b. Effectiveness:
  - (1) Technique/s Used: CDC light trap surveillance for treatment justification.
  - (2) Results: Pre- and Post-treatment surveillance results for JB Charleston are listed in attachment 1. Tyndall AFB results are currently pending.

**8. REMARKS:**

- a. Pre-treatment surveillance at JB Charleston revealed extremely high populations of salt marsh mosquitoes, *Ochlerotatus taeniorhynchus* and *Ochlerotatus sollicitans*. Because these are mosquitoes that are active earlier in the day than many species of mosquitoes, the aerial adulticide treatment was conducted in the early evening rather than after sunset to increase efficacy. The timing of application was no more than two hours prior to sunset in accordance with the pesticide label and to minimize non-target effects. Unfortunately, post-treatment surveillance did not indicate a significant reduction in mosquito populations. The reason for this is unclear, however it is recommended that future applications occur at sunset to target a broader range of mosquito behavior.
- b. Weather conditions on both nights were ideal for adulticide application. The spray system was calibrated each day on the ground prior to application, and there were no issues observed during this treatment for control of adult mosquitoes.
- c. We sincerely appreciate the outstanding support received from both JB Charleston and Tyndall AFB. In particular, we would like to thank MSgt (b) (6) , TSgt (b) (6) , and Mr. (b) (6) for their support in making all necessary arrangements prior to the spray team's arrival, and for providing field observational support during the spray applications. We would also like to thank HM3 (b) (6) for conducting pre- and post-treatment surveillance at JB Charleston. This mission would not have been possible without the support of all those involved.

(b) (6) , Lt Col, USAF  
DoD Certified Pest Management Professional

**8. REMARKS:** Relatively high mosquito counts at Craney Island and City of Portsmouth made this night application a needed intervention with respect to local mosquito control. The Portsmouth Mosquito Control Division monitors insect populations and reported excellent control. No significant problems were encountered during the actual application. Time spent with calibration activities was well spent as there were no discrepancies between pesticide loaded and amount of pesticide applied. The weather for this application was ideal. Good air movement and low wind speed at altitude undoubtedly facilitated success of mission. There were no reports of adverse non-target environmental effects. Portsmouth Mosquito control subsequently reported increasing mosquito populations 4 days post spray. Observations from Portsmouth Public works suggest that on dredge spoil the application might have been at latter end of adult mosquito life-cycle.

We sincerely appreciate the support received from all sections of Langley AFB and Craney Island/City of Portsmouth personnel. This mission proceeded smoothly and with excellent results.

DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND

27 January 2021

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-0910

SUBJECT: Capability and Concept of Operations for NAS Jacksonville, FL

1. One C-130 will be available 1-5 February 2021 to exploring the efficacy of ultra-low volume larviciding on the Florida Army National Guard's Camp Blanding Joint Training Center. The aircraft will operate from Jacksonville Naval Station, FL and use the SP2 configuration with VectoBac WDG larvicide. A second C-130 will accompany with an SP3 configuration for currency and proficiency training. This mission will provide real-world training for aerial spray aircrew, entomologists and maintenance personnel.

2. Concept of Operations:

a. 1 February (Monday)

1300 Show KYNG

1500 Depart KYNG

1730 Land KNIP

b. 2-4 February (Tues-Thurs)

0800 Depart KNIP

1200 Land KNIP

c. 5 February (Friday)

0700 Show KNIP

0900 Depart KNIP

1130 Land KYNG

3. Test aircraft will be SP2 configured with ULV booms, and the training aircraft will be an SP3 configuration.

4. Lt Col (b) (6) will serve as mission commander.

5. Lt Col (b) (6) and Lt Col (b) (6) will act as aircraft commanders.

6. Support required at Jacksonville Naval Air Station, FL has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

SUBJECT: Concept of Operations for Aerial Spray at JB Charleston, SC and Tyndall AFB, FL

1. Aerial spray deployment of one C-130 from 14-18 June 2021 to JB Charleston, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards at JB Charleston, SC and Tyndall AFB, FL.

2. Concept of Operations (All times are local):

- a. 14 June  
1500 Depart KYNG  
1700 Land KCHS
- b. 15 June (Aerial Application at KCHS)  
1300 Installation brief for CHS  
1700 Weather call/Chemical Load  
1730 Calibration  
2015 Depart KCHS  
2215 Land KCHS
- c. 16 June (Aerial Application at KPAM)  
1600 Weather Call/Chemical load  
1700 Calibration  
1900 Depart KCHS (local Eastern Time)  
2030 Arrive KPAM (local Eastern Time) - Arrive KPAM @ 1930 LCL Central  
2130 Depart KPAM (local Eastern Time) - Depart KPAM @ 2030 LCL Central  
2300 Arrive KCHS (local Eastern Time)
- d. 17 June (WX/MX Backup)  
TBD Depart KCHS  
TBD Arrive KCHS
- e. 18 June  
0900 Depart KCHS  
1000 Land KWRB for static display  
1200 Depart KWRB  
1400 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 18,500 acres at JB Charleston, 25,000 acres at Tyndall AFB
  - b. Altitude: 300' AGL NVG operations
  - c. Swath Width: 2000ft
  - d. Groundspeed: 200 Knots
  - e. Application Rate: 1.0 oz/acre of Trumpet EC
4. Lt Col (b) (6) will serve as the Mission Commander with Lt Col (b) (6) serving as the Aircraft Commander. Support JB Charleston has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Aerial application of insecticide to control populations of adult nuisance and disease carrying mosquitoes at Langley AFB, and Craney Island Army Corps of Engineers.

1. Aerial spray deployment of one C-130 to Langley AFB, VA. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of Langley AFB and Craney Island Army Corps of Engineers.

2. Concept of Operations: All times local

- a. 27 July (Tuesday)  
1500 Depart KYNG  
1615 Land KLFI
- b. 28-29 July (Wednesday - Thursday)  
2000 Depart KLFI  
2300 Land KLFI
- c. 30 July (Friday)  
1200 Depart KLFI  
1315 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc.

3. Spray Parameters:

- a. Locations: Langley AFB and Craney Island ACE, VA
- b. Acres: 12,718
- c. Altitude: 300ft AGL for NVG adulticide application
- d. Swath Width: 2,000 feet
- e. Airspeed: 200 KTS
- f. Application Rate: 0.9 oz/acre
- g. Product: Trumpet® (Naled) (EPA Reg. No. 5481-481)

4. Lt Col (b) (6) will serve as the Mission Commander with Lt Col (b) (6) as the Aircraft Commander.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

08 July 2021

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Minot AFB, Minot, Burlington, Williston and Watford City, North Dakota.

1. The 910 AW will deploy one C-130 to Minot AFB, ND to train aerial spray aircrew, pest management personnel, and maintenance members in the control of nuisance and vector mosquitoes. This mosquito adulticide application will also improve working conditions and lower the risk of vector-borne illness for individuals working and living in/around Minot AFB, Minot, Burlington, Williston and Watford City. Aerial applications performed off DOD installation property will be conducted IAW the Innovative Readiness Training (IRT) Program criteria.

2. Concept of Operations: All times local

- a. 12 July (Monday)  
1500 Depart KYNG  
1730 Land KMIB
- b. 13-15 July (Tuesday – Thursday)  
2130 Depart KMIB  
2330 Land KMIB
- c. 16 July (Friday)  
1200 Depart KMIB  
1630 Land KYNG

Times may vary from scheduled depending upon weather, effectiveness of spray, etc. The mission commander will coordinate all changes to the planned itinerary.

### 3. Spray Parameters:

#### Minot AFB:

- a. Area to be treated: 5,170 acres
- b. Altitude: 300 feet
- c. Swath Width: 2,000 feet
- d. Airspeed: 200 KGS
- e. Application Rate: 0.98 oz/acre Trumpet® EC Insecticide

#### Minot City/Burlington:

- f. Area to be treated: 22,128 acres
- g. Altitude: 300 feet
- h. Swath Width: 2,000 feet
- i. Airspeed: 200 KGS
- j. Application Rate: 0.98 oz/acre Trumpet® EC Insecticide

#### Williston/Watford City:

- k. Area to be treated: 23,622 acres
- l. Altitude: 300 feet
- m. Swath Width: 2,000 feet
- n. Airspeed: 200 KGS
- o. Application Rate: 0.98 oz/acre Zenivex® Insecticide

4. Lt Col (b) (6) will serve as the Mission Commander. Support required at Minot AFB has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

Vienna Ohio 44473-0910

SUBJECT: Capability and Concept of Operations for Aerial Spray at Grand Forks AFB, ND

1. One C-130 will deploy to Grand Forks AFD, ND from 1-4 June for a requested Aerial Spray larvicide mission helping to control nuisance and vector species of mosquitoes reducing the negative impact these organisms generate on outdoor activities. The mission will also provide training for aerial spray aircrew, pest management personnel, and maintenance members.
2. Schedule of Events (All Times Local):
  - a. 1 June  
1200 Depart KYNG  
1400 Land KRDR
  - b. 2-3 June (Multiple application sorties)  
0700 Depart KRDR  
1100 Land KRDR
  - c. 4 June  
0900 Depart KRDR  
1300 Land KYNG
3. Spray Parameters:
  - a. Area: 2,100 Acres
  - b. Altitude: 100 feet AGL
  - c. Swath Width: 200 feet
  - d. Flow Rate: 233 gallons/minute
  - e. Application Rate: 2.5 gallons/acre (water with 0.94 oz of Altosid®)
  - f. Ground Speed: 200 knots
4. Lt Col (b) (6) will serve as the Mission Commander with Lt Col (b) (6) as the Aircraft Commander.
5. Support at Grand Forks AFB, ND has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

# AERIAL SPRAY OPERATIONAL SCHEDULE

## FMCA/DoD AAP COURSE

### ST. AUGUSTINE, FL - KSGJ

### 9-14 JANUARY 2022

### QZNRK7571009

**OBJECTIVE/PURPOSE/BENEFIT:** The 910<sup>th</sup> Aerial Spray Unit will deploy one C-130 to Northeast Florida Regional Airport, FL from 9-14 January 2022 in support of the annual DoD Aerial Spray Applicator (Category 11) Course held in conjunction with Florida Mosquito Control Association (FMCA) annual fly-in.

#### **1. 910 AW PARTICIPANTS:**

Mission Commander:	Lt Col (b) (6)	(b) (6)
Entomologists:	Lt Col (b) (6)	, Lt Col (b) (6), Capt (b) (6)
Pilot:	Lt Col (b) (6)	, Capt (b) (6)
Navigator:	Lt Col (b) (6)	
Flight Engineer:	SMSgt (b) (6)	
Spray Operators:	SMSgt (b) (6)	, TSgt (b) (6)
Spray Maintenance:	TSgt (b) (6)	(Lead) (b) (6)
	MSgt (b) (6)	, SSgt (b) (6),
	SMSgt (b) (6)	, SrA (b) (6)
Crew Chiefs:	MSgt (b) (6)	, SSgt (b) (6)

#### **2. REQUIRED ITEMS:**

Msn Commander:	MC Laptop Computer
Entomologist:	Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer
Navigator:	Maps/Map Bag, Validation Map, Wingman system cards
Spray Operators:	PPE, Calibration Tables/Laptop/Tablet and or Spray datasheet, O <sub>2</sub> hose extensions, wireless headsets.
Spray Maintenance:	Deployment Kit, Support Equipment

### **3. SCHEDULE (All Local Time):**

#### **09 Jan (Sunday)**

1000 Showtime  
1200 Depart KYNG  
1430 Arrive KSGJ

#### **10 Jan (Monday):** DoD spray training begins

0745 Showtime for Entos and Spray course presenters, Anastasia Co MCD, 120 EOC Drive, St. Augustine, FL 32092

#### **11 Jan (Tuesday)**

0800 Showtime at Anastasia MCD for entos and presenters; DoD program to last until 1130; blend into FMCA program after lunch  
1100 Showtime  
1230 Takeoff for local training sortie

#### **12 Jan (Wednesday):** continuing FMCA/DoD program

\*\*\*Aircraft activities WX dependent (MC discretion)

0800 Spray Demonstration at NE Regional Airport in support of FMCA/DoD training event  
0900 Static display on ramp at NE Regional Airport in support of FMCA/DoD training event.

#### **13 Jan (Thursday)**

0800 Showtime for MX and OPS Spray Training at DoD training event

#### **14 Jan (Friday)**

0800 Showtime  
1000 Depart KSGJ  
1230 Land KYNG

### **4. AIRCRAFT & SPRAY CONFIGURATION:**

<b>Chemical:</b>	<b>None; Water only</b>
<b>MASS:</b>	<b>MASS6; SP2</b>
<b>Gallons loaded:</b>	<b>700</b>
<b>Flow Rate:</b>	<b>336 GPM</b>
<b>Application Rate:</b>	<b>8-9 gal/acre</b>

4. 5-PAX Sedan / (b) (6) : MX Sedan

**6. LODGING:**

**18 rooms reserved- Tax exempt form printed**

Property: Hampton Inn & Suites St. Augustine-Vilano Beach  
Property Address: 95 Vilano Road Saint Augustine, FL 32084  
Property Phone: (904) 827-9797  
Confirmation # 53200928 & 53203043 (9 rooms each #)

**7. CONTACTS:**

**AIR TO GROUND RADIO FREQUENCIES:**

KSGJ UNICOM	122.95
KSGJ Twr	127.625, 269.475
KSGJ Gnd	121.175, 251.125
KSGJ ATIS	119.625
KSGJ Airfield Mgr, (b) (6)	(b) (6)

Parking & security has been coordinated with Atlantic Aviation FBO  
Atlantic Gen Mgr, (b) (6)

**SPRAY OPERATIONAL SCHEDULE**  
**UTAH TEST AND TRAINING RANGE (UTTR)**  
**DUGWAY PROVING GROUNDS (DPG)**  
**18-28 October 2021**  
**Mission # QZNRK7571291**

**PURPOSE/BENEFIT/OBJECTIVE:** Aerial spray herbicide mission on the Utah Test and Training Range (UTTR) and Dugway Proving Ground (DPG) to reduce the risk of range fires by controlling cheat grass (*Bromus tectorum*) and other invasive weed species while promoting reestablishment and success of native flora.

**1. 910 AW PARTICIPANTS:**

**Mission Commander:** Lt Col (b) (6) (b) (6)

**AIRCREW:**

**Pilots:** Lt Col (b) (6) , Capt (b) (6)  
**Navigators:** Lt Col (b) (6)  
**Flight Engineer:** SMSgt (b) (6)  
**Spray Operators:** SMSgt (b) (6) , TSgt (b) (6) , SSgt (b) (6)

**CERTIFIED APPLICATORS:**

**Entomologists:** Lt Col (b) (6) , Lt Col (b) (6) ,  
Lt Col (b) (6) (1<sup>st</sup> week)

**MAINTENANCE:**

**Spray MX:** TSgt (b) (6) (lead) (b) (6)  
SMSgt (b) (6) , MSgt (b) (6) , TSgt (b) (6) ,  
TSgt (b) (6) x, SrA (b) (6) , SrA (b) (6)  
**Crew Chiefs:** TSgt (b) (6) , SrA (b) (6)  
**Avionics:** MSgt (b) (6)  
**Command Post:** SrA (b) (6)

**2. REQUIRED ITEMS:**

Msn Commander: MC Laptop Computer  
Entomologist: Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer  
Navigator: Maps/Map Bag, Validation Map, Operational Wingman system cards  
Spray Operators: PPE, Calibration Tables/Laptop and or Spray datasheet, O<sub>2</sub> hose extensions  
Spray Maintenance: Deployment Kit, Support Equipment  
Avionics: 2 Multi-band hand-held radios; Wingman system test cards

**3. IN-BRIEFING at Hill:**

On arrival on the Forestry Ramp with Mr. (b) (6) , Mr. (b) (6) and representatives from Dugway.  
Required: MC, Entos, pilots, navs, SM lead.

0749 Sunrise

0800 Depart KHIF

1300 Land KHIF

##### **28 October (Thursday) Hill Field opens at 0800**

0700 Checked out of billeting

0745 Return vehicles

0900 Depart KHIF

1530 Land KYNG

**\*\*All times are approximated. Actual times and mission details will be updated as appropriate by the Mission Commander.**

#### **5. SPRAY CONFIGURATION:**

Aircraft:	89-9106
System:	SP-3G MASS: 3
Nozzle /Orientation:	Raindrop/Straight Back
Number of nozzles:	Fuselage – 18 nozzles

#### **6. SPRAY LOADING:**

##### **a. In each gallon of mix:**

0.93 ounces of Plateau herbicide (0.73 gallons in 100 gallons of water)

0.77 ounces of Clasp (0.6 gal in 100 gallons)

0.77 ounces of Methylated Seed Oil (0.6 gal in 100 gallons)

125.5 ounces of water

##### **b. First Load (4 Tanks of 450 gallons each + sump of 75 gallons)**

Fill to 450 gal water/tank. This is done by putting the filler hose into the rear tank with all tanks open to the common sump.

Total water in tanks and sump = 1,850 gal.

Total water added = 1,850 gallons

Load 13.5 gallons of Plateau; 11 Gal Clasp; 11 Gal MSO, agitating approximately 5-7 min

Approximate total quantity mix 1888 gallons

**c. Subsequent Loads**

Fill with water for a rough total of 1850 gallons; use “per 100 gallons of water” measurements given above when adding less than 1800 gallons (i.e., residual product in tank when loading). When the MASS is returned empty, load 1800 gallons of water and add: 13.5 gallons Plateau, 11 gallons of Clasp and 11 gallons of MSO.

**7. SPRAY PARAMETERS:**

Location: UTTR – HAT range plus multiple lifts for Dugway firebreak  
Herbicide: Plateau Herbicide (active ingredient: 23.6% Ammonium salt of imazapic)  
Area to be treated: TBD UTTR; Approximately 1500 Dugway  
Swath Width: 100 feet  
Flow Rate: 300 gal/min (we are treating at 46.5 acres/minute)  
Application Rate: 6.45 gal/acre (6 oz of Plateau per acre)  
Altitude: 100’ AGL  
Ground Speed: 200 Knots  
Flush: Air purge at end of each sortie to minimize dripping upon return  
Formulas: Flow Rate = Gal/Time in Minutes  
Acreage Sprayed = Total Sec x 338 x Swath Width / 43560

**8. PARKING PLAN: Forestry Ramp**

**9. AIR TO GROUND RADIO FREQUENCIES:**

**Clover Range:** UHF 285.65 / 275.9 / 361.4 (p)  
VHF 134.1 / 118.45  
**Eagle Tower:** 351.0; Mawk 2  
**Diddle Knoll:** 398.1 (Primary), 383.2 (Back-up); 134.1 / 118.45

**DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND**

28 September 2021

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Capability and Concept of Operations for Aerial Spray at Mountain Home AFB and Saylor Creek Bombing Range, ID

1. Aerial spray deployment of one C-130 from 4-15 October 2021 in response to an aerial spray request to aid fire prevention on Saylor Creek Bombing Range located near Mountain Home AFB, ID. Herbicide will be applied to target cheat grass while allowing native fire resistant vegetation (sagebrush) to re-establish and become competitive. During the operation aerial spray flight proficiency training will be accomplished while providing real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations (All times are local)

- a. 4 Oct (Mon)
  - 1000 Support aircraft departs KYNG
  - 1010 Spray aircraft departs KYNG
  - 1400 Spray aircraft lands KMUO
  - 1410 Support aircraft lands KMUO
- b. 5-8 Oct (Tues-Fri) Spray Sorties
  - 0700 Depart KMUO
  - 0900 Support aircraft RTB to YNG
  - 1115 Land KMUO
- c. 9 Oct (Sat)
  - 1000 Swap out aircraft departs KYNG
  - 1400 Swap out aircraft lands KBOI
- d. 10 Oct (Sun)
  - 0900 Swap out aircraft departs KBOI
  - 1600 Swap out aircraft lands KYNG
- e. 12-14 Oct (Tues-Thurs) Spray Sorties
  - 0700 Depart KMUO
  - 1115 Land KMUO

- f. 15 Oct (Fri) Redeployment
  - 0900 Spray aircraft depart KMUO
  - 0910 Support aircraft depart KMUO
  - 1600 Spray aircraft land KYNG
  - 1610 Support aircraft land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 3,004 acres
- b. Altitude: 100' AGL for herbicide application
- c. Swath Width: 100ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 4 oz/acre of Panoramic® 2SL (active ingredient: 23% imazapic ammonium)

4. Lt Col (b) (6) and Lt Col (b) (6) will serve as the Mission Commanders.  
Lt Col (b) (6) and Lt Col (b) (6) will be the Aircraft Commanders. Required support at Mountain Home AFB and Saylor Creek has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT  
MCRD PARRIS ISLAND AND JB CHARLESTON, SC, 6 – 9 SEPTEMBER 2022**

**1. MISSION BASICS:**

- a. Installation Sprayed: MCRD Parris Island, SC; JB Charleston, SC
- b. Mission Duration: 6 – 9 September 2022
- c. Purpose of Application: Control of nuisance and vector mosquito species through application of adulticide
- d. Application Date: 7 September 2022
- e. Times of Application (Zulu):
  - (1) MCRD Parris Island: 0015 – 0045
  - (2) JB Charleston: 0215 – 0315
- f. Acres Treated:
  - (1) MCRD Parris Island: 7,263
  - (2) JB Charleston: 17,707
- g. Flying Data:
  - (1) Spray sorties/hours: 3/3.4
  - (2) Flush sorties/hours: 0/0
  - (3) Ferry sorties/hours: 2/4.0
- h. Project Coordinator (Name/Rank, Phone #):
  - (1) MCRD Parris Island: Mr (b) (6), DSN (b) (6)
  - (2) JB Charleston: MSgt (b) (6), DSN (b) (6)
- i. Date Spray Maps Last Approved:
  - (1) MCRD Parris Island: 6 September 2022
  - (2) JB Charleston: 7 September 2022
- j. Installation In-Briefing: (When/Where/Briefer/s): 7 September 2022 at JB Charleston CE, briefed by Maj (b) (6), Lt Col (b) (6), and Capt (b) (6)

**2. OPERATIONAL:**

- a. **Mission Commander:** Maj (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) (A/C), Capt (b) (6)
  - (2) Navigators: Lt Col (b) (6) Maj (b) (6)
  - (3) Flight Engineer: SMSgt (b) (6), SrA (b) (6)
  - (4) Spray Operators: SMSgt (b) (6), MSgt (b) (6), SSgt (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: MSgt (b) (6) (lead), MSgt (b) (6), SSgt (b) (6), TSgt (b) (6), SSgt (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6), SrA (b) (6)

- (3) Comm/Nav: MSgt (b) (6)  
d. **Entomologist:** Lt Col (b) (6) (DoD certification NJ-1142-15-0221, AA 010-03-0221)

**3. PESTICIDE:**

- a. Trade Name: Trumpet® EC (78% a.i. naled)
- b. EPA Registration Number: 5481-481
- c. Additives Used: None
- e. Gallons Pesticide Loaded: 199
- f. Gallons Pesticide Applied:
  - (1) MCRD Parris Island: 59
  - (2) JB Charleston: 140
- g. Gallons and Name of Flush Used: 10 gal highly aromatic naptha (HAN)
- h. Application Rate: 1.02 ounces per acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9108
- b. Spray System (Modules Used) and System ID #: MASS 4, SP2G
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet Flat Fan
- e. Nozzle Orientation & Number Used: 26 nozzles oriented straight down
- f. Flow Rate: 7.4 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 200'
- b. Spray Off-set: 2,000'
- c. Spray Release Altitude: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. MCRD Parris Island: Wind (ground) 280° @ 5 kts; wind (altitude) 317° @ 9 kts; temperature 84°; relative humidity 84%
- b. JB Charleston: Wind (ground) 230° @ 4 kts; wind (altitude) 275° @ 5 kts; temperature 84°; relative humidity 69%

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations.
  - (2) Results: Adequate coverage through sprayed area (attachments 1 and 2)
- b. Effectiveness:
  - (1) Technique/s Used: CDC light trap surveillance for treatment justification.
  - (2) Results: Pre- and Post-treatment surveillance results for JB Charleston and MCRD Parris Island are listed in attachment 3 and 4.

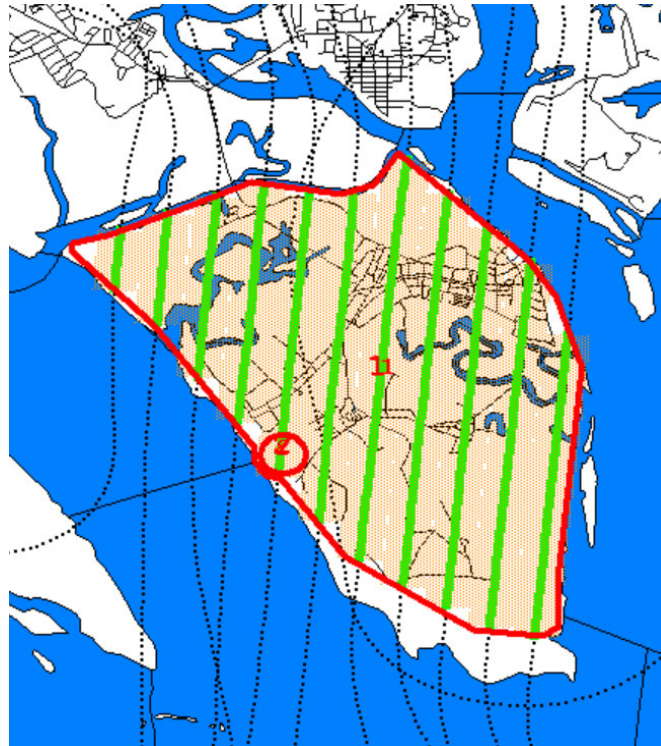

**8. REMARKS:**

- a. Pre-treatment surveillance at JB Charleston revealed extremely high populations of salt marsh mosquitoes, *Ochlerotatus taeniorhynchus*. Post-treatment surveillance indicates excellent control of these mosquitoes.
- b. Pre- and post-treatment surveillance at MCRD Parris Island may not accurately reflect the level of control reached at this location. Pre-treatment surveillance occurred on 24 August, and it is expected that population numbers may have been higher immediately prior to the treatment based on anecdotal information. Post-treatment, traps were placed on MCRD Parris Island on 7 September, the night of the spray, and collected on 8 September. While the traps showed large numbers of mosquitoes, particularly at the Crucible Aid Station, it was reported that all were dead presumably from the spray application. It was also reported that mosquitoes were extremely active when traps were set and little mosquito activity was noted when traps were collected on 8 September.
- c. Weather conditions were ideal for adulticide application. The spray system was calibrated on the ground prior to application, and there were no issues observed during this treatment for control of adult mosquitoes.
- d. We sincerely appreciate the outstanding support received from both JB Charleston and MCRD Parris Island. In particular, we would like to thank MSgt (b) (6) , Mr. (b) (6) and Mr. (b) (6) for their support in making all necessary arrangements prior to the spray team's arrival, and for providing field observational support during the spray applications. This mission would not have been possible without the support of all those involved.

(b) (6) , Lt Col, USAF  
DoD Certified Pest Management Professional

**AERIAL SPRAY OPERATIONAL SCHEDULE**  
**CAMP BLANDING MASS CONFIGURATION TRAINING**  
**JACKSONVILLE NAS, FL**  
**7 – 10 November 2021**  
**QZNRK7571311**

**OBJECTIVE/PURPOSE/BENEFIT:** One C-130 will deploy to NAS Jacksonville, FL where the 910<sup>th</sup> Aerial Spray Unit will be conducting swath characterization on Camp Blanding Joint Training Center in order to compare various configurations of the Modular Aerial Spray System to optimize control of larval mosquito vectors of disease. The aircraft will operate from NAS Jacksonville, FL and use the SP2 system. This mission will also provide real-world training for aerial spray aircrew, entomologists, and maintenance personnel with the goal of mission readiness for interrupting virus transmission.

## 1. 910 AW PARTICIPANTS:

**Msn Commander:** Maj (b) (6) ((b) (6))

**Entomologist:** Lt Col (b) (6)

**Pilots:** Lt Col (b) (6) , Maj (b) (6)

**Navigators:** Lt Col (b) (6)

**Flight Engineers:** CMSgt (b) (6)

**Spray Operators:** SMSgt (b) (6) , SSgt (b) (6)

**Spray Maintenance:** TSgt (b) (6) (LEAD) (b) (6)  
MSgt (b) (6) , TSgt (b) (6) , SrA (b) (6)

**Crew Chiefs:** TSgt (b) (6) , MSgt (b) (6)

**Avionics:** MSgt (b) (6)

## 2. REQUIRED ITEMS:

Ms n Commander:	MC Laptop Computer
Entomologist:	Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer
Navigator:	Maps/Map Bag, Validation Map, Wingman system operational cards, Stratus
Spray Operators:	PPE, Calibration Tables/Laptop/Tablet and or Spray datasheet, O <sub>2</sub> hose extensions, wireless headsets.
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand-held radios, Wingman system test cards

**3. SCHEDULE (All Local Time):**

**PPR: 11-07-01**

**07 Nov (Sunday)**

1330 Depart KYNG

1600 Land KNIP/Safety brief for MXS and test aircrew

**08 Nov (Monday)** 0645 Sunrise

0645 Showtime and weather decision

0700 Loading

0815 Ento ground crew onsite at Camp Blanding for setup of cards

0845 Spray Aircraft Departs KNIP for sortie at Camp Blanding

1200 Spray Aircraft Lands KNIP

**09 Nov (Tuesday)** 0646 Sunrise

0645 Showtime and weather decision

0815 Ento ground crew onsite at Camp Blanding for setup of cards

0845 Spray Aircraft Departs KNIP for sortie at Camp Blanding

1200 Spray Aircraft Lands KNIP

**10 Nov (Wednesday) WX Backup** 0647 Sunrise \* If needed will fly in AM before departing to YNG

0800 Show

1200 SP2 Depart for KYNG

\* Runway MX from 0800-1200. If you can be off the deck before 0800 you can depart.

1430 SP2 Lands KYNG

\*\*\*Note\*\*\* Scheduled Range times are 0800-1700 Monday-Wednesday.

\*\*\*Note\*\*\* Timelines may be adjusted by the MC to facilitate the test plan.

**4. AIRCRAFT & SPRAY CONFIGURATION:**

**Aircraft:** 92-3024

**System:** MASS: #2 SP2G (2-Module System) with fuselage booms; ULV booms spraying LV configuration.

**Nozzle/Orientation (Weinberg LZ test, 8 Nov):** (30) 8020 nozzles oriented straight down

**Number of Nozzles (Weinberg LZ test, 9 Nov):** (9) 8070 nozzles oriented straight down

**Offset:** TBD by PMP

**5. SPRAY LOADING:**

**Weinberg LZ tests: Approximately 60 GPM Water Only:**

**Amount of Water:** 700 Gallons; Should suffice for entire training period

**Where:** Parking location

**Furnished by Installation:** No hazardous waste disposal at this facility

**6. SPRAY PARAMETERS:**

Location (3-4 Feb): Camp Blanding – Weinberg LZ

Chemical: Water

Adjuvant: N/A

Area to be treated: Nominally 232 acres/60 second pass; 4-6 passes total

Swath Width: 500 feet nominal  
 Flow Rate: 60 GPM  
 Application Rate: N/A  
 Altitude: 200' AGL operations  
 Ground Speed: 200 Knots  
 Flush: None required; air purge only  
 Formulas: Flow Rate = acres per minute x gal/acre  
 Acreage Sprayed = Total Sec x acres per minute  
 Acres per minute = [(speed in knots) x (swath width)]/430.15

7. **TRANSPORTATION:** Enterprise (904) 778-0598  
 7945 Blanding Boulevard, Jacksonville, FL, 32244  
 Cars: (b) (6)  
 Minivans: (b) (6)  
 Reservation numbers: 4V7DYN, 4V7BMR, 4V7XG9, 4V7LHH, 4V84HS  
 Transportation to vehicles provided by LT (b) (6), NECE Duty Officer: (904) 314-0242

8. **LODGING:**  
**Will be quarters ON base. 15 rooms reserved. Confirmation# 31120806407**  
 Property: Navy Gateway Inns and Suites  
 Property Address: Jacksonville NAS, 6800 Roosevelt Blvd, Jacksonville, Florida 32212  
 Property Phone: 904-542-3138/904-772-6000  
 Group Name: 757 Airlift Squadron

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Capability and Concept of Operations for NAS Jacksonville, FL

1. One C-130 will deploy to NAS Jacksonville, FL from 7-10 November 2021 where the 910th Aerial Spray Unit will be conducting swath characterization on Camp Blanding Joint Training Center in order to compare various configurations of the Modular Aerial Spray System to optimize control of larval mosquito vectors of disease. The aircraft will operate from NAS Jacksonville, FL and use the SP2 system. This mission will also provide real-world training for aerial spray aircrew, entomologists, and maintenance personnel with the goal of mission readiness for interrupting virus transmission.

2. Concept of Operations:

- a. 7 November (Sunday)
  - 1130 Show KYNG
  - 1330 Depart KYNG
  - 1600 Land KNIP
- b. 8-9 November (Monday-Tuesday)
  - 0645 Showtime and weather decision
  - 0700 Loading
  - 0815 Entomologist ground crew onsite at Camp Blanding for setup of cards
  - 0845 Spray aircraft departs KNIP for sortie at Camp Blanding
  - 1200 Spray aircraft lands KNIP
- c. 10 November (Wednesday)
  - 0600 Show KNIP
  - 0800 Depart KNIP
  - 1030 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. The mission commander will coordinate all changes to the planned itinerary.

### 3. Spray Parameters

Location:	Camp Blanding – Weinberg LZ
Chemical:	Water
Adjuvant:	N/A
Area to be treated:	Nominally 232 acres/60 second pass; 4-6 passes total
Swath Width:	500 feet nominal
Flow Rate:	60 GPM
Application Rate:	N/A
Altitude:	200' AGL operations
Ground Speed:	200 Knots
Flush:	None required; air purge only

4. Maj (b) (6) will serve as mission commander with Lt Col (b) (6) as the Aircraft Commander. Support required at NAS Jacksonville has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

**AIR FORCE RESERVE COMMAND**

01 March 2022

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757AS/DOS  
3976 King Graves Rd  
Vienna, Ohio 44473-0910

SUBJECT: Concept of Operations for Aerial Spray at the Utah Test and Training Range

1. Aerial spray flight proficiency training will be accomplished on Targets 21, 23, 24, and Nord LZ at the Utah Test and Training Range (UTTR). Spray sorties will apply Krovar and Plateau to control vegetation (i.e., *Halogeton*) growth aiding bombing mission test evaluations and unexploded ordnance recovery. One aerial spray configured and one support C-130 will be available from 7-18 March 2022 for the requested spray mission. A swap out mission is scheduled over the weekend to maximize aircrew training over the two week period.

2. Concept of Operations:

ALL TIMES LOCAL

a. 7 March (Monday)

1000 Vader 07 departs KYNG (SP-1/Support)  
1015 Vader 23 departs KYNG (SP-3)  
1330 Vader 07 lands KHIF  
1345 Vader 23 lands KHIF

b. 8-11 March (Tuesday - Friday)

0800 Spray 23 departs KHIF (Actual Spray)  
0900 Spray 07 departs KHIF (Training)  
1030 Spray 07 lands KHIF  
1200 Spray 23 lands KHIF

c. 12 March (Saturday)

0900 Vader 07 departs KHIF  
1530 Vader 07 lands KYNG

d. 13 March (Sunday)

1000 Vader 07 departs KYNG  
1330 Vader 07 lands KHIF

- e. 14-17 March (Monday – Thursday)  
0800 Spray 23 departs KHIF (Actual Spray)  
0900 Spray 07 departs KHIF (Training)  
1030 Spray 07 lands KHIF  
1200 Spray 23 lands KHIF

- f. 18 March (Friday)  
0900 Vader 23 departs KHIF (SP-3)  
0915 Vader 07 departs KHIF (SP-1/Support)  
1600 Vader 23 lands KYNG  
1615 Vader 07 lands KYNG

3. Spray parameters:

Herbicide: Krovar 1DF® / Plateau  
Flow rate: 366 Gallons/Minute / 335 Gallons/Minute  
Acreage: 900 Acres / 800 Acres (Targets 21, 23+24)  
Ground speed: 200 knots (337.55 ft/sec)  
Spray altitude: 100 feet AGL  
Swath width: 35 Feet / 80 Feet

4. Lt Col (b) (6) (7-13 Mar) and Capt (b) (6) (14-18 Mar) will serve as the mission commanders.

5. Aircraft Commanders:

Lt Col (b) (6)  
Lt Col (b) (6)  
Lt Col (b) (6)

6. Support required at both Hill AFB and the UTTR has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

20 January 2022

**MEMORANDUM FOR:**

910 AW CC/ 910 OG CC/ 757 DO CC  
ARMED FORCES PEST MANAGEMENT BOARD (AFPMB)

**FROM:** 757 AS/DOS (Lt Col (b) (6) )

**SUBJECT:** Aerial Application Pest Control Course (AAP-001), FMCA/DoD fly-in, Anastasia Mosquito Control District, Florida.

1. The DoD Aerial Application Pest Control Course (AAP-001) was taught in conjunction with Florida Mosquito Control (FMCA) Fly-In event, hosted by FMCA and Anastasia Mosquito Control District, St John's County, FL. This course provided certification training in Aerial Application Pest Control (Category 11) as required by the Environmental Protection Agency in accordance with DoD training requirements. Eight DoD personnel (students) attended and completed the course. Four attended for initial certification, and 4 attended for re-certification. In addition, all 910 AW Pest Management Professionals received 14 total hours of Continuing Educational Credits (CEU's) to maintain or achieve Florida State Pesticide Applicator Certification.

**2. COURSE STAFF:**

a. 910<sup>th</sup> Airlift Wing:

Lt Col (b) (6) , Course Director & Instructor  
Lt Col (b) (6) , Course Instructor  
Capt (b) (6) , Course Instructor  
Lt Col (b) (6) , Course Instructor  
SMSgt (b) (6) , Public Affairs, Course Instructor  
Lt Col (b) (6) , Navigator and Course Instructor  
Capt (b) (6) , Pilot and Course Instructor  
TSgt (b) (6) , Spray Maintenance

b. Mission plan with crew complement is attached (Attachment 2). There were no significant deviations between plan and operational activity. That of course is a genuine testament to the effectiveness of Aerial Spray mission planners and non-DoD collaborators.

**3. STUDENTS:** A breakdown of the student composition follows:

a. Certification Status:

- (1) Initial = 4
- (2) Re-certification = 4

b. Attendee Organizations:

- (1) US Air Force/ANG = 3
- (2) US Army = 2
- (3) US Navy/Marines = 3

**4. COMMENTS:**

- a. The spray training course (AAP-001, EPA Category 11) is an annual exercise the 910AW spray group completes in order to allow DoD personnel to maintain EPA/DoD proficiency in the legal application of pesticides on DoD installations per the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) of 1974, which is effectively the law of the land regarding pest control activities.

For the last 10 years, the 910<sup>th</sup> spray group has organized our annual spray course in conjunction with FMCA-Fly In event on roughly a one in three year basis. FMCA Fly-in is an annual event sponsored by the Florida Mosquito Control association, such that aerial mosquito control applicators, largely from Florida, Louisiana, and Texas congregate to share regulatory and operational issues that affect collective mosquito control activities, as well as shared general knowledge regarding aerial application of pesticides for the same. The purpose of DoD participation in this event is to ensure that the DoD is conversing with our non-military potential partners to stay “up to speed” if a contingency, such as hurricane or other arises, and use the opportunity to train DoD personnel, with ancillary goal of reminding the industry at large regarding DoD capabilities.

From my (AAP-001 Course director and Mission Commander) perspective, this event was entirely successful. The general schedule went off as planned with very little deviation with respect to schedule. Aircrew successfully completed demonstration and local training. DoD pest management personnel were all successfully accredited for Cat 11 certification. 910AW Aerial Spray PMP's received Continuing Education Units (CEU's) to maintain Florida licensure for potential contingencies in the state of Florida. Best of all, it was actually kind of fun (personal observation).

- b. **Course Schedule:** A copy of the Course Schedule is included as **Attachment 1**. The schedule was designed to complete all necessary training/information as prescribed by Cat 11 certification guidelines in DoDI 4150.07, while also incorporating DoD schedule into FMCA general training schedule. All planned training segments of course were accomplished, largely due to alacrity and support of collaborators, instructors and aircrew.

- c. **Flying activities:** This year our training was somewhat limited to task and function. Normally, the aerial spray class conducts a flight demonstration for participants, followed by a field exercise with expectation that it will reinforce concepts regarding swath characterization. The later mentioned concept was accomplished, but as NE Regional Airport is a highly controlled location, a significant amount of coordination had to be completed. The functional goal in working with Airport Authority was to have participants present to view spray activities in a controlled location, while instructors placed test cards on taxiway/runway (this was coordinated by NE Regional airfield ops and ground/tower). Thanks to coordination from St. John's airport authority, all proceeded smoothly with good communication. Analysis of demonstration/testing was completed in a later open forum session.

Additional flying activities not directly associated with FMCA/DoD spray course included a pilot check ride (Capt (b) (6)) with an over-water proficiency sortie.

4. **Participation:** All students and staff participated actively, and successfully completed the mapping exercise and the final exam. The mapping exercise counted for 20 percent of the student's score and the final exam counted for 80 percent of the student's score. All participants passed both portions of testing with minimum grade of 70 percent, with course average being in the mid-90 percent range. Recommendations for certification were sent to command specific certifying authorities. DoD Pesticide applicator certifications are valid for 3 years.
5. **ACKNOWLEDGEMENTS:** Thanks go to all the 910 AW Course Instructors, spray MXS, spray office, and aircrew for their willingness to help and participate. Huge thanks to Messrs (b) (6) and (b) (6) representing FMCA for ultimately organizing this event. Also, I wish to sincerely acknowledge personnel at Anastasia Mosquito Control District (specifically Dr. (b) (6) and Dr. (b) (6)), as well as Mr. (b) (6) and his crew at NE Regional Airport (St. John's Airport Authority). This event (in entirety) would not have happened without their input and assistance.

(b) (6)

**AERIAL SPRAY OPERATIONAL SCHEDULE  
FMCA/DoD AAP-001 AERIAL SPRAY COURSE  
ST. AUGUSTINE, FL - KSGJ  
9-14 JANUARY 2022  
QZNRK7571009**

**OBJECTIVE/PURPOSE/BENEFIT:** The 910<sup>th</sup> Aerial Spray Unit will deploy one C-130 to Northeast Florida Regional Airport, FL from 9-14 January 2022 in support of the annual DoD Aerial Spray Applicator (Category 11) Course is held in conjunction with Florida Mosquito Control Association (FMCA) annual fly-in. Completion will result in required DoD Pesticide Applicator Certification for DoD PMP's and applicators, discussions on current status of Aerial Spray in DoD and civilian sector, and currency training for aircrew, including check ride and over-water proficiency.

**1. 910 AW PARTICIPANTS:**

Mission Commander:	Lt Col (b) (6)	(b) (6)
Entomologists:	Lt Col (b) (6), Lt Col (b) (6), Capt (b) (6)	
Pilot:	Lt Col (b) (6), Capt (b) (6)	
Navigator:	Lt Col (b) (6)	
Flight Engineer:	SMSgt (b) (6)	
Spray Operators:	SMSgt (b) (6), TSgt (b) (6)	
Spray Maintenance:	TSgt (b) (6) (Lead) (b) (6) MSgt (b) (6), SSgt (b) (6), SMSgt (b) (6), SrA (b) (6)	
Crew Chiefs:	MSgt (b) (6), SSgt (b) (6)	

**2. REQUIRED ITEMS:**

Msn Commander:	MC Laptop Computer
Entomologist:	Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer
Navigator:	Maps/Map Bag, Validation Map, Wingman system cards
Spray Operators:	PPE, Calibration Tables/Laptop/Tablet and or Spray datasheet, O <sub>2</sub> hose extensions, wireless headsets.
Spray Maintenance:	Deployment Kit, Support Equipment

### 3. SCHEDULE (All Local Time):

#### 09 Jan (Sunday)

1000 Showtime  
1200 Depart KYNG  
1430 Arrive KSGJ

#### 10 Jan (Monday): DoD spray training begins

0745 Showtime for Entos and Spray course presenters, Anastasia Co MCD, 120 EOC Drive, St. Augustine, FL 32092

#### 11 Jan (Tuesday)

0800 Showtime at Anastasia MCD for entos and presenters; DoD program to last until 1130; blend into FMCA program after lunch  
1100 Showtime  
1230 Takeoff for local training sortie

#### 12 Jan (Wednesday): continuing FMCA/DoD program

\*\*\*Aircraft activities WX dependent (MC discretion)

0800 Spray Demonstration at NE Regional Airport in support of FMCA/DoD training event  
0900 Static display on ramp at NE Regional Airport in support of FMCA/DoD training event.

#### 13 Jan (Thursday)

0800 Showtime for MX and OPS Spray Training at DoD training event

#### 14 Jan (Friday)

0800 Showtime  
1000 Depart KSGJ  
1230 Land KYNG

### 4. AIRCRAFT & SPRAY CONFIGURATION:

<b>Chemical:</b>	<b>None; Water only</b>

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757AS/DOS  
3976 King Graves Rd  
Vienna Ohio 44473-5946

SUBJECT: Capability and Concept of Operations for DoD Aerial Spray Applicator (Category 11) Course

1. One C-130 is available 9-14 January 2022 to support the annual DoD Aerial Spray Applicator (Category 11) Course in conjunction with the Florida Mosquito Control Association (FMCA) Fly-In. The aircraft will operate from Northeast Florida Regional Airport (KSGJ), FL and use the SP2 configuration. This mission will fly a spray characterization test, and support a static display.

2. Concept of Operations:

- a. 09 January (Sunday)  
1000 Showtime  
1200 Depart KYNG  
1430 Land KSGJ
- b. 10 January (Monday)  
0745 Showtime for Entos and Spray course presenters
- c. 11 January (Tuesday)  
0745 Showtime for Entos and Spray course presenters  
0800 Spray Demonstration at NE Regional Airport in support of FMCA/DoD training event  
0900 Static display on ramp at NE Regional Airport in support of FMCA/DoD training event
- d. 12 January (Wednesday)  
0600 Weather call/Showtime  
0800 Weather call/Showtime  
0900 Takeoff for local training sortie
- e. 13 January (Thursday)  
0800 Showtime for MX and OPS Spray Training at DoD training event
- f. 14 January (Friday)  
0800 Showtime  
1000 Depart KSGJ  
1230 Land KYNG

The mission commander will coordinate all changes to the planned itinerary.

3. Aircraft will be SP2G configured with LV booms installed.
4. Capt (b) (6) will serve as mission commander with Lt Col (b) (6) as the Aircraft Commander. Support required at Northeast Florida Regional Airport has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT  
TYNDALL AFB 12-15 April 2022**

**1. MISSION BASICS:**

- a. Installation Sprayed: Tyndall AFB, FL
- b. Mission Duration: 12-15 April 2022
- c. Purpose of Application: Control of nuisance and vector mosquito species through application of adulticide
- d. Application Date: 13 April 2022
- e. Times of Application (Zulu): 2340-0130
  
- f. Acres Treated: 26616
- g. Flying Data:
  - (1) Spray sorties/hours: 1/1.8
  - (2) Ferry sorties/hours: 2/5.1
- h. Project Coordinator (Name/Rank, Phone #): 2<sup>nd</sup> Lt (b) (6) (b) (6); (b) (6)  
(AFCEC) (b) (6)
- i. Date Spray Maps Last Approved: 13 April 2022 (Approved by Tyndall CE CC Maj (b) (6))
- j. Installation In-Briefing: (When/Where/Briefer/s): 1300 13 April 2022 at Tyndall CE;  
Capt (b) (6), Lt Col (b) (6), Lt Col (b) (6), Capt (b) (6), MSgt (b) (6).

**2. OPERATIONAL:**

- a. **Mission Commander:** Capt (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) (A/C), Lt Col (b) (6)
  - (2) Navigators: Lt Col (b) (6), Capt (b) (6)
  - (3) Flight Engineer: CMSgt (b) (6)
  - (4) Spray Operators: SMSgt (b) (6), SMSgt (b) (6), TSgt (b) (6)
- c. **Spray Maintenance:**
  - (1) MSgt (b) (6) (lead), TSgt (b) (6), TSgt (b) (6), SrA (b) (6)
  - (2) Crew Chiefs: TSgt (b) (6), SrA (b) (6)
  - (3) Comm/Nav: TSgt (b) (6)
- d. **Entomologist:** Lt Col (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Trumpet<sup>®</sup> EC (78% a.i. naled)
- b. EPA Registration Number: 5481-481
- c. Additives Used: None
- e. Gallons Pesticide Loaded: 225
- f. Gallons Pesticide Applied:  
(1) Tyndall AFB: 225
- g. Gallons and Name of Flush Used: 10 gal highly aromatic naptha (HAN)
- h. Application Rate: 1.08 ounces per acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 90-9107
- b. Spray System (Modules Used) and System ID #: MASS 4, SP2G
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet Flat Fan
- e. Nozzle Orientation & Number Used: 38 Straight down
- f. Flow Rate: 7.83 gallons per minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: None laterally (headwind component)
- c. Spray Release Altitude: 300' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Tyndall AFB: Wind (ground) 130° @ 8 mph (average with gusts); wind (altitude 300 AGL) 150° @ 19 mph; temperature 75°; relative humidity 72%

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations.
  - (2) Results: Adequate coverage through sprayed area (Attachment 1). Significant undesired headwind/tailwind component, although within spray parameters.
- b. Effectiveness:
  - (1) Technique/s Used: CDC light trap surveillance for treatment justification.
  - (2) Results: Good control based on trap counts (Attachment 2). Overall mosquito population reduction was 98.2%

**REMARKS:**

- a. Weather conditions on spray application date was not ideal because of higher than desired wind speed. However conditions were within specification for aerial application of pesticide.
- b. Apparently good results from mosquito adulticide spray. Pre and post spray trap counts suggested 98.2% control of mosquito population. Be aware that local temperatures dropped significantly during the application period, so that may have had a significant impact on mosquito activity and post-spray mosquito trap counts. No adverse environmental effects were reported from Tyndall AFB personnel.
- c. We sincerely appreciate the support received from Tyndall AFB. Specifically from Lt (b) (6) MSgt (b) (6) MSgt (b) (6), Mr (b) (6) , and support from Tyndall Pest Control Shop.

- c. Aircrew:
  - Pilots: Lt Col (b) (6) , Capt (b) (6)
  - Navigators: Lt Col (b) (6)
  - Flight Engineer: SMSgt (b) (6)
  - Spray Operators: SMSgt (b) (6) , TSgt (b) (6) , SSgt (b) (6)
- d. Maintenance:
  - Spray Maintenance: TSgt (b) (6) (lead), SMSgt (b) (6) , MSgt (b) (6), TSgt (b) (6) , TSgt (b) (6), SrA (b) (6), SrA (b) (6)
  - Crew Chiefs: TSgt (b) (6) , SrA (b) (6)
  - Avionics: MSgt (b) (6)
- e. SARM: SrA (b) (6)

**3. PESTICIDE:**

- a. Trade Name: Plateau Herbicide (active ingredient: 23.6% Ammonium salt of imazapic)
- b. EPA Registration Number: 241-365
- c. Formulation Sprayed: 6.2 oz/acre Plateau + 6 oz/acre of MSO in 6.5 gallons of water
- d. Gallons Pesticide Mix Loaded and applied: 6,986
- e. Gallons of pesticide used: 53 gal of Plateau
- f. Gallons and Name of Flush Used: 200 gal water
- g. Other Additives Used: 44 gal of methylated seed oil (MSO)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99106
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: 3-Module System/ UHV Fuselage Booms
- d. Nozzle Type/Size: LV Fuselage
- e. Nozzle Orientation & Number Used: 18 – raindrop nozzles, oriented straight back.
- f. f. Pressure: 40 p.s.i.
- g. Flow Rate: 300 gallons per minute.

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100' AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. 20 Oct – 1<sup>st</sup> sortie: Winds light and variable  
22 Oct – 1<sup>st</sup> sortie: Winds light and variable; similar during 2<sup>nd</sup> sortie  
28 Oct – 1<sup>st</sup> sortie: calm

**7. SPRAY MONITORING (Pe- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique Used: Visual observations by ground party of approximate 100 ft swath on all passes (see Attachment 3)
  - (2) Results: Good coverage throughout spray area
- b. Effectiveness:
  - (1) Techniques Used: thorough analysis of weed emergence in spring by environmental staff at DPG
  - (2) Results: will be determined this spring by range personnel

**8. REMARKS:** This is the fifth application of Plateau specifically for firebreaks/fire suppression and habitat restoration on the Utah Test and Training Range (UTTR). This year included the second application for the same on the Dugway Proving Ground (DPG). While the application last October (2020) has been successful in discouraging the growth of cheat grass and thus lowering the incidence of range fires, a secondary invasive exotic, Russian thistle had a tremendous year on both locations but more so on the UTTR.

Discussions were continued regarding new herbicide formulations, strategies for qualifying or even quantifying weed suppression, and even the potential to use some resources potentially available at DPG for analysis of droplet size and drift of spray clouds. The outcome of such discussions are highly dependent on funding, something that has been difficult to secure this year. Nonetheless, with ever tightening budgets, it underscores the need for continued partnerships between the Air Force and Army, hopefully sharing resources will, in turn, be a force-multiplier, supporting operational objectives such as efficacious sprays and leading to less fire on ranges and restored fire-resistant native vegetation on these installations.

(b) (6)

, Lt Col, USAF

13 September 2022

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Capability and Concept of Operations for Aerial Spray at Mountain Home AFB and  
Juniper Butte Bombing Range, ID

1. Aerial spray deployment of one C-130 from 19-30 September 2022 in response to an aerial spray request to aid fire prevention on Juniper Butte Bombing Range located near Mountain Home AFB, ID. Herbicide will be applied to target cheat grass while allowing native fire-resistant vegetation (sagebrush) to re-establish and become competitive. During the operation aerial spray flight proficiency training will be accomplished while providing real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations (All times are local)

- a. 19 Sep (Mon)
  - 1200 Support aircraft departs KYNG
  - 1210 Spray aircraft departs KYNG
  - 1600 Spray aircraft lands KMUO
  - 1610 Support aircraft lands KMUO
- b. 20-23 Sep (Tues-Fri) Spray Sorties
  - 0700 Depart KMUO
  - 0900 Support aircraft RTB to YNG
  - 1115 Land KMUO
- c. 24 Sep (Sat)
  - 1300 Swap out aircraft departs KYNG
  - 1700 Swap out aircraft lands KBOI
- d. 25 Sep (Sun)
  - 0900 Swap out aircraft departs KBOI
  - 1600 Swap out aircraft lands KYNG
- e. 26-29 Sep (Tues-Thurs) Spray Sorties
  - 0700 Depart KMUO
  - 1115 Land KMUO

- f. 30 Sep (Fri) Redeployment
  - 0900 Spray aircraft depart KMUO
  - 0910 Support aircraft depart KMUO
  - 1600 Spray aircraft land KYNG
  - 1610 Support aircraft land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 3,005 acres
- b. Altitude: 100' AGL for herbicide application
- c. Swath Width: 100ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 6 oz/acre of Panoramic® 2SL (active ingredient: 23% imazapic ammonium)

4. Lt Col (b) (6) and Maj (b) (6) will serve as the Mission Commanders. Lt Col (b) (6) and Lt Col (b) (6) will be the Aircraft Commanders. Required support at Mountain Home AFB and Juniper Butte Range has been coordinated.

(b) (6) Lt Col, USAF  
Chief of Aerial Spray

- (3) Avionics: SSgt (b) (6)  
d. **Entomologist**: Capt (b) (6) (VA Cert. # 158493-G; Exp. 06/30/2023)

**3. PESTICIDE:**

- a. Trade Name: Trumpet® EC (78% a.i. naled)
- b. EPA Registration Number: 5481-481
- c. Additives Used: None
- e. Gallons Pesticide Loaded: 90 gal
- f. Gallons Pesticide Applied: 90 gal
- g. Gallons and Name of Flush Used: 10 gal highly aromatic naptha (HAN)
- h. Application Rate: 0.97 oz/gal

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 89-9106
- b. Spray System (Modules Used) and System ID #: MASS 4, SP2G
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet Flat Fan
- e. Nozzle Orientation & Number Used: 26 nozzles oriented straight down
- f. Flow Rate: 7.0 gal/min calibrated

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 2000'
- c. Spray Release Altitude: 300 AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Langley AFB: wind (ground) 090°@6 Knots reported at 1814
- b. Weather station in spray block: wind (ground) 145°@ 3 knots, gusts up to 6 knots, 85°F, 56.5% relative humidity reported at 1840
- c. Weather at altitude
  - 1) Langley: 140-181@10-12 knots during aerial survey; 120-125@6-8 knots during the spray application
  - 2) Craney/Portsmouth: 0-359@10-12 knots during aerial survey. Swirling winds noted but in general were out of easternly direction; 125-147@5-8 knots during spray application

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - 1) Technique/s Used: GPS system monitoring aircraft flight pattern.
  - 2) Results: Adequate coverage through sprayed area (Attachments 1)
- b. Effectiveness:
  - 1) Technique/s Used: CDC light trap surveillance for treatment justification.
  - 2) Results: Pre- and Post-treatment surveillance results were conducted

**8. REMARKS:**

- A. Pre-treatment surveillance reported by Mr. (b) (6) and Mr. (b) (6) revealed high populations of mosquitoes present in the area over the past several weeks, adulticide was highly needed to control the mosquitoes. Mr. (b) (6) reported 85 – 100% reduction in adult mosquito captures 24 h after the spray mission. Mr. (b) (6) reported 65 - 95% reduction in mosquito captures.
- B. Weather conditions on 24 August were ideal for adulticide application. The spray system was calibrated on the ground prior to application, and there were no issues observed during this treatment for control of adult mosquitoes. There were cross winds averaging 6 knots and a maximum 12 knots was observed at altitude. Winds were predicted during the preflight in-brief to be at a 090 heading, thus a 0/180 swath direction was chosen. However, during spray applications the wind direction was variable at altitude and was observed between 120° to 180° during. The decision was made on the plane by the entomologist to adjust the spray on/off timing by 5 seconds to account for the change in wind patterns to reduce drift outside the northern edge and into the southern end of the block.
- C. We sincerely appreciate the outstanding support received from Mr. (b) (6) and Mr. (b) (6) for their support in making all necessary arrangements prior to the spray team's arrival, and for providing field observational support during the spray applications.
- D. We sincerely thank the folks from Mr. (b) (6) pest shop for their assistance with rental vehicles. Those individuals have not toured the spray C-130 previously and would be interested in a tour and learning more about the system and our spray operation. We propose to invite Mr. (b) (6) pest shop, and others, to view the spray system during the next mission in the area.

(b) (6) , Capt, USAF  
DoD Certified Pest Management Professional

**Attachment 1. Area sprayed at during the JB Langley-Eustis/Craney Island ACE, VA mission on 24 August 2022. The light green areas are the two spray blocks sprayed by the C-130 aircraft. The spray block is outlined in black. There was a 2000' off-set to account for the wind direction and speed and allow for the product to drift into the spray block.**

**3. PESTICIDE:**

- a. Trade Name: Trumpet<sup>®</sup> EC (78% a.i. naled)
- b. EPA Registration Number: 5481-481
- c. Additives Used: None
- e. Gallons Pesticide Loaded: 60
- f. Gallons Pesticide Applied: 60
- g. Gallons and Name of Flush Used: 10 gal highly aromatic naptha (HAN)
- h. Application Rate: 0.86 oz/gal

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 92-3024
- b. Spray System (Modules Used) and System ID #: MASS 4, SP2
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet Flat Fan
- e. Nozzle Orientation & Number Used: 25 nozzles oriented straight down
- f. Flow Rate: 6.2 GPM

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off-set: 4,000'
- c. Spray Release Altitude: 300 AGL
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Langley AFB: wind (ground) 270°@7 Knots reported at 1800
- b. Weather station in spray block: wind (ground) 221°@ 1.3 Knots, gusts up to 6 Knots, 85°F, 75.5% relative humidity reported at 1940

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

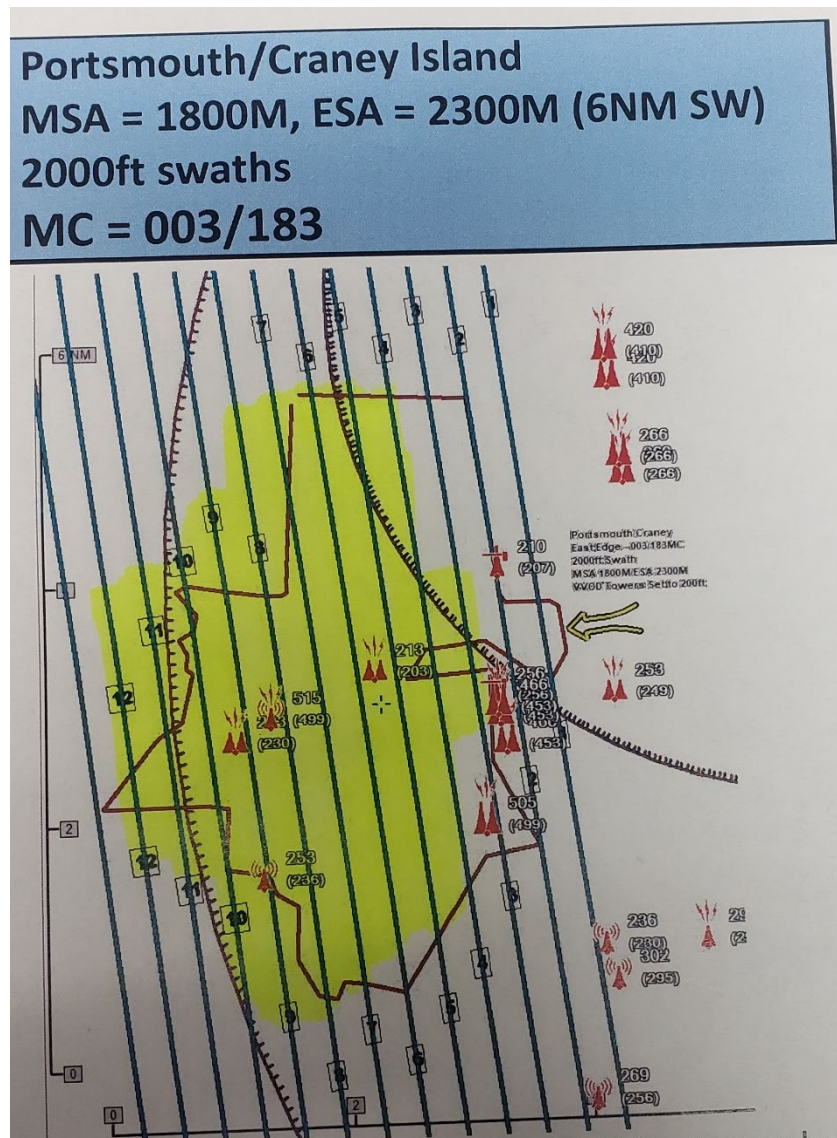

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern.
  - (2) Results: Adequate coverage through sprayed area (Attachments 1)
- b. Effectiveness:
  - (1) Technique/s Used: CDC light trap surveillance for treatment justification.
  - (2) Results: Pre- and Post-treatment surveillance results were conducted; Results pending; Verbal feedback from Portsmouth Public works indicated excellent results with positive public feedback.

**8. REMARKS:**

- a. Pre-treatment surveillance reported by (b) (6) revealed high populations of mosquitoes present in the area. Weather conditions over the weeks prior to the mission were ideal for mosquito growth and development. (b) (6) stated during the in brief that there were multiple broods coming off at varying timeframes and the adulticide was highly needed to control the mosquitoes.
- b. Weather conditions on 27 July 2022 were ideal for adulticide application. The spray system was calibrated on the ground prior to application, and there were no issues observed during this treatment for control of adult mosquitoes. There were cross winds ranging from 4-12 knots at altitude noted during the aerial survey and an offset of 4000' was used to account for spray drift.
- c. Spray data from the aircraft GPS system was corrupted resulting in the loss of usable GPS location information. The area spray was estimated and depicted from the navigator's swath depictions (attachment 1) and the swaths flown by the aircraft.
- d. We sincerely appreciate the outstanding support received from (b) (6) and (b) (6) for their support in making all necessary arrangements prior to the spray team's arrival, and for providing field observational support during the spray applications. This mission would not have been possible without the support of all those involved.

**Attachment 1. Area sprayed at Craney Island and 3 mi buffer area of Portsmouth, 27 July 2022. The red outline is the proposed spray block, the lines transecting the spray block are the spray swaths, and the highlighted swaths are the approximate spray application area.**

**3. PESTICIDE:**

- a. Trade Name: Trumpet® EC (78% a.i. naled)
- b. EPA Registration Number: 5481-481
- c. Additives Used: None
- d. Gallons Pesticide Loaded: 210 gal
- e. Gallons Pesticide Applied: 210 gal gallons
- f. Gallons and Name of Flush Used: 20 gallons H.A.N. (Highly Aromatic Naphtha)
- g. Application Rate: 1.0 oz/acre

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 92024
- b. Spray System (Modules Used) and System ID #: SP2G, System #4
- c. Spray System Configuration: 2-Module System/Fuselage Booms
- d. Nozzle Type/Size: 8003 Tee Jet
- e. Nozzle Orientation & Number Used: 32 nozzles oriented straight down
- f. Nozzle pressure: 40 psi
- g. Flow Rate: 7.3 gal/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000 ft
- b. Spray Off-set: 2000 ft
- c. Spray Release Altitude: 300 ft AGL
- d. Ground Speed: 200 kts (338 feet/second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 160@7 kts
  - (2) Release Altitude: 150@17 kts
- b. Temperature (Degrees Fahrenheit): 69°F
- c. Relative humidity: 70%
- c. Cloud Cover: Clear
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. **Application Pattern:**
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations. Note that GPS logs for this series of applications are not available as GPS shutdown procedure failed to record readily viewed data.
  - (2) Results: Adequate coverage throughout the sprayed area
- b. **Effectiveness:**
  - (1) Technique Used: Pre- and post-spray surveillance were conducted using CDC light traps.
  - (2) Results: Environmental conditions were favorable for effective mosquito control during the application. Minot AFB and the city of Minot both reported good control. Results are listed in attachment 1.

## 8. REMARKS:

Overall, the application went well with the system consistently delivering the proper flow rate for even coverage at the desired application rate. On 12 July, there was a small leak in the MASS system. However, this was quickly remedied with the replacement of a small part and the application was conducted the following night. The system was calibrated on the ground prior to application and no adverse effects to the environment or wildlife were noted during or following the spray.

Based on pre- and post-application trapping results, mosquito populations were successfully reduced. Mosquito reduction at Minot AFB and the city of Minot were 96% and 85% respectively. It is of note that these results are based on a single day of trapping pre-application for Minot AFB and post-application for both areas. It would be expected that additional days of trapping would yield similar results. Previous years' observations have suggested that August application may be even more critical. An additional spray mission is currently scheduled for 8 through 12 August 2022 and will include the city of Williston.

We (910AW), very much appreciate coordination between all collaborators on this mission. We sincerely thank Mr. (b) (6) (5CES), and Mr. (b) (6) and Mr. (b) (6) (City of Minot), for their efforts in making this mission possible as well as providing mosquito collection data from before and after the application. This information is critical to ensuring that spray missions successfully meet expectations regarding control of mosquito populations.

In addition to the upcoming August 2022 mission, it is anticipated that the cities of Minot and Williston will be treated again next year through the Innovative Readiness Training program. The Spray Unit has tentatively scheduled Minot missions to include both areas as well as Minot AFB in mid-July and mid-August 2023.

(b) (6), Lt Col, USAF  
DoD Certified Pest Management Professional

- b. **Effectiveness:**
  - (1) Technique Used: Pre- and post-spray surveillance were conducted using CDC light traps.
  - (2) Results: Environmental conditions were favorable for effective mosquito control during the application.

## 8. REMARKS:

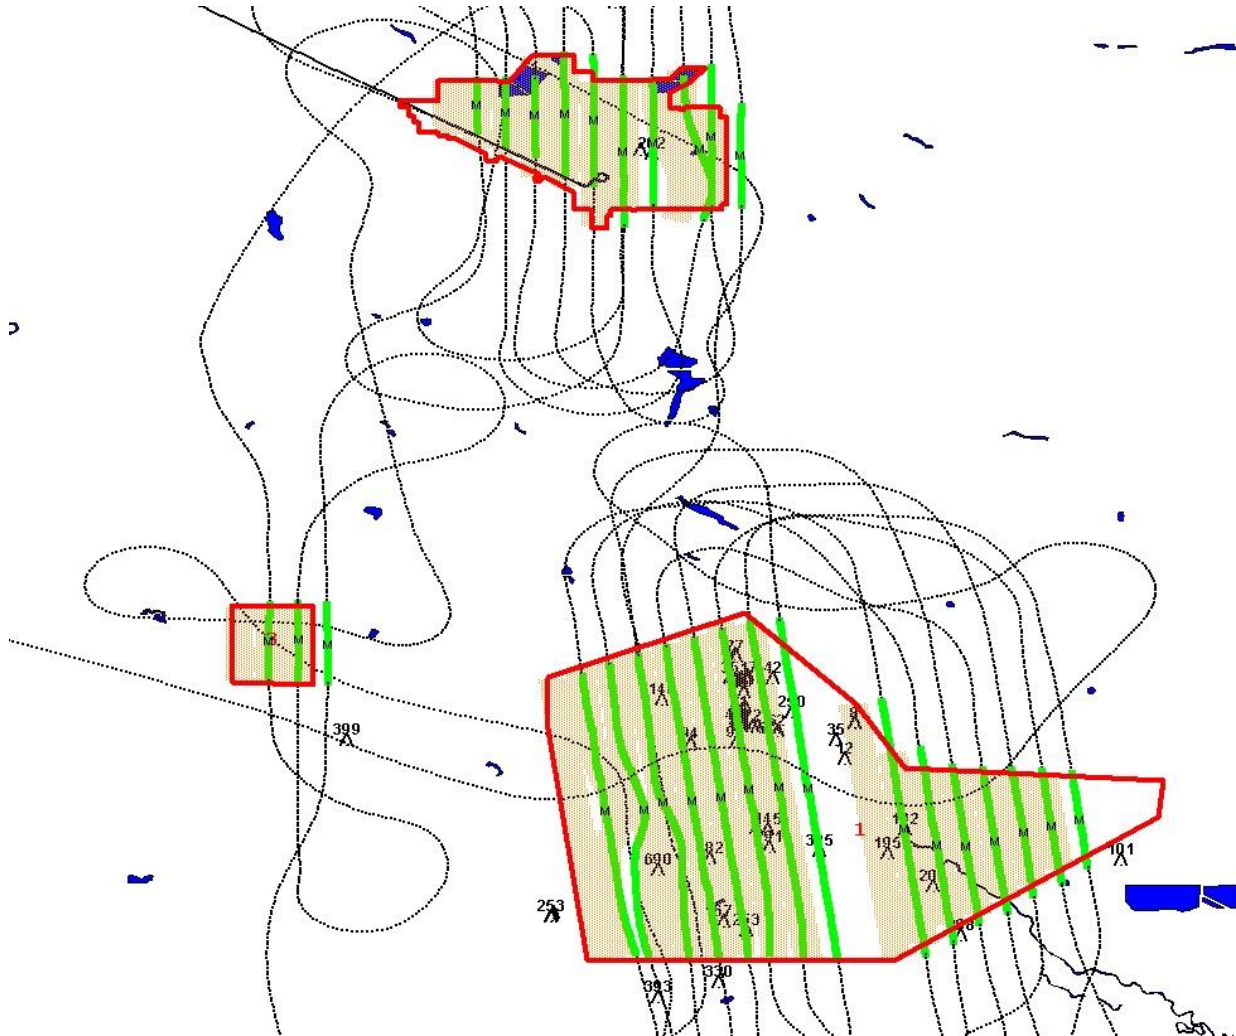

Overall, the application went well with the system consistently delivering the proper flow rate for even coverage over Minot AFB, then Burlington, and finally, for most of the application over the City of Minot. However, when the application was approximately 90% completed, a bird strike occurred. The crew decided to halt spraying and while there appeared to be no immediately recognized mechanical issues, the prudent course of action was return to the field and conduct a visual inspection. After inspecting the aircraft, it was decided that spray operations could not continue. The damage to the aircraft also meant that there would be no application for Williston ND, this trip. The system was calibrated on the ground prior to application and no adverse effects to the environment or wildlife were noted during or following the spray, the bird strike notwithstanding.

Pre-spray trapping by Minot AFB and the City of Minot, indicated moderate to high collections of mosquitoes (approximately 50 females per trap). *Culex tarsalis*, the primary West Nile virus vector in North Dakota is likely the most abundant mosquito at this time of the year. Thus, the need for an application to control mosquitoes was substantiated. At the time that this report was written, post-application mosquito trap numbers have not been received. However, based on the environmental conditions, and the relatively good coverage shown in Attachment 1, it is expected that the application gave good control. This is the last training spray mission for Minot this year.

The Air Force Aerial Spray Unit very much appreciates coordination between all collaborators on this mission. We sincerely thank Minot Public Health, Mr. (b) (6) (5CES), and Mr. (b) (6) and Mr. (b) (6) (City of Minot), for their efforts in making this mission possible as well as providing mosquito collection data. This information is critical to ensuring that spray missions successfully meet expectations regarding control of mosquito populations.

(b) (6) , Lt Col, USAF

SUBJECT: Capability and Concept of Operations for Aerial Spray at Mountain Home AFB and Saylor Creek Bombing Range, ID

1. Aerial spray deployment of one C-130 from 4-15 October 2021 in response to an aerial spray request to aid fire prevention on Saylor Creek Bombing Range located near Mountain Home AFB, ID. Herbicide will be applied to target cheat grass while allowing native fire resistant vegetation (sagebrush) to re-establish and become competitive. During the operation aerial spray flight proficiency training will be accomplished while providing real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations (All times are local)

- a. 4 Oct (Mon)
  - 1000 Support aircraft departs KYNG
  - 1010 Spray aircraft departs KYNG
  - 1400 Spray aircraft lands KMUO
  - 1410 Support aircraft lands KMUO
- b. 5-8 Oct (Tues-Fri) Spray Sorties
  - 0700 Depart KMUO
  - 0900 Support aircraft RTB to YNG
  - 1115 Land KMUO
- c. 9 Oct (Sat)
  - 1000 Swap out aircraft departs KYNG
  - 1400 Swap out aircraft lands KBOI
- d. 10 Oct (Sun)
  - 0900 Swap out aircraft departs KBOI
  - 1600 Swap out aircraft lands KYNG
- e. 12-14 Oct (Tues-Thurs) Spray Sorties
  - 0700 Depart KMUO
  - 1115 Land KMUO

- f. 15 Oct (Fri) Redeployment
  - 0900 Spray aircraft depart KMUO
  - 0910 Support aircraft depart KMUO
  - 1600 Spray aircraft land KYNG
  - 1610 Support aircraft land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: approx. 3,004 acres
- b. Altitude: 100' AGL for herbicide application
- c. Swath Width: 100ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 4 oz/acre of Panoramic® 2SL (active ingredient: 23% imazapic ammonium)

4. Lt Col (b) (6) and Lt Col (b) (6) will serve as the Mission Commanders.  
Lt Col (b) (6) and Lt Col (b) (6) will be the Aircraft Commanders. Required support at Mountain Home AFB and Saylor Creek has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

AIR FORCE RESERVE COMMAND**

16 August 2022

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Aerial application of insecticide to control populations of adult nuisance and disease carrying mosquitoes at Langley AFB, and Craney Island Army Corps of Engineers.

1. Aerial spray deployment of one C-130 to Langley AFB, VA. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel of Langley AFB and Craney Island Army Corps of Engineers.

2. Concept of Operations: All times local

- a. 23 August (Tuesday)  
1200 Depart KYNG  
1315 Land KLFI
- b. 24-25 August (Wednesday - Thursday)  
1915 Depart KLFI  
2145 Land KLFI
- c. 26 August (Friday)  
1200 Depart KLFI  
1315 Land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc.

3. Spray Parameters:

- a. Locations: Langley AFB and Craney Island ACE, VA
- b. Acres: 12,718
- c. Altitude: 300ft AGL for NVG adulticide application
- d. Swath Width: 2,000 feet
- e. Airspeed: 200 KTS
- f. Application Rate: 0.9 oz/acre
- g. Product: Trumpet® (Naled) (EPA Reg. No. 5481-481)

4. Maj (b) (6) will serve as the Mission Commander with Lt Col (b) (6) as the Aircraft Commander.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

**DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND**

05 April 2022

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Tyndall AFB.

1. One C-130 will deploy to Tyndall AFB from 12-15 April 2022. Mosquito and biting midge control will be conducted at Tyndall AFB. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito and biting midge populations affecting the health and welfare of the personnel at the installation.

2. Concept of Operations (All times are local):

- a. 12 April  
1300 Depart KYNG  
1430 Land KPAM
- b. 13 April  
1845 Depart KPAM for Aerial Application at Tyndall Air Force Base  
2030 Land KPAM
- c. 14 April (WX/MX Backup)  
1845 Depart KPAM for Aerial Application at Tyndall Air Force Base  
2030 Land KPAM
- d. 15 April  
0900 Depart KPAM  
1230 Land KYNG

Times may change from schedule depending upon weather, effectiveness of spray, etc.  
The mission commander will coordinate all changes to the planned itinerary.

3. Spray Parameters:

- a. Area to be treated: 25,500 acres over at Tyndall AFB
- b. Altitude: 300' AGL NVG operations
- c. Swath Width: 2000ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 1.05 oz/acre of Trumpet® EC

4. Capt (b) (6) will serve as the Mission Commander with Lt Col (b) (6) as the Aircraft Commander. Support at Tyndall AFB has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

# AERIAL SPRAY OPERATIONAL SCHEDULE

## MINOT, ND

### 8-12 August 2022

### MSN# QZNRK3431220

**PURPOSE/BENEFIT/OBJECTIVE:** A C-130 will deploy to Minot AFB (KMIB) from 8-12 August 2022. Aerial Spray flight proficiency training will be accomplished using Night Vision Goggles (NVGs) while providing a beneficial reduction in mosquito populations improving the health and welfare of personnel working and living in and around Williston, Minot AFB and Minot. Aerial applications off DoD property will be in accordance with the Individual Readiness Training (IRT) program.

#### 1. 910 AW PARTICIPANTS:

Mission Commander:	Lt Col (b) (6)				
Entomologists:	Lt Col (b) (6)				
Pilots:	Lt Col (b) (6)	, Maj (b) (6)			
Navigators:	Lt Col (b) (6)	, Maj (b) (6)			
Flight Engineer:	CMSgt (b) (6)	, SSgt (b) (6)			
Spray Operators:	MSgt (b) (6)	, SSgt (b) (6)	, SMSgt (b) (6)		, CMSgt (b) (6)
Spray MX:	TSgt (b) (6)	(Lead)	(b) (6)		
	TSgt (b) (6)	, TSgt (b) (6)	, SSgt (b) (6)		, SSgt (b) (6)
Avionics:	MSgt (b) (6)				
Crew Chiefs:	TSgt (b) (6)	, SrA (b) (6)			

#### 2. REQUIRED ITEMS:

Msn Commander:	MC Laptop Computer
Entomologist:	Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer, Wingman system mission cards
Navigator(s):	Maps/Map Bag, Validation Map, iPad window mounts, Operational Wingman Cards
Spray Operators:	PPE, Laptop and/or Spray datasheet, O <sub>2</sub> hose extensions
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand-held radios; Wingman system test cards

#### 3. SCHEDULE: (All Local Times)

**8 August (Monday)**

**Sunset 2145L – Civil Twilight 2226L (Minot)**

**Pesticide/Safety brief will be conducted at the aircraft prior to departing YNG**

0900 – Showtime

1100 – Depart KYNG

1535(1435 local) – Land KMIB PPR: 01-08-JR

**9-11 August (Tuesday-Thursday) Sunset/Civil Twilight see above – min change during this period**

1600 -- Inbrief at UCC Conference Room in Bldg. 445 (9 July)

1900 – Weather Call/Pesticide Load/Calibration

2130 – Depart KMIB **MC will make final call depending on area to be sprayed due to WX factors.**  
0030 – Land KMIB

**12 July (Friday)**

0800 – Bus Time

1000 – Depart KMIB

1400 – Land KYNG

(RTB departure time could be later if crew rest following prior night's mission is a factor)

**4. SPRAY CONFIGURATION AND PARAMETERS:**

<b>Location:</b>	<b>Minot AFB</b>
Acres:	5,170
Chemical:	Trumpet® EC (78% AI Naled)
Gallons to be loaded:	30
Flow Rate:	7.1 GPM
Application Rate:	0.98 oz/acre
Flush:	Highly Aromatic Naptha (HAN)
Altitude:	300 feet AGL
Airspeed:	200 KGS
Swath Width:	2,000 feet
Nozzle/Orientation:	ULV 8003 Tee Jet oriented straight down
Number of Nozzles:	(15 left – 16 right) 31 Total

<b>Location:</b>	<b>Minot City/Burlington</b>
Acres:	22,128
Chemical:	Trumpet® EC (78% AI Naled)
Gallons to be loaded:	180
Flow Rate:	7.1 GPM
Application Rate:	0.98 oz/acre
Flush:	Highly Aromatic Naptha (HAN)
Altitude:	300 feet AGL
Airspeed:	200 KGS
Swath Width:	2,000 feet
Nozzle/Orientation:	ULV 8003 Tee Jet oriented straight down
Number of Nozzles:	(15 left – 16 right) 31 Total

**Flush and Purge procedures per day will be furnished by the Mission Commander**

<b>Location:</b>	<b>City of Williston</b>
Acres:	15,000
Chemical:	Imperium
Gallons to be loaded:	90
Flow rate:	5.5 GPM
Application Rate:	0.76 oz/acre
Flush:	Water
Airspeed:	200 KGS
Swath Width:	2,000 feet
Nozzle/Orientation:	ULV 8003 Tee Jets orientated straight down.
Number of Nozzles:	(10 right – 10 left) 20-21 total

5. **RADIO FREQUENCIES:**

**Spray Ground:** UHF 392.2; VHF 123.45

**Minot AFB:** Tower – 120.65 VHF or 253.5 UHF  
Ground – 134.0 VHF or 275.8 UHF

## 2. **REQUIRED ITEMS:**

Msn Commander: MC Laptop Computer  
 Entomologist: Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer  
 Navigator: Maps/Map Bag, Validation Map, Operational Wingman cards  
 Spray Operators: PPE, Calibration Tables/Laptop and or Spray datasheet,  
 O<sub>2</sub> hose extensions  
 Spray Maintenance: Deployment Kit, Support Equipment  
 Avionics: 2 Multi-band hand-held radios; Wingman system test cards

3. **IN-BRIEFING at Hill:** 1430-1500 L or ASAP at forestry ramp (for entomologists, MXS, and MC): Note: Mr. (b) (6) will be primary POC for Hill/UTTR spray activities. Most aspects of inbrief have been pre-coordinated.

## 4. **SCHEDULE: (All Local Time)**

**PLANNED SEQUENCE OF EVENTS:** Hill AFB Tower Control and Runway Hours  
 Tower Opens at 0800L (Engine start typical at 0745 make engine start call in the blind)

### **NOTES:**

1. Scheduling reflects no weather or maintenance delays. In the event of weather or maintenance delays, the missions will be adjusted as required. ALL TIMES SUBJECT TO ADJUSTMENT BY MISSION COMMANDER
2. DUTY DAY FOR CIVILIANS WILL BE AS REQUIRED WITHIN CREW REST CONSTRAINTS.
3. ALL MX & OPS PERSONNEL WILL REMAIN ON DUTY UNTIL AIRCRAFT IS PRE-FLIGHT COMPLETE AND RELEASED BY THE MISSION COMMANDER.

### **7 March (Monday)**

**0700-0715 SHOW for ALL aircrew and Pax** - Bag Drop for Chalk 1 Pax at Aerial Port  
 0745 All Chalk 1 & 2 personal report to Base Ops/Aircrew Briefing Rm for safety and arrival brief. MC will release you.

Chalk 2 crew and MEPs will floor load their personal bags

**0830 ALL Chalk 1 Pax report back to Aircrew Briefing room for accountability** - TC  
 Capt (b) (6)

**0845 Chalk 1 PAX bus to aircraft**

1000 Depart KYNG Support (SP1) Vader 07 MI: QZNRK3431066 PPR: 22XD023

1015 Depart KYNG    Spray   (SP3) Vader 23   MI: QZNRK3432066   PPR: 22XD023  
1330 Land KHIF first aircraft

**8-11 March (Tuesday-Friday) Range Time 0800-1400L**

**Aircraft will generally plan on 2 sorties per day.**

0600 Show KHIF

0630 Aircraft Released by MX, weather call, and begin mixing product

0700 Chemical Load first Aircraft

0745 Engine Start

0800 First Takeoff

**\*\*Weekend applications are currently unavailable due to range closure.**

**12 March (Swap out departs KHIF to KYNG)**

0630 Checked out of hotel

0700 Bus (rental car) time from hotel to Hill

0900 Depart KHIF

1530 Land KYNG    (Vader 07, MI: QZNRK3431071, PPR: Not RQ'd)

**13 March (Swap out departs KYNG to KHIF)**

0800 Show at Bldg 407

1000 Depart KYNG

1330 Land KHIF    (Vader 07, MI: QZNRK3431072, PPR: 22XD024)

**14-17 March (Monday-Thursday) Range time 0800-1400L**

**Each aircraft will plan on 2 sorties per day.**

0600 Show KHIF

0630 Aircraft Released by MX, weather call, and begin mixing product

0700 Chemical Load first Aircraft

0745 Engine Start

0800 First Takeoff

**18 March (Friday) All personnel**

0600 Everyone checked out of hotel

0630 Rental vehicles depart for Hill forestry ramp with **ALL MEMBERS**

0710 Return Rental vehicles to Enterprise

0730 Bus from Enterprise to Hill

0900 Depart KHIF

1600 Land KYNG

**\*\*All times are approximated. Actual times and mission details will be by the Mission Commander.**

**5. SPRAY CONFIGURATION: SP3G**

Spray 23 - MASS #2

MASS Modules SP3 configurations

UHV Fuselage booms (Bell nozzles) oriented straight back (Krovar)

HV Fuselage booms (R-20 nozzles) oriented straight back (Plateau)

**6. SPRAY LOADING:**

### **Sequence for Loading full SP3 tank (1800 Gallons) mix for PLATEAU**

Fill water to 900 gallon mark.  
Add 18.75 (19) gallons Plateau  
Add 0.5 gallons Foam Fighter  
Add 9 gallons Clasp incrementally while mixing and adding  
remaining water (to 1800 gallons)

For Partial tank fill of Plateau, **please follow rough mixing ratios:**

100 gallon increment of finish spray mix is:  
1.0 Gallon Plateau  
0.5 Gallons Clasp  
4 oz Foam Fighter

### **Sequence for Loading 1,000 Gallon Mixing Tank: (KROVAR); note: this will be accomplished in external mixing tanks prior to aircraft upload.**

Fill with water up to 750 Gallon Mark, and then add:  
450 Pounds of Krovar I DF®  
4.0 Gallons of Clasp®  
15 oz of FTF Defomer®  
200 Ounces (1.5 gallons) Hi-Light® Dye  
Add Water to 1,000 Gallon Mark and Agitate for 30 Minutes  
Add from mixing tanks to spray tanks as appropriate for sortie

## **7. SPRAY PARAMETERS:**

**Location:** UTTR targets

Area to be treated: Approx 1,700 Acres (Targets 21, 23+24);

Expect 800 Acres to be treated with Plateau, and 900 Acres to be treated with Krovar. Spray  
MXS can accommodate both types of materials with various boom configurations

User will determine location of application; expectation is Krovar application on east side of  
targets, and Plateau application on West side of targets, however this is subject to change if  
operationally unfeasible.

**a. Plateau application:**

Swath width: 80 feet  
Flow rate: 335 Gallons/Minute  
Altitude: 100 Feet AGL  
Ground Speed: 200 Knots (337.55 ft/sec)  
Flush: 100 gallons water and subsequent air purge  
Nozzles: 18-20 R20 nozzles orientated straight back

**b. Krovar application:**

Swath Width: 35 Feet  
Flow Rate: 366 Gallons/Minute  
Altitude: 100 Feet AGL  
Ground Speed: 200 Knots (337.55 ft/sec)  
Flush: 2x full system rinse if possible; Air purge after each sortie  
Nozzles: HV Bell nozzles, orientation straight back  
Formulas: Flow Rate = Gal/Time in Minutes  
Acreage Sprayed = Total Sec x 338 x Swath Width / 43,560

**8. PARKING PLAN:** Forestry Ramp and Building 777

**9. AIR TO GROUND RADIO FREQUENCIES:**

**Clover North Range:** VHF 118.45 UHF 285.65  
**Clover South Range:** VHF 134.1 UHF 363.5  
**Eagle Range:** UHF 309.2  
**Diddle Knoll:** Provided after In-Brief  
**Spray Inter plane:** Provided after In-Brief  
**Command Post:** UHF 381.3 Call in as CONVOY  
**Base OPS:** UHF 371.95  
**Spray Ground:** Provided after In-Brief

**10. TRANSPORTATION:** Enterprise (801)-593-6007 Option #4 for counter  
865 W 1000 N LAYTON, UT 84041-4833

**Transportation to and from Hill:**

Ground Trans support (801) 777-1843:

CONFIRMATION NUMBER: In folder

Bags (Arr): Hill Trans to provide (1) stake bed truck. Bags to be delivered to hotel.

Personnel (Arr): Rental vehicles pre-positioned on forestry ramp by ADVON.

All personnel to be transferred to hotels via rental vehicle.

Thursday 17 March: Bag drop by 1200 for all personnel at forestry ramp.

Personnel (Dep)

0630 on Fri – **Rental vehicles depart with all personnel on trip to take all members to the aircraft and then return rental cars to Enterprise.**

0730 on Fri – Pickup for rental car drivers at Enterprise

**T: 801-451-7999**

**12. GENERAL TARGET INFORMATION:**

**Target 21:**

Dimensions: 4,980' X 7,770'

Acreage: 888

Aircraft Loads: Variable; material and swath width dependent

Sorties: Variable; material and swath width dependent

Passes: Variable; material and swath width dependent

Spray-On Time/Pass: 22 Seconds

Spray Heading: 005/185

**Target 23 / 24:**

Dimensions: 16,675' X 1,657  
Acreage: 635  
Aircraft Loads: Variable; swath width dependent  
Sorties: Variable; swath width dependent  
Passes: Variable; swath width dependent  
Spray-On Time/Pass: 46 Seconds  
Spray Heading: 003/183

**SEQUENCING:**

- Target sequencing is determined by UTTR personnel based upon EOD clearance schedule and airspace scheduling.
- Spray ops aircraft must stay south of Base Leg Knoll during turns on north run on Target 21. Coordination with range control is essential to assure that this portion of the range is released for air operations.

**Spraying Priorities: Target 21, Modified Target 23/24**

**Once the above areas are complete: northeast side of Target 22**

**13. CONTACTS:** The commercial area code for listings below is 801-777-XXXX unless otherwise indicated. DSN is 777-XXXX, 775-XXXX, and 586-XXXX.

**AERIAL SPRAY OPERATIONAL SCHEDULE**  
**JB CHARLESTON, SC/ PARRIS ISLAND, SC**  
**6-9 September 2022**  
**MSN# QZNRK3401249**

**Purpose/Objectives/Benefits:** One C-130 will deploy to JB Charleston, SC from 6-9 August 2022. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito and biting midge populations affecting the health and welfare of the personnel of JB Charleston and MCRD Parris Island, SC. Operations for this mission will be conducted from JB Charleston utilizing Night Vision Goggles (NVGs).

**1. 910 AW PARTICIPANTS:**

Spray Operators:	PPE, Laptop and/or Spray datasheet, O <sub>2</sub> hose extensions
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand-held radios; Wingman system test cards

**3. SCHEDULE: (All Local Times)**

**26 Jul (Tuesday)**

1200 – Depart KYNG

1315 – Land KLF I PPR: 201226JW

**DO NOT LEAVE UNTIL BRIEFED & CLEARED OFF BY THE MISSION COMMANDER!**

**27-28 Jul (Wednesday-Thursday) Sunset 2018, Civil Twilight 2047**

1500 – Installation Brief (Telecon) with (b) (6) ((b) (6) mobile); ((b) (6) work)

1700 – Wx Call/Chemical Load

1730 – MASS Calibration

2000 – Depart KLF I – conduct aerial daytime review of the area begin spraying near twilight

2300 – Land KLF I

**29 Jul (Friday)**

1200 – Depart KLF I

1315 – Land KYNG

**4. SPRAY CONFIGURATION AND PARAMETERS:**

Locations: Craney Island and 3mi buffer area of Portsmouth (8,935 acres)

Acres: 8935

Product: Trumpet® (Naled) (EPA Reg. No. 5481-481)

Signal word: Danger

Gallons loaded: 60 gallons

Flow Rate: 6.30 GPM

Application Rate: 0.86 oz/acre

Flush: Highly Aromatic Naptha (HAN)

Altitude: 300'

Airspeed: 200 KNTS

Swath Width: 2,000 feet

Nozzle/Orientation: ULV 8003 Tee Jet Flat Fan / Straight Down

Number of Nozzles: 30-31

**5. TRANSPORTATION:**

**910 AW AERIAL SPRAY UNIT  
CERTIFIED PEST MANAGEMENT PROFESSIONAL'S  
POST-MISSION REPORT  
MOUNTAIN HOME AFB, SAYLOR CREEK RANGE, ID  
4-15 October 2021**

**1. MISSION BASICS:**

- a. Installation Sprayed: Mountain Home AFB, Saylor Creek Range, ID
- b. Mission Duration: 4-15 October 2021
- c. Purpose of Application: Herbicide application to control cheat grass to suppress range fires and promote native flora
- d. Application Dates and Times (Local): See attachment 1
- e. Acres Treated: 2420
- f. Flying Data:
  - (1) Spray Sorties/Hours: 11 sorties; 9.4 hours
  - (2) Ferry Sorties/Hours:
    - (a) Spray aircraft 92023: 2 ferries; 10.1 hrs
    - (b) Support aircraft: 6 ferries; 27.2 hrs
- g. Project Coordinator (Name/Rank, Title, Phone #): Hodge Echeverria, Natural Resource , Manager, 728-1784
- h. Date Spray Map Last Approved: 4 October 2021
- i. Installation In-Briefing: (When/ Briefer/s): 4 October 2021: Lt Col (b) (6) , Lt Col (b) (6) , Lt Col (b) (6) . Lt Col (b) (6) , Lt Col (b) (6) , Lt Col (b) (6) . Mr. (b) (6) , Mt Home AFB Fire department
- j. Mission Identifier: QZNTK7571277

**3. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6) (4-10); Lt Col (b) (6) (11-15)
- b. **Aircrew:**
  - (1) Pilots: Lt Col (b) (6) , Lt Col (b) (6) (4-10); Lt Col (b) (6) , Capt (b) (6) (11-15)
  - (2) Navigator: Lt Col (b) (6) (4-10); Maj (b) (6) (11-15)
  - (3) Flight Engineers: CMSgt (b) (6) (4-10); SMSgt (b) (6) (11-15)
  - (4) Spray Operators: MSgt (b) (6) , TSgt (b) (6) (4-10); MSgt (b) (6) , MSgt (b) (6) , SSgt (b) (6) (remainder)
- c. **Maintenance:**
  - (1) Spray Maintenance: MSgt (b) (6) (lead), MSgt (b) (6) , TSgt (b) (6) , SrA (b) (6)
  - (2) Crew Chiefs: SMSgt (b) (6) (4-10), TSgt (b) (6) , SSgt (b) (6)
  - (3) COMM: Maj (b) (6) (4-10), MSgt (b) (6) , TSgt (b) (6) , TSgt (b) (6) , SSgt (b) (6) , SrA (b) (6)
- d. **Entomologists:** Capt (b) (6) (4-10), Lt Col (b) (6) (4-10), Lt Col (b) (6) (11-15)

**4. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Panoramic® 2SL
- b. EPA Registration Number: Panoramic® 2SL: 81927-19
- c. Gallons Pesticide Loaded: See attachment 1
- d. Gallons Pesticide Applied: See attachment 1
- e. Gallons and Name Diluent Used: See attachment 1 (total spray – gallons of pesticide = gallons water)
- f. Other Additives Used: None

g. Application Rate: 7.0 gal/acre water; (4.0 oz/acre AI)

**APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 92023
- b. Spray System (Modules Used) and System ID #: SP-3G MASS 3
- c. Nozzle Type/Orientation: Raindrop/Straight back
- d. Number of Nozzles: 18 Total; 9 left, 9 right
- e. Pressure: 40 p.s.i.
- f. Flow Rate: 329 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: Weather dependent. No off-set when flown into the wind
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Acceptable for all spray treatment regimens encountered.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

**a. Deposition Pattern:**

- (1) Techniques Used: Visual observation from PMP on range
- (2) Results: See remarks

**b. Effectiveness**

- (1) Techniques Used: Vegetation measurement, visual observations
- (2) Results: Will be determined in the spring of 2022

**8. REMARKS:**

This mission continues the mitigation of the invasive weed, cheat grass, in order to suppress range fires and promote the reestablishment of healthy native flora, particularly native bunch grasses and sagebrush.

The majority of the sorties were flown with a headwind or tailwind with less than a 45% crosswind component and all applications were observed from the target by a certified applicator, verifying proper deposition. A few minor issues were encountered with spray system (5 October), but they were rapidly ameliorated by Spray MXS. Precipitation events and generally poor weather cancelled several sorties during late in first week and early second week of application. However, approximately 85% of objective (Attachment 2) was completed. User stated that it is possible to complete remainder with ground equipment.

Of particular note is that 2020 application was highly successful with respect to cheatgrass control. Perhaps an unintended consequence is the proliferation of Russian thistle (Tumbleweeds) in same area. There is no quantitative data to support causality at this time, but similar project at UTTR reported the same. This phenomenon may be a product of pervasive drought conditions at both locales, or by release of Russian thistle (and seedbank) due to cheatgrass control. At this point it is too early to tell. Would possibly recommend alternate pesticide chemistry (i.e., different chemical or a tank mix) to simultaneously control cheatgrass and Russian thistle. Mr. (b) (6) (UTTR Natural resources) has been investigating this concept, and will report earliest in anticipation of 2022 herbicide application activities.

MUO Airfield operations, fire department, POL, RAPCON, and TA support was outstanding during the entire mission. This continues to be an excellent training/real world mission and we would like to thank the personnel at Mountain Home AFB for the support received.

Lt Col (b) (6), USAFR  
Pest Management Professional  
910 AW/757

- a. Aircraft Tail Number: 92-3022
- b. Spray System (Modules Used) and System ID #: SP-3G MASS 3
- c. Nozzle Type/Orientation: Raindrop/Straight back
- d. Number of Nozzles: 22 Total; 11 left, 11 right
- e. Pressure: 32 p.s.i.
- f. Flow Rate: 328 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Acceptable for all spray treatment regimens encountered.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

**a. Deposition Pattern:**

- (1) Techniques Used: Visual observation from PMP on range and in the aircraft
- (2) Results: See remarks

**b. Effectiveness**

- (1) Techniques Used: Vegetation measurement, visual observations
- (2) Results: Will be determined in the spring of 2023

**8. REMARKS:**

This mission was the first aerial spray application of Juniper Butte Range. The purpose was to control cheat grass, an invasive weed, for range fire suppression and to support habitat restoration initiatives. Previous applications in the nearby area utilized a lower application rate of 4.0 ounces per acre. It was decided to slightly increase the application rate for this mission with the expectation that increased control will be obtained with minimal additional cost.

Sorties were flown with a headwind or tailwind with less than a 45% crosswind component and all applications were observed either from the target or from the aircraft by a certified applicator, verifying proper deposition. Over 75% of the spray block was successfully treated (Attachment 2). However, due to a Time Compliance Technical Order (TCTO) regarding a potential issue with the aircraft's props, the

aircraft was unable to fly the final sorties and the southern end of the spray block was left untreated. Excess mixed spray material remaining at TCTO safety shutdown was disposed of by Natural Resource personnel and Mt Home AFB Hazmat disposal under contractual obligations.

MUO Airfield operations, fire department, POL, RAPCON, and TA support was outstanding during the entire mission. This was an excellent training/real world mission and we would like to thank the personnel at Mountain Home AFB for the support received.

Lt Col (b) (6), USAF  
Certified Pest Management Professional

# AERIAL SPRAY OPERATIONAL SCHEDULE

## SAYLOR CREEK RANGE / MOUNTAIN HOME AFB, ID

### 4-15 OCTOBER 2021

#### QZNRK7571277

**Purpose/Objectives/Benefits:** One C-130 will deploy to Mountain Home, ID from 4-15 September 2021. Aerial Spray flight proficiency training will be accomplished on Saylor Creek Bombing Range, ID while providing a beneficial herbicide treatment to prevent fire hazards, inhibit annual re-growth of cheat grass, and allow native vegetation to establish and be competitive.

0700 Show KMUO

0900 Spray aircraft depart KMUO

0900 Support aircraft depart KMUO

1600 Spray aircraft land KYNG

1600 Support aircraft land KYNG

### **4. AIRCRAFT & SPRAY CONFIGURATION:**

System:	SP-3G MASS: 3
Nozzle /Orientation:	Raindrop/Straight Back
Number of nozzles:	Fuselage – 18 nozzles

## **5. SPRAY MIXING AND LOADING:**

Entomologist will determine quantity to load and work with the local pest managers to determine the application rate. System will be calibrated after the chemical is loaded. Please see entomologist for final flow spray parameters as these numbers are subject to change depending on user requirements

### **a. In each gallon of mix:**

0.57 ounces of Panoramic® 2SL herbicide (0.44 gal in 100 gal of water)

0.32 ounces of Pro Tank (2 pints in 100 gal)

0.64 ounces of Clasp® (0.5 gal in 100 gal)

126.5 ounces of water

### **b. First Load (4 Tanks of 450 gal each + sump of 75 gal)**

Fill to 450 gal water/tank using the pump on the water tanker truck. This is done by putting the filler hose into the rear tank with all tanks open to the common sump.

Total water in tanks = 1,800 gal.

75 gal/water in sump

Total water added = 1,875 gal

Load 8.3 gal of Panoramic®; add 4.7 gal of Pro Tank, and 9 gal of Clasp® while agitating approximately 5-7 min

Total quantity mix 1888 gal

### **c. Subsequent Loads**

Fill with water for a total of 1800 gal; use “per 100 gal of water” measurements given above.

When the MASS is returned empty load 1800 gal of water and add: 8.1 gal of Panoramic®; 4.5 gal of Pro Tank, and 9 gal of Clasp®.

## **6. SPRAY PARAMETERS:**

Location:	Northern Block
Chemical:	Panoramic® 2SL (active ingredient: 23% imazapic ammonium)
Area to be treated:	3,004 acres
Swath Width:	100 feet
Flow Rate:	326 gal/min (we are treating at 46.5 acres/minute)
Application Rate:	7 gal/acre (4 oz of Panoramic® per acre)
Altitude:	100' AGL
Ground Speed:	200 Knots
Flush:	Water

## **7. RADIO FREQUENCIES: \* Confirm these Freqs at the inbrief.**

**Mt Home AFB:** ACC COMD POST 311.0/321.0

**Saylor Creek Range:**(Cowboy Control): 134.1/236.05

If Cowboy Control is not up, contact MUO APP on 124.8/259.1

**Air to Ground:** Confirm Freq with Entomologist.

**8. TRANSPORTATION: 366 LRS U-Drives**

# AERIAL SPRAY OPERATIONAL SCHEDULE

## SAYLOR CREEK RANGE / MOUNTAIN HOME AFB, ID

### 19-30 Sept 2022

### QZNRK3431262

**Purpose/Objectives/Benefits:** One C-130 will deploy to Mountain Home, ID from 19-30 September 2022. Aerial Spray flight proficiency training will be accomplished on Saylor Creek Bombing Range, ID while providing a beneficial herbicide treatment to prevent fire hazards, inhibit annual re-growth of cheat grass, and allow native vegetation to establish and be competitive.

#### 1. 910 AW PARTICIPANTS: 1<sup>st</sup> week 19-25, 2<sup>nd</sup> week 24-30

<b>Msn Commander:</b>	<b>Lt Col (b) (6)</b>	<b>1<sup>st</sup> week</b>	<b>(b) (6)</b>
	<b>Maj (b) (6)</b>	<b>2<sup>nd</sup> week</b>	<b>(b) (6)</b>

### **4. AIRCRAFT & SPRAY CONFIGURATION:**

System:	SP-3G MASS: 3
Nozzle /Orientation:	Raindrop/Straight Back
Number of nozzles:	Fuselage – 18-19 nozzles

## **5. SPRAY MIXING AND LOADING:**

Entomologist will determine quantity to load and work with the local pest managers to determine the application rate. Please see entomologist for final flow spray parameters as these numbers are subject to change depending on user requirements

### **a. In each gallon of mix:**

0.86 ounces of Panoramic® 2SL herbicide (0.67 gal in 100 gal of water)

0.64 ounces of Clasp® (0.5 gal in 100 gal)

126.5 ounces of water

### **b. First Load (4 Tanks of 450 gal each + sump of 75 gal)**

Fill to 450 gal water/tank using the pump on the water tanker truck. This is done by putting the filler hose into the rear tank with all tanks open to the common sump.

Total water in tanks = 1,800 gal.

75 gal/water in sump

Total water added = 1,875 gal

Load 12.5 gal of Panoramic®; and 9 gal of Clasp® while agitating approximately 5-7 min

Total quantity mix 1888 gal

### **c. Subsequent Loads**

Fill with water for a total of 1800 gal; use “per 100 gal of water” measurements given above if MASS returned with partial load. When the MASS is returned empty load 1800 gal of water and add: 12.5 gal of Panoramic®; and 9 gal of Clasp®.

**d.** Pro-tank cleaning agent can be added every 4<sup>th</sup> load, or as prescribed by Spray MXS personnel. Pro-tank cleaning agent should be added at a rate of 4.5 gallons per approximate 1800 gallon load.

## **6. SPRAY PARAMETERS:**

Location:	Juniper Butte (adjunct range of Mt Home AFB)
Chemical:	Panoramic® 2SL (active ingredient: 23% imazapic ammonium); 6.0 oz/acre A.I.
Area to be treated:	3,005 acres
Swath Width:	100 feet
Flow Rate:	326 gal/min (we are treating at 46.5 acres/minute)
Application Rate:	7 gal/acre (6 oz of Panoramic® per acre with adjuvants)
Altitude:	100' AGL
Ground Speed:	200 Knots
Flush:	Water

## **7. RADIO FREQUENCIES: \* Confirm these Freqs at the inbrief.**

**Mt Home AFB:** ACC COMD POST 311.0/321.0

**Saylor Creek Range:**(Cowboy Control): 134.1/236.05

If Cowboy Control is not up, contact MUO APP on 124.8/259.1

**Air to Ground:** Confirm Freq with Entomologist. 392.2 MHz expected. 123.45 MHz alternate expected.

**8. TRANSPORTATION: 366 LRS U-Drives (and additional rentals)**

**DEPARTMENT OF THE AIR FORCE**  
**AIR FORCE RESERVE COMMAND**

28 February 2023

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757AS/DOS  
3976 King Graves Rd  
Vienna, Ohio 44473-0910

SUBJECT: Concept of Operations for Aerial Spray at the Utah Test and Training Range

1. Aerial spray flight proficiency training will be accomplished on Targets 21, 23, 24, and Nord LZ at the Utah Test and Training Range (UTTR). Spray sorties will apply Krovar and Plateau to control vegetation (i.e., *Halogeton*) growth aiding bombing mission test evaluations and unexploded ordnance recovery. Two aerial spray configured C-130s will be available from 6-17 March 2023 for the requested spray mission.

2. Concept of Operations:

ALL TIMES LOCAL

a. 6 March (Monday)

1000 Vader 21 departs KYNG (MASS, SP-3)  
1015 Vader 22 departs KYNG (EMASS)  
1330 Vader 21 lands KHIF  
1345 Vader 22 lands KHIF

b. 7-10 March (Tuesday - Friday)

0800 Spray 21 departs KHIF  
0900 Spray 22 departs KHIF  
1030 Spray 21 lands KHIF  
1200 Spray 22 lands KHIF

c. 12-16 March (Monday – Thursday)

0800 Spray 21 departs KHIF  
0900 Spray 22 departs KHIF  
1030 Spray 21 lands KHIF  
1200 Spray 22 lands KHIF

d. 18 March (Friday)

0900 Vader 21 departs KHIF (MASS, SP-3)  
0915 Vader 22 departs KHIF (EMASS)  
1600 Vader 21 lands KYNG  
1615 Vader 22 lands KYNG

3. Spray parameters:

Herbicide: Krovar 1DF® / Plateau

Flow rate: 366 Gallons/Minute / 335 Gallons/Minute

Acreage: 900 Acres / 800 Acres (Targets 21, 23+24)

Ground speed: 200 knots (337.55 ft/sec)

Spray altitude: 100 feet AGL

Swath width: 35 Feet / 80 Feet

4. Lt Col (b) (6) (6-12 Mar) and Lt Col (b) (6) (13-17 Mar) will serve as the mission commanders.

5. Aircraft Commanders:

Lt Col (b) (6)

Lt Col (b) (6)

Lt Col (b) (6)

Lt Col (b) (6)

Lt Col (b) (6)

Maj (b) (6)

Maj (b) (6)

6. Support required at both Hill AFB and the UTTR has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

# SPRAY OPERATIONAL SCHEDULE

## UTAH TEST AND TRAINING RANGE MISSION

### 6-17 March 2023

**PURPOSE/BENEFIT/OBJECTIVE:** Aerial spray herbicide mission controlling halogeton and cheatgrass on Targets 21, 23, and 24 on the Utah Test and Training Range (UTTR) to improve bombing mission test evaluations and unexploded ordnance recovery. New EMASS will also be utilized and function tested.

#### 1. 910 AW PARTICIPANTS:

<b>Mission Commander:</b>	Lt Col (b) (6)	(week 1)	(b) (6)	(cell phone)
	Lt Col (b) (6)	(week 2)	(b) (6)	(cell phone)

#### AIRCREW

<b>Pilots:</b>	Lt Col (b) (6), Lt Col (b) (6), Lt Col (b) (6), Lt Col (b) (6), Lt Col (b) (6), Lt Col (b) (6), Maj (b) (6), Maj (b) (6), Capt (b) (6)
<b>Navigators:</b>	<b>First Week Only:</b> Capt (b) (6), Capt (b) (6) Lt Col (b) (6), Lt Col (b) (6), Maj (b) (6), Capt Eric Wolf <b>Second Week Only:</b> Lt Col (b) (6)
<b>Flight Engineers:</b>	CMSgt (b) (6), SMSgt (b) (6), MSgt (b) (6), TSgt (b) (6) (ADVON), TSgt (b) (6), SSgt (b) (6), SSgt (b) (6)
<b>Spray Operators:</b>	CMSgt (b) (6), SMSgt (b) (6), SMSgt (b) (6), TSgt (b) (6), TSgt (b) (6), MSgt (b) (6), MSgt (b) (6), MSgt (b) (6), SSgt (b) (6), SSgt (b) (6), TSgt (b) (6), SrA (b) (6)

#### MISSION SUPPORT

<b>Entomologists:</b>	<b>Both Weeks:</b> Col (b) (6), Lt Col (b) (6) <b>First Week:</b> Capt (b) (6)
<b>SARMS/ARMS:</b>	TSgt (b) (6), SSgt (b) (6)
<b>Command Post:</b>	SSgt (b) (6)
<b>AFE:</b>	TSgt (b) (6), SSgt (b) (6)
<b>1<sup>st</sup> Sergeants:</b>	SMSgt (b) (6), MSgt (b) (6)
<b>COMM:</b>	MSgt (b) (6), TSgt (b) (6), TSgt (b) (6), SSgt (b) (6)

## **MAINTENANCE**

**Specialists:** SMSgt (b) (6), SMSgt (b) (6), MSgt (b) (6),  
MSgt (b) (6), MSgt (b) (6), MSgt (b) (6),  
, TSgt (b) (6), TSgt (b) (6), TSgt (b) (6),  
, SSgt (b) (6), MSgt (b) (6), SSgt  
(b) (6), SrA (b) (6), SrA (b) (6), SrA  
(b) (6), MSgt (b) (6), SrA (b) (6), TSgt  
(b) (6), TSgt (b) (6)

**Spray MXS:** SMSgt (b) (6) (ADVON), TSgt (b) (6)  
(ADVON), TSgt (b) (6) (ADVON), SSgt (b) (6)  
(ADVON), MSgt (b) (6), TSgt (b) (6), SSgt  
(b) (6), SrA (b) (6)

## **2. REQUIRED ITEMS:**

Msn Commander: MC Laptop Computer  
Entomologist: Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop  
Computer  
Navigator: Maps/Map Bag, Validation Map, Operational Wingman cards  
Spray Operators: PPE, Calibration Tables/Laptop and or Spray datasheet,  
O<sub>2</sub> hose extensions  
Spray Maintenance: Deployment Kit, Support Equipment  
Avionics: 2 Multi-band hand-held radios; Wingman system test cards

- 3. IN-BRIEFING at Hill:** 1430L or ASAP at forestry ramp (for entomologists, MXS, and MC):  
Note: Mr. (b) (6) will be primary POC for Hill/UTTR, with Mr.  
(b) (6) and Mr. (b) (6) for spray activities. Most aspects of inbrief  
have been pre-coordinated.

## **4. SCHEDULE: (All Local Time)**

**PLANNED SEQUENCE OF EVENTS:** Hill AFB Tower Control and Runway Hours  
Tower Opens at 0800L (Engine start typical at 0745 make engine start call in the blind)

### **NOTES:**

1. In the event of weather or maintenance delays, the missions will be adjusted as required.  
ALL TIMES SUBJECT TO ADJUSTMENT BY MISSION COMMANDER
2. DUTY DAY FOR CIVILIANS WILL BE AS REQUIRED WITHIN CREW REST  
CONSTRAINTS.
3. ALL MX & OPS PERSONNEL WILL REMAIN ON DUTY UNTIL AIRCRAFT IS  
PRE-FLIGHT COMPLETE AND RELEASED BY THE MISSION COMMANDER.

**6 March (Monday)**

**0700-0730 Bag Drop for Chalk 3 Pax at Aerial Port, Bldg 413**

Chalk 1 & 2 Aircrew and MEPs will floor load their personal bags

**0800 SHOW for ALL aircrew and Pax** - report to Bldg 407 Aircrew Briefing Rm for safety and arrival brief. MC will release you.

**0900 ALL Chalk 3 Pax report back to Aircrew Briefing room for accountability/briefings** - TC Lt Col Stroney

**0930 Chalk 3 PAX bus to aircraft**

1000 Depart KYNG Spray (EMASS) **Vader 21 MI: QZNRK3431065 PPR: 23-BD005**

1015 Depart KYNG Spray (SP3) **Vader 22 MI: QZNRK3432065 PPR: 23-BD005**

1030 Depart KYNG Support (CP5) **Dobbins MI:**

1400 Land KHIF first aircraft

**7-10 March (Tuesday-Friday) Range Time 0800-1200L**

**Aircraft will generally plan on 2 sorties per day.**

0600 Show KHIF

0630 Aircraft Released by MX, weather call, and begin mixing product

0700 Chemical Load first Aircraft

0745 Engine Start

0800 First Takeoff

**\*\*Weekend applications are currently unavailable due to range closure.**

**13-16 March (Monday-Thursday) Range time 0800-1200L**

**Each aircraft will plan on 2 sorties per day.**

0600 Show KHIF

0630 Aircraft Released by MX, weather call, and begin mixing product

0700 Chemical Load first Aircraft

0745 Engine Start

0800 First Takeoff

**17 March (Friday) All personnel**

0600 Everyone checked out of hotel

0630 Rental vehicles depart for Hill forestry ramp with **ALL MEMBERS**

0710 Return Rental vehicles to Enterprise

0730 Bus from Enterprise to Hill

0900 Depart KHIF

1600 Land KYNG

**\*\*All times are approximated. Actual times and mission details will be by the Mission Commander.**

## **5. SPRAY CONFIGURATION: SP3G MASS (Legacy); 2.0 EMASS (new)**

### **MASS #2 (Legacy System)**

MASS Modules SP3 configuration

HV Fuselage booms (R-20 nozzles) oriented straight back (Plateau)

UHV Fuselage booms (Bell nozzles) oriented straight back (Krovar)

### **EMASS (2.0)**

UHV Fuselage booms (R-240 nozzles) oriented straight back (Plateau)

UHV Fuselage booms (Bell nozzles) oriented straight back (Krovar)

## **6. SPRAY LOADING:**

**Sequence for Loading full SP3 tank (1800 Gallons) mix for PLATEAU assuming external mixing tanks (trailers) will be utilized with expectation all mixing will be external**

Fill water to 750 gallon mark.

Add 18.75 (19) gallons Plateau

Add 0.5 gallons Foam Fighter

Add 5 gallons Clasp incrementally while mixing and adding remaining water (to 1000 gallons) in external mix tanks.

For Partial tank fill of Plateau, **please follow rough mixing ratios:** Note that this should be unnecessary for external tank mixing scenario.

100 gallon increment of finish spray mix is:

1.0 Gallon Plateau

0.5 Gallons Clasp

4 oz Foam Fighter

Sequence for Loading EMASS tanks (3200 Gallons Max; 1150 gallons each tank, UHV mode)

**Sequence for Loading 1,000 Gallon Mixing Tank: (KROVAR); note: this will be accomplished in external mixing tanks prior to aircraft upload.**

Fill with water up to 750 Gallon Mark, and then add:

450 Pounds of Krovar I DF<sup>®</sup>

4.0 Gallons of Clasp<sup>®</sup>

15 oz of FTF Defomer<sup>®</sup>

200 Ounces (1.5 gallons) Hi-Light<sup>®</sup> Dye

Add Water to 1,000 Gallon Mark and Agitate for 10 Minutes

Add from mixing tanks to spray tanks as appropriate for sortie

## 7. SPRAY PARAMETERS:

**Location:** UTTR targets

Area to be treated: Approx 1,700 Acres (Targets 21, 23+24); Priority is target 24.

Expect majority of acreage to be treated with Plateau, with approximately 3600 gallons finish mix to use Krovar (if available). Spray MXS can accommodate both types of materials with various boom configurations for legacy spray system or EMASS.

User will determine location of application; expectation is Krovar application will be made to eliminate current inventory of product, and perhaps provide a benchmark for application effectiveness.

### **a. Plateau application: (legacy MASS)**

Swath width: 80 feet  
Flow rate: 335 Gallons/Minute  
Altitude: 100 Feet AGL  
Ground Speed: 200 Knots (337.55 ft/sec)  
Flush: 100 gallons water and subsequent air purge  
Nozzles: 20-22 R20 nozzles orientated straight back

### **b. Krovar application: (legacy MASS)**

Swath Width: 35 Feet  
Flow Rate: 366 Gallons/Minute  
Altitude: 100 Feet AGL  
Ground Speed: 200 Knots (337.55 ft/sec)  
Flush: 2x full system rinse if possible; Air purge after each sortie  
Nozzles: HV Bell nozzles, orientation straight back  
Formulas: Flow Rate = Gal/Time in Minutes  
Acreage Sprayed = Total Sec x 338 x Swath Width / 43,560

### **c. Plateau application: (EMASS)**

Swath width: 80 feet  
Flow rate: 335 Gallons/Minute  
Altitude: 100 Feet AGL  
Ground Speed: 200 Knots (337.55 ft/sec)  
Flush: 100 gallons water and subsequent air purge  
Nozzles: 26 R240 nozzles orientated straight back

### **d. Krovar application: (EMASS)**

Swath Width: 35 Feet  
Flow Rate: 366 Gallons/Minute  
Altitude: 100 Feet AGL  
Ground Speed: 200 Knots (337.55 ft/sec)  
Flush: 2x full system rinse if possible; Air purge after each sortie  
Nozzles: HV Bell nozzles, orientation straight back  
Formulas: Flow Rate = Gal/Time in Minutes  
Acreage Sprayed = Total Sec x 338 x Swath Width / 43,560

8. **PARKING PLAN:** Forestry Ramp and Building 777

9. **AIR TO GROUND RADIO FREQUENCIES:**

**Clover North Range:** VHF 118.45 UHF 285.65  
**Clover South Range:** VHF 134.1 UHF 363.5  
**Eagle Range:** UHF 309.2  
**Diddle Knoll:** Provided after In-Brief  
**Spray Inter plane:** Provided after In-Brief  
**Command Post:** UHF 381.3 Call in as CONVOY

**12. GENERAL TARGET INFORMATION:**

**Target 21:**

Dimensions: 4,980' X 7,770'

Acreage: 888

Aircraft Loads: Variable; material and swath width dependent

Sorties: Variable; material and swath width dependent

Passes: Variable; material and swath width dependent

Spray-On Time/Pass: 22 Seconds

Spray Heading: 005/185

**Target 23 / 24:**

Dimensions: 16,675' X 1,657

Acreage: 635

Aircraft Loads: Variable; swath width dependent

Sorties: Variable; swath width dependent

Passes: Variable; swath width dependent

Spray-On Time/Pass: 46 Seconds

Spray Heading: 003/183

**SEQUENCING:**

- Target sequencing is determined by UTTR personnel based upon EOD clearance schedule and airspace scheduling.
- Spray Ops aircraft must stay south of Base Leg Knoll during turns on north run on Target 21. Coordination with range control is essential to assure that this portion of the range is released for air operations.
- Spraying Priorities: Target 21, Modified Target 23/24  
Once the above areas are complete: northeast side of Target 22

# **AERIAL SPRAY OPERATIONAL SCHEDULE**

## **MCDR PARRIS ISLAND, SC**

### **11-14 April 2023**

### **QZNRK3401101**

**Purpose/Objectives/Benefits:** Aerial spray deployment of one C-130 during 11-14 April 2023 to MCAS Beaufort, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards to recruits at MCRD Parris Island. NVG sorties will be flown at 300' AGL.

#### **1. 910 AW PARTICIPANTS:**

Msn Commander:	Lt Col (b) (6)	(b) (6)
Entomologist:	Lt Col (b) (6)	(b) (6)
Pilots:	Lt Col (b) (6)	(A/C), Capt (b) (6)
Navigators:	Capt (b) (6)	, Capt (b) (6)
Flight Engineer:	SMSgt (b) (6)	, SSgt (b) (6)
Spray Operators:	CMSgt (b) (6)	, SMSgt (b) (6), SMSgt (b) (6)
	TSgt (b) (6)	
Spray Maintenance:	TSgt (b) (6)	(Lead) (b) (6)
	MSgt (b) (6)	, TSgt (b) (6), SSgt (b) (6),
	SSgt (b) (6)	, SrA (b) (6)
Crew Chiefs:	MSgt (b) (6)	, TSgt (b) (6)
Comm/Nav:	TSgt (b) (6)	

#### **2. REQUIRED ITEMS:**

Msn Commander:	MC Laptop Computer
Entomologist:	Kestrel Weather Monitor, Compass, Pest Safety Binder, Laptop Computer
Navigator:	Maps/Map Bag, Validation Map, Operational Wingman Cards
Spray Operators:	PPE, laptop/Spray datasheet, O <sub>2</sub> hose extensions, NVG's
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand-held radios; Wingman system test cards

### **4. AIRCRAFT & SPRAY CONFIGURATION:**

**Aircraft:** AF92-3022

**System:** EMASS

**Nozzle/Orientation:** 10 rotary atomizers, straight back

### **5. SPRAY LOADING:**

Entomologist will determine quantity to load and work with the local pest managers to determine the application rate. System will be calibrated after the chemical is loaded. Please see entomologist for final flow spray parameters as these numbers are subject to change depending on user requirements.

**How Much Pesticide:** approx. 45 gallons for Parris Island

**Where:** Aircraft parking location

**When:** 1500 after wx call. \*\*Calibration will be performed prior to spraying

**Furnished by Installation:**

Pesticide and support vehicle  
Hazardous Waste Disposal

- **TO LEAVE/ENTER FLIGHT LINE CALL BASE OPERATIONS (843) 228-7301 OR 7302**

**6. SPRAY PARAMETERS:**

Location: MCRD Parris Island, SC  
Chemical: Trumpet – insecticide (Naled)  
Area to be treated: Approx 6,000 acres Parris Island  
Swath Width: 1,000 feet Parris Island  
Flow Rate: 3.2 GPM  
Application Rate: 0.95-1.0 oz/acre or as determined by entomologist  
Altitude: 300' AGL NVG operations  
Ground Speed: 200 Knots  
Flush: H.A.N. (Highly Aromatic Naphtha), flush and air purge as applicable  
Formulas: Flow Rate = Gal/Time in Minutes  
Acreage Sprayed = Total Sec x 338 x Swath Width / 43560

**7. AIR TO GROUND RADIO FREQUENCIES:**

Beaufort Tower: 119.05/340.2 MCAS TWR  
Beaufort Approach: 123.7  
Hilton Head Airport: 118.975 Tower, 123.0 CTAF (tower open until 0100 hrs Z)  
Beaufort Co Airport: 122.7 UNI  
Spray Ground: 392.2 UHF; 123.45 VHF

**8. TRANSPORTATION:**

**Parris Island:** Will provide (2) vehicles for transportation to and from quarters and for messing. Vehicles will be at Base Operations at MCAS Beaufort.

**1x U Drive (Van)** – Enlisted Aircrew

4 April 2023

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at MCRD Parris Island, SC

1. Aerial spray deployment of one C-130 from 11-14 April 2023 to MCAS Beaufort, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards to recruits at MCRD Parris Island. NVG aerial spray sorties are conducted at 300' AGL.

2. Concept of Operations (All times are local):

- a. 11 April (Tuesday)  
1200 Depart KYNG  
1400 Land KNBC
- b. 12 April (Wednesday)  
1400 Installation brief at MCRD Parris Island  
1630 Weather call/Chemical load  
1730 Calibration of EMASS  
1930 Depart KNBC  
2130 Land KNBC
- c. 13 April (Thursday) WX/MX Backup  
1630 Weather call/Chemical load  
1730 Calibration of EMASS  
1930 Depart KNBC  
2130 Land KNBC
- d. 14 April (Friday)  
1000 Depart KNBC  
1200 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 6,000 acres on Parris Island.
- b. Altitude: 300' AGL NVG operations
- c. Swath Width: 1,000ft
- d. Groundspeed: 200 KIAS
- e. Chemical: Trumpet – insecticide (Naled)
- f. Application Rate: 0.95-1.0 oz/acre

4. Lt Col (b) (6) will serve as the Mission Commander with Lt Col (b) (6) serving as the Aircraft Commander. Support at MCRD Parris Island and MCAS Beaufort has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

**SPRAY OPERATIONAL SCHEDULE**  
**UTAH TEST AND TRAINING RANGE (UTTR)**  
**DUGWAY PROVING GROUNDS (DPG)**  
**11-21 October 2022**  
**Mission # QZNRK7571291**

**PURPOSE/BENEFIT/OBJECTIVE:** Aerial spray herbicide mission on the Utah Test and Training Range (UTTR) and Dugway Proving Ground (DPG) to reduce the risk of range fires by controlling cheat grass (*Bromus tectorum*) and other invasive weed species while promoting reestablishment and success of native flora.

**1. 910 AW PARTICIPANTS:**

**Mission Commander:** Lt Col (b) (6) : (b) (6)

**AIRCREW:**

**Pilots:** Lt Col (b) (6) , Capt (b) (6)

**Navigators:** Maj (b) (6)

**Flight Engineer:** MSgt (b) (6)

**Spray Operators:** SMSgt (b) (6) , TSgt (b) (6) , SSgt (b) (6)

**CERTIFIED APPLICATORS:**

**Entomologist:** Lt Col (b) (6) ; (b) (6)

**MAINTENANCE:**

**Spray MX:** TSgt (b) (6) (lead) (b) (6)

SMSgt (b) (6) , MSgt (b) (6) , TSgt (b) (6) ,

##### **21 October (Friday) Hill Field opens at 0800**

0700 Checked out of billeting

0745 Return vehicles

0900 Depart KHIF

1530 Land KYNG

**\*\*All times are approximated. Actual times and mission details will be updated as appropriate by the Mission Commander.**

#### 5. **SPRAY CONFIGURATION:**

Aircraft: 89-9106

System: SP-3G MASS: 3

Nozzle /Orientation: Raindrop/Straight Back

Number of nozzles: Fuselage – 21 nozzles

#### 6. **SPRAY LOADING:**

##### **a. In each gallon of mix:**

0.93 ounces of Plateau herbicide (0.73 gallons in 100 gallons of water)

0.77 ounces of Methylated Seed Oil (0.6 gal in 100 gallons)

125.5 ounces of water

##### **b. First Load (4 Tanks of 450 gallons each + sump of 75 gallons)**

Fill to 450 gal water/tank. This is done by putting the filler hose into the rear tank with all tanks open to the common sump.

Total water in tanks and sump = 1,850 gal.

Total water added = 1,850 gallons

Load 13.5 gallons of Plateau; 11 Gal Clasp; 11 Gal MSO, agitating approximately 5-7 min

Approximate total quantity mix 1888 gallons

##### **c. Subsequent Loads**

Fill with water for a rough total of 1850 gallons; use “per 100 gallons of water” measurements given above when adding less than 1800 gallons (i.e., residual product in tank when loading). When the MASS is returned empty, load 1800 gallons of water and add: 13.5 gallons Plateau, and 11 gallons of MSO.

**7. SPRAY PARAMETERS:**

Location: UTTR – HAT range plus multiple lifts for Dugway firebreak  
Herbicide: Plateau Herbicide (active ingredient: 23.6% (Ammonium salt of imazapic))  
Area to be treated: TBD UTTR; TBD Dugway  
Swath Width: 100 feet  
Flow Rate: 300 gal/min (treating at 46.5 acres/minute)  
Application Rate: 6.45 gal/acre (6 oz of Plateau per acre)  
Altitude: 100’ AGL  
Ground Speed: 200 Knots  
Flush: Air purge at end of each sortie  
Formulas: Flow Rate = Gal/Time in Minutes  
Acreage Sprayed = Total Sec x 338 x Swath Width / 43560

**8. PARKING PLAN: Forestry Ramp**

**9. AIR TO GROUND RADIO FREQUENCIES:**

Clover Range: UHF 285.65 / 275.9 / 361.4 (p)  
VHF 134.1 / 118.45  
Eagle Tower: 351.0; Mawk 2  
Diddle Knoll: 398.1 (Primary), 383.2 (Back-up); 134.1 / 118.45  
Base OPS: 139.3  
Spray Ground: 392.2 / 123.45 You can talk to Keeli or Robbie on this Freq or Clover.  
Dugway PG Range: P-126.2 S-131.1

- 10. TRANSPORTATION: 6 PAX Truck and 7 PAX van from the environmental shop. 5 sedans from enterprise.**  
Mr. Lawrence will have the 6 PAX truck and 7 PAX Van from the environmental shop at the forestry ramp when the crews land. All members going to the in-brief can ride with Lt Col Breidenbaugh in his rental car. After in-brief someone will have to take Lt Col Haagsma to enterprise. Crew will use 7 PAX van to drop off members that need to pick up rental cars and return to base to pick up support crew.

OPS Os – (Enterprise Sedan) (b) (6)  
OPS Es – (Enterprise Sedan) (b) (6)

**910 AW AERIAL SPRAY UNIT POST-MISSION REPORT  
MINOT AFB, CITY OF MINOT, AND WILLISTON, N.D. – ADULT  
MOSQUITO CONTROL 15-19 July, 2019**

**1. MISSION BASICS:**

- a. Installation Sprayed: Minot AFB and Cities of Minot, Burlington, and Williston, ND
- b. Mission Duration: 15-19 July 2019
- c. Purpose of Application: Control adult nuisance and vector mosquitoes
- d. Application Dates: 16-17 July 2019
- e. Time of Application (Local): 9:40-11:35 (16 July)  
9:35-11:45 (17 July)
- f. Acres Treated: 28,011 (16 July)  
12,338 (17 July)
- g. Project Coordinator/s (Name/Rank, Title, Phone #):
  - (b) (6), Minot AFB Pest Management Shop, DSN 362-4289
  - (b) (6), City of Minot Public Works, 701-833-7677
  - (b) (6), City of Williston
- h. Date Spray Map Last Approved: 16 July 2019
- i. Date of Waste Generation Letter: 22 June 2004
- j. Installation In-Briefing: (When/Where/Briefer/s): Minot AFB CE, Lt Col (b) (6),  
Lt Col (b) (6), Lt Col (b) (6)

**2. OPERATIONAL:**

- a. Mission Commander: Lt Col (b) (6)
- b. Certified PMP/s (Category 11): Lt Col (b) (6), Lt Col (b) (6)
- c. Aircrew:
  - 1) Pilots: Lt Col (b) (6), Maj (b) (6)
  - 2) Navigators: Lt Col (b) (6), Lt Col (b) (6)
  - 3) Flight Engineers: MSgt (b) (6)
  - 4) Spray Operators: CMSgt (b) (6), MSgt (b) (6), MSgt (b) (6); TSgt (b) (6)
- d. Safety Briefer: Lt Col (b) (6)
- e. Spray Maintenance: TSgt (b) (6) (lead), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6)
- f. Spray Ground Monitors: Lt Col (b) (6)
- g. Crew Chief: (b) (6), SSgt (b) (6)
- h. Avionics: MSgt (b) (6)
- i. Flying Data:
  - (1) Spray Sorties/Hours: 2/4.6
  - (2) Ferry Sorties/Hours: 2/6.4

**3. PESTICIDES:**

- a. Applied at Minot AFB and City of Minot:
  - 1) Trade Name (% Active Ingredient): Trumpet® EC (78% AI naled)
  - 2) EPA Registration Number: Trumpet® EC 59639-90-5481
  - 3) Gallons Pesticide Loaded: 210 gal Trumpet® (16 July)
  - 4) Gallons Pesticide Applied: 210 gal Trumpet® (16 July)
  - 5) Gallons and Name of Flush Used: 5 Gallon HAN
  - 6) Other Additives Used: none
  - 7) Application Rate: 0.98 oz/acre Trumpet®

b. Applied in Williston:

- 1) Trade Name (% Active Ingredient): Imperium (2% AI deltamethrin)
- 2) EPA Registration Number: 432-1534
- 3) Gallons Pesticide Loaded: 90 gal Imperium (17 July)
- 4) Gallons Pesticide Applied: 90 gal Imperium (17 July)
- 5) Gallons and Name of Flush Used: 5 Gallon HAN
- 6) Other Additives Used: none
- 7) Application Rate: 1.0 oz/acre Imperium

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Type (Tail Number): 99105
- b. Spray System (Modules Used) and System ID #: 3
- c. Spray System Configuration: 2-Module System/Stainless Steel ULV fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 31 straight down (16 July)  
26 straight down (17 July)
- f. Pressure (PSI): 40 PSI
- g. Flow Rate: 7.1 GPM (16 July)  
7.3 GPM (17 July)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 2000'
- b. Spray Off Set: None
- c. Spray Release Altitude: 300 feet
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed): 248° @ 7-9 knots (16 July)  
180-240° @ 4-7 knots (17 July)
- b. Temperature: 62-65 °F (16 July)  
60-65 °F (17 July)
- c. Relative Humidity: 79% (16 July)  
87% (17 July)
- d. Cloud Cover: Partly Cloudy
- e. Source: National Weather Service

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Minot AFB conducted adult mosquito trapping to monitor mosquito densities on base.
  - 1) Technique/s Used: Mosquito traps
    - A) Results: Minot AFB: Pre-spray trap count (1 trap): 243.  
Post-spray count 4000+.
- b.. City of Minot conducted adult mosquito trapping to monitor mosquito densities.
  - 1) Technique/s Used: Mosquito traps
    - A) Results: Pre-spray trap count (2 traps): 1512; 907. Post-spray counts 803; 778.  
Reductions of 47 and 15% respectively.

c. City of Williston conducted adult mosquito trapping to monitor mosquito densities.

1) Technique Used: Mosquito traps

A) Results: (mosquito numbers)

	<u>Pre spray</u>	<u>Post spray</u>
Trap #2	43	86
Trap #3	4	5
Trap #5	68	397
Trap #6	17	4
Trap #7	11	28

Comment: Weather conditions in Minot affected the flight times for Williston. Therefore only part of Williston was effectively sprayed. It was noted that many of the Williston mosquito traps were on the border of the spray block and may not have been reached because of the limited spray conditions.

2) Technique: Efficacy Field test:

Mosquito cages were placed in a test field and in an untreated site.

A) Results (% mortality)

<u>Treated cages</u>	<u>Untreated cages</u>
97%	3%

Comment: The Imperium mosquito control product was very effective in controlling the mosquitoes placed in test cages. Unofficial pre and post spray landing rates taken at the test site demonstrated high efficacy of the control product. Drift analysis of the spray droplets demonstrated effective droplet density and volume 3500' downwind from the flight path.

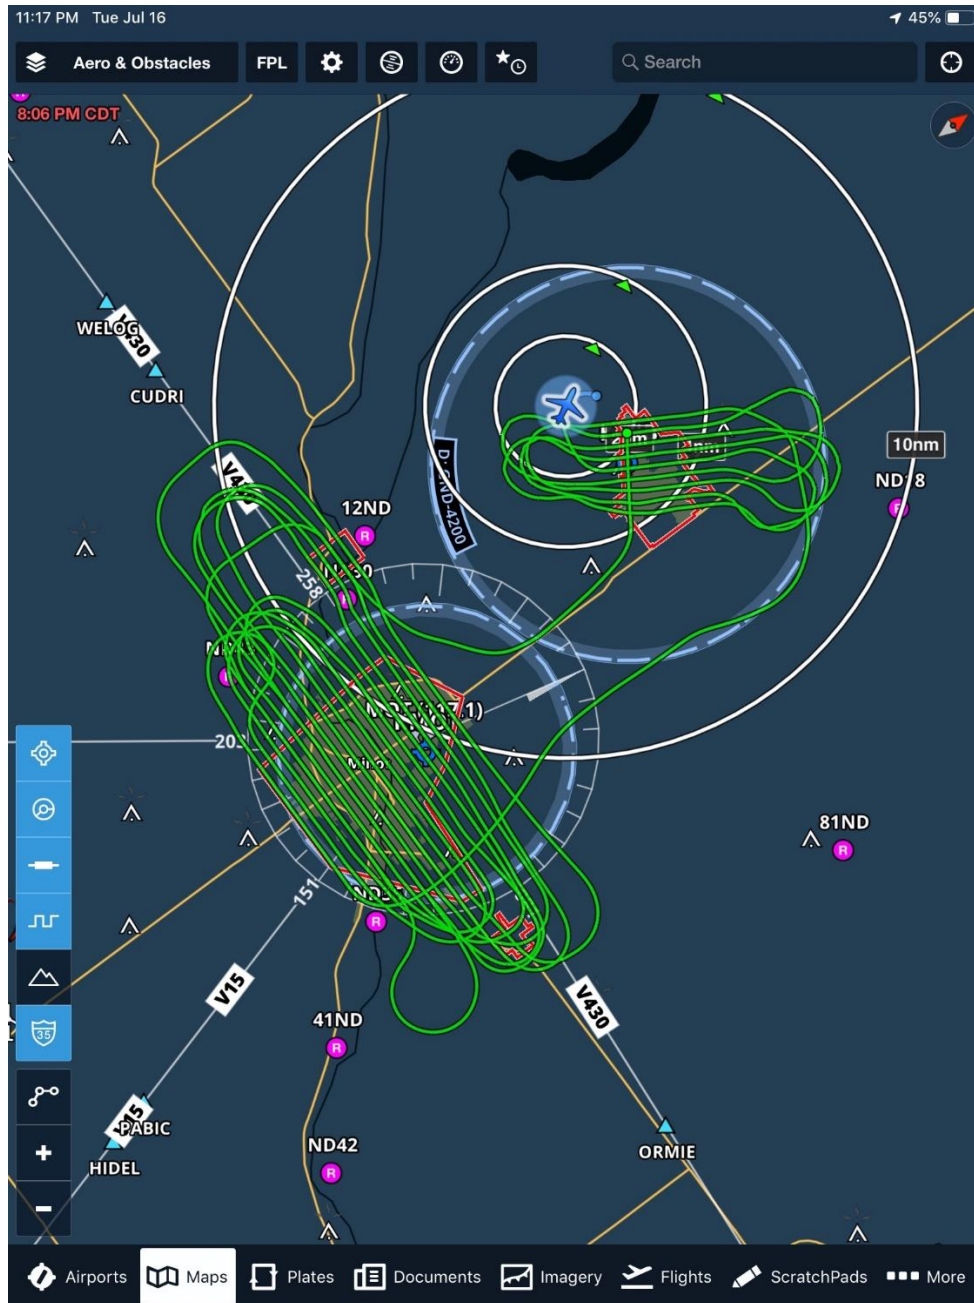

**8. REMARKS:** Meteorological conditions were good during the City of Minot and Minot AFB applications, with a moderate winds assuring good coverage. The City of Williston tested Imperium insecticide, a new formulation of deltamethrin developed for aerial mosquito control. The results from the field trial of Imperium in Williston demonstrated good results. Many thanks to (b) (6) (Minot AFB), (b) (6) (City of Minot), and (b) (6) (City of Williston) for their support.

# AERIAL SPRAY OPERATIONAL SCHEDULE

## Minot, MAFB, & Williston, ND

17-21 July 2023

MI: QZNRK3431198

AFRC IRT#:14-08-EMASS1

PPR: 01-17-IL

**Purpose/Objectives and Proposed Benefits:** To control nuisance and vector mosquitoes in order to improve working conditions and lower risk of vector-borne illness to individuals working and living in and around Minot AFB and the cities of Minot and Williston ND. Aerial Spraying of the cities of Minot and Williston will be in accordance with the IRT program.

### 1. 910 AW PARTICIPANTS:

Msn Commander:	Lt Col (b) (6)	(b) (6)
Entomologist:	Lt Col (b) (6)	, Lt (b) (6) (b) (6)
Pilots:	Lt Col (b) (6)	, Lt Col (b) (6) , Maj (b) (6)
Navigator:	Lt Col (b) (6)	
Flight Engineer:	SSgt (b) (6)	
Spray Operators:	CMSgt (b) (6)	, SMSgt (b) (6) TSgt (b) (6)
Spray Maintenance:	SSgt (b) (6)	(Lead) (b) (6)
	TSgt (b) (6)	, SSgt (b) (6) , SrA (b) (6) ,
	SrA (b) (6)	, SSgt (b) (6)
Crew Chiefs:	TSgt (b) (6)	, SSgt (b) (6)
Avionics:	MSgt (b) (6)	

### 2. REQUIRED ITEMS:

Msn Commander:	Mission Folder, Laptop
Entomologist:	Wind Gauge, Compass, Pest Safety Binder, Project Notebook
Navigator:	Maps/Map Bag, Validation Map
Spray Operators:	PPE, Calibration Tables/Laptop and or Spray datasheet, O2 hose extensions
Spray Maintenance:	Deployment Kit, Support Equipment
Avionics:	2 Multi-band hand held radios

### 3. SCHEDULE: (All Local Times)

**17 July (Monday):** PPR: 01-17-IL

1000: Show KYNG

1200: Depart KYNG

1430: Land KMIB

**18-20 July (Tues-Thurs):** Sunset 2141, Twilight 2220 (Minot)

1500: In brief 18 June; Minot AFB CES; Williston with participate with tele-con.

1700: Showtime/WX decision

1730: Load

2100: Takeoff KMIB (subject to change dependent upon location)

2330: Land

**21 July (Friday)**

1000: Crew show

1200: Depart KMIB

1630: Land KYNG

### **3. AIRCRAFT & SPRAY CONFIGURATION:**

Aircraft: 89-9105  
System: EMASS Single pallet with Rotary Atomizers  
Nozzle/Orientation: ULV MicronAir electric atomizers, oriented straight back  
Number of Nozzles: 10 nozzles for all locations

### **4. SPRAY MIXING AND LOADING:**

Entomologist will determine quantity to load and work with the local pest managers to determine the application rate. 160 gal of Trumpet is needed for Minot City and Burlington and 40 for MAFB at 0.97 oz/acre of Trumpet insecticide applied, with total of 210 gallons of Trumpet (7 barrels). Williston will use approximately 120 gal (60 gal Zenivex and 60 gal 13 BVA oil). EMASS system is suitably calibrated for Trumpet and Zenivex/BVA oil with appropriate viscosity coefficients entered into EMASS computer.

### **5. SPRAY PARAMETERS:**

#### **Location: Minot AFB & City of Minot**

Chemical: Trumpet  
Area to be treated: Minot City (22,133 acres) MAFB (5,169 acres)/ 27,302 acres total  
Swath Width: 2,000'  
Flow Rate: 7.2 gal/min for 2,000' swath (Trumpet ® EC Concentrate - 78% naled)  
Application Rate: 0.98 oz/acre Trumpet  
Altitude: 300' NVG operation  
Ground Speed: 200 Knots  
Flush: HAN, with subsequent air purge

#### **Location: Williston/Watford City**

Chemical: Zenivex E20  
Area to be treated: 17.832 acres Williston/ 5,794 acres Watford; Total: 23,626 acres  
Swath Width: 2,000'  
Flow Rate: 4.65 gal/minute (1:1 BVA 13: Zenivex E20)  
Application Rate: 0.0038 lbs/acre A.I. Etofenprox (0.32 oz/acre), (0.64 oz /acre 1:1 dilution); 60 gallons Zenivex and 60 gallons BVA-13 oil.  
Altitude: 300' (NVG operation)  
Ground Speed: 200 Knots  
Flush: HAN, with subsequent air purge

### **6. RADIO FREQUENCIES:**

MAFB Twr: 120.65, 236.6, 253.5;  
Minot Intl: 118.2, 251.125 or Unicom 122.95  
Williston: 122.8 CTAF/UNICOM  
Spray Gnd: VHF 123.45 UHF 392.2

### **7. TRANSPORTATION:**

Minot Vehicle Ops: 701-723-3176 / 701-723-3121/ DSN 453-3121  
3 Minivans Confirmation # 34351571  
8 Pax van, 6 Pax pickup (bus will transport from A/C to vehicle ops at 1300)

### **8. LODGING:**

Hawthorn Suites by Wyndham Minot  
800 37th Ave SW, Minot, ND 58701  
(701) 858-7300  
Non- A's to be emailed to aerial spray shop

DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND

30 August 2023

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at JB Charleston/MCRD Parris Island, SC

1. Aerial spray deployment of one C-130 from 5-7 Sep 2023 to JB Charleston, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards at JB Charleston/MCRD Parris Island.

2. Concept of Operations (All times are local):

a. 5 Sep (Aerial Application at KCHS/PI)

1300 Depart KYNG  
1500 Land KCHS  
1515 Weather call/Chemical load  
1530 Inbrief  
1600 Calibration  
1900 Depart KCHS  
2200 Land KCHS

b. 6 Sep (WX B/U)

1530 Weather call/Chemical Load  
1600 Calibration  
1900 Depart KCHS  
2200 Land KCHS

c. 7 Sep

1000 Showtime  
1200 Takeoff KCHS  
1400 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc.  
All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 18,500 acres JB Charleston, 6000 acres PI
- b. Altitude: 300' AGL NVG operations
- c. Swath Width: 2000ft
- d. Groundspeed: 200 Knots
- e. Application Rate: 0.85 oz/acre of Trumpet EC

4. Lt Col (b) (6) will serve as the Mission Commander with Maj (b) (6) serving as the Aircraft Commander. Support at JB Charleston has been coordinated.

(b) (6), Capt, USAF  
Chief of Aerial Spray

**DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND**

05 June 2023

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at JB Charleston, SC,

1. Aerial spray deployment of one C-130 from 13-16 June 2023 to JB Charleston, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards at JB Charleston.

2. Concept of Operations (All times are local):

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at JB Charleston, SC, MCRD Parris Island, SC and Tyndall AFB, FL

1. Aerial spray deployment of one C-130 from 15-19 May 2023 to JB Charleston, SC to train aerial spray aircrew, entomologists, and maintenance members in control of mosquitoes and biting midges which negatively impact outdoor training activities and create health hazards at JB Charleston, SC, MCRD Parris Island, SC and Tyndall AFB, FL.

2. Concept of Operations (All times are local):

- a. 15 May  
1200 Depart KYNG  
1400 Land KCHS
- b. 16 May (Aerial Application at KCHS/Parris Island)  
1100 Installation brief for CHS  
1600 Weather call/Chemical Load  
1630 Calibration  
1930 Depart KCHS  
2230 Land KCHS
- c. 17 May (Aerial Application at KPAM)  
1600 Weather Call/Chemical load  
1630 Calibration (if required)  
1845 Depart KCHS (local Eastern Time)  
2015 Arrive KPAM (local Eastern Time) - Arrive KPAM @ 1915 LCL Central  
2145 Depart KPAM (local Eastern Time) - Depart KPAM @ 2045 LCL Central  
2315 Arrive KCHS (local Eastern Time)
- d. 18 May (WX/MX Backup)  
Timeline and training TBD by Mission Commander
- e. 19 May  
1000 Depart KCHS  
1200 Land KYNG

Times and spray locations may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 18,500 acres at JB Charleston; 6,000 acres at MCRD Parris Island;  
25,000 acres at Tyndall AFB
- b. Altitude: 300' AGL NVG operations
- c. Swath Width: 2000ft
- d. Groundspeed: 200 Knots
- e. Application Rate: 0.85 oz/acre JB Charleston/Parris Island  
1.07 z/acre Tyndall AFB of Trumpet EC

4. Capt (b) (6) will serve as the Mission Commander with Lt Col (b) (6) serving as the Aircraft Commander. Support at JB Charleston has been coordinated.

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations for Aerial Spray at Minot AFB, and Minot, North Dakota.

1. The 910 AW will deploy one C-130 to Minot AFB, ND to train aerial spray aircrew, pest management personnel, and maintenance members in the control of nuisance and vector mosquitoes. This mosquito adulticide application will also improve working conditions and lower the risk of vector-borne illness for individuals working and living in/around Minot AFB, City of Minot, and Williston, ND. Aerial applications performed off DOD installation property will be conducted IAW the Innovative Readiness Training (IRT) Program criteria.

2. Concept of Operations: All times local

- a. 17 July (Monday)  
1200 Depart KYNG  
1430 Land KMIB
- b. 18-20 July (Tuesday – Thursday)  
2100 Depart KMIB  
Conduct aerial applications at Minot AFB, City of Minot and/or Williston, Watford City  
2330 Land KMIB
- c. 21 July (Friday)  
1200 Depart KMIB  
1630 Land KYNG

Times may vary from scheduled depending upon weather, effectiveness of spray, etc. The mission commander will coordinate all changes to the planned itinerary.

### 3. Spray Parameters:

#### Minot AFB/Minot City & Burlington:

- a. Area to be treated: 5,169/22,133 acres (27,302 acres total)
- b. Altitude: 300 feet
- c. Swath Width: 2,000 feet
- d. Airspeed: 200 KGS
- e. Application Rate: 0.98 oz/acre Trumpet® EC Insecticide

#### Williston/Watford City:

- f. Area to be treated: 17,832/5,794 acres (23,626 acres total)
- g. Altitude: 300 feet
- h. Swath Width: 2,000 feet
- i. Airspeed: 200 KGS
- j. Application Rate: 0.0038 lbs/acre A.I. Etofenprox (0.32 oz/acre),  
(0.64 oz /acre 1:1 dilution)  
60 gallons Zenivex and 60 gallons BVA-13 oil

4. Lt Col (b) (6) will serve as the Mission Commander with Lt Col (b) (6) serving as the Aircraft Commander. Support required at Minot AFB has been coordinated.

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Concept of Operations of Larvacide Application for Aerial Spray in and around the Army Corps of Engineers' property, Williston, ND and Grand Forks AFB, ND.

1. Aerial spray deployment of one C130 to Williston Basin International Airport, ND from 30 May – 9 June 2023 for the requested larvacide spray over the Army Corps of Engineers' property near Williston, ND and Grand Forks AFB, ND. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of the personnel working on the Army Corps' property, and by extension, the citizens of Williston. While conducting missions out of Williston Basin International Airport, we will also conduct a routine lavarside spray at Grand Forks AFB, ND. Mission objectives provide training for aerial spray aircrew, entomologists, and maintenance personnel in all aspects of the aerial spray mission.

2. Concept of Operations: All times local

- a. 30 May (Tuesday)
  - 1400 Depart KYNG (Support Aircraft)
  - 1400 Depart KYNG (Spray Aircraft)
  - 1700 Land KXWA (Support Aircraft)
  - 1700 Land KXWA (Spray Aircraft)
- b. 31 May – 8 June (Wednesday-Thursday)
  - 0600 Show KXWA
  - 0700 Depart KXWA
  - 1200 Land KXWA
  - (Multiple sorties each day depending on weather)
- c. 9 June (Friday)
  - 1000 Depart KXWA (Spray Aircraft)
  - 1015 Depart KXWA (Support Aircraft)
  - 1430 Land KYNG (Spray Aircraft)
  - 1445 Land KYNG (Support Aircraft)

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

Williston ACE, ND

- a. Area to be treated: 32,594 total acres (application on select areas with larva present)
- b. Altitude: 100 ft for larvicide application
- c. Swath Width: 100 ft
- d. Groundspeed: 200 KIAS
- e. Flow Rate: 326 gals/min
- f. Application Rate: 7 gal/acre mix (water with 2.0 pints Vectobac® + 0.05 oz of Poly Control 2)

Grand Forks AFB, ND

- a. Area to be treated: 2,100 acres
- b. Altitude: 100 ft for larvicide application
- c. Swath Width: 200 ft
- d. Groundspeed: 200 KIAS
- e. Flow Rate: 233 gals/min
- f. Application Rate: 2.5 gal/acre (water with 0.94 oz of Altosid®)

4. Lt Col (b) (6) will serve as the Mission Commander with Lt Col (b) (6) serving as the Aircraft Commander. Support at Williston Basin International Airport has been coordinated.

(b) (6), Lt Col, USAF  
Chief of Aerial Spray

# **AERIAL SPRAY OPERATIONAL SCHEDULE**

## **JB CHARLESTON, SC**

### **13-16 June 2023**

### **MSN# QZNRK3402164**

**Purpose/Objectives/Benefits:** One C-130 will deploy to JB Charleston, SC from 13-16 Jun 2023. Aerial Spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito and biting midge populations affecting the health and welfare of the personnel of JB Charleston. Operations for this mission will be conducted from JB Charleston utilizing Night Vision Goggles (NVGs).

#### **1. 910 AW PARTICIPANTS:**

Formula Sprayed: 2.0 pints of Vectobac in 7 gallons water per acre.

Flush: Water

Other Additives: Poly Control 2

Application Rate: 7 gal/acre mix (water with 2.0 pints Vectobac® + 0.05 oz of Poly Control 2)

**7. SPRAY PARAMETERS: Williston ACE**

**Aircraft Tail Number:**

Spray System Module and System ID: MASS #2

Spray System Configuration: SP-3

Nozzle Type/Size: Rain Drop (LV) R-20 Raindrop nozzles

Nozzle Orientation and Number Used: 20 (10 each side) straight back

Pressure: 40 psi

Flow Rate: 326 gallons per minute

**8. APPLICATION PARAMETERS: (Williston ACE)**

Swath Width: 100 feet

Spray Release Altitude: 100 feet AGL

Ground Speed: 200 knots (338 feet per second)

**SPRAY MIXING AND LOADING:** Plan on ~1,800 gallons in the tanks per lift. A full load will consist of 1,800 gal of water in MASS tanks + 75 gal of water in the sump + 65.0 gal of Vectobac 12 AS + 1.5 gal of Poly Control 2 (if available).

Subsequent loads can be calculated by the following formula:

Determine the volume remaining in MASS. Add water to 1,800 gallons total. Add Vectobac at 4.6 oz per gallon of water added (e.g., the difference between 1800 and the amount remaining from the previous sortie; Poly Control 2 is added at 0.05 oz per gallon of water added.

**9. SPRAY MIXING AND LOADING: Grand Forks AFB (if applicable)**

**Composition of Each Gallon:**

- (1) 0.375 ounces of Altosid® Liquid Larvicide Concentrate (SR20)
- (2) 0.25 ounces of AirexDC™ drift retardant

**Typical Load:**

- (1) Fill with 450 gallons of water per tank; total water in (4) tanks = 1800 gallons
- (2) Add 1.33 gallons of Altosid® per tank (5.32 gallons total)
- (3) Add 0.88 gallons AirexDC™ per tank (3.52 gallons total) while agitating approximately 15 min
- (4) Total quantity mixed = Approx 1800-1900 gallons

**Final Load for Complete Flush:** Fill tanks with the amount of water necessary for a proper system flush

**Mixing Instructions:**

SHAKE WELL BEFORE USING. Altosid® may separate on standing and must be thoroughly agitated prior to dilution.

PRECAUTIONARY STATEMENT: Spray solution should be used within 48 hours; always agitate before spraying.

**10. SPRAY PARAMETERS: Grand Forks**

Location:	All prescribed areas
Chemical:	Altosid®
Area to be treated:	Approximately 2,100 acres
Swath Width:	200 feet
Flow Rate:	233 gallons/minute
Application Rate:	2.5 gallons/acre (water with 0.94 oz of Altosid®)
Altitude:	100' AGL
Ground Speed:	200 Knots
Flush:	Water
Formulas:	Flow Rate = Gal/Time in Minutes Acreage Sprayed = Total Sec x 338 x Swath Width / 43,560

**11. PARKING PLAN:**

General Aviation Ramp at Williston International Airport; Water supplies within range of ramp.

**12. AIR TO GROUND RADIO FREQUENCIES:**

Primary: UHF 392.2; VHF 123.45

**13. CONTACTS:** CONTACTS @ WILLISTON INTERNATIONAL AIRPORT (KXWA):

Airport Operations (5a – 1a Daily):	701-580-5699
Airfield Director:	701-875-8594 ext.(b) (6) (b) (6)

**DEPARTMENT OF THE AIR FORCE  
AIR FORCE RESERVE COMMAND**

12 September 2023

MEMORANDUM FOR HQ AFRC/A3O

FROM: 757 AS/DOS  
3976 King Graves Rd  
Vienna OH 44473-5946

SUBJECT: Capability and Concept of Operations for Aerial Spray at Mountain Home AFB and Saylor Creek Bombing Range, ID

1. Aerial spray deployment of one C-130 from 18-29 September 2023 in response to an aerial spray request to aid fire prevention on Saylor Creek Bombing Range located near Mountain Home AFB, ID. Herbicide will be applied to target cheat grass while allowing native fire-resistant vegetation (sagebrush) to re-establish and become competitive. During the operation aerial spray flight proficiency training will be accomplished while providing real-world training for aerial spray entomologists and maintenance personnel.

2. Concept of Operations (All times are local)

- a. 18 Sep (Mon)
  - 1100 Spray aircraft departs KYNG
  - 1110 Support aircraft departs KYNG
  - 1430 Spray aircraft lands KMUO
  - 1440 Support aircraft lands KMUO
- b. 19-22 Sep (Tues-Fri) Spray Sorties
  - 0700 Depart KMUO
  - 0900 Land KMUO
  - 0900 Support aircraft RTB to YNG (19 Sep)
- c. 23 Sep (Sat)
  - 1300 Swap out aircraft departs KYNG
  - 1700 Swap out aircraft lands KBOI
- d. 24 Sep (Sun)
  - 0900 Swap out aircraft departs KBOI
  - 1630 Swap out aircraft lands KYNG
- e. 25-28 Sep (Tues-Thurs) Spray Sorties
  - 0700 Depart KMUO
  - 0900 Land KMUO
  - 0900 Support aircraft departs KYNG (28 Sep)

1230 Support aircraft lands KMUO (28 Sep)

- f. 29 Sep (Fri) Redeployment
  - 0900 Spray aircraft depart KMUO
  - 0910 Support aircraft depart KMUO
  - 1630 Spray aircraft land KYNG
  - 1640 Support aircraft land KYNG

Times may vary from schedule depending upon weather, effectiveness of spray, etc. All changes to the planned itinerary will be coordinated by the mission commander.

3. Spray Parameters:

- a. Area to be treated: 3,000 acres
- b. Altitude: 100'AGL for herbicide application
- c. Swath Width: 100ft
- d. Groundspeed: 200 KIAS
- e. Application Rate: 6 oz/acre of Panoramic® 2SL (active ingredient: 23% imazapic ammonium)

4. Capt (b) (6) will serve as the Mission Commander for the duration of the mission and Maj (b) (6) will serve as Deputy Mission Commander on the second week. Lt Col (b) (6) and Lt Col (b) (6) will be the Aircraft Commanders. Required support at Mountain Home AFB and Saylor Creek Range has been coordinated.

(b) (6), Capt, USAF  
Chief of Aerial Spray

**AERIAL SPRAY PLAN**  
**JB LANGLEY-EUSTIS/CRANEY ISLAND ACE, VA**  
**21-24 August 2023**  
**QZNRK3491206/PPR:**

**Purpose/Objectives/Benefits:** Aerial application of insecticide to control populations of adult nuisance and disease carrying mosquitoes at Joint Base Langley-Eustis and the Army Corps of Engineers' (ACE) Crane Island Dredged Material Management Area. Aerial spray flight proficiency training will be accomplished while providing a beneficial reduction in mosquito populations affecting the health and welfare of members operating at Joint Base Langley-Eustis, and Crane Island, VA.

**1. 910 AW PARTICIPANTS:**

Msn Commander:	<b>Capt Nicholas Hudak</b>	(b) (6)
Entomologist:	Lt Col (b) (6)	, 1 <sup>st</sup> Lt (b) (6)
Pilots:	Lt Col (b) (6)	, Lt Col (b) (6)
Navigators:	Maj (b) (6)	, Maj (b) (6)
Flight Engineer:	TSgt (b) (6)	
Spray Operators:	SMSgt (b) (6)	, TSgt (b) (6)

# AERIAL SPRAY OPERATIONAL SCHEDULE

## SAYLOR CREEK RANGE / MOUNTAIN HOME AFB, ID

### 18-29 Sept 2023

### QZNRK3431261

**Purpose/Objectives/Benefits:** One C-130 will deploy to Mountain Home, ID from 18-29 September 2022. Aerial Spray flight proficiency training will be accomplished on Saylor Creek Bombing Range, ID while providing a beneficial herbicide treatment to prevent fire hazards, inhibit annual re-growth of cheat grass, and allow native vegetation to establish and be competitive.

#### 1. 910 AW PARTICIPANTS: 1<sup>st</sup> week 18-25, 2<sup>nd</sup> week 24-30

<b>Msn Commander:</b>	<b>Capt (b) (6)</b>	<b>(both weeks)</b>	<b>(b) (6)</b>
	<b>Maj (b) (6)</b>	<b>(DMC wk 2)</b>	<b>(b) (6)</b>

##### **25-28 Sep (Mon-Thurs) Spray Sorties**   Range: Mon-Thurs 0700L - 0900L

0500 Show KMUO/WX decision/load

0700 Depart KMUO

0700-0900 Range Time Tues-Fri

0900 Land KMUO (unless extended range time approved)

##### **28 Sep (Thurs) Support Aircraft**    **MI – QANRK9931272**            **PPR: NK-28-01**

0800 Show KYNG

0900 Depart KYNG

1230 Land KMUO

##### **29 Sep (Fri) Redeploy to YNG**

0700 Show KMUO

0900 Spray aircraft depart KMUO

0910 Support aircraft depart KMUO

1630 Spray aircraft land KYNG

1640 Support aircraft land KYNG

#### **4. AIRCRAFT & SPRAY CONFIGURATION:**

System:	EMASS Extended
Nozzle /Orientation:	EMASS Raindrop/Straight Back
Number of nozzles:	Fuselage – 20-24 Nozzles

## **5. SPRAY MIXING AND LOADING:**

Entomologist will determine quantity to load and work with the local pest managers to determine the application rate. Please see entomologist for final flow spray parameters as these numbers are subject to change depending on user requirements.

### **a. In each gallon of mix:**

0.86 ounces of Panoramic® 2SL herbicide (0.67 gal in 100 gal of water)  
0.64 ounces of Clasp® (0.5 gal in 100 gal)  
126.5 ounces of water

### **b. First Load (2 tanks. 3000 gallons water nominal EMASS load)**

Half fill each EMASS Tank using the local hydrant or the water tanker truck.

Total water in tanks = 3000 gal.

Total water added = 3000 gal.

Load 20.0 gal of Panoramic®; and 15 gal of Clasp® with recirc agitation.

Total quantity mix 3035 gal

### **c. Subsequent Loads**

Fill with water for a total of 3000 gal; use “per 100 gal of water” measurements given above if MASS returned with partial load.

**d.** Pro-tank cleaning agent can be added every 4<sup>th</sup> load, or as prescribed by Spray MXS personnel. Pro-tank cleaning agent should be added at a rate of 8 gallons per approximate 3000 gallon load.

## **6. SPRAY PARAMETERS:**

Location:	Saylor Creek bombing range
Chemical:	Panoramic® 2SL (active ingredient: 23% imazapic ammonium); 6.0 oz/acre A.I.
Area to be treated:	3835 acres
Swath Width:	100 feet
Flow Rate:	326 gal/min (we are treating at 46.5 acres/minute)
Application Rate:	7 gal/acre (6 oz of Panoramic® per acre with adjuvants)
Altitude:	100' AGL
Ground Speed:	200 Knots
Flush:	Water

## **7. RADIO FREQUENCIES: \* Confirm these Freqs at the inbrief.**

**Mt Home AFB:** ACC COMD POST 311.0/321.0

**Saylor Creek Range:**(Cowboy Control): 134.1/236.05

If Cowboy Control is not up, contact MUO APP on 124.8/259.1

**Air to Ground:** Confirm Freq with Entomologist. 392.2 MHz expected. 123.45 MHz alternate expected.

910 AW AERIAL SPRAY UNIT  
CERTIFIED PEST MANAGEMENT PROFESSIONAL'S  
POST-MISSION REPORT  
MOUNTAIN HOME AFB, SAYLOR CREEK RANGE  
18 – 29 September 2023

1. MISSION BASICS:

- a. Installation Sprayed: Saylor Creek Range, ID
- b. Mission Duration: 18 – 29 September 2023
- c. Purpose of Application: Herbicide application to control cheat grass to suppress range fires and promote native flora
- d. Application Dates and Times (Local): See attachment 1
- e. Acres Treated: 3,321
- f. Flying Data:
  - (1) Spray Sorties/Hours: 8 sorties; 14.9 hours
  - (2) Ferry Sorties/Hours:
    - (a) Spray aircraft 92-3021: 1 ferry; 5.9 hrs
    - (b) Support aircraft: 6 ferries; 31.9 hrs
- g. Project Coordinator (Name/Rank, Title, Phone #): (b) (6), Natural Resource Manager, DSN 728-1784
- h. Date Spray Map Last Approved: 18 September 2023
- i. Installation In-Briefing: (When/ Briefer/s): 18 September 2022, briefed by Capt (b) (6) and Capt (b) (6)
- j. Mission Identifier: QZNRK3431261

2. OPERATIONAL:

- a. Mission Commander: Capt (b) (6)
- b. Aircrew:
  - (1) Pilots: Lt Col (b) (6) (18 – 23), Lt Col (b) (6) (24 – 29), Capt (b) (6), 1Lt (b) (6)
  - (2) Navigator: Lt Col (b) (6), Maj (b) (6) (18 – 23), Maj (b) (6) (24 – 29)
  - (3) Flight Engineers: SMSgt (b) (6) (18 – 23), SSgt (b) (6), SSgt (b) (6) (24 – 29)
  - (4) Spray Operators: SMSgt (b) (6), TSgt (b) (6), SSgt (b) (6) (24 – 29)
- c. Maintenance:
  - (1) Spray Maintenance: TSgt (b) (6) (lead), TSgt (b) (6), SSgt (b) (6), SrA (b) (6), SrA (b) (6)
  - (2) Maintenance: MSgt (b) (6), TSgt (b) (6), TSgt (b) (6), TSgt (b) (6), SSgt (b) (6), SSgt (b) (6), SrA (b) (6)
  - (3) Communications: MSgt (b) (6)
  - (4) First Sergeant: MSgt (b) (6)
- d. Entomologists: Lt Col (b) (6) (24 – 29), DoD pesticide applicator certification #NJ-1142-15-0221/#AA-010-03-0221; Capt (b) (6) (18 – 23), DoD pesticide applicator certification #AA-029-20-0823/#AA-001-21-0823; Capt (b) (6) (22 – 29),

DoD pesticide applicator certification #NJ-012-23/#AA-007-23-0523; 1Lt (b) (6)  
DoD pesticide applicator certification #AF-1351-20-0723/#AA-003-21-0521

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Panoramic® 2SL (23.3% ammonium salt of imazapic)
- b. EPA Registration Number: 66222-141-81927
- c. Gallons Pesticide Loaded: See attachment 1
- d. Gallons Pesticide Applied: See attachment 1
- e. Gallons and Name Diluent Used: See attachment 1 (total spray – gallons of pesticide = gallons water)
- f. Other Additives Used: 140 gal Clasp® drift control agent
- g. Application Rate: 7.2 gal/acre water (6.5 oz/acre AI)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 92-3021
- b. Spray System (Modules Used) and System ID #: SP-3G MASS 3
- c. Nozzle Type/Orientation: Raindrop/Straight back
- d. Number of Nozzles: 22 Total; 11 left, 11 right
- e. Pressure: 32 p.s.i.
- f. Flow Rate: 334 gallons/minute

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 100'
- b. Spray Off-set: None
- c. Spray Release Altitude: 100'
- d. Ground Speed: 200 KTS

**6. WEATHER OBSERVATIONS:** Acceptable for all spray treatment regimens encountered.

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

**a. Deposition Pattern:**

- (1) Techniques Used: Visual observation from PMP on range and in the aircraft
- (2) Results: See remarks

**b. Effectiveness**

- (1) Techniques Used: Vegetation measurement, visual observations
- (2) Results: Will be determined in the spring of 2024

**8. REMARKS:**

The purpose of this mission was to control cheat grass, an invasive weed, for range fire suppression and to support habitat restoration initiatives.

Sorties were flown with a headwind or tailwind with less than a 45% crosswind component and all applications were observed from the target and from the aircraft by a certified applicator. Throughout the mission, wind speed and direction were relatively stable at approximately 5 knots, resulting in what

visually appeared to be excellent deposition. Although limited range time was available, the entirety of the spray block was treated (Attachment 2).

MUO Airfield operations, fire department, POL, RAPCON, and TA support was outstanding during the entire mission. This was an excellent training/real world mission and we would like to thank the personnel at Mountain Home AFB for the support received.

Lt Col (b) (6), USAF  
Certified Pest Management Professional

**910 AW -- AERIAL SPRAY UNIT**  
**CERTIFIED PEST MANAGEMENT PROFESSIONAL'S POST-MISSION REPORT**  
**PARRIS ISLAND MCRD, SC AND JB CHARLESTON, SC 17-21 Jun 2019**

**1. MISSION BASICS:**

- a. Installation Sprayed: Parris Island MCRD, SC; JB Charleston, SC
- b. Mission Duration: 24-27 September 2019
- c. Purpose of Application: To control pestiferous populations of mosquitoes (specifically *Aedes taeniorhynchus*) and biting midges (*Culicoides* spp.)
- d. Application Date: 26 Sept 2019 (Parris Island); 25 Sept 2019 (JB Charleston)
- e. Time/s of Application (Zulu): 2240-0050 hrs (Parris Island); 2255-0135 hrs (JB Charleston)
- f. Acres Treated: 7,533 acres (Parris Island); 18,305 acres (JB Charleston)
- g. Project Coordinator: Capt (b) (6), Environmental, DSN (b) (6) (Parris Island); MSgt (b) (6), Spray Coordinator JB Charleston DSN 673-5266
- h. Date Spray Map Last Approved: 26 Sep 2019 (Parris Island); 25 Sept 2019 (JB Charleston)
- i. Date of Waste Generation Letter: 30 October 2007
- j. Installation In-Briefing: (When/Where/Briefer/s): On Site (Parris Island). Telephone by Lt Col (b) (6); 26 Sept 2019. JB Charleston CE, briefed by MSgt (b) (6), Lt Col (b) (6); 25 Sept 2019.

**2. OPERATIONAL:**

- a. **Mission Commander:** Lt Col (b) (6)
- b. **Aircrew:**
  - (1) Pilots: Maj (b) (6) (A/C), Lt Col (b) (6)
  - (2) Navigators: Lt Col (b) (6); Maj (b) (6)
  - (3) Flight Engineers: SMSgt (b) (6)
  - (4) Spray Operators: CMSgt (b) (6), (b) (6)
- c. **Maintenance:**
  - (1) Spray Maintenance: TSgt (b) (6), MSgt (b) (6), TSgt (b) (6), TSgt Jason Ross
  - (2) Crew Chiefs: TSgt (b) (6), TSgt (b) (6)
  - (3) Avionics: TSgt Elias Rafidi
- d. **Entomologist:** Lt Col (b) (6)

**3. PESTICIDE:**

- a. Trade Name (% Active Ingredient): Trumpet® (78%) Both locations.
- b. EPA Registration Number: 5481-481 (Trumpet)
- c. Formulation Sprayed: Trumpet (78% naled) (JB Charleston and Parris Island)
- d. Gallons Pesticide Loaded: 25 Sept; 120 Gallons (JB Charleston); 26 Sept; 60 Gallons Trumpet® (Parris Island)
- e. Gallons Pesticide Applied: 60 Gallons Dibrom® (Parris Island); 120 Gallons Trumpet® (JB Charleston)
- f. Gallons and Name Diluent Used: n/a
- g. Gallons and Name of Flush Used: 20 gallons water
- h. Other Additives Used: None
- i. Application Rate: 1.15 oz/acre (Parris Island); 0.85 oz/acre (JB Charleston)

**4. APPLICATION EQUIPMENT:**

- a. Aircraft Tail Number: 99105
- b. Spray System (Modules Used) and System ID #: 2
- c. Spray System Configuration: 2-Module System/ ULV Fuselage Booms
- d. Nozzle Type/Size: TeeJet® 8003 Flat Fan
- e. Nozzle Orientation & Number Used: 18 (Parris Island); 29 (JB Charleston) oriented straight down
- f. Pressure: 40 p.s.i. (Parris Island); 40 p.s.i. (JB Charleston)
- g. Flow Rate: 4.2 gallons per minute (Parris Island); 6.2 gallons per minute (JB Charleston)
- h. Sorties: 2/3.8 hrs (application); 2/4.2 hrs (ferry)

**5. APPLICATION PARAMETERS:**

- a. Swath Width Flown: 1000' (Parris Island); 2000' (JB Charleston)
- b. Spray Off-set: none (Parris Island); 1000' (JB Charleston)
- c. Spray Release Altitude: 300'
- d. Ground Speed: 200 Knots (338 Feet/Second)

**6. WEATHER OBSERVATIONS:**

- a. Winds (Direction/Speed):
  - (1) Ground: 220@6 knots (Parris Island); 240@5 knots (JB Charleston)
  - (2) Release Altitude: 220@14 knots (Parris Island) and 240@10 knots (JB Charleston)
- b. Temperature (Degrees Fahrenheit): 73°F (Parris Island); 75°F (JB Charleston)
- c. Cloud Cover: Clear (both locations)
- d. Source: Ground observations and aircraft SCNs

**7. SPRAY MONITORING (Pre- and Post-Treatment):**

- a. Deposition Pattern:
  - (1) Technique/s Used: GPS system monitoring aircraft flight pattern. Direct field observations ((b) (6) )
  - (2) Results: Good coverage throughout both sprayed areas
- b. Effectiveness:
  - (1) Technique/s Used: Light traps deploy before and after spray application
  - (2) Results: Parris Island

Post Spray trapping results have not yet been submitted by Parris island. However, Navy PrevMed comments: Substantial reduction of biting midge and mosquito populations after spray mission. PI environmental reported no adverse environmental effects of spray. This report will be updated upon receipt of additional data.

- (3) Results: JB Charleston (5 locations)

Spill Way: 843 before; 412 after; 51% reduction  
Golf Course: 53 before; 8 after; 85% reduction  
Marrington Trail: 443 before; 13 after; 97% reduction  
Hopper Bridge: 2823 before; 520 after; 81% reduction  
Spawar: 463 before; 23 after; 95% reduction

Totals: 4625 before; 976 after; 78% reduction

No adverse environment effects of spray were noted

**8. REMARKS:** Excellent coordination amongst all involved parties made this mission remarkably smooth. Reasonable control of mosquito and midge populations in both locations was observed both observationally and anecdotally. Application direction was less than ideal for JB Charleston application because aircraft was somewhat limited by air traffic operating out of Charleston International, resulting in only a 25 degree crosswind component (ideal is 90 degrees). This perhaps it the reason that although trap results from JB Charleston were not poor, and ideal spray application would result in reductions greater than 90%.

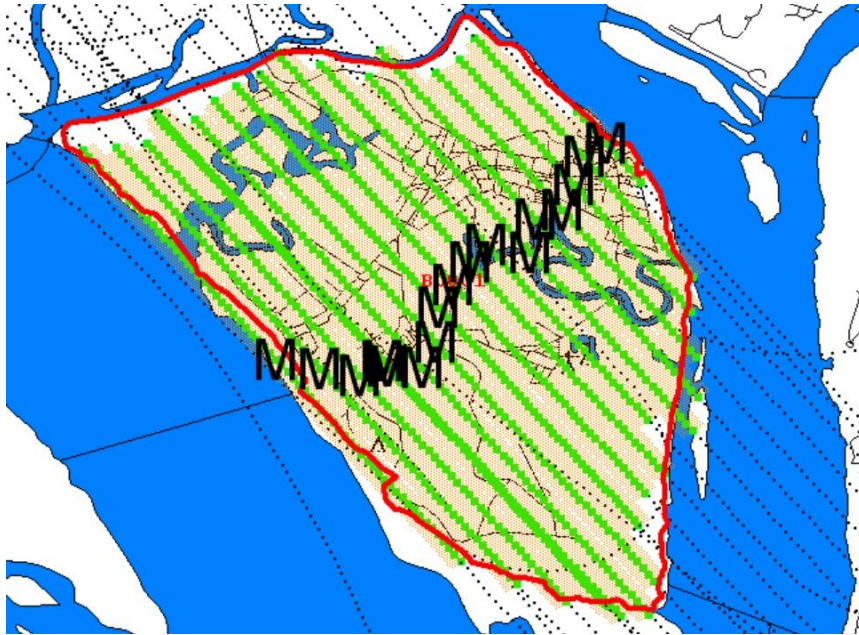

Actual applications at both locations proceeded without any significant functional problem or mishap, and no negative effect on wildlife was observed. On this mission no eagles were present at Parris island, which resulted in complete coverage without buffer zones. Many thanks to Capt (b) (6) and (b) (6) (Parris Island), and MSgt (b) (6) (JB Charleston) for their help in accomplishing this mission.

//signed//

(b) (6), Lt Col, USAFR

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: MSGT (b) (6) , Hill 14-21 Oct 2018

**Aircraft Tail Number:** 89009104

**MASS Number:** 3

**Configuration:** SPG 3

**Boom & Nozzle Type:** Fuselage, 18  
raindrop ( 9 per side)

**Chemical in Main Tank:** Plateau

**Chemical in Flush Tank:** H2O

**Total Chemical Loads:** 7

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0 Gals

**Amount of Solid Waste Generated:**  
10 LBS

## 1. From a maintenance aspect, what training was accomplished on this mission?

We had great training for everyone on this mission, we was able to safely perform Hot Upload training daily, which was only done during the oil spill, and one time since during the all hands spray trainer we had several years ago. This was several of the spray maintainers first time working with the hot uploading. I would like to add, that having once spray MXS person on the panel, on comm, with one spray MXS personal on comm on the ground, made the communication and upload a huge success. The Air Crew was great by keeping the chatter down while we loaded. We also had some hands on troubleshooting with the 4" flow meter not displaying the flow rate while spraying, and the flow control leaking. We R2 the flow control seal, and traced wiring & located the cannon plug to the 4" flow meter was bad.

## 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.

3. Worked great with the crew chiefs on this trip & communication between the mission commander LT Col (b) (6) and everyone was great!! Teamwork all the way around was a success and the pre planning having the age equipment staged and the fire hydrant certified was a must and worked out perfect.

## 4. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.

MASS 3 system completed the spray mission on time, had to cancel after the first sortie due to the flow control leaking and no flow readings while they were spraying, several hours after the sortie was completed and troubleshooting we squared away the system. We had an incident with the fire

department showing up do to an electric smell, still not 100% sure of the cause, but was stated earlier that the #2 motor smelled & was drawing unusual loads on the amp meter. We disconnected #2 motor. & had them use only motors 1 & 3. No other issues with the spray system. Had an issue with the loadmaster getting spraying with chemical looking into the forward #4 fill , and the loadmaster on the panel ran a motor and did not verify that he was the right tank valve open and the right mix valve open before running the pump. The #4 tank valve was not open like he thought and the number 4 mix valve was open, so it filled the tank he thought he was transferring from. This caused the tank to be overfilled and chemical to get the other loadmaster wet when he looked into the tank.

**5. How was host base and TA support? Please include details.**

Excellent as always.

**6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues

**7. Were there any notable observations from a maintenance perspective inflight?**

Spray MXS didn't fly

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Yes.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Trip was all around a good trip, no issues with the aircraft, or weather.

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Charleston AFB/Parris Island Oct 3 to Oct 6 2018

**Aircraft Tail Number:** 90009108

**MASS Number:** 4

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage,8003

**Chemical in Main Tank:**

Trumpet/Dibrom

**Chemical in Flush Tank:** Atsol 150

**Total Chemical Loads:** 1

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
8 gallons

**Amount of Solid Waste Generated:** 20  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

Completed flow meter trouble shooting and download training as well as load and calibration proficiency training.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Excellent communication between load masters, spray maintenance, and entomologists was key to overcoming difficulties with system during loading and calibration.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

Efficiency of calibration could be improved with improved training of load masters on best practice calibration procedures and system operation.

**4. How was host base and TA support? Please include details.**

Host base and TA support were highly supportive providing required AGE in timely fashion.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues with chemical.

**6. Were there any notable observations from a maintenance perspective inflight?**

None

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Aircraft maintenance issues prevented timely mission departure on 03 Oct and led to cancellation of sortie on 05 Oct. Replacement of defective flow meter slowed calibration process on 04 Oct but sortie was not delayed.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Charleston, May 15-19 2023

**Aircraft Tail Number:** 90-9108

**MASS Number:** EMAS 1

**Configuration:** ULV

**Boom & Nozzle Type:** Atomizers

**Chemical in Main Tank:** Trumpet

**Chemical in Flush Tank:** Atsol

**Total Chemical Loads:** 2

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 20  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

Boom config. Calibration with atomizers for first time. Uploading product from drums in full PPE

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication with Maint, Ento, Ops, Base pest control

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

4. Continue to train with new personal

**5. How was host base and TA support? Please include details.**

Both were good when needed

**6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

None noted

**7. Were there any notable observations from a maintenance perspective inflight?**

First time using atomizers. Slight quantity to overboard discrepancy.

- 8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was effective

- 9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

None

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Charleston, September 5-7, 2023

**Aircraft Tail Number:** 3022

**MASS Number:** EMASS 1

**Configuration:** ULV

**Boom & Nozzle Type:** Atomizers

**Chemical in Main Tank:** Trumpet

**Chemical in Flush Tank:** Atsol

**Total Chemical Loads:** 1

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 20  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

(b) (6)'s first ULV mission with the EMASS. (b) (6) and (b) (6) both got training for system configuration. Clevenger's first time as a trip lead. Clevenger first time sitting at the console for the upload. Feliz's first time watching for leaks with the EMASS.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication between spray ops, Spray mx, Entos, and mx was clear and concise. Not having to calibrate the EMASS allowed us to configure, upload, and spray on Tuesday night.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

**4.** The areas that we could use room for improvement is experience as a shop and with the EMASS, since we have such a young shop and we're still learning the EMASS

**5. How was host base and TA support? Please include details.**

The host base had everything loaded on a flatbed truck and ready for us before we left home station so we could bring the truck to the plane and upload. TA moved swiftly when we need equipment and when it was time to leave without issue.

**6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

None were noted

**7. Were there any notable observations from a maintenance perspective inflight?**

Spray mx uploaded 170 gallons of product, but spray ops noted only 146 gallons being sprayed. Spray mx is trouble shooting the issue.

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was quick and effective allowing the spray mission move swiftly and without issue.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

The EMASS is having an indication issue either being a tank quantity issue or a flow rate issue. With 24 gallons of product not accounted for.

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Charleston and Parris Island, SC, 20190617 to 20190621

**Aircraft Tail Number:** 89009105

**MASS Number:** 4

**Configuration:** ULV

**Boom & Nozzle Type:** 8003

**Chemical in Main Tank:** Trumpet,  
Dibrom

**Chemical in Flush Tank:** HAN

**Total Chemical Loads:** 2

**Total Flush Loads:** 2

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 20  
lbs.

1. From a maintenance aspect, what training was accomplished on this mission?

(b) (6) received training on all ULV processes and procedures.

2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.

Coordination with Charleston pest management was instrumental in mission completion

3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.

4. None

5. How was host base and TA support? Please include details.

Host base support was excellent.

6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.

No issues or changes.

7. Were there any notable observations from a maintenance perspective inflight?

Flow rate fluctuated on first sortie.

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was highly effective.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Clearer communication between load masters in regards to pressure relief adjustment procedures would aid in flow rate fluctuation minimization

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead : TSgt (b) (6) , Charleston JB ,

30-31 Aug 2016

**Aircraft Tail Number:** 89009103

**MASS Number:** MASS 1

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage, ULV TEE  
JET 8003'S

**Chemical in Main Tank:** TRUMPET

**Chemical in Flush Tank:** Atsol-150

**Total Chemical Loads:** 1

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0 GAL

**Amount of Solid Waste Generated:**  
10 LBS

## 1. From a maintenance aspect, what training was accomplished on this mission?

Proficiency training on ULV chemical upload and Calibration was accomplished for all spray maintainers.

## 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.

Constant communication from LtCol (b) (6) , as to nozzle count, chemical quantity and load time was appreciated. The MASS and booms performed at a very high level thanks to the diligence of (b) (6) and her extra attention to the booms in between missions and (b) (6) for the extra time spent with me to fine tune the ULV pressure system and flow. The extra time spent by both of these individuals was key to the system producing to a very close tolerance.

## 3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.

**Due** to the short notice nature of this emergency mission, there were a few items missed. One item was the Passenger manifest which was my responsibility, another was the Crew Chiefs not being put on the crew orders. Both of these would have been caught had there been a concept brief as normal.

**4. How was host base and TA support? Please include details.**

The host pest shop manager, (b) (6), was accommodating as he always is, he ensured we had everything that we needed.

**5. Where there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues with the chemical at all. All four barrels were in good shape. 120Gals of Trumpet were loaded and sprayed, K-Factor .250, 28 8003 nozzles, flow rate of 6.3 GPM

**6. Where there any notable observations from a maintenance perspective inflight?**

Spray MX did not go on flight. However the Operators were happy with the system and its operation.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Yes good communication around.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

The only point that caused a delay was the lack of load master availability for the system calibration.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead : TSgt (b) (6) , Charleston JB ,

10-13 Sept 2015

**Aircraft Tail Number:** 89009105

**MASS Number:** MASS 1

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage, ULV TEE  
JET 8003'S

**Chemical in Main Tank:** TRUMPET

**Chemical in Flush Tank:** Atsol-150

**Total Chemical Loads:** 1

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0 GAL

**Amount of Solid Waste Generated:**  
10 LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

Proficiency training on ULV chemical upload and Calibration was accomplished for all spray maintainers.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Constant communication from LtCol (b) (6) , as to nozzle count, chemical quantity and load time was appreciated.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

The lack of enough vehicles for the entire crew was the only hindrance to the trip.

**4. How was host base and TA support? Please include details.**

The host pest shop manager, (b) (6) , was accommodating as he always is, he ensured we had everything that we needed.

**5. Where there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues with the chemical at all. All three barrels was in good shape. 120Gals of Trumpet were loaded and sprayed, K-Factor .250, 27 8003 nozzles, flow rate of 6.3 GPM

**6. Where there any notable observations from a maintenance perspective inflight?**

Spray MXS did not go on flight. However the Operators were happy with the system and its operation.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Yes good communication around.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

The mission went very well

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** TSgt (b) (6) - Hill AFB - UTTR/Dugway October 2023

**Aircraft Tail Number:** 9106

**MASS Number:** EMASS 1

**Configuration:** UHV

**Boom & Nozzle Type:** Fuselage  
Raindrop - R240 13-16 (14 used)

**Chemical in Main Tank:**  
Panoramic/Plateau - MSO(mineral oil)

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 6

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
3 Gals

**Amount of Solid Waste Generated:** 5  
LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

SSgt (b) (6), TSgt (b) (6), SrA (b) (6), and TSgt (b) (6) all had training on EMASS loading, config, deconfig, HMI input, and air bottle refill.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication between the Mission commander and Aerial spray was consistent, clear and concise. Communication between aerial spray and maintenance personnel was clear and determined where each member was needed to execute mission in timely manner.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

All aspects of mission were successful.

**4. How was host base and TA support? Please include details.**

TA was extremely helpful with all maintenance needs. Any equipment they did have that we needed, they got to us in a timely manner. Fire Dept was quick to bring water when requested but fire hydrant was used primarily. All needs were met.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues or changes to chemical uploads and sorties. Water was loaded in morning to prevent freezing. Product was loaded in morning as well.

**6. Were there any notable observations from a maintenance perspective inflight?**

No observations were noted.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination between Aerial Spray and aircrew as well as Mission Commander went well.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Mission was a success ! No issues noted.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6)

, Hill AFB, UTTR 7-18 Mar 2022

**Aircraft Tail Number:** 92003023

**MASS Number:** 2

**Configuration:** HV

**Boom & Nozzle Type:** Raindrop& Bell

**Chemical in Main Tank:** Plateau& Krovar

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 6

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 0  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication, personnel cohesion. Cooperation between ops, mx, Hill Pest management personnel.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

**4.** The trip was attempted during an extremely cold time. We need more natural heat.

**5. How was host base and TA support? Please include details.**

As always, (b) (6) and his crew in Pest Management were available to assist with any need or want. (b) (6), despite being new was instrumental in gaining access to flightline buildings and requisition of gate access cards. Communicating early with (b) (6) aided in receiving all of the needed AGE plus a warehouse tug for AGE movements.

**6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

The product itself was good.

**7. Were there any notable observations from a maintenance perspective inflight?**

The time of year was not conducive to spray operations in Utah. The weather was extremely cold causing the first week sorties to be canceled and the system valves to operate very slowly even after direct heating with NGH heaters for lengthy periods of time. Multiple valve gaskets froze and began to seep fluids during spray operations. The Flush pump froze and distorted the casing causing a major water seep.

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was great amongst the whole group, the weather takes all the fault.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

POC for AGE is (b) (6) : (b) (6) ,(b) (6) (b) (6)

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Hill AFB, UTTR 6-17 Mar 2023

**Aircraft Tail Number:**

92003022/92003021

**MASS Number:** MASS 3 / EMASS 1

**Configuration:** HV / UHV(EMASS)

**Boom & Nozzle Type:** Fuselage R Drop /  
Bell Nozzles

**Chemical in Main Tank:** Plateau / Krovar

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 3 / 7

**Total Flush Loads:** 4

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 0  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

From Spray Maintenance aspect, we had a lot of new maintainers as well as a new system, so training on the mission at Hill, our job, and training on the EMASS happened daily.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication, personnel cohesion. Cooperation between ops, mx, and as usual, Hill Pest Mgmt. (b) (6) has been our Pest Mgmt contact for years and is now retiring. His replacement is (b) (6) and will be great for us in this position. With the amount of folks being trained and the new EMASS, everyone having patients and being flexible was key.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

4. Improvement will come in the form of experience in doing this mission with all our new folks.

**5. How was host base and TA support? Please include details.**

Advon team reported TA support was very good, availability of all requested equipment was met prior to arrival as well as during.

**6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

As part of the verification process for the EMASS, we did use plateau at first and then switched to Krovar. Continued discussion on the use of Drift retardant as well as Defoamer in the EMASS needs to happen.

**7. Were there any notable observations from a maintenance perspective inflight?**

No observations were made on the maintenance side of both systems.

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was extremely effective in accomplishing this msn. I will say as we always do, the freezing weather is not a help in any way and I'll continue to say that we are lucky that we haven't had a bad system failure as a result of bad weather.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

As we all discussed with the EMASS and the foaming issue, I believe there is still room for discussion on all ends as well as with a potential call with Battelle. I'm sure that everyone still has questions and scenarios, and I think we need to put them on paper and schedule a date/time that we can all have this conversation (to include Battelle). Again, having so many folks getting trained from maintenance / loads, I have to say from what I saw, everyone did an awesome job, and it is always great to see when we put our heads together what we can accomplish. Mission success.

# Aerial Spray Maintenance Post-Mission Report

**Location and Dates:** Langley AFB, 3-6 Aug 2015

**Aircraft Tail Number:** 89009105

**MASS Number:** MASS 4

**Configuration:** ULV

**Boom & Nozzle Type:** ULV 8003

**Chemical in Main Tank:** Trumpet

**Chemical in Flush Tank:** Atosol 150

**Total Chemical Loads:** 1

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0Gal

**Amount of Solid Waste Generated:**  
5Lbs

## 1. From a maintenance aspect, what training was accomplished on this mission?

Currency was maintained for ULV chemical upload, as well as system calibration.

## 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.

Despite MASS 4 returning home from the prior mission with severe cross contaminated chemical buildup throughout the tank all plumbing and both booms, the system ran flawlessly and we only experienced 2 clogged nozzles during the calibration. This is attributed to the diligent hard work of the entire spray maintenance flight, with an extra thank you to (b) (6) , (b) (6) and (b) (6) for their extra attention in areas not required to be inspected during an after mission inspection, but most importantly the thorough in tank cleaning.

## 3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.

The final spray plan had us spraying Dibrom. Upon receipt of the chemical, it was discovered that we had 3EA 30gal barrels of Trumpet. One of which had a cut in the bottom of the drum, which was repaired using PIG putty by spray maintenance personnel.

**4. How was host base and TA support? Please include details.**

Langley AFB's motor pool was very accommodating in bring us a new u-drive-it when the van we had become unusable. They drove the new vehicle to us. The ACFT external power unit had issues staying online, when called TA was quick to have a new unit delivered to us.

**5. Where there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

As stated, the chemical was different from what was on the mission plan.

Flow rate was 5.1 GPM, K-Factor 0.250, 22 open nozzle sites

**6. Where there any notable observations from a maintenance perspective inflight?**

No maintenance personnel flew during the spray.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

The coordination of the site in-brief and chemical load/calibration could have been offset more. All worked out well however, with a weather cancel on the first day.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

# Aerial Spray Maintenance Post-Mission Report

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0 Gals

**Amount of Solid Waste Generated:** 5  
LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

(b) (6) , (b) (6) , (b) (6) , (b) (6) , (b) (6) all had training on EMASS loading, config, and deconfig.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication between the Mission commander and Aerial spray was consistent, clear and concise. Communication between aerial spray and maintenance personnel was clear and determined where each member was needed to execute mission in timely manner.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

All aspects of mission were successful.

**4. How was host base and TA support? Please include details.**

TA was very helpful with all maintenance needs. Any equipment they did have that we needed, they got to us in a timely manner.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues or changes to chemical uploads and sorties.

**6. Were there any notable observations from a maintenance perspective inflight?**

No observations were noted.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination between Aerial Spray and aircrew as well as Mission Commander went well.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Mission was a success ! No issues noted.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: Thomas Neiswanger, Tyndall AFB, 12-15 Apr 2021

**Aircraft Tail Number:** 92003023

**MASS Number:** 4

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage TJet  
8003

**Chemical in Main Tank:** Trumpet EC

**Chemical in Flush Tank:** HAN

**Total Chemical Loads:** 1

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 10  
lbs.

## 1. From a maintenance aspect, what training was accomplished on this mission?

The beginnings of trip lead and management training for TSgts (b) (6) and (b) (6). They were invited into the installation in-brief to gain understanding of the tasks required prior to our arrival on station such as trapping and bug counting area mapping and flight planning. SrA (b) (6) received refreshing on all aspects of the ULV mission with regards to system configuration, chemical upload and calibration.

## 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.

Communication with the MC is paramount to success and LT Col (b) (6) ensures requirements are understood with plenty of time to accommodate. Pest management delivered the product loaded on a stake bed to Base Ops rather than make us find them somewhere else on base.

## 3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.

4. I would be remiss if I didn't mention the GOVs that survived hurricane Michael we are still being issued: multiple dash lights flash off and on while driving brakes require a lot of forethought to stop properly, switches hanging out of the door panels, etc.

## 5. How was host base and TA support? Please include details.

TA support was very good, they removed the power cart from the ACFT during Eng start rather than MX having to pull it clear of the wing..

**6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No.

**7. Were there any notable observations from a maintenance perspective inflight?**

Began system calibration with 34 open nozzle, resulting in nearly 11.5 GPM. Nozzles were progressively removed until we ended up with 24 open nozzles to obtain the desired 7.6 GPM spray rate.

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was extremely effective in accomplishing this msn.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Flow rate indicated 8.7 with actual flow rate of 7.6, may need to adjust KFactor. Direct read analog pressure gauge read 38-40PSI while the Digital read 82PSI. Normally the direct read gauge would be trusted; however, while loading the product the digital gauge read 44, direct 0 and when the spray line valves were opened pressure escaped through the booms and the digital gauge then read 3 PSI.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: TSgt (b) (6) , Location: Mayport NAS

8-12 Dec 2015

**Aircraft Tail Number:** 89009105

**MASS Number:** MASS 2

**Configuration:** LV

**Boom & Nozzle Type:** Fuselage, ULV TEE  
JET 8020'S

**Chemical in Main Tank:** VectoBac WDG

**Chemical in Flush Tank:** H2O

**Total Chemical Loads:** 1

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0 GAL

**Amount of Solid Waste Generated:**  
10 LBS

## 1. From a maintenance aspect, what training was accomplished on this mission?

Being that this mission was to test VectoBac WDG as a viable product, able to be sprayed from the MASS at the required pressure , flow rate and achieve the proper swath and droplet size, we received a greater knowledge of what this MASS could produce, using a mix of the LV system mode, with a ULV boom setup. We also learned how the product mixed into water, as well as the mixing of the dye required to I.D. the product on marking cards.

## 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.

The ability to have Lt Col (b) (6) and SMSgt (b) (6) , in shop working out the calibration with H2O (as close as possible, due to the much higher than normal ULV volume of 60 GPM), for multiple days prior to mission departure. Also the ability and willingness of AS maintenance flight to think outside the box to make the mission a success, it couldn't have happened without the great understanding and knowledge of the separated system mode capabilities, and the intuitiveness to make them work together to achieve for this unconventional mission!

## 3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.

The ability to mix the product more thoroughly and efficiently can be reached by using the venturi inductor. The inability to adapt the venturi into a closed loop with the MASS and the small

amount of product required for the mission did not warrant the development of a separate mixing/loading system. I would suggest utilizing the mixing trailers that are forward stationed at Hill AFB for any future, larger quantity missions of the same product.

**4. How was host base and TA support? Please include details.**

Support was accommodating to point that was required of them. We were not on station for them in any way, therefore their support consisted of delivering and retrieving the AGE and marshaling the aircraft in and out. We loaded the water for mixing and flushing prior to leaving home station due to not being able to get any there. The Air terminal staff was accommodating and allowed us all to relax in the terminal while waiting for the aircraft to return.

**5. Where there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

200Lbs of product was mixed into 110Gal of H<sub>2</sub>O. The product was a fine granule, yet dense and light, which made it float on top of the water. The product had to be pushed below the water surface to get the it into suspension and allow the mixing process to happen.

**6. Where there any notable observations from a maintenance perspective inflight?**

Spray MXS did not go on flight. However the Operators were happy with the system and its operation.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Yes good communication around.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Upon return to home station, we inspected the inside of the MASS tank prior to beginning the clean-up procedures. We found small clumps of unmixed product laying on the tank bottom. The theory is the clumps are a result of our inability to effectively and thoroughly mix the product from the start, and not the chemical coming out of suspension. The clumps were quickly broken up and mixed into the water that was introduced directly into the tank through the aft filler port. After approximately 500 Gal of water(added 100Gal, mixed and recirculated and finally run through the spray valve and boom feed line), there was little to no sign of the VectoBac WDG remaining in the MASS, however there remains pink hue to any water run through the MASS due to the marking dye.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) /Minot July 16-20 2018

**Aircraft Tail Number:** 90009107

**MASS Number:** 1

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage,

**Chemical in Main Tank:** Trumpet

**Chemical in Flush Tank:** Atsol 150

**Total Chemical Loads:** 2

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
5 Gal

**Amount of Solid Waste Generated:** 25  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

Sgt (b) (6) new TR in shop. Trained individual on ULV upload/calibration procedures. There was also download training with all members on the trip.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication, personnel cohesion. Cooperation between ops, mx and Minot pest mngmt.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

No room for improvement.

**4. How was host base and TA support? Please include details.**

TA support was very good, no noted issues.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

After the in-brief it was checked to see if there was all the chemical. It was noted that we were missing from 6 barrels which were eventually found and did show up to try to complete the mission.

**6. Were there any notable observations from a maintenance perspective inflight?**

No noted issues with system in flight.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was extremely effective in accomplishing this msn.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Acft broke 9for an eng problem. We had to have an MRT fly out thurs to fix the airplane. We had to download the chemical because the airplane broke. Plane was fixed on thurs allowing us to arrive at home on time.

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: TSGT (b) (6)

**Aircraft Tail Number:** 9107

**MASS Number:** 1

**Configuration:** LV

**Boom & Nozzle Type:** Fuselage,

**Chemical in Main Tank:** Trumpet

**Chemical in Flush Tank:** Naphtha

**Total Chemical Loads:** 2

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0 Gals

**Amount of Solid Waste Generated:**  
20LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

All personnel on this trip were trained and qualified

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication between the Mission commander and Aerial spray went well.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

The calibration process went way over needed amount of time. Resulting in extra time spent in Tyvek in the heat and humidity.

**4. How was host base and TA support? Please include details.**

Ta was on point and helpful the entire time.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

The primary load for Minot City and Minot Base was changed to a higher amount (6 drum to 7 drums) and the Williston trip did not happen, but was also changed from the original amount to less (9 drums to 6 drums). System break prevented the Williston mission from taking place.

**6. Were there any notable observations from a maintenance perspective inflight?**

No Aerial Spray Maintainers were on the Flights.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

All coordination went well

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

During calibration it seemed as though miss-communication in the adjusting process of the pressure and flow was observed. Note: Flush and purge was no completed due to system break in between sorties. 3 gal of good chemical was downloaded back into a barrel.

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: TSGT (b) (6) , MinotAFB-Williston, ND, July 15-18, 2019

**Aircraft Tail Number:** 9105

**MASS Number:** 4

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage,

**Chemical in Main Tank:**

Trumpet/Imperium

**Chemical in Flush Tank:** Atsol

**Total Chemical Loads:** 2

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0 Gals

**Amount of Solid Waste Generated:**  
20LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

New chemical training was accomplished for all Aerial Spray maintainers including SDS familiarization, new chemical handling procedures and PPE usage.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication between the Mission commander and Aerial spray was consistent, clear and concise. Communication within aerial spray maintenance was clear and concise once clear expectations were established.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

The only improvement on the maintenance side would be the vehicle choosing. The maintenance crew should have had more than a two door Ford Ranger for three people. Separating the avionics troop from the crew chiefs.

**4. How was host base and TA support? Please include details.**

TA was very helpful with all maintenance needs.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

50% of the barrels of Imperium had loose bungs which could have been a factor in a slow chemical load.

**6. Were there any notable observations from a maintenance perspective inflight?**

No Aerial Spray Maintainers were on the Flights.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

All coordination went well

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

The lighting delay was the only hitch in the entire trip. Despite the delay we still managed to get that sortie in but with less chemical than originally planned.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** TSgt (b) (6)

- Hill AFB - UTTR/Dugway October 2023

**Aircraft Tail Number:** 9106

**MASS Number:** EMASS 1

**Configuration:** UHV

**Boom & Nozzle Type:** Fuselage  
Raindrop - R240 13-16

**Chemical in Main Tank:**  
Panoramic/Plateau - MSO(mineral oil)

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 7

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
3 Gals

**Amount of Solid Waste Generated:** 5  
LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

SSgt (b) (6), TSgt (b) (6), SrA (b) (6), and TSgt (b) (6) all had training on EMASS loading, config, deconfig, HMI input, and air bottle refill.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication between the Mission commander and Aerial spray was consistent, clear and concise. Communication between aerial spray and maintenance personnel was clear and determined where each member was needed to execute mission in timely manner.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

All aspects of mission were successful.

**4. How was host base and TA support? Please include details.**

TA was extremely helpful with all maintenance needs. Any equipment they did have that we needed, they got to us in a timely manner. Fire Dept was quick to bring water when requested but fire hydrant was used primarily. All needs were met.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues or changes to chemical uploads and sorties. Water was loaded in morning to prevent freezing. Product was loaded in morning as well.

**6. Were there any notable observations from a maintenance perspective inflight?**

No observations were noted.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination between Aerial Spray and aircrew as well as Mission Commander went well.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Mission was a success ! No issues noted.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Oklahoma/Tinker, June 17-24 2023

**Aircraft Tail Number:** 90-9108

**MASS Number:** EMASS 1

**Configuration:** UHV

**Boom & Nozzle Type:** Bell/RA20

**Chemical in Main Tank:** Water

**Chemical in Flush Tank:** None

**Total Chemical Loads:** 4

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 0  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

EMASS loading from hydrant, Boom reconfiguration, Air bottle refill, HMI config, Tank quantity troubleshooting

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication, personnel cohesion. Cooperation between ops, mx, Base ops, APS. Proximity to hydrant.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

**4.** Rental car drop off and pick up location had limited hours. No GOV available due to exercise. Wasn't allowed to store bins/equipment near plane/on ramp.

**5. How was host base and TA support? Please include details.**

TA support was very good, Base ops was ok other than allowing us to have equipment nearby

**6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

Sprayed water for testing purposes on decon effectiveness. Switched from bell nozzles and Raindrops

**7. Were there any notable observations from a maintenance perspective inflight?**

HMI lost GPS signal during flight one time, Stopped logging data, RTB to troubleshoot, loads had to write data by hand. Quantity discrepancy vs HMI sprayed overboard

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was extremely effective in accomplishing this msn.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Acft had no major issues to stop/slow mission. Rental car/GOV needs to be done better like other locations, Enterprise hours of operation limited on weekends. Lodging location was excellent choice but had to use Valet only.

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Paris Island, April 10-14 2023

**Aircraft Tail Number:** 90-9108

**MASS Number:** EMAS 1

**Configuration:** ULV

**Boom & Nozzle Type:** Atomizers

**Chemical in Main Tank:** NONE

**Chemical in Flush Tank:** None

**Total Chemical Loads:** 0

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 0  
lbs.

- 1. From a maintenance aspect, what training was accomplished on this mission?**

Boom config

- 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Mission Failed due to no product available

- 3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**
- 4.** No product available. Hotel was an hour away
- 5. How was host base and TA support? Please include details.**

Both were good when needed

- 6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

Product was not available

- 7. Were there any notable observations from a maintenance perspective inflight?**

We never loaded product. Did not fly

- 8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was effective

- 9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

No product available

# Aerial Spray Maintenance Post-Mission Report

**Location and Dates:** Parris Island SC, 19-22 Apr 2016

**Aircraft Tail Number:** 89009105

**MASS Number:** MASS 4

**Configuration:** ULV

**Boom & Nozzle Type:** ULV 8003

**Chemical in Main Tank:** Dibrom

**Chemical in Flush Tank:** Atsol 150/  
HAN

**Total Chemical Loads:** 1

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0Gal

**Amount of Solid Waste Generated:**  
10Lbs

**1. From a maintenance aspect, what training was accomplished on this mission?**

Currency was maintained for ULV chemical upload/ download, as well as system calibration.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Working closely with the AMVAC chemical representatives before and during this mission should prove to be profitable in discovering why we are finding a thick and sticky red substance in the MASS.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

The only area that could be improved is lodging closer to the base and our aircraft.

**4. How was host base and TA support? Please include details.**

As we continue to adjust to the new security at Beaufort MCAS the Marines in Base Ops are very accommodating in escorting us in and out of the secure location as well as on and off of the visiting aircraft parking ramp

**5. Where there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

The chemical was good and had been verified by AMVAC prior to maintenance arriving for the load. Approximately 10 gallons of Dibrom was downloaded and the barrel was marked, AMVAC Rep is planning to meet us the next time we are at Parris Island to Check the chemical prior to uploading.

Flow rate was 3.2 GPM, K-factor .250, 14EA 8003 nozzle sites open

**6. Where there any notable observations from a maintenance perspective inflight?**

No maintenance personnel flew during the spray.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

All coordination was sufficient.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead : Tsgt (b) (6) / Parris Island, SC / 5-7 Apr 2016

**Aircraft Tail Number:** 90009108

**MASS Number:** MASS 4

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage, ULV TEE  
JET 8003'S

**Chemical in Main Tank:** Dibrom

**Chemical in Flush Tank:** Atsol-150

**Total Chemical Loads:** 1

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0 GAL

**Amount of Solid Waste Generated:**  
5 LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

No training was required, just maintained currency in different loading and calibrating positions.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication between Aircrew/ MC and Spray Maint was awesome.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

The biggest problem having to get on and off the Flight line. We were stranded due to the fact they only had 1 escort. The same problem occurred when trying to get back out to the plane. We told base ops we needed a lite cart when we landed info didn't get passed along. We also wrote it down on acft requirements paper when we landed. Lodging had no phones a cell coverage was week.

**4. How was host base and TA support? Please include details.**

TA DID NOT GET US A LITE CART.

**5. Where there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

. For calibration we had 13 total nozzles open, K-Factor was .250 and flow rate was 2.7 @ 40 psi.

**6. Where there any notable observations from a maintenance perspective inflight?**

No notable observations

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

All coordination and communication was great for this mission. No problems

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

None

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: TSgt (b) (6) , Salina KS,

24-29 October 2016

**Aircraft Tail Number:** 89009104

**MASS Number:** MASS 3

**Configuration:** HV

**Boom & Nozzle Type:** Fuselage,  
Raindrop

**Chemical in Main Tank:** Milestone

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 9

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0 GAL

**Amount of Solid Waste Generated:**  
0 LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

Proficiency training on HV chemical upload and mixing was accomplished for all spray maintainers.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Constant communication from Lt Col (b) (6) , as to nozzle count, chemical quantity and load time was appreciated. The assistance received from the additional maintenance package also kept the mission running smoothly.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

The only item needing improvement would involve having the hotel aware of our tax-exempt status.

**4. How was host base and TA support? Please include details.**

The F.B.O. personnel was very friendly and helpful, the fire Dept kept our mission on track by having the water tanker on standby as the aircraft was taxing into spot, enabling us to load and mix very quickly.

**5. Where there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues with the chemical at all. 36 raindrop nozzles used

**6. Where there any notable observations from a maintenance perspective inflight?**

Spray MXS did not go on flight. However the Operators were happy with the system and its operation.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Yes good communication around.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

The mission was effected by high winds three separate days.

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Williston/Grand forks May 29th-June 7th

**Aircraft Tail Number:** 89009105

**MASS Number:** 5

**Configuration:** LV/HV

**Boom & Nozzle Type:** Fuselage R Drop

**Chemical in Main Tank:** vectobac,altosid

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 7

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 15  
lbs.

1. **From a maintenance aspect, what training was accomplished on this mission?**

(b) (6) new ART in shop. Trained individual on LV/HV upload procedures w/ load station.

2. **What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication, personnel cohesion. Cooperation between ops, mx, FBO, Army Guard, Minot Age, Minot Pest Mgmt, Grand Forks Pest Mgmt

3. **What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

4. Improved pre/post load communication

5. **How was host base and TA support? Please include details.**

TA support was very good, Army Guard was Excellent for flight line access and forklift availability.

6. **Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

Due to Acft issues sprayed Grand forks Sunday instead of Saturday.

7. **Were there any notable observations from a maintenance perspective inflight?**

Needed to add 2 more nozzles after first lift, following lifts were spot on for GPM.

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was extremely effective in accomplishing this msn.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Acft had some MX issues, awmas 5 performed well some minor valve solenoid air leaks. Lodging location was excellent choice.

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Tyndall AFB and Langley AFB, 20190819 to 20190825

**Aircraft Tail Number:** 89009106

**MASS Number:** 4

**Configuration:** ULV

**Boom & Nozzle Type:** 8003

**Chemical in Main Tank:** Trumpet

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 2

**Total Flush Loads:** 2

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 20  
lbs.

- 1. From a maintenance aspect, what training was accomplished on this mission?**

Members received training on water flush processes and procedures.

- 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Coordination with pest management was instrumental in mission completion

- 3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

- 4.** Transportation and quality of transportation at both locations could be improved. Defective vehicles at both locations presented multiple avoidable challenges.

- 5. How was host base and TA support? Please include details.**

Host base support was excellent at both Tyndall and Langley.

- 6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues or changes.

- 7. Were there any notable observations from a maintenance perspective inflight?**

No in flight issues

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was very effective.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Hydraulic leak was noted on aircraft right wing during scheduled departure on 20190823. Scheduled departure was cancelled in order to coordinate repair of hydraulic leak locally with home station support.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6) , Tyndall AFB, FL, 12-15 April 2022

**Aircraft Tail Number:** 90009107

**MASS Number:** 4

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage 8003 Tee  
Jet

**Chemical in Main Tank:** Trumpet EC

**Chemical in Flush Tank:** Atsol 150

**Total Chemical Loads:** 1

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 5  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication, personnel cohesion. Cooperation between ops, mx, Tyndall Entos, Tyndall CE personnel ensuring everything we needed was taken care of.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

**4.** None

**5. How was host base and TA support? Please include details.**

TA support was very good, we had everything we needed.

**6. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

We did have one partial 30gal drum of Trumpet that had not been marked as good/bad. It was still sealed so I decided to load it as well. I have briefed our shop the importance of ensuring that all drums be marked with the appropriate markings so we are never unsure of chemical being loaded. We loaded 7-30gal drums and one partial of 10gal of Trumpet EC.

**7. Were there any notable observations from a maintenance perspective inflight?**

System had some pressure issues that loadmasters fixed by opening the top set of filters.

**8. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was extremely effective in accomplishing this msn.

**9. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Lodging location was excellent choice. Thank you to all for a successful mission.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: (b) (6)

Tyndall/PI 15-18 APR 2019

**Aircraft Tail Number:** 89009104

**MASS Number:** 4

**Configuration:** ULV

**Boom & Nozzle Type:** Fuselage,

**Chemical in Main Tank:**

Trumpet/dibrom

**Chemical in Flush Tank:** Atsol 150

**Total Chemical Loads:** 2

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0

**Amount of Solid Waste Generated:** 15  
lbs.

**1. From a maintenance aspect, what training was accomplished on this mission?**

(b) (6) was on his first spray mission. Trained individual on ULV upload/calibration procedures. All aspects of the different positions on a ULV mission.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication, personnel cohesion. Cooperation between ops, mx and Charleston pest mgmt.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

Better support from the transportation in the vehicle situation and initial pickup

**4. How was host base and TA support? Please include details.**

TA support was very good, no noted issues.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

Tyndall changed both amount used from 8 barrels to 7. Also changing the spray parameters. Questions on the dibrom being used or new.

**6. Were there any notable observations from a maintenance perspective inflight?**

No noted issues with system in flight, Spray loads were extremely capable on this msn.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination was extremely effective in accomplishing this msn. Also giving the great training opportunity for aerial spray maint. New employee

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Earlier coordination for room accommodations would be greatly appreciated for status information

## Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead: TSGT (b) (6) , Williston, ND, 29 May to June 6, 2018

**Aircraft Tail Number:** 9108

**MASS Number:** 5

**Configuration:** LV

**Boom & Nozzle Type:** Fuselage,

**Chemical in Main Tank:** Vectobac

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 2

**Total Flush Loads:** 0

**Amount of Liquid Waste Generated:**  
0 Gals

**Amount of Solid Waste Generated:**  
20LBS

**1. From a maintenance aspect, what training was accomplished on this mission?**

(b) (6) , (b) (6) , and (b) (6) were all trained on Vectobac mission and load station operation. (b) (6) was trained on leading edge removal and installation as well as APU operation. Other members were fully qualified on all tasks.

**2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.**

Communication between the Mission commander and Aerial spray was consistent, clear and concise. Communication within aerial spray maintenance was clear and concise once clear expectations were established.

**3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.**

Communication expectations within aerial spray maintenance could have been better established from the lead at the beginning of the mission. Transportation to and from the hotel and rental cars was very disorganized. A second bus or a truck for baggage would have been beneficial. Personnel waited at the aircraft for 2 hours for transportation to the hotel after initial bus left. No second bus was provided despite being promised.

**4. How was host base and TA support? Please include details.**

TA was very helpful with all maintenance needs.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

The primary load for Williston was not changed. Pest management failed to provide drift retardant.

**6. Were there any notable observations from a maintenance perspective inflight?**

No Aerial Spray Maintainers were on the Flights.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

All coordination went well

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

Prior to first sortie a leak was identified at the spray valve. Spray valve was rebuilt which eliminated the leak. During the first sortie issues were identified with pressure indication and flush pump operation. Upon landing the pressure transducer was replaced. No fault could be found with flush pump. Bird strike to left leading edge between #1 and #2 engines was identified after second sortie. Damage required removal of leading edge for evaluation which resulted in cancelation of final 2 days of mission.

# Aerial Spray Maintenance Post-Mission Report

**Trip Lead, Location and Dates:** Lead- SSgt (b) (6) ; Williston, ND; 30 May - 6 June 2023

**Aircraft Tail Number:** 9108

**MASS Number:** 5

**Configuration:** LV

**Boom & Nozzle Type:** Fuselage, raindrop

**Chemical in Main Tank:** Vectobac

**Chemical in Flush Tank:** Water

**Total Chemical Loads:** 19

**Total Flush Loads:** 1

**Amount of Liquid Waste Generated:**  
0 Gals

**Amount of Solid Waste Generated:**  
20LBS

## 1. From a maintenance aspect, what training was accomplished on this mission?

(b) (6), (b) (6), (b) (6), and (b) (6) were all trained on Vectobac mission and load station operation. Zachery Wilson led first trip and was trained on coordination with entomologist and mission commander.

## 2. What went well or aided in making this trip/mission a success? Please include details ex. Personnel, communication, equipment, etc.

Communication between the Mission commander and Aerial spray was consistent, clear and concise. Communication between aerial spray and maintenance personnel was clear and determined where each member was needed to execute mission in timely manner.

## 3. What areas was there room for improvement? Please include details ex. Personnel, communication, equipment, etc.

When returning to Williston International Airport, it is vital that YARS supplies their own SGNC Nitrogen cart. For this mission, we were forced to borrow a SGNC from Minot AFB, taking valuable time from both flight crew and aerial spray personnel. Power carts are available at next door airport, but often kick off and do not work very well. If any LOX is needed, it would have to be acquired from Minot as well. It is needed that support plane bring all needed AGE for future missions. When returning, it is also vital to bring a minimum of 10 sets of 50ft 4in fire hose line. The fire hydrant is approximately 350ft away from aircraft parking spot, including a fence halfway through which required to dig a hole under the fence to run the fire hose line under that.

**4. How was host base and TA support? Please include details.**

TA was very helpful with all maintenance needs. Any equipment they did have that we needed, they got to us in a timely manner.

**5. Were there issues or changes to chemical? Please include details ex. Containers, quality of chemical, switch, etc.**

No issues or changes to chemical uploads and sorties.

**6. Were there any notable observations from a maintenance perspective inflight?**

No Aerial Spray Maintainers were on the Flights.

**7. Was coordination of aircrew, aircraft, weather details, and training sufficient to optimize mission effectiveness? Please include details.**

Coordination between Aerial Spray and aircrew as well as Mission Commander went well.

**8. Any other information that affected the mission/trip that needs to be mentioned. Please include details ex. Aircraft, system, weather, etc.**

MASS 2 should have been more prepared. During first sortie, it was found that the vent line on the aft of MASS 2 had a valve left open, causing product to leak under tank 3 & 4 and onto ramp after banking in flight with full load caused product to go into vent line. Pig-mat was also not installed under catwalk, hindering ability to quickly spot any leaks should they occur. After mission was complete, it was neglected to run water through ground loading station before disconnection hose lines.
